Resolved, That the fruits of the great political triumph of 1844 have fulfilled the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842 and the creation of the more equal, honest, and protective tariff of 1846, and that in our opinion it would be a fatal error to weaken the bands of a political organization by which these great reforms have been achieved and risk them in the hands of their known adversaries, with whatever delusive appeals they may solicit our surrender of that vigilance which is the only safeguard of liberty.

The Democratic convention of 1852 adopted this:

Resolved, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government and for the gradual but certain extinction of the public debt.

Resolved, And to sustain and advance among them constitutional liberty by continuing to resist all monopolies and exclusive legislation for the benefit of the few at the expense of the many.

The Democratic convention of 1856, that nominated Mr. Buchanan, adopted the following as a part of its platform:

Resolved, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interests of one portion of our common country to the injury of another.

Resolved finally, The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world.

And this was reaffirmed by both the Douglas and Breckinridge wings of the Democratic party after the unfortunate split of 1860.

In 1872 there was a split in the Republican party, and Mr. Greeley was nominated by the Liberals. The Democrats indorsed his nomination, and thereby accepted his platform, which contained this clause:

We remit the discussion of the subject (protection and free trade) to the people in their Congressional districts and the decision of Congress thereon, wholly free from executive interference or dictation.

And this is the only instance in which a national Democratic convention has ever evaded coming squarely to the issue of tariff for revenue.

PAYMENT OF THE DEBT.

Sir, I regret that unwise legislation has placed more than seven hundred millions of our bonds in such a condition that they can not be paid off till 1907. Here the people have to pay 4 and 4½ per cent. interest on this for nearly a quarter of a century, when they can get all the money wanted at 3 per cent., and could pay them in ten years. For more than twenty years bad government must go on by allowing the owners of these bonds to draw high interest on this vast sum, while it is freed from all taxation, national, State, and municipal. There should be no favoritism in our Government. Each citizen should pay taxes in proportion to his ability, in proportion to the property he possesses and the blessings derived from the Government.

Nothing will more surely and rapidly destroy our Government than the fostering of favored classes by legislation. Nothing will so quickly breed discontent and riots as the enactment and continuance of laws so unequal in their operations that the poor are taxed heavily while the millions of bonds owned by those possessing great wealth go free from all taxes. I know there are those who do not want to pay off this debt. Those who hold it know they have a mortgage on the muscle of every laborer till the last cent is paid with interest. They know they will probably never get another chance to make so safe an investment where they will be free from taxation, hence they raise the cry that the debt is being paid too rapidly. Away with the doctrine that "a national debt is a national blessing!" It should never be assented to by any patriot.

Sir, the protectionist also urges non-payment of the debt. He knows that while the debt lasts and interest is to be paid he has an excuse for high tariffs, which will be gone when the debt is extinguished. Hence, "interest on the debt must be paid" is "rolled under his tongue as a sweet morsel." It enables him to continue to clamor against reduction of war-tariff taxes.

MANUFACTURING IN THE SOUTH.

The advocates of high tariff for the sake of protection tell us that we of the South should favor the present duties to develop our country. Kingdoms are promised us if we "will fall down and worship" them. My candid opinion is that nothing stands more in the way of Southern development than the present high tariff and the increased cost of machinery and establishments for manufacturing which it causes. Cotton manufacturing in the South pays 20 per cent. according to the statistics of 1880. So favorably is the South situated for manufacturing that cotton has been picked there and the suit of clothes it made worn the same day. There are iron-furnaces there at which the owner can stand and see the point from which the coal, ore, and limestone are all taken out of which his iron is made. I predict the time will come when Tennessee and Alabama stoves and castings can be sold at a profit in Pittsburgh and their domestics sold in Lowell. The president of the Phœnix Mills in Georgia has written to members of this House advocating reduction of the tariff and demonstrating that Southern mills do not need it.

AGRICULTURE.

Sir, we are more dependent upon our farmers than upon any other class for our prosperity. When enacting laws to protect why not strive to benefit them? They are more numerous than all other classes, and their prosperity more important. Yet what do you propose to do for them, except fleece them? What protection is afforded the farmer? His surplus cotton, tobacco, and wheat are all sold in the East in competition with pauper labor. What benefit does he derive from your alleged laws against pauper-labor competition? None.

But you tax him sleeping and tax him waking; tax him in prosperity and tax him in adversity; tax him living, and even after death his grave-clothes are heavily taxed.

Sir, not only is this so, but your exclusive laws are rapidly driving from him those who have been accustomed to buy his products.

Three years ago, when England saw the market for the sale of her goods was restricted in the United States, she began to cast around to devise means of getting her wheat elsewhere. She sent seed-wheat into India to try the experiment of raising it there. The success was marvelous. This year more than 40,000,000 bushels of her supply came from there. So severe a competition came that wheat has gone down till it is lower than it has been for twenty-five years. Laborers are employed there at 6 cents a day. Russia is also one of our chief competitors in the wheat market. Similar comparisons might be made with regard to tobacco and cotton. And you tax these farmers on everything to maintain those engaged in other pursuits. A law which taxes one laborer for the benefit of another who is not taxed is not just and will not endure.

Relative to the reduction of the tariff under Democratic administration prior to the war, Hon. Robert J. Walker, ex-Secretary of the Treasury, said:

From 1850 to 1860 our agricultural products increased 95 per cent. and our manufactures 87 per cent., being in both cases nearly double any preceding ratio of increase.

Commenting on this period, the gentleman from Texas [Mr. MILLS] of the Ways and Means Committee, truly says:

On the 30th day of July the Walker tariff was enacted, to go into effect the 1st day of December, 1846. How was our foreign trade affected by the low revenue tariff? It increased so much that from the 1st of December, 1846, to 1st of December, 1847, the revenue had increased eight and one-half millions, notwithstanding the very great reduction of duties. How did this affect agricultural products? Just as a revenue tariff always does when it opens a way for them to market. Agricultural products rose from July 30, 1846, to December 1, 1846, 23½ per cent. on an average; cotton rose 18.3 per cent.; wheat, 17.3; rye, 13; corn, 24.5; oats, 40.9; barley, 24.7.

Seven of the principal crops, as shown by the Secretary of the Treasury in his report of that year, had increased in value during the six months succeeding the passage of that bill more than $115,000,000, and it was estimated that the increased value of the whole crop for the same period was three hundred and fifty millions. This additional value was given to the agricultural products of the country beause the tariff of 1846 opened a way for them to market. But that is not all of its benefits to the farmers. It decreased the prices of manufactured products correspondingly. It added three hundred and fifty millions to his crops, but it added three hundred and fifty millions to the purchasing power of his money.

INTERNAL REVENUE.

Mr. Chairman, the gentleman from Pennsylvania [Mr. KELLEY] urges the repeal of the internal-revenue laws to reduce taxes. He was chairman of the Ways and Means Committee last Congress; if sincere in this profession, why did he not do it then? Why, when he had the power, did he not come forward with a bill and abolish it? No, sir; his party is willing enough to reduce the internal revenue to give cause for higher tariff, but they do not want to get rid of the system which gives them so many offices. They reduced the internal revenue by many (forty) millions last Congress, but did not abolish a single office.

All the old machinery was kept. What the people want is to have the mode of collection so simplified as to get rid of the wrong and oppression which now characterize it. Failing in that, they will strike at the whole system. They are willing for whisky to pay its part of the great debt hanging over us if you will change the mode of collection so it will not grind the citizen down and drag him from home as it does now. They will not be satisfied with a mere reduction of the tax on spirits distilled from grain, while all of the old machinery is kept grinding away on the citizen. It is not so much the amount of the tax on whisky as it is the method of enforcing internal-revenue laws to which they object. I made an argument before the Ways and Means Committee, showing the hardships of the present system and urging that we be relieved of them. I think we will get some relief.

I suppose I do not violate the proprieties of that proceeding when I say that we were told by the committee that it would be impossible to abolish the internal-revenue tax altogether; that to do so would leave a deficiency of about $40,000,000 a year. But we are promised an abolition of the tobacco taxes, &c., and a simpler method of collection. A bill I introduced to reduce the time within which parties can be indicted in the Federal courts from five to two years and less has already passed the House, and I hope will pass the Senate before we adjourn.

The gentleman from Pennsylvania [Mr. KELLEY] a few days ago undertook to draw a blood-curdling picture of the misery he saw abroad. He certainly can not claim that the high protective tariff has removed all want in this country. I will here read a gloomy picture he drew of the privations of his own people nearly twenty years after this high protective feature was adopted in what was known as the Morrill tariff. He said:

Why, sir, the people of my city, the working people, whose pride it has been to have their families live under their own roof, are many of them huddling together, three or four families in one such house, and then are probably unable to pay their rent.

Let us see what sort of consistency characterizes the clamorers for higher tariff. They say it is for the benefit of American labor. Yet many of the owners of mills and factories import pauper laborers from Europe to work in their factories at lower wages than Americans are willing to work for. The contracts are made in the East before they are transported here. Again, if protection is for the benefit of the laborer, why were his wages reduced 10 per cent. last summer when the tariff had been reduced less than 2 per cent.? If the laborer is so loved by them, why is he turned off and the mill shut down when he strikes for higher wages?

SHOULD THE QUESTION BE REMOVED FROM POLITICS?

Sir, we are told by high protectionists that this should not be made a political question. That it should be taken from the arena of politics. The question is where the Constitution placed it. Congress fixes the amount and method of raising the taxes, and the people make and unmake the Congressmen. For one, I am glad the people have the constitutional right and power to thrust from authority those who overburden them, and thereby betray their trusts, and I hope they will always exercise it. Congress has power over the taxes, and, thanks to our wise fathers, the people have power over Congress.

AMERICAN SHIPPING DESTROYED BY THE PRESENT SYSTEM.

There was a time when our commerce was carried in American ships, manned by American seamen—American freemen. There was a time when the American flag floated over American cargoes, and when its bright, beautiful stars and emblematic stripes enlivened every sea and port where commerce was known. The American, looking out on the broad ocean, beheld it in the Orient and in the Occident. Whither he went—

To the northern wastes of snow,
Or strayed where the soft magnolias blow—

it was there; there to remind him of his own native land, whose sons resembled in their strength the gnarled oak of her deepest forests and whose daughters rivaled in their beauty and loveliness the orange-blossoms of her most fragrant groves.

But how is it to-day? Alas, the blighting hand of legislative restriction and oppression fell upon our marine service and it withered. Materials entering into the manufacture of the ship were highly taxed under our prohibitory tariff. Under pretext of protecting American ship-building our people were prevented from using foreign-built ships except on ruinous terms. They could not buy those made at home out of highly-taxed material at a cost that would enable them to compete in the carrying trade with those built abroad. So we have had to give up the seas.

Ships, sailorless, lay rotting on the sea;
And their masts fell down piecemeal; as they dropped
They slept on the abyss without a surge.

The seas are no longer white with our sails and the American flag no longer waves over the deep. English ships bring their iron to us, and carry our wheat, corn, cotton, and tobacco from us. Our laws are wrong—"there is something rotten in the state of Denmark," or this could not be. It was never so under Democratic dominion.

In 1855 we built in this country four hundred vessels for the foreign carrying trade. In 1879, with a population almost doubled, we built but thirty-five. At that time Great Britain had 950,000 tons engaged in trade between that country and this. Now she has but little less than 6,000,000 tons. And last year we paid $120,000,000 in freights to foreigners. With a less population we had seven times more tons engaged in the foreign carrying trade than now.

OUR FREE INSTITUTIONS.

Mr. Chairman, I have been both surprised and pained by the tenor of speeches made on the other side. The general prosperity of the country and its marvelous development are pointed to by protectionists and claimed to be wholly the fruits of their system. They, sir, are the fruits of our free institutions generally, rather than of any particular law. They come from our freedom of the press, freedom of speech, freedom of religion, freedom from arrest except by legal process, our trial by jury, and general dissemination of knowledge among the masses. These have made us great, and would have made us so under either high or low tariff. Ours is the most desirable of all countries, whether the one or the other theory of the tariff is adopted. No man contemplates with more patriotic pride its present and prospective grandeur than I do. Well might the eloquent Phillips exclaim: "Happy, free America, the lightnings of heaven yielded to your philosophy; the temptations of earth could not seduce your patriotism."

May "He who doeth all things well" so guide our glorious land that it shall for ages continue as now—the wonder of the world, and a blessing to mankind.

Issue of Circulating Notes.

SPEECH

OF

HON. DAVID B. CULBERSON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1884,

On the bill (H. R. 5460) to provide for the issue of circulating notes to national banking associations.

Mr. CULBERSON, of Texas, said:

Mr. SPEAKER: The bill under consideration is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That upon any deposit already or hereafter made of any United States bonds bearing interest, in the manner required by law, any national banking association making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered and countersigned as provided by law, not exceeding in the whole amount the par value of the bonds deposited: *Provided*, That at no time shall the total amount of such notes issued to any such association exceed the amount at such time actually paid in of its capital stock. And that all laws and parts of laws inconsistent with the provisions of this act be, and the same are hereby, repealed.

SEC. 2. That associations organized for the purpose of issuing notes payable in gold, under the provisions of section 5185 of the Revised Statutes of the United States, upon the deposit of any United States bonds bearing interest with the Treasurer of the United States, shall be entitled to receive circulating notes to the amount and in the manner prescribed in this act for other national banking associations.

At an early day of this session I introduced the following bill:

That whenever the circulation of any national bank, or any portion thereof,

shall be surrendered, the Secretary of the Treasury shall thereupon issue an equivalent amount of Treasury notes of the denominations now provided by law for national-bank notes. Said Treasury notes shall be deposited in the Treasury and paid out as other moneys kept for the discharge of the obligations of the Government. They shall be receivable for salaries and for all dues to the Government, including duties on imports; shall be a legal tender between national banks and for all debts due to any national bank; shall be redeemable in coin, as the legal-tender notes of the United States now are; and when received into the Treasury they shall be reissued, and when mutilated or worn they shall be replaced, in the same manner as now provided by law for said legal-tender notes. The coin held in the Treasury at the date of the passage of this act for the redemption of the legal-tender notes of the Government shall also be applicable to the redemption of the Treasury notes herein provided for; and such coin reserve may from time to time be increased by adding thereto other sums from payments made into the Treasury, in the discretion of the Secretary of the Treasury: *Provided*, That the total amount of said coin reserve shall never be less than 25 per cent. nor more than 30 per cent. of the total amount of legal-tender and Treasury notes outstanding.

Under the provisions of the bill now under consideration it is made lawful for the Secretary of the Treasury to deliver to the national banks now organized circulating bank notes to the par value of their bonds now on deposit at the Treasury to secure their ultimate redemption. The bill further provides that hereafter, instead of issuing to national banks circulating notes in amount equal to 90 per cent. of the par value of the bonds deposited by them, notes to the full par value of the bonds shall be issued and delivered to them. The reservation of 10 per cent. as now provided by law is to be discontinued.

The immediate effect of the bill if it becomes a law will be to make an absolute gift of $40,000,000 to the banks now organized, without the slightest consideration to the tax-payers. There are $400,000,000 in bonds now on deposit at the Treasury to secure the redemption of $360,000,000 of circulating notes. This measure proposes to increase the latter amount by handing over to the banks $40,000,000 more of notes. What reason is given for the bestowal of this magnificent favor upon the banks?

We are told, Mr. Speaker, by the advocates of the bill that the object is to prevent contraction in the volume of the currency. It is true that there is manifest danger of a contraction in the volume of currency. The Comptroller in his last report gives Congress the following information:

> More than one-half of the bonds now held by the national banks are 3 per cents. Unless there shall be legislation by the present Congress, which shall reduce the receipts of the Government, it is probable that the United States bonds will continue to be paid at the same rate as during the last year, in which event all the threes will be called for redemption within three years. This will reduce the bonds held by the banks from three hundred and fifty-three to one hundred and fifty-one millions, and cause a contraction in national-bank circulation of about sixty millions per annum.

I think the situation demands prompt attention from Congress. The contraction of the currency at the rate of sixty millions per annum for the next three years can not fail to produce the most serious results, and some method should be adopted to prevent it. We have now in circulation about $1,000,000,000, consisting of $400,000,000 in gold and silver and the balance in legal-tenders, bank notes, and gold and silver certificates. This volume of currency is constantly increasing by the coinage of silver and gold, but not in advance of the increasing demands of trade and business. There can not be, in my opinion, greater evils inflicted upon any country than those which flow from a depreciated currency, or from a volume of currency, however sound, which is constantly fluctuating, rising above or falling below the absolute wants and uses of money.

Since I have had the honor of being a member of Congress I have labored assiduously to secure a sound currency fully, adequate in volume to meet all the requirements of the business and trade of the country. I think we have reached that point. There is now not the slightest taint of depreciation or irredeemability or fiatism about our currency. Though mixed, each of the classes is equal, measured by the gold standard. There is no complaint about the volume of money. A contraction of sixty millions per annum for the next three years would reduce the volume of money below the amount required by the necessities of the people, and all the harmful results of an inadequate volume of money would be entailed upon the country.

The depression and waste of values, the broken fortunes, the privation and distress of labor which followed the demonetization of silver, causing a contraction in the volume of money of one-half the metal currency of the country, ought not to be made possible, in whole or part, by permitting such a reduction in the volume of money as seems imminent. The proper inquiry is, as it appears to me, Mr. Speaker, how and to what extent ought the contemplated contraction to be averted.

If the measure under consideration prevails and the banks should honestly use the $40,000,000 which are proposed to be given to them for the purpose intended, it would afford no adequate remedy for the evils threatened. The measure is wholly inadequate. It is nothing more nor less than an effort to prevent the contraction of $180,000,000 in three years by $60,000,000 per annum by the issue $40,000,000 in bank notes. It is simply a tub to the whale, if not a pretext to give to these favored pets of Congress a munificent gift.

The best interests of the country demand that Congress should provide a dollar to take the place of every dollar that is taken out of the volume of currency by operation of law or otherwise. The volume of currency ought not to be permitted to be reduced below its present standard; but, on the contrary, should be increased as the wants of the country increase.

I am not sure that this measure will give any relief at all or serve in any manner to prevent contraction. The banks under the law may contract or inflate the currency at will. They control absolutely $360,000,000 of the currency. Have we any assurance that they will use the $40,000,000 which this bill proposes to give them to prevent to that extent the anticipated contraction? There is no provision in the bill that limits the use of the money, and there is nothing in the past history of the banks which gives an assurance that the money will not be used to increase their power to inflict injury upon the people. There is a great struggle between the banks and the people. The people demand that the public debt shall be paid off as it falls due. The banks demand that the public debt shall be perpetuated, because the payment of the public debt means the extinction of the banking system.

The effect of this bill will be to strengthen them in this great struggle and to weaken the power of the people. It will not do to say that this money will be used for the purpose intended if the conduct of the banks in the past furnishes any evidence of what will be their course in the future. They labor for their own interests, untempered by the sympathies which enter into individual transactions. In a former Congress I made some remarks upon the bill to extend national-bank charters, which I ask permission to print with these remarks.

I shall offer the bill introduced by me as a substitute for the pending bill. It provides a cheap, inexpensive, and adequate remedy to meet the evils of contraction. Individually, I would prefer to make the Treasury notes proposed by my bill legal-tenders. It will be seen from the speech which will be printed with these remarks that I have always held the opinion that Congress had the power to issue Treasury notes in peace as well as war, and invest them with a legal-tender capacity. There can be no doubt now since the decision of the Supreme Court of the power of Congress in the premises.

It may not be improper to observe that the decision of the Supreme Court referred to was made upon a question which involved the constitutionality of a law passed by the Forty-fourth Congress. That statute substantially provided that whenever outstanding legal-tender notes were received in the Treasury on any account they should not be considered as redeemed and canceled, as was required by the act to provide for the resumption of specie payment, but that the Secretary of the Treasury should reissue the notes in payment of all claims against the Government, &c. The effect of the statute was to preserve from destruction the remnant of legal tenders, amounting to $346,000,000 then outstanding, and to legalize the reissue of the same.

The subject of contention before the Supreme Court was that whenever these notes or any part of them were received at the Treasury they became waste paper, having been redeemed, and that while Congress possessed the power to cause these notes to be issued, as they were, in a time of war and great public exigency, there was no authority in Congress to cause them to be reissued in 1878, a period of profound peace. A large majority of the Democrats of the Forty-fourth Congress voted for the measure. The Democratic party has been accustomed to claim the honor of the passage of the act and to refer to the great results which have been achieved by it as the beneficence of Democratic policy. The decision of the court only affirms, therefore, the constitutionality of the law passed by the Forty-fourth Congress. It is in no degree a recognition of fiatism or the validity of irredeemable Treasury notes, but determines the authority of Congress to issue Treasury notes in peace as in war, redeemable in coin, and for the time being invest them with the capacity of legal-tender.

ADDENDA.

NATIONAL-BANK CHARTERS.

[Remarks delivered in the House of Representatives, Wednesday, May 17, 1882, on the bill to enable national banking associations to extend their corporate existence.]

Mr. CULBERSON. Mr. Speaker, I would not trespass upon the indulgence of the House by participating in this debate, but for the fact that I feel it incumbent upon me to support and defend the amendment which I have submitted to the bill now under consideration. The bill, substantially, re-enacts the national-bank act of 1864. The banks now in existence, numbering 2,148, are authorized to reorganize at the expiration of their charters for an additional period of twenty years, and full authority is given for the organization of new banks with a like period of duration. By reference to the amendment which I have submitted, it will be observed that I propose to put the present national banking system into a process of gradual liquidation, as it provides that after the passage of the act no franchise or charter shall be granted or extended to any association for the purpose of banking and that no banking association now in existence shall be revived or reorganized.

The amendment further provides that, as each bank now chartered shall expire by limitation or by voluntary surrender of its circulation, the Secretary of the Treasury shall prepare Treasury notes, in the usual form, of like denominations and of like amounts of the notes of such bank, and shall pay them out to the creditors of the Government, who may elect to receive them at par in payment and satisfaction of their claims. The notes which are provided for are to be pure and simple "Treasury notes," receivable by the Government for all dues whatsoever. I do not propose, Mr. Speaker, to repeal the bank act, as since the adoption of the Revised Statutes it is doubtful whether Congress has authority to terminate the charter of a bank lawfully pursuing its avocation and business within the terms of its charter. I therefore propose to leave the law as it is, to cover the operations of all existing banks and control their conduct until they shall expire by limitation.

I do not think, Mr. Speaker, that a more just and proper method to close up and discontinue the present system of banking could be suggested. By it all individual or vested rights are recognized and protected, and the business interests of the country sedulously guarded and shielded from any harm or disturbance whatever by reason of a reduction in the volume of currency. No

stockholder in a bank can justly complain of any violence or injustice to any right acquired by his investment, as the measure which I advocate permits each association to pursue its business unmolested for the full period of time fixed by its charter. In respect to the public aspect of the subject, I submit that no possible detriment or disturbance of the business of the country will follow the adoption of my amendment, because every bank note which may be canceled under the operation of it will be substituted by a Treasury note, having all the attributes and functions of money which appertain to bank notes. There will be no reduction of the volume of the currency. As the bank notes will pass out of circulation Treasury notes will pass into circulation readily, and will perform all the offices of money which national-bank notes now perform.

Bank notes are equivalent in value to coin, not because of the intrinsic merit of the bank which puts them into circulation, but for the reason that their ultimate payment and redemption are guaranteed by the Government. A Treasury note with a like guarantee will not be less esteemed as a circulating medium. I do not intend by anything I have said or may say in this debate to assent to the proposition that Congress has authority to create a bank and invest it with the power to issue notes designed to circulate as and clothed with the functions of money. The currency of this country is its life, and the framers of the Constitution wisely vested the law-making power with authority to coin money, prescribe its volume, and regulate its value. National banks exercise governmental functions in respect to the currency. Instead of the law-making power issuing the entire currency of the country, it has relegated to banking associations the authority to issue it without limit. They are invested with full power to dwarf or inflate the volume of currency at their pleasure. There is now absolutely no restraint or limitation upon the power of the banks to decrease or increase the volume of currency.

I believe, Mr. Speaker, that the act in this respect is in conflict with the Constitution. But it was passed twenty years ago. Private rights and vast business interests, both public and private, have been acquired and grown up under this system of banking, and the practical question is, how best to discontinue the system without injustice to individuals, without wrong to vested rights, and without serious derangement of the interests of the public. I submit that my amendment is a full and complete answer to the question. I believe, Mr. Speaker, that a large majority of the people of the United States are in favor of the discontinuance of the national banking system. They are prepared to see it pass away as speedily as practicable; not because the continuance of the system implies a perpetuation of the national debt, as is alleged by some, for such result would not necessarily follow. There are bonds enough already issued and which do not mature until 1907 to support the system upon a far more extensive scale than now exists. There are to my mind graver and stronger reasons why the system should be abolished.

It has outlived the object and purpose of its establishment, and there is no necessity of a public character for its longer continuance. If, Mr. Speaker, the advantages and benefits of the system outweighed its injustice and disadvantages to the public, or if they were equal, we might be pardoned for giving new life to the banks and extending their succession for twenty years, as proposed by the bill. But if, on the other hand, there are no benefits or advantages derived by the people from this system, and if it can be shown, as I believe it can, that it is a vast monopoly and opposed to the best interests of the people, how are we to escape the just indignation of those whom we represent if we fail now and here to put an end to its existence? What was the object and purpose of the act which authorized national banking? It was passed in 1863. The Government of the United States at that time was engaged in war. It was struggling to maintain its credit and to provide means necessary to prosecute the war. It became necessary for the Government to utilize all its resources and exercise all its powers, doubtful and unquestioned, to maintain its credit and provide the means to support its armies in the field.

It was believed by those who conducted the affairs of the Government at that time that the system of banking authorized by the act of 1863 would aid the Government to sell its bonds, and also aid in maintaining the credit of the currency. The history of that eventful period and the debates in Congress show that the national banking system would never have been instituted or authorized but for such prevailing sentiment and belief. Therefore, to state the case as strongly as it should be stated, this banking system was adopted, first, to induce the purchase of the bonds of the Government, and thereby enhance the credit of the Government; and second, to maintain and enhance the value of the legal-tender greenbacks, in which bank-notes were made redeemable. I am not here, Mr. Speaker, to question either the motives or the soundness of the judgment of those who inaugurated this system and fastened it, I fear for all time, upon the country.

I believe that the motive which inspired the President and his Secretary of the Treasury, Mr. Chase, to approve the plan were pure and laudable; but subsequent events have demonstrated that patriotism has exerted but little influence over the management of these institutions. The Government was vastly deceived when it set up these fiscal agencies, so called, to enhance the value of its bonds and the credit and solvency of its currency. Corporations consult their own interests. Unlike individuals, sentiment does not temper their dealings. Their interests pointed toward cheap bonds and depreciated legal-tenders. They needed the bonds to bank upon, and when they were called upon to redeem their notes, the cheaper the greenbacks the less gold it would take of the interest on their bonds to supply them. Accordingly, we find that the bonds decreased in value more rapidly after the bank act was passed than before. Such would seem to have been the natural and sure result. The banks supplied themselves with all the bonds they needed to bank upon at from 50 to 60 cents on the dollar, and, notwithstanding bank-notes were redeemable in legal-tender greenbacks, legal-tenders depreciated over 70 per cent.

If, however, Mr. Speaker, I am mistaken in all this, there can be no question about the present. United States bonds are selling at a high premium; legal-tender greenbacks are at par with gold and silver. We do not need these fiscal agencies to enhance the value of our bonds or greenbacks, and therefore we can not re-enact the bank law and extend this system for twenty years or longer for the reasons and purposes which influenced Congress twenty years ago to pass the original act. We must look up some other excuse, some other reason and purpose, to justify a practical re-enactment of the bank act as is proposed by this bill. In consideration of the aid which it was supposed these fiscal agencies would give the Government in maintaining its credit the Government conferred upon them privileges, immunities, and favors of immense value. In a Government like that of the United States, where every citizen is supposed to be equal before the law, and each alike entitled to its protection, such a system of class legislation, of governmental favoritism as the national banking system discloses is an enormity of the most frightful magnitude. All other monopolies in this country are dwarfed into insignificance when compared with it.

I propose, Mr. Speaker, to show what some of these privileges, immunities, and favors are, and how they have been used and enjoyed by the banks. Every association of five or more persons who may own and deposit in the Treasury of the United States $100,000 in bonds of the Government are entitled to receive $90,000 in unsigned bank notes. The bonds remain in the Treasury, and the interest thereon is paid quarterly by the Government to the bank. The notes are signed by the officers of the bank and are used as capital for banking. Each bank is authorized to operate for twenty years. Practically the capital of every five men thus associated together in a banking association is nearly doubled, almost free of cost to them. One-half of it remains at the Treasury and earns interest; the other half is loaned to the customers of the banks at from 6 to 24 per cent. per annum. In order that these pets of the Government should have an open field in which to ply their vocation, all State banks were taxed out of existence. Besides, they are permitted to bring all their suits in the United States courts, without regard to the amount in controversy and without respect to the cost or inconvenience of unfortunate debtors.

Again, no tax can be laid upon their bonds, and all the legal-tender greenbacks held in reserve or placed to the credit of the surplus fund are likewise non-taxable. While these are valuable privileges and favors, there are others far more valuable. The national banks constitute a huge monopoly. My friend from Pennsylvania [Mr. MUTCHLER], who has just delivered a very able speech in favor of the bill, affirms that the national banking system is not a monopoly, because every man in the United States who has the means to invest in bonds may become a national banker, and that, banking being free to all, it can in no just sense be deemed a monopoly. Now, I submit that the gentleman does not state the proposition quite accurately. I affirm that the system is a monopoly, for the reason that banks alone can issue and put into circulation bank notes. They enjoy a monopoly in that respect.

If a farmer owns United States bonds, why may he not deposit them at Washington and have the privilege of taking home with him 90 per cent. of the amount in notes guaranteed by the Government to loan to his neighbor at the rate of interest allowed by the laws of the State in which he resides? Simply because under the law such a privilege is restricted solely to national banks. I repeat that the currency of this country is its life-blood, and Congress has put it in the keeping of soulless corporations, who may increase or lessen its flow as their interest dictates or their caprice may suggest. They can make money cheap to-day and to-morrow dear. The property of the country and its entire business are at the mercy of the system. We have now seven hundred and sixteen millions of paper currency, consisting of three hundred and forty-six millions of legal-tender greenbacks and three hundred and seventy millions of national-bank notes.

The amount of greenbacks is fixed by law and can not be decreased or increased except by law. The representatives of the people in Congress must be consulted before the volume of greenback currency can be changed, but the banks alone control the volume of bank notes. They are not responsible to the people. The exercise of their power over the currency of the country is nowise regulated or limited by law. Who can doubt or who will assume to say that such associations, with no legal restraints or limitations in this respect, united by common interests, inspired, as all business corporations are, by the greed of gain, do not constitute a dangerous and powerful enemy to every opposing interest in the land? The Comptroller's report for last year shows that in the last twelve years the national banks have distributed among their stockholders $517,825,392 of net profits, and have on hand besides $130,000,000 surplus funds, all earned upon an average capital of less than $500,000,000. And we are to-day importuned on all sides to give a new lease of power to such an overshadowing monopoly.

The toiling millions of the country are again called upon, not as before in a time of war and widespread alarm; not in a season of general depression, when Government securities and credit were at a fearful discount; not in a moment of extreme peril, when patriots seized every plausible expedient to restore the credit of the Government; but in the silence of a profound peace, in the midst of comparative prosperity, with Government securities and credit far above par, to support this vast, unfeeling, grasping monopoly for another period of twenty years. Such is the proposition, sir; no more, no less. Judging the future by the past, these institutions will gather into their coffers over a billion of dollars of profit and three hundred millions of surplus capital upon an investment of $500,000,000 in the next twenty years, the period proposed by this bill. The brain and muscle of the country are proposed to be mortgaged for twenty years to earn such princely fortunes for the banks, and all for what? Absolutely for no consideration whatever. The people do not need their currency, because the Government can furnish them currency direct, without cost; and if, as was supposed, they aided at any time the Government in maintaining its credit, such aid is no longer needed nor desired.

We are under no obligation to the national banks, Mr. Speaker. If their friends will continue to claim that they have rendered the Government in times past valuable services, I answer that long since all such services have been fully paid for and the obligations discharged. If they are to retire now, and forego for the future the exclusive rights and favors which they have enjoyed for twenty years under the legislation of Congress, they will have the satisfaction of knowing that they have gathered princely fortunes from the toil and labor of those whose interests they assume and pretend to have promoted. We are told, sir, that the national banking system is friendly to the best interests of the people. I deny that proposition, and I affirm that from the very day of its organization to the present time it has warred incessantly upon the rights and upon the best interests of the people; that it has been ungrateful and selfish, and has used its power and exclusive privileges to increase the burden of taxation and embarrass the Government in every laudable effort it has made to lighten the weight of the public debt.

In other words, sir, this creature of Congress early became its master, and for twenty years has dictated, in the main, the financial laws and operations of the Government to its own advantage. The proof is abundant to establish this proposition, but in the limits of my time only the most prominent facts can be presented. I pass the period of the war for obvious reasons, nor will I weary the House to recapitulate the efforts of the banks between the close of the war and the first administration after its close to contract and destroy the greenback currency. Among the first if not the very first act of Congress approved by President Grant was the act of 1869 entitled "An act to strengthen the public credit." It will be remembered that about one billion and a half of the bonds were payable in lawful money. It was so stipulated in the contract. Greenbacks were lawful money, made so by law, and the Supreme Court affirmed the validity of the statute. But unfortunately they were at a serious discount and far below par value in coin.

By the act referred to all the securities, outstanding bonds, and currency of the Government were declared payable in coin, and the faith of the Government was pledged to discharge them in gold and silver. This was in plain violation of the contract. The terms of the contract did not admit of any dispute. The history of that period records the fact that when the measure was before Congress the corridors around this Hall, the committee-rooms, above and below us, and the city itself swarmed with the agents and attorneys of the banks, who were here to influence the judgment of Congress and aid in the passage of that infamous act. The work was accomplished. It required great labor, for the work was infamous. The public debt was increased $600,000,000 by the legal effect of the act, and the bonds held by the national banks alone were enhanced $25,000,000. The banks owned about $356,000,000 of bonds. They had purchased them at a discount ranging from 40 to 60 cents in the dollar. They were payable in lawful money, and might have been discharged in legal-tender greenbacks, which were then at a serious discount.

But these patriotic fiscal agencies, the banks, united by a common interest and influenced by a common greed, deliberately combined their power, which far exceeded all other influences, and secured the passage of this law, which created an additional burden of $600,000,000 upon the people for which there was absolutely no consideration and which was an unmixed fraud upon the tax-payers. In 1870 Congress undertook to refund the public debt at a less rate of interest. The bill originated in the Senate, and I beg to call attention to the eighth section of that measure as it passed the Senate. It is as follows:

"SEC. 8. *And be it further enacted*, That on and after the 1st day of October, 1870,

registered bonds of any denomination not less than $1,000, issued under the provisions of this act, and no other, shall be deposited with the Treasurer of the United States as security for notes issued to national banking associations for circulation under an act entitled 'An act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof,' approved June 3, 1864; and all national banking associations organized under said act, or any amendment thereof, are hereby required to deposit bonds issued by this act, as security for their circulating notes, within one year from the passage of this act, in default of which their right to issue notes for circulation shall be forfeited, and the Treasurer and the Comptroller of the Currency shall be authorized and required to take such measures as may be necessary to call in and destroy their outstanding circulation, and to return the bonds held as security therefor to the association by which they were deposited in sums of not less than $1,000: *Provided*, That any such association now in existence may, upon giving thirty days' notice to the Comptroller of the Currency, by resolution of its board of directors, deposit legal-tender notes with the Treasurer of the United States to the amount of its outstanding circulation and take up the bonds pledged for its redemption."

When the bill came to the House the combined power of the national banks again appeared around this Hall and was everywhere visible. The section was stricken out and the Senate was forced to accept the bill as amended, and thus amended it became the law. I do not propose, Mr. Speaker, to animadvert upon this action of the banks. Language which I control is too sterile to characterize it properly. I content myself with reproducing an extract from the speech of Senator SHERMAN, who had charge of the bill, and who I believe was then, as he is now, the ablest financier of this country. He said:

"Mr. President, the three remaining sections of this bill apply to the national banks. That is much too great a theme for me to enter upon at this stage of the debate; but I will explain in a very few words the theory of those sections. The national banks are mere creatures of law. They hold their existence at the pleasure of Congress. We may to-morrow, if it promotes the public interests, withdraw their authority. The franchise has been valuable to them.

"We think it right they should aid us in funding the public debt. They hold of our securities $346,000,000. Nearly all of these bear 6 per cent. interest in coin. We will not deprive them of any of them; we will not take from them the property they enjoy; we will not deny them even the payment of 6 per cent. gold interest as long as they are the owners of these bonds. But they hold the franchise of issuing paper money guaranteed by the United States, and which constitutes the circulation of our country; and we say that, enjoying this franchise, we now stipulate with them for the reduction of interest on the bonds they hold. The provisions of this bill are not arbitrary.

"We are about to retire and cancel our notes by the provisions of this act. We are about to give them the monopoly of the circulation of this country, the sole and exclusive privilege of issuing paper money." We have destroyed the State banks. And now what do we require in return? That they shall join us in reducing the burdens of the public debt; that they shall bear some little of their share of the loss of income which every holder of the public securities must suffer.

"Sir, national banks would be very unwise indeed to make issue on this question. If any man here is a friend to the national-bank system, I can claim to be. I was here at its cradle, introduced the original banking bill, and advocated it, and also introduced the amendment to it, conducted it, and saw it passed. But if I believed now that the banks of the United States were unwilling to aid us in reducing the rate of interest on the public debt to the extent of the limited sacrifices they are called upon by this bill to make, I should certainly change very much my opinion of them and of the whole system.

"I wish now to record my deliberate judgment that in this conclusion to which we have been compelled to arrive by the action of the House we are doing the national banks a great injury, which will impair their influence and power among the people, and that the opposition of the national banks to this provision which would have required them to aid in the funding of the public debt will tend more to weaken and destroy them than anything that has transpired since their organization. I do not see how we can go before the people of the United States and ask them to lend us gold at par for our bonds, when we refuse to require agencies of our own creation to take them; when we even refuse to require new banks not yet organized to take these new bonds, and when we refuse to require old banks, which have made on the average from 15 to 20 per cent. annually upon the franchise. But, sir, the vote of the House shows the power of the national banks."

It will be observed from what I here read that Mr. SHERMAN, if not the author of the plan of national banking, was the author of the original bank act of 1863 and the supplemental act of 1864. Those acts, as passed, contained a reservation of the right to Congress to alter, amend, or repeal them. This reservation was dropped out by the adoption of the Revised Statutes. I call attention to this fact to show that, notwithstanding the banks were in the power of Congress and subject at any time to be destroyed by a repeal of the law, yet they boldly defied the power of Congress and defeated the laudable efforts of the Government to avail itself of their influence in lessening the interest on the public debt. In this connection, Mr. Speaker, I desire to call attention to the conduct of the banks at the close of the last session of Congress. In the opinion of a large majority of that Congress it was practicable to refund a portion of the public debt in 3 per cent. bonds, and a bill for that purpose passed both Houses. That measure contained the following provision:

"From and after the 1st day of July, 1882, the 3 per cent. bonds authorized by this act shall be the only bonds receivable as security for national-bank circulation, or as security for the safe-keeping and prompt payment of the public money deposited with such banks: *Provided*, That the Secretary of the Treasury shall not have issued all the bonds herein authorized, or so many thereof as to make it impossible for him to issue the amount of bonds required: *And provided further*, That no bond upon which interest has ceased shall be accepted or shall be continued on deposit as security for circulation or for the safe-keeping of the public money; and in case bonds so deposited shall not be withdrawn, as provided by law, within thirty days after the interest has ceased thereon, the banking association depositing the same shall be subject to the liabilities and proceedings on the part of the Comptroller provided for in section 5234 of the Revised Statutes of the United States: *And provided further*, That section 4 of the act of June 20, 1874, entitled 'An act fixing the amount of United States notes, providing for a redistribution of the national-bank currency, and for other purposes,' be, and the same is hereby, repealed; and sections 5159 and 5160 of the Revised Statutes of the United States be, and the same are hereby, reenacted."

These fiscal agents of the Government were again called upon to aid in the reduction of the interest upon the public debt in part, and what was the result? Their agents and attorneys were on all sides plying their influence to defeat the bill. They threatened to produce a panic. They affirmed, and truthfully so, that the business of this country, vast as it is, was at their mercy, and rather than aid the Government to reduce the interest upon the bonds they would deposit lawful money in the Treasury and surrender their circulation, and thus contract the currency to the disturbance of business and the panic of capital. Congress for one time boldly opposed the unreasonable exactions and demands of the banks and disregarded their threats. The bill was passed, $18,000,000 were deposited by the banks in fifteen days pending the controversy, and the volume of currency to that extent was reduced. Business felt the blow, and but for the resources of the Government, applied on the instant, a panic would have occurred. As soon as the bill reached the President all the combined power and influence of the banks were concentrated and brought to bear upon the executive branch of the Government to secure a veto. They triumphed, and the bill fell. In the muscular language of my friend from Missouri [Mr. BLAND], "they bulldozed the President."

We are now paying, Mr. Speaker, 3½ per cent. upon what are known as the Windom bonds, because of the defeat of the 3 per cent. funding act, which was brought about by the influence of national banks. The act was in all respects reasonable, and the experience of the country since that time will attest the fact that our bonds drawing 3 per cent. interest could have been sold at par.

Mr. RANDALL. Will the gentleman from Texas allow me to interrupt him a moment? Before the 1st of May, 1881, two months after the adjournment of the last Congress, the bonds of the United States had reached such a premium that they returned to those who purchased them at the market prices less than 3 per cent., showing clearly that those who had voted for the funding bill as passed at the close of the last Congress were right in the belief that a Government loan could be negotiated at 3 per cent. I will hand to my friend from Texas [Mr. CULBERSON], to be incorporated in his remarks, a statement showing what income is yielded by 4 and 4½ per cent. Government bonds, at the market prices on the first, second, third, fourth, and fifth days of the present month: the 4½ per cent. bonds yielding an average of about 2.70 per cent. to purchasers at market prices, and the 4 per cent. bonds yielding about 2.86 per cent. This is an official statement from the Treasury Department, the calculations having been made by Mr. Elliott, a recognized authority on subjects of this kind.

Mr. CULBERSON. Mr. Speaker, by permission of the House I will insert the table in my remarks [omitted in this reprint].

* * * * * * *

But, Mr. Speaker, the crowning act of all the outrages upon the interests of this country committed by the national banks was the part they took in the perpetration of that great financial crime, the demonetization of silver in 1873. Of all the conspirators who aided in that dark and secret deed they are the most guilty, and if there are any degrees in the atrocity of that act they deserve the highest. They owned about $370,000,000 of our bonds. Originally they were purchased at a great discount. Originally they were payable in lawful money; but, as we have seen, they had been converted without consideration into coin bonds, at the instance of the banks, payable in coin at its then standard value, and by which the banks reaped an immense harvest of profit. Not satisfied with the immense powers, immunities, and exclusive privileges bestowed upon them by law, to some of which I have adverted, the banks deliberately conspired to break the financial peace of the country by demonetizing silver.

Silver was cheaper than gold, and their bonds, being payable in coin, might lawfully be discharged in silver, the cheaper metal. The silver currency was the currency of the people and occupied the field of circulation too completely for the interests of the bank notes. It had to be destroyed. It was destroyed, and the national banks gathered again a rich harvest of profits by the enhancement of the value of their bonds and the appreciation of their notes. But at what terrible costs, privation, and sacrifices to the people and business of the country! Who, even now, Mr. Speaker, can look back over the period from 1873 to 1878, during which one-half of the metal currency of the world lay dormant and demonetized, and contemplate the frightful waste of values, the broken fortunes, the poverty and universal depression which marked that period without a feeling of indignation and shame?

The history of our country, eventful as it has been, furnishes no parallel to the financial distress produced by the demonetization and withdrawal of silver from circulation. The fires in the furnaces of our vast manufactories burned to ashes, vast enterprises of internal improvements were abandoned, labor ceased to command living wages, and thousands upon thousands of able-bodied men tramped the country, vainly begging for work, and living upon the scant charity of those whom the crash had not entirely despoiled. Properties of all kinds except national banking stock shrank in value with fearful rapidity, until State and municipal governments had no competition in bidders at tax sales, and all the financial gloom and depression were precipitated at a time when the country, torn to pieces by war, was struggling under a load of debt and taxation never before borne by any people with such heroic fortitude.

During this period the national banks made money with a rapidity which astonished the honest men connected with them, while the people grew poorer day by day. Who of us does not remember the angry opposition of the banks to the remonetization of silver and its limited coinage as established by the "Bland bill?" Congress dared not falter in that work. The will of the people had been heard. It was the language of command. We passed the bill in spite of the combined influences of the banks. Again they concentrated all their power and influence upon the Executive, and the sad spectacle of the President of the United States cowering before this august monopoly was repeated. He vetoed the bill, but Congress made it the law notwithstanding his veto.

Mr. HOOKER. My friend from Texas will allow me to say right here, that the distinguished gentleman from Georgia [Mr. Stephens], chairman of the Committee on Coinage, Weights, and Measures, stated to the House on the day that silver was demonetized it constituted one-half of the metallic money of the world. In addition, that $346,000,000 of greenbacks were kept alive only by the action of a Democratic House.

The SPEAKER *pro tempore*. The time of the gentleman from Texas has expired.

Mr. BLAND. I hope by unanimous consent he will be permitted to conclude his remarks.

Mr. REAGAN. I believe I am entitled to the floor, and I will yield to my colleague as much time as he desires.

The SPEAKER *pro tempore*. The gentleman from Texas is entitled to the floor.

Mr. REAGAN. I yield to my colleague.

Mr. CULBERSON. I will not trespass much longer on the indulgence of the House. In 1874 the Republican party was defeated in the House of Representatives. The triumph of the Democracy was an earnest protest filed by the people against the domination of banks over the legislation of Congress. Yet this influence was in no wise daunted by the rebuke. In the closing days of the last session of the Forty-third Congress it put in an appearance on the resumption bill, and fastened upon that measure a clause providing for the redemption and cancellation of the legal-tender greenbacks. The work of destruction was going on when the Democrats, for the first time in twenty years, on the 4th day of December, 1875, presented a majority in the House of Representatives. The whole financial policy of the Government since the war had been in the interests of national banks. The Democratic party remonetized silver and partially restored its coinage. All efforts to repeal the resumption law were defeated, except the proposition to rescue $346,000,000 of legal-tender greenbacks from destruction. We saved that much of them to the people.

And thus we see, Mr. Speaker, that the policy of the banks was to convert the bonds which could be discharged in greenbacks into coin bonds, and when changed to make war on silver, the cheaper and most universal circulation, in order to have the bonds payable in gold only, to destroy the legal-tender currency as redeemed under the resumption act, so that the only currency should be gold and national-bank notes. When the Forty-fourth Congress assembled that policy had been ingrafted in the law. We found it sanctioned by law. In part the policy had been executed and was beyond the reach of repeal or modification. The struggle to remonetize silver and the fight to sustain the remnant of the legal-tender currency show that if these banks could have triumphed we would to-day have no currency but gold and national-bank notes. My friend from Arkansas [Mr. JONES] in his able speech the other day presented the situation exactly. He said there was an irrepressible conflict going on between banks on one side and silver and silver certificates on the other.

Such, Mr. Speaker, is the fact: and because of that conflict we have propositions now pending to destroy silver and silver certificates. Are these banks,

therefore, not the enemies of the best interests of the people? Show me, if you can, where sentiment or patriotism or respect for the interest of the people, when opposed to their interests, ever tempered their grasping and cruel policy. They are the open enemies of that grand principle which underlies our theory of government: "All men are equal before the law, and each alike is entitled to its protection." Whenever the Government with one hand takes the money of a citizen and with the other bestows it upon a corporation it is no less a robbery because the transfer is made under the form and color of law. Why should Congress, in the face of all these facts, give to the banks a new life, a new lease of power over the people? Does any one suppose that if this bill should become a law this system can ever hereafter be changed? Surely not. The system is stronger to-day than at any time in the past. It grows in strength year by year; it has been powerful enough in the past to dictate laws to Congress and vetoes to Presidents. Will it be less powerful or less grasping in the future? Has it not grown by the favors of Government until its strength is sufficient to defy the people and their representatives in Congress?

I submit, Mr. Speaker, in view of the fact that a majority of this House seems determined to pass this bill, that the amendment offered by the gentleman from Pennsylvania [Mr. RANDALL] ought by all means to be adopted. The power to contract the volume of currency now conferred on these corporations is so dangerous to the financial peace of the country that it should be limited by law. Upon the policy of vesting the power to issue currency upon corporations I beg to read a short extract from a speech made by Mr. Benton in 1833 in the Senate:

"The Government ought not to delegate this power if it could. It was too great a power to be trusted to any banking company whatever, or to any authority but the highest and most responsible which is known to our form of government.

"The Government itself ceases to be independent, it ceases to be safe, when the national currency is at the will of a company. The Government can undertake no great enterprise, neither of war nor of peace, without the consent and co-operation of that company; it can not count its revenues for six months ahead without referring to the action of that company, its friendship or its enmity, its concurrence or opposition, to see how far that company will permit money to be scarce or to be plentiful; how far it will let the money system go on regularly or throw it into disorder; how far it will suit the interests or policy of that company to create a tempest or suffer a calm in the moneyed ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices; to make and break fortunes; to bring the whole community upon its knees to the Neptunes who preside over the flux and reflux of paper. All property is at their mercy. The price of real estate, of every growing crop, of every staple article in the market, is at their command. Stocks are their playthings, their gambling theater, on which they gamble daily with as little morality and far more mischief to fortunes than common gamblers carry on their operations."

And now, to conclude what I have to say on this subject, I desire to submit that I consider the discontinuance of banking so important and desirable that I shall vote for every proposition which shall be offered for that purpose which does not assume that Congress has the power to issue an irredeemable Treasury note to circulate as money. While the amendment which I propose provides for a simple and pure Treasury note redeemable in the dues to the Government, which presents a plan to which perhaps there is less objection than one investing such notes with a legal-tender quality, yet I am free to say that I will vote for either. The question of the power of Congress to issue a legal-tender note I regard as settled by the judgment of the Supreme Court. As a Representative in Congress I am authorized to decide for myself whether such exigency exists as renders it necessary for Congress in this case to authorize the issuance and circulation of promises of the Government to pay money on demand and for the time being invest such notes with a legal-tender quality.

If the war was flagrant and the demand upon the Government required it there are few who would question the power of the Government to issue them or the soundness of the judgment of the court. The exigency now presented is hardly less than such as war might present. The banks are at war with the rights and interests of the people. Their power has grown to be autocratic and despotic, and the issue of the struggle in behalf of the people is by no means certain. In behalf of those whom I have the honor to represent and whose highest interest it is my ambition alone to serve, I would avail myself of any lawful means to crush out this kingly monopoly, which has usurped, under the color of law, the powers of Government and now exercises them to the scandal of republican government and the unblushing robbery of the people.

The Tariff.

SPEECH
OF
HON. C. R. BRECKINRIDGE,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. BRECKINRIDGE said:

Mr. CHAIRMAN: It is difficult to make a speech upon the pending measure without going into a full discussion of the tariff question. The bill under consideration does not contemplate a material change in the character and arrangement of the present tariff. It does not profess to correct inequalities in the system or to alter the ratio of things; but it touches the tariff, and that naturally opens discussion not only of the bill but also of the whole subject of the tariff. I shall attempt to divide my remarks into two leading parts: first, the proposition of supporting this bill; and second, the tariff.

Sir, the Democratic party came into power in this House upon mainly two distinct propositions, or rather upon one proposition that consists of two elements. We promised reform in the matter of Federal taxation. We promised reform in the sum and in the mode of Federal taxation.

Of course a party covers a good deal of ground in every platform, for the two great political parties in this country are based primarily upon two great and distinct principles, each the antithesis of the other. For that matter the politics of all countries in which there is enough vitality for political life is founded upon the same two great principles. As a matter of form or of force, one may be called centralization and the other may be called decentralization or home rule. As a matter of governmental terms, one may be called despotism and the other democracy or constitutional government. As a matter of principle, one may be called justice and the other injustice, or, to express it more in consonance with the language of that grand instrument which is the corner-stone, the keystone, nay, which is the whole arch upon which our fabric rests—the Declaration of Independence—the one may be called equality and the other may be called inequality. Every measure, I care not to what it applies, has a principle beneath it; and despite the glamour of party cries, despite the obscuration of superincumbent matter, you have but to probe it deep enough, you have but to think it out to its remote and inexorable conclusion, and you will find a fixed principle controlling its end, rough-hew it as you may.

The grand principle underlying the Democratic party and making it almost divine is that of the equality of man in every public sense, of equal and exact treatment to all; and the one subtle, stifling, and noxious principle that underlies the Republican party is that of inequality, of unequal treatment of men; and whatever may be its cries or its pretenses, whatever may be its victories upon tangent issues, yet we always find an ultimate result of that character finding expression in some form or other of class legislation.

Sir, I need not cite unfailing history to prove all this. Those who read and reflect already know it. But this being true, you find expressions in every party platform covering the various questions, great and small, that attract public attention from the different classes of the people.

But a question is not easily nationalized, and a party or a people, like an individual, will attend to the necessary routine matters of every-day life; it will have an eye perhaps upon several matters in a casual way, but it never sets its heart and hands to more than one really great work at a time, and seldom is it that a people set themselves to a great work and leave it until it is finished.

Thus it was, sir, that the Democratic party directed its attention in the recent past to the great questions of the currency, the treatment of the public debt, and to that of reconstruction, and it did not leave them until they were put into fairly good and satisfactory shape.

Now we come down to the much that still remains for proper treatment, and while our platforms from 1876 down to this time contain much matter thrown in, like chinking in a stone wall, to fill in and to make out the parts, yet the great distinctive question—that which presses most heavily upon the masses of the people; that which they demand and which they will continue to demand shall have attention and proper treatment—is the question of Federal taxation.

Sir, ever since the fatal concession was made that the taxing power—the one great power of sovereignty and of mastership—ever since the fatal concession was made that that power could be used as a means of providing for the public defense, save embargoes to prevent war, and that industries could be subsidized, encouraged or advanced, other than by direct appropriations, under the eye of the people, of the money that had been collected into the Treasury—ever since then (and that was early in our history) this has been the greatest and the most fundamental question in our politics. This is the chief source from which all our woes have sprung. The limitations of the fathers have long since been lost sight of or ignored. What Hamilton could not accomplish directly his successors have accomplished indirectly. The Government established by Jefferson and Madison has been perverted out of all true shape and form, but the Constitution is still here for us to return to, and the people, though horribly deceived and imposed upon, are not debased or destroyed. We have had great contests, but this is the Marathon, this is the Waterloo, of the generation that has succeeded the war. Class legislation has reached its acme. Hamilton's dream of a monarchy and of titles and nobility, of a classified condition of men by law, has been realized in all except the title and tinsel of power.

We stand to-day with past passions cooled, with past misconceptions and diverting issues removed or worn threadbare. We stand to-day where Jefferson and Hamilton stood one hundred years ago, but with Hamilton in the ascendant for the hour, and the most fundamental aspect of this question is, shall this Government of ours be a democracy, a constitutional, a limited government, or shall it be a government of class legislation, of class rule, of monopoly, of simply discretion? In obedience to the present phase of this great question we promised the people "reform in the sum and mode of Federal taxation."

Sir, party platforms are not meaningless instruments of writing. They are expressions of what is needed at the time, and they are solemn pledges of agitation and effort until those ends are attained. I utterly condemn that low standard in politics which puts forward expressions only to delude the people. For one, I condemn a contest simply for the spoils of office. It has no higher motive than greed, and it has no greater force than "the cohesive power of public plunder." I would rather be in the minority, leaving the emoluments of office to my political opponents, but with sufficient power to serve the people and the country by compelling the opposite party to conservative policy, than to succeed to control like a disorganized band of plunderers. The

best hope of our country is the doctrine and party of Democracy. I would have the party that bears that name pure and untarnished. The country is ready for a brave, conservative, honest party of Democracy and reform, and if we would get power we must merit it, and if we would merit it we must show some disposition to keep our pledges, and some ability to subordinate our views of expediency to the declared will and wisdom of our majorities. Any patriotism of less discipline and of less power of sacrifice for principle than this is of no avail; and no other method and no less degree of discipline is known or practiced among honest, sensible, and earnest men.

Sir, in this connection I will review to the majority here the pledges they have formally and solemnly made to the people. It matters not what may have been certain ancient concessions and compromises under peculiar circumstances. The fathers have kept their faith, and we are only called upon to keep our faith. Sir, we have of late years expressed our views of the measures of immediate and pressing necessity, and given our pledges for every effort to attain them in sundry national and State platforms. If these things are not necessary and right, we ought not to mention or to agitate them. If they are necessary and right, we ought to agitate them. Nay, we can not condemn agitation and effort without impeaching our own integrity and wisdom, as manifested in a long succession of party declarations.

In our national platform, adopted at Saint Louis in 1876, we said:

Reform is necessary in the sum and mode of Federal taxation, to the end that capital may be set free from distrust and labor lightly burdened. We denounce the present tariff levies upon nearly 4,000 articles as a masterpiece of injustice, inequality, and false practice. It yields a dwindling, not a yearly rising revenue; it has impoverished many industries to subsidize a few; it prohibits imports that might purchase the products of American labor; it has degraded American commerce from the first to an inferior rank upon the high seas; it has cut down the sales of American manufactures at home and abroad, and depleted the returns of American agriculture, an industry followed by half our people; it costs the people five times more than it produces to the Treasury, obstructs the process of production, and wastes the fruits of labor; it promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.

Here, sir, the proposition of reform in the sum and mode of Federal taxation is clearly stated, and a demand is made for taxation only for public purposes, that is, for revenue. The diverting passions of the war and the horrors of remorseless reconstruction were fast fading from view. Under the cover of those things many subsidized industries had fed to the full upon the hard earnings of their brethren. The panic of 1873 had developed the turning-point of protection. We might reasonably expect allies from some of those industries which, having outgrown the fostering care of infancy, were then in need of the larger freedom of manhood. Much of the system since 1873 has been only makeshift and patchwork. Some of the hoped-for tendencies were noted, upon which I shall not dwell at this point, but they were subsequently restrained, and hand is still joined in hand, like the locked shields of a Grecian phalanx, and the cohorts of class legislation still hunt the fields of their own countrymen in the preferred quest of robbery rather than go out into the large and generous rivalry of the commerce of the world.

Next in order, sir, we held a national convention at Cincinnati, and there and then we reaffirmed the grand platform of 1876 and pledged our best efforts for the attainment of "a tariff for revenue only."

Since 1880 we have adopted many State platforms. Those which most feebly reflect the sentiments of the two successive national platforms I have just mentioned are the latest platforms of Ohio and of Pennsylvania. If they clearly commit us to one or to both of the propositions I have spoken of, then it is not necessary to cite other platforms that are stronger. These two, in fact, are the well-measured expressions of those Democrats who have so much to say about the inexpediency of the bill under consideration.

The Ohio platform says:

We favor a tariff for revenue, limited to the necessities of Government economically administered, and so adjusted in its application as to prevent unequal burdens, encourage productive industries at home, afford just compensation to labor, but not to create or foster monopolies.

Mr. Chairman, there are some things about this plank which are plain, and there are some things about it which are not plain. Without doubt, however, or equivocation, it calls for the limitation of revenue to the necessities of Government economically administered. It also wants the tariff "adjusted" so as to accomplish certain ends. The clear inference is that the tariff does not now accomplish those ends, for if it does why should it be "adjusted." I will not comment upon the impossibility of a man's traveling in opposite directions at one and the same time. I will not comment upon the sincerity or the ability of those who try to make the people think that such a thing can be done. I will not stop at this point to demonstrate that of all the people who are imposed upon and who are made to suffer by a high protective policy the factory wage-worker is the most grievously burdened; but I simply call attention to the plain fact that that faction of our party who prefer to march under this banner of somewhat doubtful device have at least solemnly pledged themselves to reform in the sum and to an "adjustment" of the tariff. If they can not at once keep both of these solemn promises I hope they can at least keep one of them.

And now, sir, if I may be pardoned a slight anachronism, I will here insert the platform recently adopted at Allentown, Pa. This platform was adopted since the organization of this House, since the introduction of this bill, since the indorsement of this bill and of "a tariff bill," by the Democratic caucus—a caucus declared to be neither more nor less than any other caucus—adopted by gentlemen who have given adhesion to the party under the national platforms of 1876 and 1880, by a convention of which the distinguished gentleman from Pennsylvania [Mr. RANDALL] was the hero, and consequently it comes before us at this time as the freshest and most persistent of all the solemn declarations and promises, and its authors are, of us all, should they fail to try to keep their pledges, the most exposed to the charge of mockery.

That platform says:

We favor a tariff for revenue, limited to the necessities of the Government, economically collected, and so adjusted as to prevent unequal burdens, encourage active industries at home and afford a just compensation to labor, but not to create or foster monopolies, and to this end we favor the abolition of the internal-revenue system and taxes.

Let us subject this plank to a brief and a fair analysis. It has obscurities and *non sequiturs* which I do not admire, and it has some looseness of speech that can hardly be intentional. It wants "a tariff for revenue, limited to the necessities of the Government." I take this to mean a reduction of surplus revenues. It may be construed as meaning more; but these gentlemen who have so often and so long clamored for a reduction of surplus revenues will hardly deny that they mean that much. They want the tariff limited, or the revenue limited, or both; but we need not quarrel about that, for we are anxious to give them both or either. To these ends the party has made many overtures to them. They have made none to the party. I trust they want something. They say they do.

They want "a tariff for revenue, limited to the necessities of the Government, economically collected." What do they want "economically collected;" the Government? It would so appear from the context. I presume they mean they want the Government economically administered. That is the usual Democratic form of expression, and that covers the collecting of the tariff as well as all other administrative functions of Government. The deservedly high reputation of Mr. RANDALL as an economist in all the expenses of Government entitles him to the benefit of this more comprehensive construction.

But they want the tariff "so adjusted as to prevent unequal burdens, encourage active industries at home, and afford just compensation to labor, but not to create or foster monopolies." Sir, if the tariff is doing all these things now, it does not need to be adjusted. But they say they want it adjusted. The clear inference is that the tariff is not now doing these things; that it does not encourage active industries at home; that it does not afford a just compensation to labor, and that it does, at this time, create and foster monopolies. If this be so, why not adjust it? Why not try? Why delay so good a work? If delay arises, why not clearly prove that it is the fault of the Republicans? Sir, we have an intimation from the gentleman from Pennsylvania [Mr. RANDALL] as to when he is willing to begin to keep this pledge about a pressing current matter. In his speech in this House upon the 5th of May, 1882, he said that if he had his way the tariff should not be touched oftener than once in ten years. Since that time we have the confessed breach of faith of tariff reform and reduction arising from the Tariff Commission. That change, falsely so called, went into operation in 1883. The gentleman from Pennsylvania has been the steady advocate of resting upon that "change" and "adjustment." Hence we are to conclude that he would not touch the tariff until the expiration of ten years from July 1, 1883. That would be July 1, 1893. Yet he says now that he wants the tariff "adjusted." Is this hot or cold? It is neither hot nor cold. What conclusions are the people to draw from such talk as this? Mr. Chairman, the people are honest, they are earnest, they are sensible, and I leave them to draw their own conclusions.

But, sir, we are not wholly done with this remarkable platform. Sir, after favoring an adjustment of the tariff for all the purposes I have quoted, a plan of action is proposed. As a close and logical proposition I commend it to the consideration of this House and to that of the country. They want the tariff adjusted so as to accomplish many things not now effected, "and to this end we favor the abolition of the internal-revenue system and taxes."

They are going to change the organism of the tariff right now by abolishing the internal-revenue system. Sir, the doctor is going to cure your sickness by performing a surgical operation upon another man.

What stuff is this? What faith can the people have in such practitioners? Can it be possible that gentlemen can so delude themselves? Can it be possible that the poor, monopoly-ridden workmen and miners of Pennsylvania, now killing each other with guns and clubs in their desperate competition and struggles for work and for bread—can it be that they are so benumbed by starvation and oppression as to be imposed upon in this way? Is their reason dead? Is their manhood starved out of them? Such may be so; but if it be, let us take time by the forelock and spread this agitation, before our people too are ground entirely into the dust by heartless class legislation, now hard enough to bear, pampering a selfish and an insolent few, and we will adjust the tariff by adjusting the tariff, and not by touching something else and letting the tariff alone.

Sir, when the contest for the Speakership was pending the idea was

abroad that the difference between the two leading aspirants was only one of degree, and not a very great one at that. I had little faith in all that then. I have less now. It seemed that it was only a question of discretion as to when and how tariff reform should begin, and I for one hoped the declaration of the sense of the Democratic party in that contest would secure a graceful acquiescence in that expression of discretion and of policy that the majority might indicate. But such did not prove to be the case. There were rumors of stubborn dissent, and those who had in charge the tariff and revenue question did not think it expedient to try to materially adjust the tariff, but they framed a bill designed to reduce the surplus revenue, leaving the general structure and arrangement of the tariff about as it was. This was a very great compromise of what the majority considered was best for the country and best for the party. The action in caucus proved that the decision of the result of the election of Speaker had not finally settled the question of policy. This fact alone justified the framing of so moderate a bill as the one we have under consideration.

But, sir, the question of policy was decided by the caucus as it had been indicated by the election of a Speaker. All platforms had spoken clearly in favor of a reduction of surplus revenues. This bill proposes almost solely that. I have no apology for those who restricted us to this. Yet we still have assurances that the minority will not submit upon a pure question of policy—if we take them at their own words—to the decision of the majority; nay, to that of a two-thirds vote of their own party. The logic of this is that those who fail to go with their party refuse to do so simply upon a question of policy. Their allegiance does not cover even a question of discretion. I submit that this is a poor exhibition of party loyalty, the poorest that can be imagined, and I trust it will be so considered by the country and by those of our friends who may be the victims of the piques and errors of others.

Many of our old comrades have even gone so far as to refuse to vote for the consideration of a bill thus indorsed in principle by themselves and thus formally indorsed in principle and policy by the committee and by the caucus of their own party. They have even tried to deny this bill a hearing. Mr. Chairman, these things are too new, they are too unprecedented to me for me to comment upon them.

In support of conduct of this sort gentlemen can not cite their platforms, and they need not cite the views of the fathers of the Republic. All of these but commit them to what they profess they want and to what they refuse to do. None of them justify you in refusing to keep or in refusing to try to keep your pledges. None of them justify you in bolting your party, in making a breach of party discipline in violation of your pledges, in violation of what you have professed to want, upon some idle and fanciful question of discretion and of style. The people will understand this. They have ordered a great work to be undertaken, and if those of their Representatives here who are seeking to do their duty should now be foiled, we shall go back to them clean-handed and undaunted, explain to them how we have been encumbered by those who will not stand by our colors, who do more for the common enemy in this cause than the enemy can possibly do for himself, who are here only to get position and to oppose the faith and policy of the party. We will carry the cause to Chicago and to the hustings, and, reinspired by contact with the people, presenting an issue and a devotion worthy of their confidence and respect, we will return to this Hall willing to grant, but not having to ask, terms of the lovers of monopoly. The people of our country are too great for revolution, and they are also too great and too sensible to long remain the victims of deception and oppression.

But, sir, let us look at some of the arguments employed by the minority of about one-fifth, the bolting Democrats here, as an explanation of their refusal to submit in the matter of discretion and policy to the decision of the great majority of their party associates. As we have lost all faith in their desire to "adjust the tariff," we present substantially only the proposition to reduce the surplus revenues. Upon this point they have ever clamored. The way they meet it must be the test of their sincerity. We have made every possible compromise and overture consistent with honor and with the slightest semblance of fidelity to the people to reconcile them, and to get them to show that they value the party and the pledges they have made more than they do the extreme high protection which they have ever pretended to denounce but never ceased to work for.

They say they would reduce the surplus revenues by repealing the internal taxes. "Practical statesmanship" has ever been a favorite expression with those gentlemen. I suppose that means something that will work. If a matter will not work, I suppose it is something worthy only of the "doctrinaires." Very well; how does this proposition to repeal the whisky tax work? You have the decision of the caucus of your party upon the question, where it was overwhelmingly defeated. A further test has been made. A resolution testing the question was submitted to the House only a few days ago, and the vote in favor of it was only 33 in this House of 324 members.

Will that work? Will it work in the Democratic party? Do even the Republicans dare at this time to let it work? It is true that the Republican party presents the only hope and refuge for those who propose to persist in the fight for this plan and idea. But if you want and intend to reduce the surplus revenues now, you clearly must do it by some other means than that. You have filed and made plain your preference of a plan. The responsibility of a compromise of the perfect symmetry of your theory is lifted from you by the decisions I have cited. You can not do it that way now in either party. You can not do it ever in any but the Republican party. Then to persist in that plan, and to refuse to co-operate in that which has been adopted by your own party, is to demonstrate that you propose to carry your "practical politics" and your "practical statesmanship" either into the Republican party, or else to cling to your "doctrinaire" theory by flocking off into a third party, celestial and alone, with free whisky as your beverage and with Bacchus as your god. This idea can not suit the people, and this defection will not long delay the great cause of reform.

I will not discuss the merits of the question of repeal of the internal taxes now. I have only sought to speak of it as it relates at this time to the proposition of supporting this bill. Upon this point the court and the jury have decided in our favor, and there for the present we can let the case rest. When the case comes up again, and upon its merits, I hope to discuss the merits, and to get a decision as ringing and conclusive as that we have just received.

But they say they want to get the Presidency first, and then they will reform the tariff and reduce the surplus revenues. That, Mr. Chairman, will be molesting the tariff more often than "once in ten years." That will not, I hope, be deferred until 1893. Yet, if this policy is pursued, I think it will defer our accession to power much longer than 1893. But this question also is simply a question of policy, and unless gentlemen have some ulterior point in view, or else are utterly at variance from all that is accepted as due to party fealty and to party discipline, as the only known means of advancing, in a free country, the public weal, they will submit to that decision as to policy upon which the great majority of their associate representatives have formally agreed.

It is hardly necessary, sir, to argue as to the folly of such a course. It is hardly necessary to show that the burden of proof rests upon the plaintiff. Most men know that those who would sneak into power are not worthy custodians for power. If we simply say, "Turn the rascals out," echo retorts, "Keep the rascals out." Those who are afraid of their principles have got no principles. The opposition may be unworthy, but we must prove that we are less unworthy. This can not be done by fanaticism upon the one hand nor by duplicity and double-dealing upon the other. All this has been fully and formally gone over; and those who are oblivious or impervious to it, and who persist in bolting their party upon mere questions of policy or of style, are either like Ephraim—given over to the folly of their idol—or they have deep, ulterior purposes, which even kisses can not disguise from us or from the people. If there be such as the latter, I trust they may get their reward but with it its full concomitant of disappointment and remorse.

Again they say that "this is the first step," and that "the Democracy mean ultimate and absolute free trade."

What platform advocates direct taxes for revenue? What thinker of our party, ancient or modern, has ever advocated it? What platform has ever failed to advocate "a tariff" for revenue? The effrontery of such a charge is only equaled by the objection to vote for this bill because it is a first step. You say that you yourselves want to "adjust" the tariff and that you are opposed to "protection for the sake of protection." If that be so, are you not willing to take the "first step?" No; and those who are not willing to take the first step would not be willing to take the second step, and those who are never willing to take the first step do not want to take any step, and it is very well for this fact to come out plainly now.

Some object to this bill upon the ground that the proposed reduction of taxation will not result in a reduction of the revenue. If that be the objection, it is astonishing that they can not yield their doubts about so trivial a matter to the assembled and expressed wisdom of the great majority of their party. A careful estimate, made by an expert of the Bureau of Statistics, Mr. Evans, shows that the reduction of revenues under this bill will exceed $30,000,000. No effort or calculation is made to refute this further than bald assertion. But grant, for the sake of the gentlemen who urge this plea as their reason for not standing by a party measure, that the reduction of taxes will not reduce the revenue receipts, and then where do they stand? They are then contending for taxation for some other purpose than revenue with incidental protection. They are contending for taxation above the revenue point, to a prohibitory point, and for what? It can be for nothing else than for protection. That is taxation for protection with incidental revenue. That is "protection for the sake of protection," which Mr. RANDALL emphatically stated, in his speech of May 5, 1882, he was opposed to, because, he said, he "doubted" the constitutionality of it, and because it built up monopolies. We did not need for him to enlighten us as to the facts, the character, and the results of such a practice; but we do need now and the country needs and you yourselves need that some explanation be given of your present support of "protection for the sake of protection." You confess by that argument that you now favor protection for the sake of protection. This bill you confess would reveal that condition.

Another objection urged is that this is a horizontal bill. If that "style" does not suit you the caucus takes the responsibility off of your shoulders. This is, indeed, the best preliminary test in all things of where the revenue point is.

But you say it is a new method of treatment. The first change in the tariff, that urged by Mr. Hamilton before the dawn of this century, was a horizontal change. Under the compromise bill of Mr. Clay in 1833 there was a horizontal reduction of 10 per cent., the same in 1835, the same in 1837, and by 1842 the same. In 1861 the framework was fixed to suit the manufacturers. That was what they had set the country on fire to get, and that was the beginning of that great system of transposition of wealth earned by the many into the pockets of the few, and of our millionaire, I may almost say of our billionaire, era. Enough passion was stirred and enough of trouble and complications were brought about to keep the people from seeing the main purpose of that system until now the coffers are full, the great centers of trade are bursting with wealth, while the other parts of the country and the great mass of our people are of course in a correspondingly hard and depleted condition. This was all designed and obtained. I will not dwell upon it at this point. My present purpose is to prove that gentlemen have no ground to stand upon when they bolt their party upon the plea that a horizontal treatment of the tariff is new. I need not discuss why the horizontal plan was adopted; I need simply to prove the fact here that it is not new.

These gentlemen urge no reason now why it should not be adopted except that it is new. In 1865 there was a horizontal increase of taxes upon domestic manufactures of 20 per cent., and a corresponding increase was made for the double purpose of revenue and of compensatory protection upon imports. The tax on domestic manufactures was decreased horizontally 20 per cent. in 1866, and it may be well to add that the compensatory protection was not decreased, and it has not been to this day, save the small, and, as I will show further on, delusive reduction in 1883 of less than 6 per cent. In 1872, under a pressure that I need not now dwell upon, and a false pretense, there was a horizontal reduction of the tariff of 10 per cent., only to be followed three years afterward, in 1875, by its restoration. So this method of treatment, Mr. Chairman, is not new. Gentlemen may say it is new, but nobody will believe it. They may say that that is their reason for not supporting this bill now, but nobody will believe that. They may say that that reason justifies them now in bolting the Democratic party, but nobody will believe that either. They will believe none of these things if my poor voice can get the facts before the people.

I need not further enumerate the objections urged by gentlemen here. I have enumerated the principal objections. The others are of the same sort, only, if possible, weaker. Those who persist in taking refuge in such flimsy objections would deserve better of public opinion if they came out frankly and said that they may love the Democratic party much, but that they love protection more; that they are not willing to follow the Democratic party in the great work it resumed in 1876 and is now fairly warmed up to. That would be manly. It would command respect, if not approval. It would be free from equivocation. All men respect a man who follows his convictions of principle and duty, let them lead him where they may. But we can not understand a man's seeking public place with the certainty or purpose of occupying an equivocal position. It will not long continue to be equivocal in the public estimation. If gentlemen desire to do what their platforms promise, or to do any part of it, they must know that if this bill passes to the stage for amendment they have every opportunity to incorporate their views upon it; and should they fail to succeed, they then have the opportunity of voting against the bill and of defeating it at its presentation for final passage. It seems to me that that time would surely be early enough for any Democrat to bolt his party and to affiliate with the opposition, without rushing thus early into their arms. Even appearances are worth something except to those who want to treat their own party and pledges with contempt.

Mr. Chairman, I might have spoken of the talk that we can not do anything on account of the Senate and the Executive being Republican. But, sir, as that involves the supposition that the other branches of the Government will not keep the faith, it is a violent, gratuitous, and discourteous assumption upon the part of those who refuse to test them. I will embrace this in supporting the proposition that the Democratic party now occupies a vantage ground that commands the present field of political battle, and which the threatened bolt of some of its members may cause us to lose. I will review the Republican record as respects the ground covered by this bill before I close this part of the subject.

The Republicans could not inspire a policy more in consonance with their political interests than that of our letting the tariff alone for "ten years," or, for that matter, for one year, and thereby attempting less than they themselves are pledged to. I only trust that, should we lose the fight on this bill, we shall still show at Chicago that we do not mean to retreat from the position we resumed at Saint Louis in 1876 and have maintained ever since. In considering the proposition I have enunciated, we must take a look at the terms and conditions upon which the present tariff was enacted, which embraces the pledges of the Republican party, and also the extent to which the condition of trade conspires for the success of reform.

Sir, when a protected industry is favored by natural conditions it soon reaches a point when it can go forth in open competition with the world, and at a later period it reaches a point where its own interests require that it shall be permitted to go forth and compete with its rivals for the trade of foreign countries. It starts in infancy. It acquires the vigor and training of additional years, and can be readily weaned from the Government bottle. Later than this and it has acquired all the characteristics of manhood. At this stage it must go forth, or else it finds the local browsing inadequate for the support of its expanded growth, and it begins to collapse into an enervated and depressed condition of little profit to itself yet crushing to others.

This point is reached when production has grown equal to consumption. Prior to that, while it weakens others it enriches and strengthens itself. After that, it begins to fall back upon itself. Everything then becomes a sort of makeshift and patchwork. Overproduction is the constant recurring evil, and failures, lockouts, and strikes become the order of the day. Sir, with many of our industries this danger line was fairly reached, as I have said, in 1873. Vast accumulations of capital had helped to cause the building of an unprecedented extent of railroads. Overproduction had filled the warehouses with surplus goods, upon which the banks made loans to continue production with, when suddenly the canvass became rent at a weak point and the truth was revealed. That was the time to begin to unload protection upon certain industries (I speak now especially from the protectionist standpoint) and to pay especial attention to the building up of foreign markets.

But it is notorious that people in a given pursuit accommodate themselves to changed outward conditions affecting their business very slowly. Production was stopped. Armies of tramps were turned loose upon every part of the country, poor hungry fellows, first seeking work, afterward begging bread. Foreign markets were not opened up. Trade was not liberated and liberalized. Home consumption alone, the old well-tried bridge, as they still call it, was relied upon. We all remember how slow our recuperation was. The surplus was slowly consumed, at prices approximating what we ought to have had all along, yielding a less royal profit to the proprietors, and six years afterward we had the fine crop of 1879, a scarcity of manufactures was found to exist, and then the "boom" of 1880 began.

Old protective prices were realized again, the consumers giving up their hard-earned money for the desirable things of life at double the just and proper prices. For some years we have been blest with good crops, and until now Europe has needed our surplus food at prices that enabled us to go on making millionaires and still to live ourselves. There has been more or less friction at times, and now we are at the end of our patched-up tether again.

Mr. Tilden saw the true state of things, and he sent our grand platform of 1876 to Saint Louis. He made but one mistake. He underrated the delusion of the people. He thought the monopolists were as wise as he was, and that they would begin to throw overboard their Jonahs. He failed to remember that a failing cause seldom compromises. Charles I lost his head. James II lost his crown. Louis XVI went to the guillotine. The South lost all it had invested in slavery.

But we are more conservative now, all of us. We do not eat as much fire as we used to. We do not denounce the Constitution as we used to. We are reaching the William and Mary age. At least we are passing Charles II, if we do pass it. We are waiting for the repeal of the "corn laws." The roundhead and the cavalier have fused into a homogeneous whole. Wrongs at home are not like wrongs from abroad. Brothers quarrel now, but they do not fight. But people learn by experience and they learn by discussion. What the manufacturers failed to do in 1873 they are many of them seeking to do now. In my humble opinion the protectionists are in an astonishing condition. They are committed fast and strong to protection for the sake of protection, and are threatening to commit themselves to the infidelity of opposing what is involved in this bill, and yet if they win they will have to inaugurate reforms in many repects far more radical than that proposed by this bill.

The time has come when they will have to camp after us, unless we retreat and deliberately take position in their rear. They will not revise the tariff in a way fair to consumers. They will seek to sell their surplus abroad and still, by prohibitory laws and combinations among manufacturers, continue to plunder the people at home. The ripe occasion has come for us to deliver successful battle from our position of just treatment to both producers and consumers. Shall we abandon this position now? Shall we or any of us handicap our own party and play into the hand of the other?

What I have said of the general condition of the country is especially true of the East. The Eastern States have a sufficient plant in manufactures to supply our whole country. But the position of raw materials and the differences in freight rates have caused establishments to be erected in the West and in the South which largely supply all the wants west of the Alleghany and the Blue Ridge Mountains. We buy cutlery of Connecticut and some boots and shoes of Boston, but nine-tenths of our steam-engines are made in the West, and as we increase the shipments of dressed meats from our stock farms we prepare our hides where the oak grows and make more boots and shoes and other things in Cincinnati, Chicago, Saint Louis, Louisville, Little Rock, and other cities. Our reapers, plows, carriages, wagons, gin-stands, jeans, coarse cottons, and a thousand other things are now supplied to us more cheaply near home than the East can or does do it. In 1880 California had $61,000,000 of capital invested in manufactures, Georgia had $20,000,000, Illinois had $140,000,000, Indiana had $65,000,000, Iowa $33,000,000, Kentucky $45,000,000, Kansas $11,000,000, Michigan $92,000,000, Ten-

nessee $20,000,000, Alabama $9,000,000, Missouri $72,000,000, and so on I might enumerate. But we have much more now than we had then, and we are growing with our growth, and as we float down the Mississippi and build railroads to Mexico we will come in under the new treaty and sell our surplus to that growing empire.

What are you going to do with your surplus? What entails a loss on you affords a good profit to us. We want a greater freedom of trade, and then in cotton goods, in the products of iron and of wood, as well as in food products, we will command the principal markets of the world. But we can get along without it longer than you can. Where are the strikes and the lockouts at this time? They are east of Pittsburgh, and not west or south. Thus, Mr. Chairman, we see that the condition of business forbids the policy of retreating from our righteous position.

Looking, then, at the industrial situation, what answer should we give to the question as to where a reduction of taxes should strike at this time? The answer is, the tariff. Of course the Democratic party, the party of the great mass of consumers, would always say the tariff, until it is reduced by proper steps to a strictly revenue basis.

But then let us look at it from the ordinary political standpoint and see with what conscience even the Republicans can refuse to let the tariff be reduced at this time to the Morrill basis of 1861. If they are untrue to their pledges and wrong, then let us fasten that fact upon them and take an appeal to the country upon the approaching ides of November.

As I have said, in 1861, with war on hand and with the low-tariff Democrats out of Congress, the Republicans arranged the tariff under the Morrill bill so as to provide a great revenue, and with it all the protection that the protectionists said they could ask. The adjustment was made by themselves to suit themselves. They knew that up to the point where production equals consumption a high tariff is the sweetest thing, the most convenient and respectable form of slavery ever practiced upon a people, and the most enriching process conceivable to the proprietors. But the demands for additional revenue soon arose, and every conceivable form of internal taxes was laid. Among these taxes there was a direct tax amounting to as much as $128,000,000 a year laid upon the manufactured products produced in this country. This, of course, correspondingly diminished the protection that had previously been granted. Hence what was called a compensatory increase of the import tax was laid at the same time. It was a solemn agreement that this increase was only temporary, and that it was to be repealed, like and like, as the direct tax upon the home products of manufacture should be taken off, and until only the former but still "bonanza" basis of the Morrill tariff of 1861 should be reached.

Now, have the direct taxes of $128,000,000 a year been taken off of the domestic manufactures? They have, long since. Has the "compensatory and temporary increase of the tariff" been correspondingly reduced back to the Morrill basis of 1861? No; it has not. Has any part of it been taken off? Practically, no. For the tariff was ingeniously laid so that certain duties were far above even the necessary prohibitory point, and those items could be, and in 1883 they were, reduced so as to make things look like there had been an average reduction, when in fact even those items were still left at a point practically prohibitory, as I will show, while the tariff was made even higher, in the professed reduction, upon those items which were not already taxed to the prohibitory point, and which are consumed by the plain people of the country.

Thus the tariff by the law of last year was reduced less than 6 per cent., instead of 25 per cent. as promised, and the reduction was so placed upon items as had previously been prepared for some such contingency and cheat and so increased upon such articles as woolens, &c., as to make it higher to consumers, as I have said, than it had ever been before.

Now, let us first look at the record as to this agreement, and be it remembered that the present bill has a condition in it that no reduction shall go below the rates fixed in the Morrill bill of 1861, the point to which even the Republicans promised it should go long since, and then let each Democrat answer to himself the question why should not the reduction of the surplus revenue take place on the tariff at this time and late day.

Upon June 2, 1864, when these additional taxes and this additional protection were being piled up, Mr. MORRILL, the Republican leader and spokesman in that business, said:

> This is intended as a war measure, a temporary measure, and we must, as such, give it our support.

Again, June 28, 1866, under like circumstances, Mr. MORRILL said:

> The present bill is not likely to suit everybody, and I regard it as only a temporary measure, fit to be introduced because of the imperious necessities of our present condition.

Mr. ALLISON, in his very able speech in this House on the 24th and 25th of March, 1870, said:

> I desire to call the attention of the committee to the growth of the present tariff. In 1861, at the close of the Thirty-sixth Congress, the policy of the Government was changed by the passage of what was called the "Morrill tariff;" a tariff prepared in the interests of protection, and distinguished from the tariff of 1846 and of 1857 by the imposition of heavy duties upon articles manufactured in this country, and by admitting free of duty many raw materials used in such manufactures. This tariff was modified twice during the year 1861, for the purpose of increasing the revenue, but upon leading articles remained substantially the same until July 14, 1862, when a thorough revision of the tariff of 1861 was made. By this revision the tariff was increased generally to compensate for the internal-revenue tax, and upon a few articles for the purpose of increasing the revenue. Mr. Stevens, in debate, said that the principle adopted was the one that was mentioned when the tax bill was under consideration, namely, the additional duty was fixed, as nearly as possible, at the same rate as taxation, except in a few cases, where necessary to correct errors in the present tariff.
>
> * * * * * * * *
>
> Mr. Shellabarger, then a member from Ohio, rose in his seat and asked Mr. MORRILL if there was any increase of duty over and above the tariff of 1861, save and except the compensating duty made necessary by internal-revenue taxes. Mr. MORRILL said in reply that there was no increase except for that purpose, or for the purpose of revenue upon articles not produced in this country.

Mr. ALLISON added:

> At the close of his speech Mr. MORRILL made this pledge:
> "This is intended as a war measure, a temporary measure, and we must give it our support as such."
> Again, he speaks of it as "a war measure, imposed by the necessities of the Government, the scarcity of laborers, and the enormous direct taxation."

And further on in that speech Mr. ALLISON said:

> This large internal-revenue tax was made the excuse and the cause of the advance of the tariff of July 14, 1862, and June 30, 1864. I quoted the language yesterday of the then chairman of the Committee on Ways and Means in 1862, Mr. Thaddeus Stevens, himself a protectionist, and certainly in favor of the protection of the great interest of Pennsylvania, iron. He made a pledge upon this floor in 1862 that those additions of duties upon manufactured articles imported in this country were made necessary because of the internal-revenue taxes. Both he and Mr. MORRILL, subsequently chairman of the Ways and Means Committee, declared that the act of June 30, 1864, was a temporary measure, a war measure, and was not intended as a measure which should remain upon the statute-book as a protective tariff in the time of peace.

Then yielding the floor for a moment to Mr. COX, who had been a member of the conference committee of the two Houses, that gentleman said:

> I desire to say, in addition to what has been said by the gentleman from Iowa [Mr. ALLISON], that I was on the committee of conference upon the tariff of 1864. The reason why that conference report was made as it was made, the reason given by Mr. MORRILL and Mr. Fessenden, was that the internal tax had been raised, but that the moment that tax was reduced they would be in favor of reducing the custom duties. That was understood when the report was made upon the tariff of 1864; it was one of the conditions leading the conference committee to report that measure.

Then Mr. ALLISON resumed the floor and said:

> It is admitted by all that the increase of the tariff was commenced and carried on upon the basis of the protective duties of the Morrill tariff of 1861; the increase of direct taxation, added to the price of domestic manufactures, rendered an increased tariff necessary in order to prevent our country being flooded with cheaper foreign productions. Certainly, then, upon the decrease of internal taxation the tariff may be, and ought to be, decreased in proportion, the danger being no longer in existence which was sought to be averted by these increased duties.
>
> But I may be asked how this reduction shall be made. I think it should be made upon all leading articles, or nearly all; and for that purpose, when I get the opportunity in the House, if no gentleman does it before me, I shall move that the pending bill be recommitted to the Ways and Means Committee with instructions to report a reduction upon existing rates of duty equivalent to 20 per cent. upon the existing rates, or one-fifth reduction. Even this will not be a full equivalent for the removal of all internal taxes upon manufactures. It will not be difficult to make a reduction upon this basis.

Now, as to the amount, again, of the direct tax, long since all repealed, to offset which the present compensatory or equivalent tariff duties still retained were laid, I quote from the same speech of Mr. ALLISON. He said:

> The total of this domestic tax amounted in the fiscal year 1865–'66 to the enormous sum of $310,000,000; and upon domestic goods alone to the sum of $128,226,784.

All of this domestic tax of over $128,000,000 has long since been repealed.

This has nothing to do with the cotton tax of 2 and 3 cents a pound. This was maintained against a large class of our agriculturists in plain violation of article 1, section 9, clause 5, of the Constitution, which says:

> No tax or duty shall be laid on articles exported from any State.

I hope to live to contend for that tax to be repaid to the States. It is due to the honor of our country.

Here we are refunding taxes every day upon whisky and tobacco that may be exported, if any tax may have been paid on the tobacco, instead of its being taken out of the warehouse, and yet not a cent of the same sort of tax has ever been refunded upon cotton. This, too, was kept up for the manufacturers in large part, but for sheer shame it had to be stopped.

In addition to these repeals in their favor we have had the free-list on raw materials largely increased or approximated, they the while not abating but actually increasing the protection.

But let us look at some still later utterances about the "compensatory" part of the present tariff. Mr. MORRILL, on May 9, 1870, said:

> At the same time it is a mistake of the friends of a sound tariff to insist upon the extreme rates imposed during the war if less will raise the necessary revenue.

How must this sound to those who object to the present bill upon the ground that it will not reduce the revenues and that this bill is unjust to manufactures? And in the same speech he says:

> Whatever percentage of duties were imposed upon foreign goods to cover internal taxes upon home manufactures should not now be claimed as the lawful prize of protection when such taxes have been repealed. There is no longer an equivalent.
>
> * * * * * * *
>
> Protection has here no legitimate claims, and it may be taken off whenever direct taxes are repealed and less revenue is desired.

It was under some sense of obligation to the people that at that time, 1870, a reduction of the small extent of 10 per cent. was made in the tariff. This was only a very partial keeping of the pledges that had been given. The love of money was stronger than every consideration of humanity and of honor. Only this much was done, and even this was not permitted to stay done, for in 1875 the 10 per cent. was restored back to the tariff and to the manufacturers, as I previously stated.

But, sir, the popular outcry at this causeless restoration of the 10 per cent. to the tariff, when there ought to have been an additional step taken toward the tariff of 1861, caused the Republicans and other protectionists to see the necessity of some show being made of a reduction. The Republicans had more faith also in the professions of the present bolting faction of the Democratic party then than they have now. At this time that faction is their only hope of saving them from having now to keep their own pledges.

I repeat, it is gratuitous for any one to say at this time that we can not frame a bill that the Senate will pass, committed as the Republicans are by pledges, urged as they are by their own Executive to reduce taxes and to reduce the tariff, and assured as they are that the act of last year is a failure as respects the reduction of either tariff or revenue, so ingeniously was it contrived for the purpose of failing in both particulars.

But what did the Republicans next do? They had conferences everywhere respecting their perils and the order in which they would agree to keep the faith. Then, upon the 7th of May, 1878, they were represented by their chosen spokesman, Hon. N. P. Banks, of Massachusetts, a member of the Ways and Means Committee of this House, and he said:

These papers which I hold in my hand bear the official signatures of the authorized representatives of one hundred and twelve manufacturing corporations and firms of New England, in which they themselves suggest and consent to reduction of duties upon an extended and complete list of articles of foreign manufacture which come actively and directly in competition with the industries in which they are engaged, rising from 10 to 20, 30, 40, and 50 per cent. upon the present schedule of duties upon such importations. More than a hundred and twelve corporations and firms of cotton and woolen manufacturers alone, of their own choice, and after repeated conferences, in which all the interests of the textile fabrics of this country were considered, high and low, made this proposition. * * * As it was with the cotton manufacturers, so it was with the woolen manufacturers. They consented to and in a certain sense recommended, as of their own accord, a reduction of duties of from 23 to 25 per cent.

* * * * * * *

Mr. HOOKER. Will the gentleman allow me to ask him why these interests asked a diminution of the tariff?

Mr. BANKS. Because their attention had been called to the subject. It was their duty to make known to the Government what they desired. They found when they brought their representative men together from all parts of the country that the duties could be reduced and they could still pursue their vocations with more or less success, and like honest and honorable citizens they made that declaration to the Government. And so did the wool-growers, from California to New England. They assembled in the State of New York for the same purpose, and after long and anxious conference one with another and with the woolen manufacturers they agreed, as did the silk manufacturers, to what extent they would recommend a reduction of the duty.

It was all appearance and deceit. How stand the wool-growers of California and elsewhere now? How stand the manufacturers? They said they could stand more then than is asked now, and protection was only asked for infancy. What has become of the patriotism and of the "honest and honorable citizens" who then spoke? They did nothing then and they refuse to do anything now, because they vainly think they can still afford to defy and deceive the people, and by combinations to limit production to continue to let the workmen starve on half-time work, while the proprietors continue to rob the people out of double prices.

And so things went on until President Arthur and others became alarmed at the suffering and mutterings of the people, and in his message to Congress of December 6, 1881, the President said:

In view, however, of the heavy load of taxation which our people have already borne we may well consider whether it is not the part of wisdom to reduce the revenues, even if we delay a little the payment of the debt. It seems to me that the time has arrived when the people may justly demand some relief from their present onerous burden, and that by due economy in the various branches of the public service this may be really afforded.

Forced expressions like this gave rise to another pretense and humbug show at reduction and reform. Hence we had the fraudulent Tariff Commission, made up of manufacturers and of representatives of protected interests, six, I believe, out of the seven, and they went through a great show and recommended a one-sided reduction; but so conservative is this bill that it actually does not reach further than the measure proposed by that commission would have gone. But we are invoking certain supposed moral forces to compel some Republicans and the Democratic protectionists to help us take at least a small, meager first step in this direction.

The commission's report was not adopted. The whole thing was only for delay and appearance. Congress then resumed its control of the tariff, adopted a revision that raised the real burdens still higher upon the people, and that is now pronounced by the Secretary of the Treasury a complete and a consummate failure in all that even the Republicans promised from it.

Such treatment of the people and of the public interests is all the more shocking when we contemplate the sentiments from the President in his December message of 1882. He said:

I heartily approve the Secretary's recommendation of immediate and extensive reductions in the annual revenues of the Government. It will be remembered that I urged upon the attention of Congress at its last session the importance of relieving the industry and enterprise from the pressure of unnecessary taxation. It is one of the tritest maxims of political economy that all taxes are burdensome, however wisely and prudently imposed. And though there have always been, among our people, wide differences of sentiment as to the best methods of raising the national revenues, and indeed as to the principles upon which taxation should be based, there has been substantial accord in the doctrine that only such taxes ought to be levied as are necessary for a wise and economical administration of the Government. Of late the public revenues have far exceeded that limit, and unless checked by appropriate legislation such excesses will continue to increase from year to year. For the fiscal year ended June 30, 1881, the surplus revenue amounted to $100,000,000; for the fiscal year ended 30th of June last the surplus was more than $145,000,000. The report of the Secretary shows what disposition has been made of these moneys. They have not only answered the requirements of the sinking fund, but have afforded a large balance applicable to other reductions of the public debt.

But I renew the expression of my conviction that such rapid extinguishment of the national indebtedness as is now taking place is by no means a cause for congratulation; it is a cause rather for serious apprehension. If it continues, it must be speedily followed by one of the evil results so clearly set forth in the report of the Secretary.

Either the surplus must lie idle in the Treasury, or the Government will be forced to buy, at market rates, its bonds not then redeemable, and which, under such circumstances, can not fail to command an enormous premium, or the swollen revenues will be devoted to extravagant expenditure, which, as experience has taught, is ever the bane of an overflowing Treasury.

It was made apparent, in the course of the animated discussions which this question aroused at the last session of Congress, that the policy of diminishing the revenue by reducing taxation commanded the general approval of the members of both Houses. I regret that because of conflicting views, as to the best methods by which that policy should be made operative, none of its benefits have as yet been reaped.

And yet in the face of all this here we are begging some Democrats and trying to shame the Republicans into even considering a measure to reduce the surplus revenues. In the face of all this they say it must not come off of the tariff, where every dollar of tax you take off of the people will relieve them of some $5 of subsidy also, making a total saving to the people of the $30,000,000 or more of tax, plus, say, $150,000,000 of subsidy—nearly $200,000,000 of burden. You would rather take thirty or fifty millions off of the internal-revenue tax, which would lift just that and no more off of the people, where they do not want it taken from, where you know it can not be taken from, by the indicated sentiment of this House and of the country; and you would hold on to your excessive privileges and unlawful prizes, asking the people to stand robbing a while longer, or, as Mr. RANDALL indicates, until 1893, and then you give us another promise. The people must awake! They will get nothing they do not compel. They were not made to be your bondsmen.

One word more about the work of the Tariff Commission and of the act passed last year.

In his report of December last to this Congress the Secretary of the Treasury, after urging and arguing for "a reduction of taxation," after saying, "the question still presses, what legislation is needed to relieve the people of unnecessary taxation?" after warning us of the evils and the hardships to business of our excessive exactions of money from the people, says:

In the recommendations of the President and those of this Department and the action of Congress and in the expression of public opinion there has been substantial concord as to how the needed reduction of the revenue should be brought about. * * * It was conceded by all that a substantial reduction should be made upon nearly all imported articles subjected to duties.

To make a start in the proposed reduction of revenue from imports the Tariff Commission had been created.

In the report of the commission it said:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country.

Then the commission recommended the reduction of the tariff, and said:

Entertaining these views, the commission has sought to present a scheme of tariff duties in which a substantial reduction should be the distinguishing feature. The reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent.

I take all of these extracts from the report referred to of the Secretary of the Treasury.

We know that the Republican Congress did not begin to adopt these recommendations. The protectionists, as usual, quickly repented of trying to keep their promises, of the "generous" offers they had made, and they returned "like a sow to its wallowing in the mire." They discredit their own commission, which I believe they always intended to discredit and were only using as a blind, and adopted a bill last year that professed something, but which we knew was false and bound to fail, and that would increase the burdens upon the people; and now the Secretary says of it—for the truth must out—even in six months after its adoption, that the "calculations have not been verified."

And again he says:

Shall we seek again for that reduction which was not attained?

And again he says:

There was a general agreement that a substantial reduction of the tariff should be made.

And again he says:

The actual results so far attained indicate that the reduction labored for has not been effected by the new tariff act.

"Labored for" by whom? Not by the Congress that passed the act. It may have been labored for by the commission, who, not appreciating

the ridiculous part they were called upon to play, protectionists though they were, may have vainly thought that the protectionists generally were going to stand by their "general agreement." The expression is a good piece of irony upon Congress or upon the commission or upon both, for perhaps only the Secretary has been duped.

Again the Secretary says:

It can not be assumed that the estimated surplus for the current and next years under existing laws will remain at the same rate in succeeding years. The increasing population and swelling business of the country will add to rather than take from the amount of the surplus as now estimated, while the decrease of amount on the public debt, and probably of the amount disbursed by the Pension Bureau, as arrears of pensions are paid off, should diminish expenditures.

Here, then, Mr. Chairman, is the situation from this point of view. In the light of all this some Democrats ask us not to keep the "general agreement" of the Republicans, and not even a part of our own solemn pledges. Here is surplus piling upon surplus, and the amount being still more heaped up by the retrenchments of the Committee on Appropriations; and what are we going to do about it? Mr. RANDALL and his committee do well, of course, to retrench expenditures; but do we not see that we must the more imperatively provide for reducing the surplus revenue? This is "practical statesmanship" with a vengeance.

I will do my part, as an American, to the best of my humble ability to make this all plain to the people. I want them to scan well this long line of violated faith, to judge men by their protracted actions, and if they want the surplus left in their own pockets and the tariff burdens reduced, then they must send men here who do or who will work for those ends, and not those who have been and who now are working against them, and who bolt their party upon the first step toward the accomplishment of a small part of what they are solemnly pledged to.

Sir, I have often visited the last resting-place of Henry Clay, and I have stood by his sepulcher, reflected upon his policy, and upon the high spirit of his life. I have thought that his compromises had perhaps better never have been made. I do not know. His gift of his children did not sufficiently check the rapacity of the pursuing pack to enable his people to reach a place of safety. But, as I have gazed upon his sarcophagus, this inscription has challenged my unqualified admiration, that "though many years in the public service, he never once attempted to deceive his people." Gentlemen, I submit that for your imitation.

Relief must come. If not given gradually, it will come rashly, a way I would deplore; but I would rather see it come that way than not at all. To concede what is just is the only possible prevention of rashness.

Grant that this margin we cut is a sacrifice, is it "a lawful prize" you give up? Suppose it were a lawful prize, would not the sacrifice now be necessary? What interest can afford to be less liberal and less patriotic, if you please, than another? Let no prejudices be excited by any industry against itself. The next cut will be by selection, and then you want a well-disposed jury to consider your claims as a revenue-producing article. We can raise our revenue without taxing either wool or sugar. The manufacturers and the Republicans want both of them made free. Your only hope in the early future is upon your showing as a revenue-producing article, and then from the Democrats alone will you stand a chance of fair treatment.

Gentlemen have voted against the consideration of this bill, and they have proposed in caucus or introduced in this House none other. I say again that if they refuse to vote for this bill to the point where they can amend it, for if not amended to suit them they can still vote against it upon its presentation for final passage, they will then conclusively show that they are the uncompromising foes of reform, and I trust the issue will be the more sharply drawn in the future; and I repeat that our cry then should be, "On to Chicago!"

Mr. Chairman, in my remarks so far I have tried to confine myself to those matters which rightly pertain to the proposition of supporting the bill we have under consideration. As I have said before, independently of the question of the right or wrong of the tariff, this bill ought to pass, and the time when gentlemen can contend for the "lawful prizes" of protection is still in the future. This is the first step, the next will be the second step. I have tried to show that it will be time enough for gentlemen to oppose the policy of their party when the party opposes the policy that even the Republicans are pledged to, though now they are faithless to it. This is too early, I say again, for gentlemen to be throwing themselves into the arms of the Republican party, unless they wish to show to the country that the majority of the Democratic party is the only organized faith-keeping element in the country, and that they, the bolters, are in the party only to get the offices and to oppose the policy of the party.

But, sir, I do not wish to conceal my desire to take the second step. For my part I would take it now, and I only refrain from the effort in deference to weighty considerations of policy, approved of by the great majority of my party associates.

In this connection it becomes necessary and proper for us to set forth, not only the claims of this bill, but also the general subject of the tariff.

I now proceed from the consideration of the bill before us to that of the tariff itself.

This subject which we call the tariff, and it means taxes, is but a part of our system of Federal taxation; and while the tariff is our principal mode of Federal taxation, yet it has to be considered in connection with the whole system and principle of Federal taxation, to be rightly viewed; and while a tariff system of taxation is in very many respects the best that can be pursued, and it is a system that I never want to see abandoned, yet of all others it is the one that can be most perverted from a blessing to a curse, and that requires the narrowest and the closest scrunity upon the part of the people.

I think it was Turgot who said that "the art of taxation was to pluck the feathers without making the goose scream."

This is a very necessary art in a despotic government like that which Turgot served, and it is equally necessary to those in a free country who wish under the forms of taxation and law to practice all manner of wrongs upon the people.

Sir, the tariff system, with all its possible blessings, has been made in the hands of selfish and designing men a sad illustration in this country of that "art" not simply to procure vast and needless revenues, but also to cloak and obscure the practicing of the most shocking, unequal class legislation. It is by this and by kindred legislation that monopolies have been fostered and produced among us, and I may almost say billionaires have been created, to the oppression of our own people and to the amazement of the world. It is thus that the wealth of our matchless country, produced by the labor of our matchless people, has been steadily turned from the fair distribution that would follow under natural and equal laws to the present vast distortion, while the toilers have been ground down from bad to worse until already we present many of the most revolting aspects of a despotic and decaying nation.

When I see how hand has joined in hand to procure and to perpetuate these inequalities and wrongs—none but the rich enriched—how the passions and prejudices of the masses have been worked upon to divert their minds and to make them the instruments of mutual destruction and of self-enslavement; how God and liberty and humanity and country and honesty have all been made the rallying-cries for gain, thus uniting itself with fanaticism, from, I may say, generation to generation; how all priceless things have been imperiled and good men confused and estranged in the chaos; how the while the web has been carefully and steadily woven; how the pyramids of gold have been steadily added to; how the manufacturers have been subsidized with thousands of millions of dollars that they never honestly earned; how the railroads have been endowed with hundreds of millions of acres of the finest lands on earth, and their bonds indorsed for millions upon millions by a "paternal" Government; how solemn contracts have been violated with the people's creditors by the people's representatives to give advantages to national creditors which have been denied them by solemn agreements and by previous laws; how others, too, have been lifted from the common lot and struggles of life and have been given more money for nothing by the Government upon securities that they in turn would often lend to the people upon the same basis at 10 per cent.—when I consider these things I have sometimes almost despaired of our ability for self-government, and I know not which is the greater, my condemnation of these colossal wrongs or my astonishment at the ability, perseverance, and amazing cunning of those who have practiced and do now practice and maintain them. It surpasses the wrongs and corruption of the age of Alexander, of the age of the Roman emperors, and of the age of the partition of Poland.

Many of these things are past recall. Many of them are not, and some of them are now before us. The system is on trial. I for one, recognizing the vastness of the undertaking which is set before us, but having at heart only the liberty, the happiness, and the true grandeur of our whole and our common country, and knowing that only death can discharge us from the obligations of earthly duty, gird my loins about me and strike hands with those who are ready to strike for the right.

Sir, the origin of this system is calculated to warn us against its abuses. And at every step I wish to refute the misrepresentations of those who pretend to believe that we want to abolish the system instead simply of correcting its abuses, and to refute the equal error that if we had all power at this moment we would reform these evils without regard to the relative consequences. As I understand it we want "reform, not revolution." We want a growth, not a burst; but to have a growth we must not have stagnation. But whence was this system first derived, and what is its meaning?

Worcester defines tariff as follows:

A schedule or table of duties or customs payable to the government on merchandise imported or exported.

Mark the true meaning. It is "duty payable to the government," and not duty or subsidy payable to a preferred class of our people. Yet the present tariff is so arranged that for every dollar we pay the Government we pay perhaps five dollars or more to the proprietors, and to the proprietors alone, of a few subsidized industries. As opposed to this, we demand a tariff only for public revenue, and not for subsidy.

But as to its origin, Trench says:

If you turn to a map of Spain, you wil take note at its southern point, and running out into the Straits of Gibraltar, of a promontory, which from its position is admirably adapted for commanding the entrance of the Mediterranean Sea, and watching the exit and entrance of all ships. A fortress stands upon this promontory, called now, as it was also called in the times of the Moorish domination in Spain, "Tarifa," the name, indeed, is of Moorish origin. It was

the custom of the Moors to watch from this point all merchant-ships going into or coming out of the Midland Sea, and issuing from this stronghold, to levy duties according to fixed rates on all merchandise passing in or out of the straits; and this was called, from the place where it was levied, "tarifa" or "tariff," and in this way we have acquired the word.

Sir, if I may digress to say a word upon an etymological question, I will say that while from this promontory the Spanish got its "tarifa," the Italian its "tariffa," the French its "tarif," and we our tariff, yet the word "tarif" is pure Arabic, meaning in the Arabic just what it means in our present English, but perverted by the robber Moors, just us it has been perverted from Government revenue by the robber protectionists. A legitimate tariff, a revenue tariff, a tariff upon our own people for the sole purpose of providing a public revenue for public purposes, and so placed as to cost the people as little as possible outside of what goes into the public Treasury, is a blessing. A tariff perverted from this public purpose, but designed to so disturb trade as to give to a few people, from the earnings of the many, five dollars or more, where it gives one dollar to the public treasury—this I say is robbery; it is a curse; it is slavery; and those who favored it and now favor it are, and have ever been, the real foes to human rights and to human freedom.

But, sir, it is much easier for us to see the mote in our brother's eye than it is for us to see the beam in our own eye, and hence I will make use of the robbery committed by the Moors to illustrate the nature and the working of our present system. As commerce passed this "custom-house" of Tarifa it proved suggestive to the Moor. He wanted to be "encouraged" and "protected" as he followed the common lot of life, and so he concluded to lay tribute upon those who traded under his observation. Indeed, he cut east and west, while we cut mainly our own people. It was simply a sum of money that he exacted upon merchandise. For a long time the people along the Mediterranean considered that he did no harm or wrong to them as consumers, but that he simply helped them to get even with the bargain-driving merchants.

But this merchandise consisted in large part of the necessaries of life, and by dint of long robbery the people learned that what came out of the merchants ultimately came out of them. The merchants never could let their competition go further than to sacrifice a part of their profits. Under all circumstances the merchant had at least to get back the cost of the goods. What they paid out for tribute at Tarifa was as much a part of the cost price as was the freight or the original cost of the article. The percentage of profit also had to be computed upon a much larger basis than would otherwise have been the case. Thus the matter was compounded upon the consumer.

Another element of the case, and as with us by far the bigger element, was that most of the imported articles were also produced in part by the people living upon the shores of the Mediterranean, inside of the point where this tariff was exacted. With our varied climate, soil, and minerals this is much more the case than it was with the people of whom I speak.

Those people living inside of Tarifa, and who produced some of the articles that were imported, were not slow to learn that they might as well take advantage of the enhanced price of the imported article, and hence they quickly marked up the domestic product to about the full price of the imported article, so as to reap the benefits of the enhanced price.

It is not recorded that they had any increased love for "labor." Nor does it appear that the "laboring man" derived any benefit from ceasing to produce a little more of something that went abroad to produce a little more of something that had previously been imported in exchange for his former products. The truth is those people at Tarifa were disturbing the natural order of trade.

Had trade been left alone the people would have continued to get what they wanted, other than what they produced at home, by exchange, giving in return to foreign nations commodities that could be more cheaply produced on the Mediterranean than they could be produced in other countries. This undisturbed flow of commerce and of exchange would have been a benefit and a blessing to all nations in reach of each other. As soon as exchange ceased to be as cheap as home production respecting any article or particular industry, that moment home production would increase. As soon as home production of a given article ceased to be as cheap as getting it by exchange, that moment the people would begin to conform to the wise and gainful policy of ceasing to produce the article. New wants would arise; new articles of commerce would come into existence, and all proper changes would take place for the best as peoples grew and as their industries grew. But these Moors disturbed the whole natural order of trade. They did not simply seek to get a revenue upon those articles that would least disturb commerce, but they threw a drag-net over all things, just as our protectionists have done, and with such results, apart from revenue, as we are beginning to see.

Sir, abstract reasoning is entirely lost upon some gentlemen here, for they continually assert that a tax upon an article cheapens that article to the buyer, and that a tax upon imports does not correspondingly increase the price of the home product. When asked how it can "protect" the manufacturer unless it increases the price to the buyer, they simply fall back upon assertion. Eminent gentlemen talk this way, and hence I make this childlike demonstration. There is no proposition too absurd for self-interest to evolve.

The immediate result, then, of this indiscriminate tariff, apart from the revenue it yielded to the Moors, was a large profit to the particular growers or manufacturers inside of Tarifa of the articles taxed, and a corresponding injury to the great mass of consumers of such merchandise, including those who labored for the small number of proprietors benefited, for, labor being exempted from duty, it could come in at any time in full supply, and then the laborer got no more, while he nevertheless had to pay more of his same scant wages for the very necessaries of life that he himself produced. This left him worse off than he was before; and this is just the way it works with us.

Now, I repeat that the whole natural order of production and exchange was deranged; and whenever the ultimate day of restoration of this order should be restored the laborer and the great mass of the people would be relieved of this burden and injury, but not till then.

Gentlemen may say that these pirates were public benefactors, but the people did not long think so. When they found out the burdens they were placing upon all laborers and consumers the occupation of the Moor was gone. Gentlemen may say that they had been engaged in "developing the industries" of that country; but a little reflection convinced the people that they were really not so much aiming to "develop the industries" as they were to develop the resources of the country. That system had a peculiar charm for the Moors and for the few inside who were making the money.

Now, Mr. Chairman, I have tried to make plain the true nature and character of our so-called protective tariff. What right have we to make our custom-houses promontories of Tarifa?

Sir, the power to tax is the power to destroy. We can take a part by a tax, or we can take all of a citizen's property. But how, and for what? Can we lay an embargo upon imports simply to enrich one man or a few men, to the detriment of the great mass of laborers and consumers of the country? Can we take from one or divert from one simply to enrich another? Can we do it directly? Can we do it indirectly? I do not mean by sophistry and deception, for we are doing it that way now. If done directly we can bring it before the courts, and it is stopped. If done indirectly by a perversion of the taxing power, we can not get it before the courts; we can only go to the people themselves; but the principle is the same whether the wrong be perpetrated either directly or indirectly.

I wish I had time to introduce here the decisions of the supreme court of Maine and of other States upon this subject; but I will at least introduce the decision of the Supreme Court of the United States in the well-known Loan Association *vs.* Topeka case (20 Wallace, page 657). Every speech delivered in this debate ought to have this decision in it. The court said:

> The power to tax is therefore the strongest, the most pervading, of all the powers of the Government, reaching directly or indirectly to all classes of the people. It was said by Chief-Justice Marshall in the case of McCulloch *vs.* The State of Maryland that the power to tax is the power to destroy. A striking instance of the truth of the proposition is seen in the fact that the existing tax of 10 per cent. imposed by the United States on the circulation of all other banks than the national banks drove out of existence every State bank of circulation within a year or two after its passage. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there is no implied limitation of the uses for which the power may be exercised.
>
> To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms.
>
> Nor is it taxation. A "tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by government for the use of the nation or state." "Taxes are burdens or charges imposed by the legislature upon persons or property to raise money for public purposes."

And the court adds:

> If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor.

What would be the result of a system that protects equally all around? Suppose we established an expensive, complicated system that gave 50 per cent. additional profit to the laborer, to the lawyer, to the merchant, to the manufacturer, to the preacher, to the doctor, to the sewing-woman, and to every other person in employment in the country; what would be the result? It would be a purposeless exchange of dollars; it would be "swapping dollars" all around; it would be an absurdity. We should be out the expense of the office-holders, without a single man in the country being a gainer.

But unless you protect all you protect only a part. But this the Supreme Court justly says "is robbery." Hence this sort of policy is bound to wind up in absurdity or in robbery; but it never goes far enough to be absurd, for it always stops where it is designed to stop, namely, at "robbery."

Some things are almost too plain to admit of a demonstration. Yet I have taken occasion to turn to the census and to take two States that fairly represent the two sides of this policy, to examine the effect upon them, and I will present it to you.

From 1850 to 1860, under a revenue tariff, the wealth of Iowa increased 942 per cent. During the same period the wealth of Pennsylvania increased 96 per cent.

In 1861 the high-tariff policy was adopted. From 1860 to 1870 the population of Iowa increased from 673,000 to 1,188,000, which is nearly

100 per cent. Yet, despite the vast increase of wealth by immigration, the aggregate increase of wealth in that State dropped off in this period from nearly 1,000 per cent. to about 300 per cent. The ratio fell off more than two-thirds.

How was it with Pennsylvania, a manufacturing State, operating under the new system? The population of Pennsylvania increased only about 40 per cent., yet the aggregate increase of wealth in that State sprang from 96 per cent. to nearly 300 per cent.

What Iowa lost Pennsylvania gained. The law was procured and is now maintained just for the purpose of taking from one man and giving to another.

Deduct from Iowa's gain what was carried there by immigrants, or what is properly chargeable to their work, and how small must have been the real profits of the farmers. Now, allow to Pennsylvania what is properly chargeable to her gain by means of immigration, and yet how vast must have been the profits of the manufacturers.

The farmers and other consumers, including especially those who labor for the monopolist, have not actually been sold into bondage, but they are so "robbed under the forms of law" that they have but little left above a poor living.

My life is a short one, yet I have lived long enough to see agriculture dethroned and the great body of my people practically made bondmen. I trust they will soon, all of them, see this, and then a fire will flash from their eyes which will teach the monopolists that they were not born to be slaves.

No party ever had a higher mission than the Democracy has now. I repeat here that Mr. Hamilton failed to make this country a monarchy, with degrees of peoples other than God's gifts; and Mr. Jefferson settled that this country shall be a democracy. By fraud unparalleled that decision has been set aside. But the perversion will not stand long. This is to be a democracy, a representative democracy, a constitutional democracy. The people will rule with wisdom and justice. Talk no more of your mere equality under the law. It is a delusion and a fraud. We want equality under equal laws, a phrase of some reality. Your loose construction of the Constitution means partiality and favor. You can not run this Government without justice. When justice is practiced, and only then, will labor cease to envy capital, for capital will cease to rob, deceive, and oppress labor. Cease to prate for standing armies, and take refuge in justice. It is a place from which you want to go, but from which nobody wants to drive you.

You do not need so much to legislate for the people as you do to cease from legislating against them. Give them an equal show, and then if misfortunes overtake them, as they most seldom will, the fault will not be ours, but the visitation will be of God, against whom the people are not likely to rebel.

But gentlemen say that this class legislation does not produce monopolies, for all men are free to enter the subsidized industries. What mockery is this? The fact that you at once groan with wealth and that others begin to groan with poverty and toil is enough to refute it. But consider the nature of the case.

Do foreigners come in at once to compete with you? No. Only foreign mechanics and miners are enticed by your short-lived, fictitious wages. Capitalists know that you have been stimulated beyond what natural laws justify; that you exist only by an act of Congress, and they are distrustful of your foundation. Hence, so far as they are concerned, you are left unmolested.

Do farmers rush into the subsidized pursuits? Can they do it? The habits of a lifetime are not easily changed. Your skilled knowledge is not quickly acquired, and the property which you have caused to be discriminated against no longer yields a profit, and hence can only be sold, should its owner wish to make a change, at a great sacrifice.

Thus you are secure in your monopoly, and of your vast profits there is no doubt. You readily import all the contract labor you want, and that commodity, one of your "raw materials," as you would call it, is free of impost and correspondingly cheap. You say the laborer abroad is a pauper. He at least then yields to the seductiveness of your contracts, and deceived by temporary and fictitious high prices, comes to swell your wealth and victims.

It is your own delusion to now talk of preventing the importation of labor under contracts. You can readily grant that now, for the market is already glutted. Should future wants arise you could readily evade such a law. The pauper labor is here, and what the oppressed laborer wants is a law that will compel you to compete with the world, sell to the world all you can make, at a smaller profit than by combinations you get at home, and then he will have work the year around at the price he now gets when he gets anything, for he competes and must compete in a free-trade labor market; but his cost of living the while will be much less as well as his employment more constant. It will have to come to this, as sure as there is a natural law; and the laborer will know it, if only by starvation; and the manufacturers and other monopolists will know it, if only by panics and the thunder of the people they rob.

In order that the people may figure out for themselves the amount of subsidy they pay upon the pretense of raising a limited amount of revenue, and what protection for the sake of protection costs them, I insert the following table, which has recently come from the Bureau of Statistics:

Statement showing the values of the principal manufactured articles produced in the United States during the census year 1880, *which, when imported, are subject to customs duties, the amounts thereof exported and remaining for consumption, the amount of such articles imported for consumption, &c.*

Manufactured articles.	Produced in the census year 1880.	Exports, domestic, during the year ended June 30, 1880.	Consumption of domestic, during the year 1880.	Imported for consumption during the year ended June 30, 1880.	Total consumption in the year.	Imported.

c Excess of exports. d Mostly included in cotton, silk, and wool manufactures.

Additional light will be furnished by the following table, from the same source. I wish to call attention to the fact, as shown by this table, that the average tax collected is over 40 per cent., while previous to the last act, which was to have taken off from 20 to 25 per cent., the duty was a little over 42 per cent. This shows that the reduction on the articles taxed is only, say, 2 per cent. The amount of subsidy paid is difficult

to estimate. We consume over five billions of manufactured goods. I am satisfied that there have been years when the people paid tribute to the subsidized industries of not less than $1,500,000,000 a year. It is much less now, owing to overproduction in many lines of business and to the only partial efficiency of combinations. Perhaps it is not much over $500,000,000 a year; but if the people will figure out what that amounts to each man, to each State, and to each county, they will understand why they are kept poor and others are made rich. I leave those calculations for them to make. These tables give them the data to go upon.

Values of imports of dutiable merchandise entered for consumption in the United States, with the amount of duty and the average ad valorem rate of duty collected, during the six months ended December 31, 1882 and 1883.

And now, Mr. Chairman, I want to expose a few of the more striking frauds and wrongs, in detail, that are practiced under this tariff law upon the people. The following tables are prepared from the invoices of one of the leading importers in this country. I will not give his name, for the monopolists make it disagreeable to every man who lets out these custom-house secrets. But every gentleman here who has informed himself in these lines of business knows these figures to be correct. They show how a great pretense of reduction of duties can be made when there is practically no reduction at all, for the articles reduced are still left at prohibitory rates of duty. They were prepared by the protectionists for this use and fraud. These tables also show how the articles used by the masses of the people are heavily taxed, and those used by the very rich are relatively lightly taxed. It is the great consumption of the masses that they are after. In every way the monopolists are good to themselves and unfeeling and unjust to the people. What the toiling millions consume is taxed to a prohibitory point, and the people are turned over, bound hand and foot, to the "robbery" of the protected classes. When they overproduce they still seek, by combination, to prevent competition and to exact the full pound of flesh.

Table showing the rate of duty on woolen cloths, woolen shawls, and all manufactures of wool of every description made wholly or in part of wool, under the tariff in force prior to July 1, 1883, and the tariff of July 1, 1883 (act of March 3, 1883).

Under the tariff act of 1857 woolen cloths, cassimeres, coatings, and shawls paid a duty of 24 per cent.

Manufactures of wool of which wool is the component material of chief value, not otherwise provided for, 24 per cent.

Manufactures of mohairs, or goat's hair, not otherwise provided for, 19 per cent.

It will be observed that the cheaper and medium goods, all along, are still prohibited, while the price plus the tax on the finer goods still keep them safely out of reach from competition with the manufacturer here of the lower grades. You see how short a distance money goes in shopping.

And here I will insert a statement of duties on worsted and cotton dress goods of a character worn by 85 per cent. of the women of this country. I have an extensive table of the same sort of goods of French manufacture, but this will serve as an example. Indeed, it is easy to fill a book with illustrations of these subterfuges and wrongs, but a few will illustrate the character of the universal drag-net that is thrown around the people.

Table showing the rate of duty on worsted and cotton dress goods under the old tariff and the act of March 3, 1883; goods 22 inches wide, weighing under 4 ounces to the square yard.

Five per cent. for freight and charges added to the cost in Europe to make cost to land here.

It is notorious that we derive only two or three thousand dollars of revenue from blankets, yet we consume millions of dollars' worth of them yearly, and if the law is operative we pay several millions of dollars of tribute to the manufacturers of blankets for their enrichment, certainly not for revenue. This is only one of scores of items of the same kind.

Many tricks are hid under the specific plan of taxation, instead of taxing articles according to their value. The excuse is that frauds are thus prevented. I hope a change of administration will relieve the customs officers of any such reflections upon their intelligence and honesty, and the people of that wrong. A one-dollar article ought not to be taxed as much as a five-dollar article. Yet it is done every day.

Here, too, the pretense of a big reduction on the lower and medium grades of goods leaves them still above all possible competition, and taxed vastly higher than goods for the rich are taxed.

Previous to the late war, blankets paid a uniform ad valorem duty of 15 per cent. and flannels 19 per cent.

Now, sir, I want to consider some of the false charges that are brought against "the fathers" in connection with the tariff. They are quoted as favoring everything a man can think of. Their language is garbled, and the conditions and limitations under which they spoke are entirely ignored.

As early as 1785 Mr. Jefferson said:

I take for granted that the commercial system, wished for by Congress, was such a one as should have commerce on the freest possible footing. This was the plan on which we prepared our general draught for treating with all nations.

Again, in 1788, he said:

The system of the United States is to use neither prohibitions nor premiums. Commerce then regulates itself freely, and asks nothing better.

Again in 1800, in speaking of foreign commerce and the rights of government, he said:

Our merchants will manage the better the more they are left free to manage for themselves.

Again, he said:

Instead of embarrassing commerce under piles of regulating laws, duties, and prohibitions, could it be relieved from all its shackles in all parts of the world, could every country be employed in producing that which nature has best fitted it to produce, and each be free to exchange with others mutual surpluses for mutual wants, the greatest mass possible then would be produced of those things which contribute to human life and human happiness; the numbers of mankind would be increased and their condition bettered. Would even a single nation begin with the United States this system of free commerce, it would be advisable to begin it with that nation; since it is one by one only that it can be extended to all.

In 1811, in writing to General Kosciusko, he said:

The revenues will be levied entirely on the rich. * * * The poor man pays not a farthing to the General Government but on his salt.

What did Mr. Polk say? In his message to Congress in December, 1846, in speaking of the act "reducing the duties on imports," which had previously been passed, he said:

The leading principles established by it are to levy the taxes with a view to raise revenue, and to impose them upon the articles imported according to their actual value.

And he says further, in speaking of the old law:

The act of 1842, by the excessive rates of duty which it imposed on many articles, either totally excluded, them from importation or greatly reduced the amount imported and thus diminished instead of producing revenue. By it the taxes were imposed not for the legitimate purpose of raising revenue, but to afford advantages to favored classes at the expense of a large majority of their fellow-citizens. Those employed in agriculture, mechanical pursuits, commerce, and navigation were compelled to contribute from their substance to swell the profits and overgrown wealth of the comparatively few who had invested their capital in manufactures.

Again he alludes to this system as "unequal and unjust."

And still further on he speaks of this system of taxation having been a part of the class legislation of England until it became "intolerable," and he speaks of the "severe struggle on the part of the protected and favored classes to retain the unjust advantages which they have so long enjoyed."

We hear much of Mr. Polk and "incidental protection." What he meant by incidental protection is not explained as he himself explains it, and for the obvious reason that if he were quoted in a way just to his memory he would ever prove a strong adherent to the doctrine of "a tariff for revenue only." Would that I had time to quote at length and to exhibit his clear and forcible statements of the injury of a protective tariff to farmers, and to all except the proprietors of the protected concerns. But what I have quoted is conclusive.

Mr. Buchanan, in speaking of restrictive legislation, said he favored such restrictive legislation "as may be necessary to counteract the regulations of foreign nations."

This is very different from our past and present proscription of the products of Germany and France, by which we have compelled them to prohibit the products of our farmers in order that they may counteract our regulations instead of our counteracting theirs. We know that the correct remedy for our troubles with those countries is to cease from our proscription of them, and then they will cease from their proscription of us, which we have provoked.

The production of food products in the old countries of Europe has reached its maximum. At their present rate of increase of population they will in ten years add 36,000,000 people to their population. All the food for them must be imported. Shall we supply it? They will not take our goods unless we take theirs. They would gladly exchange with us. But if we continue to restrict the rights and trade of the great body of our people to enrich a few, and thus to cut our people off from their foreign customers, then England will go on developing Australia, India, the Soudan, and other parts of Africa; France and Germany and Holland will still further look to China, Africa, and the islands of the sea.

When Congress was given the power to regulate foreign commerce it was not intended that it should be destroyed, but that it should be extended and improved.

Mr. Buchanan further said that he favored a protective tariff far enough "to secure a supply of those articles of manufacture essential to the national independence and safety in time of war." May his fame be protected from the perversions and slanders of his successors!

I think it was a great mistake to admit, even as a war measure, that taxes could be laid with a view to any other purpose than simply the getting of revenue, and that at the least possible cost, directly or indirectly, to the people. It was with great reluctance that Congress was given the power to tax the people at all. The people feared this central power. They long preferred and required that Congress simply make known its wants to the States, giving each one's quota upon a given rule, and the States collected and forwarded the money, just as the counties now do to the State capitals. But Congress was given the power to tax; but it was given with reluctance. With the power to tax it was simply given the power to tax, and not to go beyond this power grudgingly granted, and as now to extort money for private as well as for public purposes.

It has large discretion as respects the appropriating of the funds thus acquired. These operations are open. The people can see and measure them. This power to apply the public funds is granted only to those who are repeatedly brought back to account to the people, and lavishness and indiscretion is thus easily checked and rebuked. But if such appropriations would be wasted unless the General Government followed them up executively, and the Government is not given the power by the Constitution to thus invade that sphere, then the Government need not and should not make the appropriation. I will offer some additional observations in this connection at a later point, when I wish to consider the "general-welfare" clause.

Andrew Jackson is often quoted as having favored "a judicious tariff." Those who quote him this way never quote him any further. They give none of his qualifications. We all want "a judicious tariff;" and what is more, gentlemen, we intend to have it.

Even England, that foolish, labor-burdening country, living hard by the pauper fields of France, Germany, and Italy, and in open and frequent communication with India and China, maintains "a judicious tariff." England could not outstrip her neighbors any other way. This is the way her laborers are able to save more than ours do, although our natural advantages are the greater of the two. Jackson favored "a judicious tariff, such a one at least as would foster, protect, and preserve within ourselves the means of national defense and independence, particularly in a state of war."

Here, too, the limitation is as a war measure. The men of that day felt the danger of conquest from England, which had failed to conquer us at first, but had then turned her power upon liberty-loving France and had been successful, much more than we can conceive of now. England to-day, however, is the champion of liberty, and we can defy the world.

Additional light is thrown upon the convictions of Jackson by what is said by Henry Clay, who at the same time gives his own position. Mr. Clay said:

If the compromise act had not been adopted, the whole system of protection would have been swept by the board by the preponderating influence of the illustrious man General Jackson, then at the head of the Government, at the very next session after its enactment.

In giving his own views, Mr. Clay said:

In three years we could judge of the ability of our establishments to furnish these articles as cheaply as they were obtained abroad, and could then legislate with the lights of experience.

He added:

Three years would be sufficient to place our manufactures on this footing.

And what was it that he wanted for three years? The tariff then

was 20 per cent., and he wanted only 5 per cent. more, and that only for three years.

The present tariff, vast in its amount, exceeding 40 per cent., lower on luxuries than on necessaries, cruel and unjust in its arrangement, violating every principle of just or scientific taxation, has now raged for over twenty years, and yet gentlemen cite Mr. Clay to sustain them in inaction.

Mr. Chairman, this diverting of the taxing power of the Government from the sole and single purpose of raising revenue was agreed to once in a small way as a war measure. That was a new departure, though early taken. It involved a principle not countenanced by the framers of the Constitution, not dreamed of by them when they formed that instrument, and that to-day enslaves nineteen-twentieths of our people and in various forms more seriously threatens our country than has any peril to which it has ever been exposed.

It is a leading product of the doctrine that the Federal Government is a government of discretion, and not a limited government, nor, in a true sense, a government of constitutional restrictions. In short, it involves the question and is the great question as to whether or not we have constitutional liberty in this country.

Force of arms has failed, and I trust will ever fail, to break up the form of our Government.

But here is a doctrine, practiced by the dominant party, aided and abetted by a handful of Democrats, sustained also by the recent decision of the Republican majority of the Supreme Court, that does not, indeed, assail the outward form of our Government, but simply annihilates its substance, extinguishes its spirit, debases all the Constitution except the "general-welfare" clause, to simply rules and suggestions, erects here a great government of discretion, destroying all guarantees of liberty and property, sowing to the winds and inviting the whirlwind.

As many gentlemen defend this perversion of the taxing power of the Government upon the wretched sophistry of the "general welfare," drawing it with equal falsity from political economy and from our Constitution, I will, having tried to treat in a plain and popular way of the former heresy, now proceed to treat of the latter.

Sir, the "general-welfare" clause, once the most harmless and insignificant clause in the Constitution, is now, as we have seen, the stronghold of protection and the ground of repeal of all the balance of our supreme law. Our hope, sir, is always primarily in the people. I propose to go back to the formative period of our Government and bring down all that pertains to this famous clause, and to do my humble part toward awakening public opinion until it shall give us a Congress and an Administration and a Supreme Court that will not legislate away and give away all that freemen hold dear.

The American people, justly treated, are the best safeguard property ever had. Continue to rob and betray them and I would rather be a Philistine in the temple that Samson wrecked than thus to invite their vengeance.

That clause is the first clause of section 8, article 1, of the Constitution. It is as follows:

> The Congress shall have power to lay and collect taxes, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States.

Sir, looking at this clause in a plain way, and remembering that the framers of the Constitution were earnest, plain, sensible men, what view does it present? It is evidently composed of two elements: first, a declaration of power respecting the raising of money—or call it revenue; and, second, a declaration of purposes, or objects to which that money is to be limited. The latter part is a limiting expression, and not one of expansion. That money is to pay the public debts; it is to be spent in our constitutional efforts for the common defense and in defraying the expense of what we are empowered to do for the general welfare, and for no other objects is it to be appropriated.

Other parts of the Constitution, in connection with the first part of this clause, tell us how far our supreme governing power extends, and the second part of this clause tells us that our use of the money we collect must not be unguarded and reckless or partial in its character, but that our appropriations must be restricted to the payment of the debts of the United States and to those expenditures of a national character that are clearly sustained by the Constitution, and that are clearly for the general welfare.

A policy under this head may touch only spots and individuals, such as pensioning soldiers and similar acts; but the general welfare plainly demands such an expenditure upon the score of national gratitude and prudence, and hence it is national and general in the proper sense.

But under no circumstances does this grant of discretion to appropriate money for the general welfare carry an extension of the functional power of the Government beyond the grants that are distinctly made to it and that are distinctly stated not to extend beyond those limits.

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.—*Article* 10.

And again:

> The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.—*Article* 9.

Thus in every way is this idea of discretion in the exercise of power over the States and the people by perversion of the taxing power or of any other power guarded against. Time and again is it prohibited, and a strict construction of the Constitution is thus demanded by the very words of the Constitution itself. We have large discretion over the money in the Treasury, with certain limitations as to time, respecting appropriations for military purposes; but there our discretion stops. Neither by looking after appropriations nor otherwise can we invade the rights of citizens or of the States.

We may pension a wounded soldier or not just as we think public policy requires; but we can not follow that up and invade his rights and say what he shall eat and drink, how he must vote, and what clothes he must wear. If we think the policy evil we can stop the appropriation; but we can not invade his reserved rights. The same is true as to a State.

The first subtle comment upon this clause contrary to this view was from a source where we might naturally expect it. It was from Mr. Hamilton, the foe of our present form of government, the firm believer in a centralized government, and that, too, of monarchical form. I give all credit to his personal uprightness and to his transcendent abilities.

In his report on manufactures, in 1791, Mr. Hamilton said:

> The terms "general welfare" were doubtless intended to signify more than was expressed or imported in those which preceded.

Why should he use the word "more?" It is the comparative of much. It is the synonym of greater. Those terms were not intended to mean something more than what preceded them. They were intended to mean something different and something less, instead of something greater, or even equal to what preceded them. The first was a grant of power, the latter was a statement of the objects to which the money provided for was to be limited, a restricting clause it was, and the incorporation perhaps of the maxim of "the public weal" as a guide in the exercise of all constitutional power.

All the power you can wrench or squeeze out of it is the power to pay our own debts to the exclusion of the States or munificent private citizens coming in and, *vi et armis*, paying our debts for us; and then the liberty of discriminating as to the proper objects for national appropriations and outlays of money. This liberty is not likely to be long or greatly abused, I repeat, by a Congress the more numerous body of which is drawn directly from the people, and is compelled to go back to the people for new credentials every two years. Yet, sir, we now have taxation perverted from revenue to robbery, in harmony with this adroit suggestion of power from Mr. Hamilton, and a Supreme Court that practically states that our Government is no longer a Government of constitutional limitations.

This will appear the more striking when we consider the custom of Mr. Hamilton to put out a "feeler" in one place and to allay suspicion in the next. He was not only the father of the present opposition, but the natural delineator of their tactics.

He denounced our Constitution as "a shilly-shally thing, of mere milk and water, which could not last." He endeavored in convention to make an old English constitution of this, and failing in that, all his subsequent measures tended to bring it to the same thing.—*Jefferson's Works*, volume 9, page 122.

After the adoption of this Government he said there was "no stability, no security, in any kind of government but a monarchy."—*Jefferson's Works*, volume 9, page 126.

Neither he nor his posterity, the monopolists, ever had any faith in the people, or any use for them except to live off of them, or, as the Supreme Court says, to rob them.

Mr. Hamilton declared his belief in government bottomed on corruption as the only practicable government. In speaking of the English Government, Mr. Adams said: "Purge that constitution of its corruption, and give to its popular branch equality of representation, and it would be the most perfect constitution ever devised by the wit of man." To this, Mr. Hamilton replied: "Purge that constitution of its corruption, and give to its popular branch equality of representation, and it would become an impracticable government."—*Jefferson's Works*, volume 9, page 96, and volume 7, page 390.

His work all comports with this doctrine, and his descendants are like him.

When the bill to assume the continental certificates was about to be passed, and a preliminary test proved it, he had his henchmen informed by couriers with relays of horses, and swift-sailing boats were employed by sea. Active and secret agents were in every city and town. They bought up this paper at 5 shillings and 2 shillings per pound, acting under this "pointer" from the Secretary of the Treasury, Hamilton, and thus the masses found a few days later that they had been imposed upon in the interest of the few. Just after this he "cooked up" a great scheme and put it through to give $20,000,000 to his pet localities and henchmen, and fortunes followed fawning, and came very near breaking up the Union. Congress met and adjourned for days without doing any

business, so great was the anger. The deed was grafted, and to undo it was to break up the Union. In despair Hamilton took counsel of Jefferson to prevent anarchy. At last a few Southern members concurred, seeing it could not be stopped short of anarchy, upon condition that the Federal Capital be put where it now is.—*Jefferson's Works*, volume 9, pages 93, 94.

As for Hamilton's general policy for this Government, Jefferson warned Washington that it was for the General Government to "exercise all powers which may be for the general welfare," as the monopolists might choose to construe it, and he noted the means of general corruption employed.—*Jefferson's Works*, volume 3, 461.

And in the same letter to the President he called attention to the refusal of the monopolists of that day to acquiesce in the decision of the majority. (Page 463.)

The people were quiet for a time then as they have been quiet until now, for Washington was true to the Republic and often protested that he would "lose the last drop of his blood in support of it."—*Jefferson's Works*, volume 9, 96.

But long before they had proceeded anything like as far with corruption and class rule as we now suffer from "the eyes of the nation were opened and a general disbandment of them from the public service took place."—*The Anas*, page 97.

Why, sir, we are given the power "to borrow money on the credit of the United States" (Constitution, article 1, section 8, clause 2), and who ever doubted our constitutional power to pay back the money we borrow? The pecuniary power has sometimes been questioned, but not the constitutional power. This, then, may take us back to our famous clause, and I propose to show that the only idea of power intended, apart from the discretion or liberty of determining what are fit subjects for national appropriations as future exigencies might arise, was the power, not to pay the future debts of the Government then being established, for that idea of power is gratuitous, but to assume and to pay the old debts of the Revolutionary war. It was retrospective power, as it were, not future power. It was feared that the new Government might try to scale off the debts of the Colonies, and if it had not been for that this famous clause would never have been put into the Constitution, and our present robbing tariff would not have the deceptive veil of "general welfare" to cloak it.

Let us go, then, to "the architects" of the Constitution, as Mr. Benjamin calls them, for I think he was the real author of The Republic of Republics, and see what they did and said.

Sir, in the first draught of the Constitution, submitted to the convention August 6, 1787, by Mr. Rutledge, on behalf of the committee of detail, this whole matter was covered only so far as the following language goes:

> The Legislature of the United States shall have the power to lay and collect taxes, duties, imposts, and excises.—*Elliott*, 5, 378.

That was all it said. There was nothing in the whole instrument, as well as not in this clause, about paying debts or about the general welfare. The power to borrow money on the public credit was given, and that carried with it the right to pay. But the colonies had contracted debts in a war for the "general welfare," and also had the old confederated government contracted such debts, and great concern was felt, as I have said, about the new Government having the power and disposition to pay these old debts.

Hence, on the 18th of August, Mr. Pinckney submitted, among other propositions that ought to be incorporated in the Constitution, the following:

> To secure the payment of the public debt.—*Elliott*, 5, 440.

This related to the old debt, and it was in conjunction with a plan for future debts, embracing also the prevention of a permanent revenue law, which Mr. Mason said "must, of necessity, subvert the liberty of any country." There was a struggle to get the power to tax at all, and a still greater struggle to get the power to lay any but a temporary tax, except taxes to provide for the payment of a debt.

These propositions, with the others, were referred to the committee of detail.

Mr. Rutledge "then moved that a grand committee be appointed to consider the necessity and expediency of the United States assuming all the State debts." This was agreed to, the committee consisting of one member from each State.

Then, on the 21st of August, the grand committee of eleven, upon the proposition, submitted the following report:

> The Legislature of the United States shall have power to fulfill the engagements which have been entered into by Congress, and to discharge as well the debts of the United States as the debts incurred by the several States during the late war for the common defense and general welfare.—*Elliott*, 5, 451.

There was discussion as to whether the assumption should be optional or obligatory; but this was the status up to this point, and only those debts are included which were contracted "for the common defense and general welfare." This is the first use in constitutional language of the term "general welfare," and mark the connection. It relates only to the payment of old debts.

Then on the next day, the 22d of August, the committee of detail came in, through Mr. Rutledge, with their report, covering Mr. Pinckney's proposition upon this question. Their report would make the first clause of the first section of the seventh article of the original draught of the Constitution read as follows:

> The Legislature of the United States shall have the power to lay and collect taxes, duties, imposts, and excises, for payment of the debts and necessary expenses of the United States; provided that no law for raising any branch of revenue, except what may be specially appropriated for the payment of interest on debts or loans, shall continue in force for more than —— years.

The committee also proposed an addition to the sixteenth clause of the second section, seventh article, of the following:

> And to provide, as may become necessary from time to time, for the well-managing and securing the common property and general interests and welfare of the United States in such manner as shall not interfere with the government of individual States, in matters in respect only to their internal police, or for which their individual authority may be competent.

I think the text should have assigned this to the first section, as the second section has not got a sixteenth clause.

Here is the first intimation of the idea of the liberty to appropriate money in connection with future matters relating to the "general welfare." Previously, only past "general welfare" debts had been spoken of. This was a crude, preliminary proposition, involving some vague and dangerous language about the States; but we will see how it was pruned. We have seen the strict-construction requirements of the Constitution, which I have read, put in as amendments to guard against the slightest danger of looseness, and that, too, when the Constitution had already prohibited the General Government from maintaining the sovereignty and integrity of a State government from domestic violence, except "on application of the Legislature, or of the executive when the Legislature can not be convened." (Article 4, section 4.)

Thus we proceed on through the formative stage of the Constitution.

The consideration of this report was delayed until members could get copies of it. But the convention at once began the consideration of the report of the committee of eleven. They took up the clause—

> The Legislature of the United States *shall have power* to fulfill the engagements which have been entered into by Congress.

The words relating to power are italicised in the text. Mr. Madison wanted to keep this, for some had tried "to show that contracts under the old government were dissolved by the Revolution, which destroyed the political identity of the society."

Mr. Gouverneur Morris moved to substitute "the Legislature *shall* discharge the debts and fulfill the engagements of the United States." This was agreed to.

Then on the 23d of August the first clause of article 7, section 1, was agreed to, as follows:

> The Legislature shall fulfill the engagements and discharge the debts of the United States, and shall have the power to lay and collect taxes, duties, imposts, and excises.
>
> Mr. Butler expressed his dissatisfaction lest it should compel payment as well to the blood-suckers who had speculated on the distresses of others as to those who had fought and bled for their country.

You observe here that this whole business was presumably closed, and not a word said or revived about the "general welfare," past or future.

Then on the 25th of August this clause was taken up again. The word "shall" was considered by Mr. Mason as too strong. "Mr. Langdon wished to do no more than leave the creditors *in statu quo*." Others spoke in the same general tenor, and then Mr. Randolph moved this as a substitute:

> All debts contracted and engagements entered into by or under the authority of Congress shall be as valid against the United States under this Constitution as under the Confederation.

This was agreed to, only Pennsylvania voting "no," there being ten States voting "ay."

Then—

> Mr. Sherman thought it necessary to connect with the clause for laying taxes, duties, &c., an express provision for the object of the old debts, &c., and moved to add to the first clause of article 7, section 1:
>
> "For the payment of said debts, and for the defraying the expenses that shall be incurred for the common defense and general welfare."

This clearly does not intimate that we are to assume any and all power at our discretion, as we may think, regardless of the limitations of the Constitution, the general welfare may be advanced. Fortunately for the general welfare, this is a limited constitutional Government, and not one of wild, reckless Congressional discretion. Indeed, if reckless expenditures were incurred not clearly for the general welfare a future Congress would by this be discouraged from paying them. It is a warning to creditors against reckless Congressional appropriations and credits. It is clearly limiting in its character and shows that some debts may be unauthorized and illegal. It is a clear statement of the objects only, and none other, for which the money collected shall be expended; and it grants power only, and here only by implication, to even the discretion of giving money here and there in a well-guarded way as the general welfare may seem to demand.

But this idea was understood as already agreed to; for, as Mr. Madison says:

The proposition, as being unnecessary, was disagreed to, Connecticut alone being in the affirmative.

See also, Mr. Chairman, how perfectly clear it is that the power granted was primarily and principally to pay the old debts, and only those debts which had been contracted in the public defense and for the general welfare.

Then, on the 31st of August, all this matter was referred again to a grand committee of one from each State, which, on September 4, reported as follows:

The first clause of article 7, section 1, to read as follows: "The Legislature shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States." (Elliott, V, 506.)

This, said Mr. Madison, "was agreed to *nem. con.*"

It was agreed to without discussion. It was agreed to unanimously. And this it is and thus it is that gentlemen say they have power to pervert taxation to other purposes than raising revenue. "Providing for the common defense and general welfare" here relates to that part of the providing which involves the appropriating of money. The other steps, such as suspending the writ of habeas corpus, taxing the property of citizens, &c., is all granted and carefully guarded elsewhere.

Would you say here that we can provide for the common defense in any way our discretion may suggest, namely, by suspending the writ of habeas corpus in time of peace and tranquillity, by quartering our troops upon our people, by taking the property of citizens wantonly and without pay? Would you say this from that? No; not now. Yet you have said and do say even much more than all this in what you say and do for your own enrichment about the taxing power. What the Federal Government can do for the general welfare is to properly exercise the powers that have been delegated to it, and not to encroach upon the other powers, all of which are solemnly and specifically "reserved to the States or to the people." This arrangement was deemed best for the general welfare. And when we were given discretion in the appropriating of the public money, we were not commanded not to refrain from giving that money when we think best, nor were we commanded or empowered in respect to anything but the giving of that money. Certain it is that the men composing that convention did not sit still and without a dissenting voice "give away" all that they were doing and in a moment erect here a despotism with no limitations or restrictions. Their plain words forbid it. The meagerest sense and patriotism forbid it. God grant that the people will now confront this issue and practice, and forever forbid it.

This is what was agreed upon; this is the way it was agreed upon; and thus it stands in our Constitution to-day. And yet you claim discretion here, not only to appropriate money for the general welfare as exigencies may require, but also to assume any and all power, to pervert the taxing power, to lay embargoes in time of peace upon our commerce and against our foreign customers, if you presume only to say you think that to beggar some and to enrich others of our people by legislation is conducive to the general welfare; and feeling secure in this usurpation, and feeling strong in your ill-gotten wealth, you now proclaim for taxation for the sake of subsidy and propose at your discretion to do all things.

We want the Constitution observed. We want a revival of the Constitution. We want freer trade for our people, and we want our commerce restored to the seas.

Sir, this Government does not grow as other governments do. The English constitution is not a written constitution in the way ours is. It is a set of precedents, statutes, and decisions, wresting power from the Crown from time to time, and in favor of the people. No precedent, decision, or statute here can give lasting power to the central Government if they be in violation of the Constitution. This Government can not grow in that way. It can not grow except as the Constitution is amended by the people. It does not grow. It is made. It is not a government of growth. It is a constructed government. It can not evolve itself either to a stronger or to a weaker statue. It may have powers it did not know of; then it simply learns and exercises what it always had. New methods may be employed in order to apply the same revered principles to new conditions, but no new powers are acquired in this way. It is simply the exercise of the same old power and right and grant. The people can make the Constitution, and through it the Government, as they see fit; but of itself the Government can not grow, and it can not long usurp. Until the people make an addition to it or take something from it it is an unchangeable thing. Let no man add to or take from the book of the Constitution. If any man shall add unto these things the people shall add unto him the plagues that are written in this book. And if any man shall take away from the words of this book the people shall take away his part out of this book and of the things that are written in this book.

Sir, Mr. Madison never considered that we even had the power to use discretion in appropriations beyond the specific grants of power. Hamilton did not openly avow more than that we had the liberty of appropriating money for certain contingencies. Mr. Monroe was long in coming to Mr. Hamilton's position. Judge Story went no further than this discretion as to making appropriations. It was by appropriations that Washington would encourage industries and the sciences, and promote the general welfare. Our power to legislate to this end, other than by spending money to disseminate information, seeds, plants, &c., as we do through the Agricultural Department, and by experimental farms, and such limited ventures at the public expense, is limited to the grant of power given us in the eighth clause of section 8, article 1, of the Constitution, which gives Congress power—

To promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries.

From this we draw our power to make patent and copyright laws—the only laws we can justly make to encourage, protect, and develop industries, and these monopolies must be "for limited times."

We have the same language now to guide us that they had and no more. And those who are fattening off of the people by class legislation are "robbing" the people, although it be "under the forms of law."

Of the ultimate issue of this great fight I have no manner of doubt. Let us, if possible, compose the schism; but, by all means, let us press the issue. Let us trust the people and carry the truth to the hustings. It is the only course of wisdom. The battle is hotly joined now. Fidelity is the only course of honor. You idly say we shall fail. What boots it if by failure we further arouse the people to the perils besetting constitutional government? The people have ordered this fight and I am glad of it, and I hope no man now on their side will quit the field let the seeming inducements be what they may.

There is just one matter that I want to bring out before I quit, for while I can hope to influence perhaps not one man upon this floor, yet I want what I say to be some contribution of facts and principles to the mass of our people.

In 1880 we consumed over five billion dollars' worth of manufactured goods in this country. We consumed over this much of manufactured goods of domestic make. Nearly all of this is subsidized through and by means of the tariff. The average subsidy is over 40 per cent.; that is the average of what the law aims to give them. If they do not get the good of but half of it, it is not the fault of the law, but because they sometimes overreach themselves. But the theory of the law is to give these people a subsidy of nearly $2,000,000,000 a year.

Now, the wages of the labor that enters into the value of what we buy is, say, 17 per cent. of the value of the article. This makes the amount paid for labor less than $1,000,000,000 a year. Now, if that infamous law could operate in full, and it goes as far as human avarice can go into human flesh and blood, then we could pay every laborer that these monopolists employ by giving him a warrant on the Treasury and let him sit idle and do nothing the whole year through and still save $1,000,000,000 a year to the consumers, farmers and others, of this country. This is what makes "the poor poorer and the rich richer."

One word more. When the manufacturer comes to reducing taxes he wants to carve only on the raw materials. Apart from the proposition that when sacrifices are the order of the day all should make them in equal degree, yet I wish to call attention to the effect, as relates to protection to the manufacturers, of free raw material and a duty retained upon the finished product. I believe in free raw materials and in taxing finished products as they enter into consumption, but I do not believe in being imposed upon in the doing of it. The manufacturer's protection always amounts in such a case as I have cited to more than the duty on the article. This seems paradoxical, but a little illustration and thought will make it perfectly plain.

For instance, take silks. I do not know just now the percentage of labor that enters into a dollar's worth of silk cloth. But say that it is 50 per cent. of the value, which may be too high; but take that for illustration of the principle. Now raw silk is free. Silk cloth is taxed 50 per cent; that means 50 per cent. of the full value. But half of that value is in the raw silk that has been worked into the cloth which our manufacturers get, if brought in its raw state, free. Hence, so far as protection goes, the 50 per cent. upon the whole is doubled upon the half that is represented by manufacture, and consequently a duty here of 50 per cent yields a protection to the manufacturer of 100 per cent. Hence, when the manufacturer says he is protected only to the extent that the article is apparently taxed we need to see the status of the raw material, and inquire if the raw material that composed a part of the finished product is allowed for in any way, or if the gross tax is not applicable to the finishing expenses only. In this connection I subjoin an extract from Senator SHERMAN in the tariff debate last year:

That about one-half of the cost of these woolen goods is in the cost of the raw material, the wool, and the other half is the cost of manufacture. Take, therefore, a lot of these goods; suppose that the value of the goods imported is $1,000, and one-half of that is the cost of the wool, and the other half is the cost of manufacture. The duty on $500, the cost of the wool, has already been fully compensated for and more than compensated for by the specific duty. Then, as to the duty levied, not as 40 per cent. of the $500 the cost of manufacture, which is all the manufacturer puts upon it, but the duty is levied at 40 per cent. on the thousand, thus giving him a protection of $400, or 80 per cent. on the cost of manufacture.

The Tariff.

SPEECH

OF

HON. MOSES A. McCOID.

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. McCOID said:

Mr. CHAIRMAN: This seems to me a most unnatural strife. Here we have a government instituted for the purpose of securing the happiness and welfare of its people; a government, not foreign, but of the people; not by any man or number of men over us, but by the people; not for the world, or Europe, or England, or any other, but for us. We have incorporated ourselves with powers which we ourselves execute for our good.

We asserted our political independence of the world, framed the charter by which we should work, ran up our flag to the unmastered winds, started the action of the organs of national life, and were mapped as one of the independent nations of the world. Political independence quickly asserted had to be fought out with heroic courage, and must be defended with jealousy and care, and will ever depend much in its substance upon that other condition of commercial independence.

The map of the world shows that the dream of political independence without the fact of commercial independence is soon and easily dispelled, and is at best "nothing but a dream." The 'one is necessary to the other. No nation commercially dependent upon another can be politically free. Therefore the first aspiration of a patriot whose country has asserted its independence is to see it commercially independent. The debates of the early Congresses are full of the expressions of this sentiment, and I need not quote them here. But this state of commercial independence is reached only by slow and encouraged growth. A country can not leap full armed, Minerva-like, to it.

This is especially true of a country like ours of vast extent and infinite, unexplored resources. It must pass through its infancy, its growth, its development, to its full possession of native strength. And this I suspect is the better understanding of the oft-repeated phrase "infant industries"—industries in an undeveloped country. As long as we have our undeveloped mines, our unplanted factories, and our unconsumed products, we are in our infancy, and will require the same commercial protection, encouragement, development, as the state of infancy ever demands. I have noticed the natural division in the debates of this and last Congress of our commercial industries into producing, manufacturing, and shipping industries. And I have noticed to what fallacies and follies gentlemen are led when they confine themselves to any one and antagonize it to others.

These interests are all one. They are correlated and dependent on each other. There is the physical, the mental, and the spiritual, but they make up but one man. Each is dependent on the other, and the correct development is of all three together. The time taken from one and given to the other is not lost, but results in the improvement and good of all. You may say you tax the one to help the other, or you deny the one to give to the other, or you use the one to protect, encourage, and strengthen the other; but the result is a well-developed, well-balanced, and well-proportioned man.

Is there any antagonism between the three great industries into which the labor of our people may be classed? It is true that agriculture is pre-eminently our staple, but does it not depend upon and lead to manufacturing and prosper and flourish with it, and does this not lead to shipping and trade. No wise farmer should sell his produce, but feed it and consume it and sell the second product. No wise nation or people incorporated in government should sell their raw product, but manufacture it, consume it, and sell the resultant article. The proper subject of trade and free trade is manufacture, and when a people can consume their own products in their home industries and only yield them to trade, when they can fix their price beyond that which it will bring at home, then and then only are they commercially free, and then and then only should they be free-traders.

The gentleman from Ohio [Mr. HURD] illustrated this, and to my mind defeated his whole argument by the admission that Liverpool fixed the price of all that the American farmer had to sell. He had just shown that the power to fix the price of labor was the power to enslave. I turn his illustration back upon him, using as near as I can his own language. The American farmer works a day and produces what in a fair home market should bring a dollar, with which he would buy some needed article. He brings it to the market. But there he is told that the price of his day's labor, of all that he has put into it of his hopes and his fears and earnest toil, is fixed in Liverpool, and Liverpool has decreed that he should have for it but 50 cents. And so he goes back, toils another day, and puts the care, and hope, and fear of another day into it to get the other half of his dollar. That second day is a day of slavery.

Liverpool might as well have waked him up in the morning with the lash and driven him in bondage through that day for it. It was to him a day of slavery—a day of unrequited toil. And he is in bondage to whom? Not to a law of his own making; not to a power of his own choice; not to the interest of his own country, his land, or his own continent. He is in bondage to a power separated from him by seas, unsympathizing, grasping, and tyrannical. He is the serf of a power he and his fathers have vainly tried to throw off. If he is to be in slavery to one who shall have the power to fix the price of his labor, he would rather choose his master and choose him here. Why, sir, if the argument of the gentleman from Ohio [Mr. HURD] was true, it might not be a strange spectacle to see patriots enduring sacrifices in the accomplishment of the noble purpose of building up and enriching and glorifying their own country. For objects like these men have gladly given their fortunes and their lives. But who would choose the shameful bondage to a foreign power and commercial tyrant, out of which could come alone the increasing disgrace and dependence of his country?

Now, sir, it appears to me that our true national policy is to determine that the day shall come when the price of our products shall not be fixed at Liverpool, when we shall consume our own and dictate the price of that which we choose to sell abroad; that, attendant upon our great agricultural industry, we will build up manufacturing and every other variety of productive interests which our abundant resources will sustain, so that we can have within our borders our own markets; and that, attendant on all these, we will reach out with shipping facilities under the patronage of Government, aid and flush the markets of the world. And then we will have reached the *summum bonum* of our friends—free trade. We will have reached that freedom of commerce as England has reached it so far as she has adopted it. We will have reached, it in the only way by which it can be reached and at the same time maintain our commercial independence.

I believe in the principle that our commerce should be free, as free as the policy of nations will permit. But I believe that the policy of our nation, practiced by the States before the Union and at the time of the adoption of the Constitution, acknowledged as a consideration of the federation adopted by our fathers in the first Congress and practiced every since, is to except from that general principle in every case where our national interests demand it. These exceptions are founded upon considerations of the rights of States, our commercial defense, the development of our domestic resources, the necessity to diversify our industries, the raising of revenue, the protection of our labor, &c.

To do this the power to lay impost duties on imports was given to the national Legislature. And it is to be used for the promotion of these interests, in order that our country may grow up to that state of commercial independence where, freed from these conditions of infancy and strong enough to cope with the competitors, it can adopt commercial freedom.

The great question is now upon us, how shall we best develop the material prosperity of the Southern and Western States? The loyalty and sympathetic unity of these vast areas of territory to the Union is closely allied to that of their development under the generous policies of the General Government. If antagonisms ever arise in this country again it will be over these policies.

I believe this material development can only come through a wisely adjusted system of protection in the especial interest of agricultural industries. I believe that there is sound economical philosophy in the doctrine that the prosperity of agriculture must come through diversification of industries, in peopling areas of land, by which a large proportion of non-agricultural people may be secured to them.

This principle and its results are so well stated and illustrated in Report No. 3 of 1883 of the Agricultural Department, pages 22 and following, such as I have marked, that I feel justified in inserting them here:

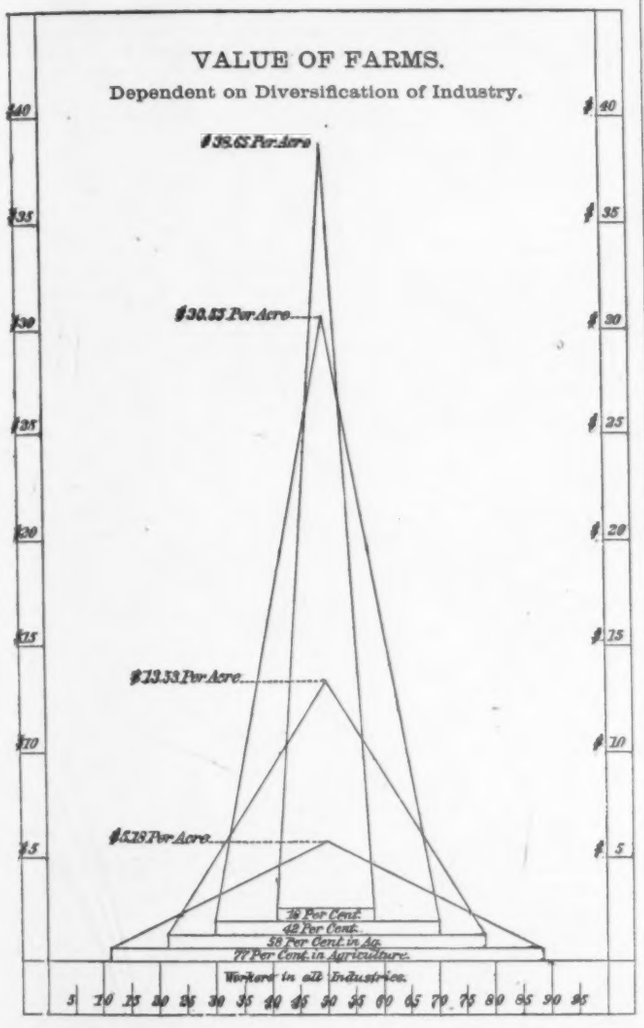
To test the value of this hypothesis let us divide the States and Territories of the United States into four classes, the first having less than 30 per cent. engaged in agriculture; second, those with 30 and less than 50 per cent.; third, those with 50 and less than 70 per cent., and fourth, those having 70 per cent. and over, being almost exclusively agricultural States.

VALUE OF LANDS.

Applying this test to the value of lands, the following result is obtained:

Classes.	States and Territories.	Farms.	Value.	Value per acre.	Workers in agriculture.
	No.	*Acres.*	*Dollars.*	*Dollars.*	*Per ct.*
First class	15	77,250,742	2,985,641,197	38 65	18
Second class	13	112,321,257	3,430,915,767	30 55	42
Third class	13	237,873,040	3,212,108,970	13 53	58
Fourth class	6	108,636,796	562,430,842	5 18	71

Diagram showing value of farm lands as affected by increase of non-agricultural population.



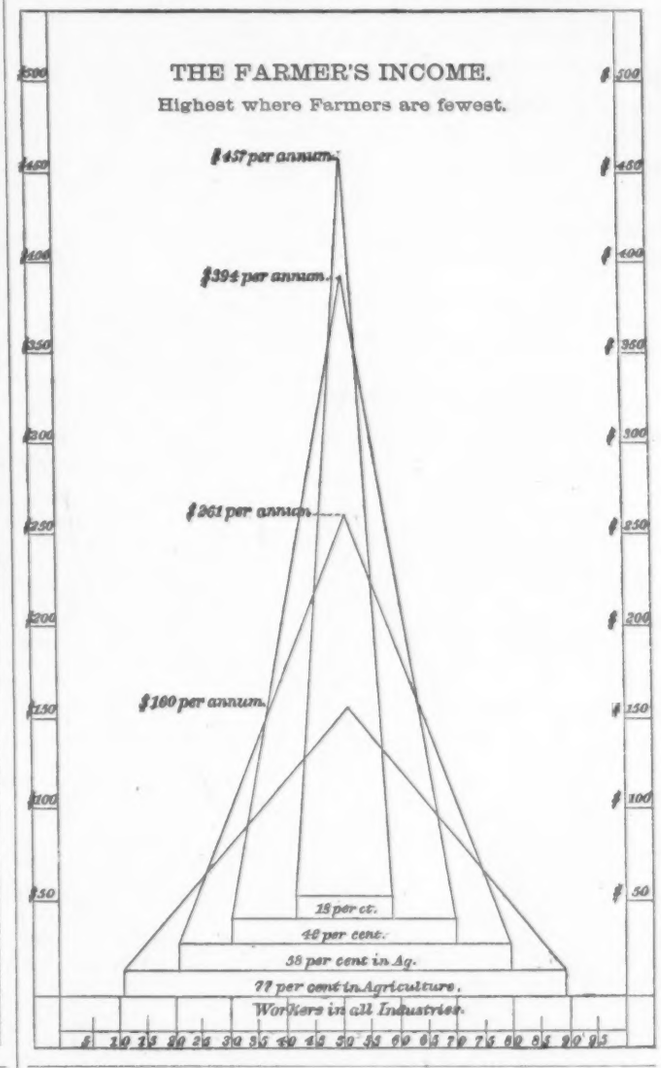


Diagram of value of products as affected by increase of non-agricultural population.

As the proportion of agricultural to other workers diminishes the value of land increases, but in a much higher ratio. In the almost exclusively agricultural States eight acres are worth little more than one in the first class, consisting of States of the largest non-agricultural population. In the class which averages 42 per cent. in agriculture the land is of more than twice the value of farms in the class which averages 58 per cent. of the people in rural employments.

The following States and Territories all have less than 30 per cent. of their aggregate of persons in all occupations engaged in the pursuits of agriculture, and they average but 18 per cent.:

States and Territories.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
District of Columbia	18,146	3,632,403	200 18	2
Massachusetts	3,359,079	146,197,415	43 52	9
Rhode Island	514,813	25,882,079	50 27	9
Colorado	1,165,373	25,109,223	21 55	13
Nevada	530,862	5,408,325	10 19	13
Arizona	135,573	1,127,946	8 32	15
New Jersey	2,929,773	190,895,833	65 16	15
Wyoming	124,433	835,895	6 72	18
Connecticut	2,453,541	121,063,910	49 34	18
Montana	405,683	3,234,504	7 97	20
New York	23,780,754	1,056,176,741	44 41	20
Pennsylvania	19,791,341	975,689,410	49 30	21
California	16,593,742	262,051,282	15 79	21
Idaho	327,798	2,832,890	8 64	25
Maryland	5,119,831	165,503,341	32 33	28
Total	77,250,742	2,985,641,197	38 65	18

In this list the most diverse conditions are represented. On one extreme the District of Columbia has but 18,146 acres of agricultural land, which is valued at $200 per acre as suburban property under the shadow of a large city. On the other, small areas in the Territories are surrounded by immense bodies of unoccupied lands, which are given away by the United States Government, keeping the prices of cultivated farms low, though they are rising with great rapidity. California and Colorado are similarly situated, yet further advanced in point of time and in development of industries, and of course showing higher prices. In the States in which there is no public land to depress prices there is no average that is not higher than the general average of the next class of States having 30 to 50 per cent. in agriculture. The range of prices is from $32.33 per acre in Maryland to $65.16 in New Jersey. Though New Jersey has 15 per cent. in agriculture, the influence of the adjacent populations of Philadelphia, New York, and Brooklyn reduces practically her percentage to a lower proportion than Massachusetts and Rhode Island.

The second class includes the smaller manufacturing States of the East and the older States of the West, in which the agricultural population is less than half of all.

States and Territories.	Farms.	Value.	Value per acre.a	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
New Hampshire	3,721,173	75,834,389	20 38	31
Delaware	1,090,245	36,789,672	33 74	33
New Mexico	631,131	5,514,399	8 74	35
Maine	6,552,578	102,357,615	15 62	35
Utah	655,524	14,015,178	21 38	36
Ohio	24,529,226	1,127,497,353	45 97	40
Oregon	4,214,712	56,908,575	13 50	40
Washington	1,409,421	13,844,222	9 82	42
Michigan	13,807,240	499,103,181	36 15	42
Illinois	31,673,645	1,009,594,580	31 87	44
Wisconsin	15,353,118	357,709,507	23 30	47
Vermont	4,882,588	109,346,010	22 40	47
Dakota	3,800,656	22,401,084	5 89	49
Total	112,321,257	3,430,915,765	30 55	42

a Average.

This list embraces also a few of the Territories, and a State or two in which the unoccupied public lands continue to depress prices of farm lands.

It is conceded that differing degrees of fertility must affect prices, and other causes may be operative; yet such is the controlling force of preponderating non-agricultural population in raising prices that we find the average of this class to be more than 25 per cent. lower than class first.

When the proportion of farmers is increased to half or two-thirds the price of land declines seriously, as follows:

States.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
Virginia	19,835,785	216,028,107	10 89	51
Missouri	27,879,276	375,633,307	13 47	51
Minnesota	13,403,019	193,724,260	14 45	52
Indiana	20,420,983	635,236,111	31 11	52
Louisiana	8,273,506	58,989,117	7 13	57
Iowa	24,752,700	567,430,227	22 92	57
Nebraska	9,944,826	105,932,541	10 65	59
West Virginia	10,193,779	133,147,175	13 06	61
Kentucky	21,495,240	299,298,631	13 92	62
Florida	3,297,324	20,291,835	6 15	64
Kansas	21,417,468	235,178,936	10 98	64
Tennessee	20,666,915	206,749,837	10 00	66
Texas	36,292,219	170,468,886	4 70	69
Total	237,873,040	3,218,108,970	13 52	58

The States having over 70 per cent. engaged in agriculture are as follows:

States.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
Georgia	26,043,282	111,910,540	4 30	72
North Carolina	22,363,558	135,793,602	6 07	75
South Carolina	13,457,613	68,677,482	5 10	75
Alabama	18,855,334	78,954,648	4 19	77
Mississippi	15,855,462	92,844,915	5 86	82
Arkansas	12,061,547	74,249,655	6 16	83
Total	108,636,796	562,430,842	5 18	77

INCOME OF THE FARMER.

The owner of land finds a great advantage in the increase of the proportion of non-agricultural population. Does the cultivator of the soil obtain an annual product of higher value? The answer is an emphatic affirmative in the following statement from the census of 1880:

Classes.	Engaged in agriculture.	Products of agriculture.	Value per capita.	Workers in agriculture.
	Number.	*Dollars.*	*Dolls.*	*Per ct.*
First class	1,060,681	484,770,797	457	18
Second class	1,566,875	616,850,959	394	42
Third class	3,017,971	786,681,420	261	58
Fourth class	2,024,966	324,237,751	160	77

There are nearly twice as many agricultural producers in the fourth class as are found in the first, yet the crops of the million are worth much more money than all the results of labor of the 2,000,000 workers. The class that has 58 per cent. in agriculture makes $101 per annum more than that which has 77 per cent., and the class with the lower average of 42 per cent. gets $133 above the earnings of that which averages 58 per cent. in agriculture.

It is not assumed that there are no other causes affecting the quantity and value of the farmer's crops which cause variations in the exhibit of individual States, but the relative proportions of agricultural and non-agricultural population constitute a factor which dominates all other factors, so that when such data are co-ordinate in classes of States the result appears with the invariability of the operation of law. That all these variations may be seen and the causes sought by the rural economist, the following details are given:

States and Territories.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
District of Columbia	66,624	1,464	2	$514,441	$351
Massachusetts	720,774	64,973	9	24,160,881	372
Rhode Island	116,979	10,945	9	3,670,135	335
Colorado	101,251	13,539	13	5,035,228	372
Nevada	32,233	4,180	13	2,855,449	683
Arizona	22,271	3,435	15	614,327	179
New Jersey	396,879	59,214	15	29,650,756	501
Wyoming	8,884	1,639	18	372,391	227
Connecticut	241,333	44,026	18	18,010,075	409
Montana	22,255	4,513	20	2,024,923	449
New York	1,884,645	377,460	20	178,025,695	472
Pennsylvania	1,456,067	301,112	21	129,760,476	431
California	376,505	79,396	21	59,721,425	752
Idaho	15,578	3,858	25	1,515,314	393
Maryland	324,432	90,927	28	28,839,281	317
Total	5,786,710	1,060,681	18	484,770,797	457

The largest income is enjoyed by the farmer of California, not only because 79 per cent. of the people of that State are outside of agriculture, making a market for his crops, but because of the demand throughout the United States for fruits, wines, and other peculiar products of that favored State. Wool is also a productive source of income, due to the market made by the woolen mills of other States.

Only in Oregon and Illinois, in the second class, are rural incomes up to the average of the first class, and only in New Mexico and Dakota are the annual earnings down to the average of the third class, so uniform is the action of this principle of industrial economy.

States and Territories.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
New Hampshire	142,468	44,490	31	$13,474,330	$303
Delaware	54,580	17,849	33	6,320,345	354
New Mexico	40,822	14,139	35	1,897,974	134
Maine	231,993	82,130	35	21,945,489	267
Utah	40,055	14,550	36	3,337,410	229
Ohio	994,475	397,495	40	156,777,152	394
Oregon	67,343	27,091	40	13,234,548	489
Washington	30,122	12,781	42	4,212,750	330
Michigan	569,204	240,319	42	91,159,858	379

Wisconsin	417,455	195,901	47	72,779,496	372
Vermont	118,584	55,251	47	22,082,656	400
Dakota	57,844	28,508	49	5,648,814	198
Total	3,764,725	1,566,875	42	616,850,959	394

In the almost exclusively agricultural States the range of income per man is quite uniform, from $140 in South Carolina to $262 in Arkansas, the average of all being $160. It may be claimed that labor, from climate or race considerations, is less efficient than in other States, but it is evident from the small areas planted, except in cotton and corn, and the small products gathered, that the lack of diversity in industry, and even of variety in agriculture, is dwarfing the magnificent resources of this great belt of States. The wisest and brightest of these farmers have reiterated this sentiment for a generation, and many are acting on it; but the reflex influence of manufactures and mining would accomplish more for agriculture than the most persistent direct efforts for the improvement of agriculture.

States.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
Georgia	597,862	432,204	72	$67,028,929	$155
North Carolina	480,187	360,937	75	51,729,611	143
South Carolina	392,102	294,602	75	41,108,112	140
Alabama	492,790	380,630	77	56,872,994	149
Mississippi	415,506	329,938	82	63,701,844	187
Arkansas	260,692	216,655	83	43,796,261	202
Total	2,639,139	2,024,966	77	324,237,751	160

In the following list Iowa, Minnesota, and Nebraska lead in average income. They have below 60 per cent. in agriculture, have rich lands, easily cultivated, and send a large proportion of their products to Eastern and foreign markets, and therefore have less of the stagnation of isolation.

States.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
Virginia	494,240	254,069	51	$45,726,221	$180
Missouri	692,959	355,297	51	95,912,660	270
Minnesota	255,125	131,535	52	49,468,951	376
Indiana	635,080	331,240	52	114,707,082	346
Louisiana	363,228	205,306	57	42,883,522	209
Iowa	528,302	303,557	57	136,103,473	448
Nebraska	152,614	90,507	59	31,708,914	350
West Virginia	176,199	107,578	61	19,360,049	180

WAGES OF LABOR.

Having shown that the value of the farm and the income of the farmer are enlarged by increasing the proportion of non-agricultural laborers in a State, it is important to inquire whether the farm laborer shares in the advantage to the owner and cultivator of the soil. Fortunately a definite answer can be given from repeated and trustworthy returns of the wages of farm labor to the Department of Agriculture.

In 1870, when wages and prices generally were high, the average wages of farm labor in the first or manufacturing class of States was $34, while in the last, exclusively agricultural class, it was but $15. When the panic came, and years of manufacturing depression followed, mechanics and artisans competed with farm laborers and reduced the price of rural labor. It is a fact that prices at different times furnish an accurate measure both of the industrial status of the laborers and the prosperity of the great industries of the country.

In 1882 the wages of agricultural labor averaged nearly $25 in the first and second class, $19.50 in the third, and $13.20 in the fourth. The demand for wheat and corn, beef and pork, the product of Ohio, Michigan, Illinois, Wisconsin, and other States of the second class, to supply home, eastern, and foreign markets, brought up the value of farm labor to an equality with wages in the States of the first class. The scarcity of laborers, who prefer farms of their own, also contributed to high rates in this class. Where more than half of the workers are farmers, the competition of laborers reduces inevitably the rate of wages. So we find that where the proportion reaches three-fourths, the reduction usually amounts to 50 per cent.

The influence of manufacturers, of mining, of any productive industries on local prices, whether of farms or farm products or farm labor, is plainly traceable in States and in various districts within the States by the furnace fires, the mines, the factories that thickly dot the location where high prices for farm labor prevail.

The diagrams illustrate in a striking manner the operation of what may be deemed a law in industrial economy, and show that the value of farm lands depends more upon the diversification of industry than upon the fertility of the soil, and that the farmer's income is highest where farmers are fewest.

If, then, national prosperity as exhibited in property values, in income, and in prices of labor is demonstrated to depend on diversified industries in States, how shall this result be secured? Let every State look about for the natural resources within her borders in which these industries may be founded. Encourage them, invite capital to them, and present their claims to the General Government for protection against hostile foreign competition. Let the General Government meet these demands upon correct principles.

Whenever we can by encouragement develop resources and establish factories here which can supply us the article, in a healthy home competition, cheaper than foreign manufacturers can sell it, it is our duty to discriminate in order to do so. Now, that is a matter of fair discussion, in which we must consider our resources, their abundance and character, &c. Again, when we know that we can not produce sufficient for our demand of any article, but may by encouraging the establishment of factories compel importers to sell cheaper than they otherwise will, it is our interest to do so.

Mr. Chairman, what we want is a reasonable, fair adjustment of the tariff from the standpoint of national interests. We do not want to do it for the special benefit of any particular locality, but broadly for all. If this Congress had undertaken to reduce the revenue and reform and equalize the tariff as a business Congress, I should have heartily supported that effort so far as I could see that it was wisely done.

The most absolute and accursed folly of this whole question is the wicked use of it by the Democratic party as a political question in order to get themselves into power.

The adjustment of a tariff is a business question. It is a question of detail, and the policy, necessity, and propriety of the duty comes up on each article as an independent question. It is then a question of revenue, of the relation it bears to our labor, our resources, our industries, our defense, and our ultimate commercial prosperity. When you take up the subjects of glass, iron, salt, wool, lumber, horses, wheat, meats, liquors, sugar, cotton, they should be handled in a patriotic, business way, with a view to raise our revenue and equally distribute our tax for it, and at the same time to wisely maintain our American interests.

Sir, I think a Presidential year is not a favorable time to do this. It is our political year and not given to business. I think the mistake of action now is illustrated by this bill. There was not time to enter upon a careful revision and adjustment of inequalities before the campaign, and evidently our Democratic friends wanted to do something to make an issue and do it soon, and from necessity took this method.

I think it would have been better to have waited until the work could be wisely and carefully done. There are times when this method would perhaps be justifiable, but no such necessity exists now. And in my judgment the inequalities of the present adjustment of the tariff would rather be increased than cured by this bill. I think we ought not to have a surplus in the Treasury. The revenue should never exceed the actual demands of Government. We are disappointed to find that the revision of the tariff last year did not make a greater reduction of revenue. But would this? Gentlemen on that side say not. Experience teaches that it would not. It would be better to take up the items from which our redundant revenue comes and provide for a reduction there.

Mr. Chairman, I seek no political advantage from the success or defeat of this bill. I would not detract from the great reputation of its author or reflect upon his earnestness or ability. Both are well-known and recognized.

If a measure like this was in my judgment wise and I felt that it would be of benefit to the country, I should be glad to support the distinguished gentleman from Illinois in it. But I do not believe the good results which he anticipates would follow it.

I regard this as a question of national concern, to the consideration of which we should come as one people against the outside world, and which we should settle with that high and lofty spirit of patriotism which animated our fathers. The policy which we adopt should not be a local or sectional one, but a broad and national one. The interests of Massachusetts and all New England, with her whirling wheels of tireless toil, are our interests; the interests of New York, New Jersey, and Pennsylvania, with her flaming forges, are our concern; the interests of the States that circle down the Appalachian range and bathe in the tides of the surrounding seas or which shock their golden grain in the fertile valleys of the Mississippi and its great tree of tributaries are ours; and the fortunes of the regions of richer ores on either side of the snowy Sierras and away yonder to the Puget Sound are as much to us as the fortune of the pleasant valley where from the porch of cottage homes we take in view those familiar signs of civilization—the modest school-house, the spired church, the bell-towered college, and the domed temple of justice. It stretches out before us, one exhilarating panorama, one common country, whose every interest is our own, whose highest welfare is our dearest wish.

Contested Election—O'Ferrall vs. Paul.

SPEECH

OF

HON. JOHN C. COOK,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House having under consideration the contested-election case of O'Ferrall vs. Paul—

Mr. COOK said:

Mr. CHAIRMAN: In order that a correct conclusion may be arrived at on any question of this kind it is essential that we should first fairly understand the facts in the case. I shall content myself to-day with simply giving a statement of the facts in this case and what I conceive to be sound rules or principles applicable and that experience in this class of cases convinces me are essential in the discharge of that duty imposed on us to judge of the election of our fellow-members. I start out, Mr. Speaker, with this fact: that the contestee received a majority of the votes of the district by over 300. There is no dispute about that. Now, how is it proposed to reduce this majority? Upon what facts is it proposed that over 300 votes shall be deducted from Mr. Paul in the county of Albemarle?

It is claimed that about five hundred men voted for Mr. Paul who had not paid their capitation tax, and as evidence we have the poll-list of each township. Then we have the list of colored delinquent taxpayers, one for each of the two districts, the county being divided into two districts.

Now, I insist that when a name occurs on this delinquent-list it is not sufficient to fairly show that that man voted because a similar name occurs on the poll-list of a precinct embraced in that half of the county. Suppose we find the name of John Jones upon the poll-list in one of the precincts of that county. We now turn to the colored delinquent-list of that half of the county that embraces this precinct. There is no testimony to show that John Jones whose name appears upon one of the poll-lists is the same man whose name appears upon the delinquent-list. There is no circumstance to identify the man.

There is no testimony whatever introduced to show that John Jones upon the one list is the same as the John Jones upon the other list. How, then, do you know that John Jones who voted in a certain precinct is the John Jones whose tax was not paid? Nothing, except that a man by that name appears upon the delinquent-tax list. There are repeated instances where there are half a dozen men having the same name appearing upon the two lists.

Where you have two lists of this character limited to a small precinct, limited to a small number, and you find only one instance of the same name upon the two lists it is safe to assume that they are the same person. But where it is a list that covers one-half of a county, that embraces more than a thousand names, and especially where there are repeated instances of the same name occurring upon the two lists, it is unsafe to assume that the two names stand for the same man.

I have here the case of Letcher against Moore, decided by Congress before the day when partisanship ruled in the determination of election cases. And I say, Mr. Speaker, looking back to the times when partisanship first seems to have entered into these contests no man can do otherwise than to regret the extent to which it has governed the votes of members of the House for the last twenty years. It is a thing that grew out of the heat and passions of the war, which it seems impossible to break up.

It must be with regret that we look back and see not only what outrageous decisions were made in the House, but how the committees, sitting as judges, have not scrupled even to put upon record unjust rulings as being safe precedents for the future. We look to them with regret, because the extreme doctrine used one day by the House when a majority was of a certain political persuasion is used years afterwards on the other side. I say it is fair for us to look back for precedents beyond that period; and I have here a case I want to refer to, the case of Letcher

against Moore, which was in the House a long time and which was thoroughly and ably considered.

Mr. CALKINS. In what year was that?

Mr. COOK. In the year 1833. I find this resolution was adopted by the committee unanimously and was accepted by the House in that case, and it is a fair doctrine to stand by to-day:

Seventh. That when a name is found on the poll-books, proof that an individual of that name resides in the county who is a minor is not sufficient to strike the name off the poll-book, and that some proof, direct or circumstantial, other than finding the name on the poll-book will be required of the vote having been cast by such minor in the county or precinct where the vote is assailed. Adopted unanimously.

Mr. CALKINS. I wish to ask the gentleman whether that same doctrine was not reaffirmed in the last Congress in a case that was tried here?

Mr. COOK. It was, although I do not believe it appears directly in the report; it is in a case I do not care about referring to very often. And yet I believe the doctrine is sound that where you have for one-half of the county the names of over a thousand men appearing on the delinquent-list it is not safe to assume because there is an identity between a name upon that list and a name upon the poll-list the parties are the same.

I insist that the rule which should be adopted in this House, because it is a safe one, because it is the only safe one, should be this: that before a vote is deducted from one side or the other we should have proof upon which it is fair to rely that that vote was cast and that it was cast for the person from whom it is to be deducted. We should have some degree of certainty upon both these points, and especially when the identity of the voter can be established, when you have the name of the man whose vote you are seeking to deduct from the one or the other candidate.

Before you are to do that, the party who is desirous of having the vote thus deducted should bring before the House evidence of a character sufficient to fairly warrant the conclusion that the vote was cast for that man; and that evidence should be of the highest character fairly attainable under the circumstances.

Now, when you have the names of four hundred men whose votes you propose to deduct from the vote of Mr. Paul, what reason is there for not calling the voters themselves, for not taking up each individual vote and identifying it, and showing that the man without paying his tax did in fact vote, and then showing by the best evidence you can secure that he voted for John Paul?

Before I forget it I want to say here that I am now only speaking upon the question whether it is right under the proof to seat the contestant. My views might go so far as to lead me to say that the election in this case should be declared void. But before you shall readjust the account and say definitely that John Paul shall have so many votes accorded to him as having been legally cast for him, and that the contestant shall have so many votes accorded to him as having been legally cast for him, I insist that the House should have evidence that is fairly reliable for that conclusion.

Now, what evidence have you to show that any of these men voted for Mr. Paul? All the evidence that has been given upon that point has been of a general nature only. It is true that perhaps a precedent in the past might be found for coming to the conclusion which the majority of the committee has come to; but such a precedent, if it can be found, is not reliable. I say that it is unsafe to accept general and unreliable testimony, to accept mere guesswork, when the facts admit of proof by circumstantial evidence that is far more reliable.

How do you know that these four hundred men, or whatever number you propose to deduct from the vote of Mr. Paul, voted for him? Is it because A, B, and C give it as their opinion that those men voted for him? But the assertion is made, which I admit is reasonable, and it is supported by proof, the force of which I admit, that these tax receipts were given to parties for the purpose of qualifying voters who would vote the Readjuster ticket. That is the only fact upon which you can hinge the conclusion that they did vote for him. That a work was inaugurated for a certain purpose is apparent from the testimony, and it would not be fair to deny it.

But where men vote by secret ballot it is unsafe, I repeat, to accept any general declaration, or any fact that is general in its nature, and make that of universal application, because you are seeking to throw out every vote that was cast upon this class of tax receipts. I say that in view of the fact that the contestant had it in his power to summon as witnesses these men who voted, and ask them for whom they voted, and in view of the fact that if they declined to state for whom they voted the contestant could have proved to what party each belonged, with what party each affiliated, and could have proved their political choice; he could have placed in evidence circumstances bearing upon each individual vote, and in that way could have proved for whom the men voted. Such testimony should have been produced.

I wish to say one word in reply to my friend from Iowa [Mr. HEPBURN]. He asks the other side of the House whether they are willing to establish the precedent of assuming that because a man is a colored man he therefore voted the Readjuster or Republican ticket. I do not care whether they are willing to do so or not; I am not. I have always noticed that Republicans are entirely willing to claim that when it is to their advantage. I do not think it is fair upon either side. I do not think it is safe or right to accept that as self-evident in a matter requiring judicial determination.

I want to apply here to-day the same rule of action that I would be willing to have applied in the next Congress, if the Republicans shall have the same majority then that the Democrats have here to-day, and I would apply none other. I believe that in all these contests we should disregard the present and look to the future. By my votes on this floor and by my voice in the committee I shall oppose the adoption of any rule now which I would not have apply in the future. And when every political party comes to that in this House, when the Republicans, being in a majority, shall apply in these cases only such rules as they are willing that the Democrats should apply when they have the majority, and when the Democrats shall act in the same way, then we will have more fairness in the decision of these cases, and there will be less room for the criticism which is now universally made upon our decisions.

Look over the country, take the public opinion of to-day, and you will see that no regard is paid to the decision of this House in election contests, because they consider it a foregone conclusion that such decision will be a partisan one. I am surprised, and I may be pardoned for referring to it, to find on the Committee on Elections and in this Congress men who in the last Congress voted for the unseating of men on this floor, and now when parties are reversed are ready likewise to reverse their opinions and turn their backs on their past positions.

It is for that reason that I speak on this occasion. I want a rule adopted which will be safe for all future time. I want the best evidence which is attainable under the circumstances, and I want that evidence to be such as is fairly reliable, before any vote shall be deducted from one man or given to another.

The other point in this case, which relates to the question of whether these men's taxes were in fact paid in time, I leave to those more familiar with the details.

The Tariff.

SPEECH

OF

HON. BURR W. JONES.

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884,

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. JONES, of Wisconsin, said:

Mr. CHAIRMAN: The history of politics is full of illustrations of one fact that is, that the masses are not easily led away from those vital issues on which all great questions depend. The average common sense of mankind somehow sees through the rubbish of false statement, of abstraction, of prejudice, down to the live practical issue about which the whole contest turns.

Some forty years ago there was struggle, memorable in English history, in which the political economists deluged all England with facts and falsehood, with theories good and bad. If that had been possible the judgment of the common people would have been utterly dazed in the confusion of all the sense and nonsense, oratory, statistics, and literature, poured in upon them. Meanwhile the multitude quite ignored the doctrines of former centuries. They gave themselves no trouble about the doctrines of the future. They decided that during their own day and generation one tax at least should be removed; that bread should go untaxed to the mouth of the consumer. Their will became law. The corn laws were repealed.

In our own country there is now going on a struggle between contending views on the subjects of revenue and taxation. Extremists on both sides are seeking to direct the contest. There are those perhaps, though I doubt if there is one in this House, who would sweep away all duties upon imported goods. These extremists are so few in number or so widely scattered in this country as to be not easily found. And yet every man who asks for a reduction of taxation is described in some quarters as a free-trader. Then there are theorists and extremists of the other sect: those who seem to believe that international trade is a curse; that no good thing can come from abroad; that the ocean should be the uttermost boundary of commerce and not its highway; that taxation is not a clog and burden upon industry, but is its life and motive power. Meanwhile the people who sent us here are not worrying about the abstract principles of protection on the one hand or of free trade on the other. Those principles must take care of themselves;

and woe be unto either of them if it shall stand in the path of a great nation's progress.

While the theorists are contending among the clouds, those who sent us here are also contending, but over a very plain and an intensely practical question. That question is: ought the extraordinary taxation of the war period to be made perpetual in time of peace? In this House we find ourselves divided upon this question. Our Republican friends are practically united in saying that there should be no change. They have voted against the consideration of the only bill brought before the House to reduce taxation. They will now seek to summarily behead the measure by voting to strike off the enacting clause. It is not merely that they oppose this bill; they ask no opportunity to amend it or make it better. They oppose all legislation tending to reduce the present high taxation. A very large majority of those on this side of the House maintain that there ought to be a material reduction from the rates of taxation imposed by the tariff bill of 1861 and the other bills of the war period. We believe that the question now before us is the precise question which was submitted to the people of this country in the elections of 1882, that it will thrust itself upon our attention until decided upon its merits, and that it will down at the bidding of no monopoly or no party.

I quote from the last report of the Secretary of the Treasury:

> Upon the estimate of $85,000,000 as the surplus for the current year, we find a surplus for that period of nearly $40,000,000 not wanted for the regular expenditures of the Government or for the payment of the national debt through the sinking fund.

Again in the report he says:

> The estimates for the fiscal year ending June 30, 1884, show a surplus revenue of $85,000,000 per annum. This is enough to pay all the 3 per cents in about three and one-half years and before the close of the fiscal year ending June 30, 1887.

It will be remembered that after 1887 no other of the Government bonds can be called until 1891. They can only be purchased in the market and by the payment of a large premium. The Secretary estimates that this surplus will be increased year by year by the increasing population and swelling business of the country.

In the elections of 1882 our people decided by an overwhelming vote that Congress at its last session had been derelict in not reducing taxation. They condemned in no uncertain manner that Congress for spending improvidently the public moneys instead of reducing the surplus revenues. At the last session of the last Congress, after the elections and the whirlwind, there was a pretended yielding to the imperative demand for reduction of taxation. Even Mr. KELLEY, of Pennsylvania, was constrained to say "the present object, dear to the heart of the people, is to diminish an excessive revenue." The tariff commissioners had recommended a bill reducing tariff rates on the average 20 per cent., and had stated that in their opinion the reduction would reach 25 per cent. The same statement was made by the gentlemen who had in charge the tariff bill which finally became a law. In order to show how this promise has been kept, I will ask leave to print a short extract from the report of Mr. Nimmo, of the Bureau of Statistics. It tells its own story.

Values of imports of dutiable merchandise entered for consumption in the United States, with the amount of ad valorem rate of duty collected, during the six months ended December 31, 1882 and 1883.

Articles.	Six months under the old law—1882.			Six months under the new law—1883.			Increase (+). Decrease (—).		
	Value.	Duty collected.	Ad valorem rate of duty collected.	Value.	Duty collected.	Ad valorem rate of duty collected.	Value.	Duty collected.	Ad valorem.
	Dollars.	*Dollars.*	*Per cent.*	*Dollars.*	*Dollars.*	*Per cent.*	*Dollars.*	*Dollars.*	*Per cent.*
All dutiable merchandise	260,856,237	110,449,331	42.34	241,738,562	98,812,477	40.87	— 19,117,675	— 11,636,854	— 1.47
Sugar and melada	44,432,311	23,180,590	52.17	46,793,822	23,520,030	50.26	+ 2,361,511	+ 339,440	— 1.91
Iron and steel, and manufactures thereof	32,499,426	12,713,996	39.12	23,766,583	8,207,133	34.53	— 8,732,843	— 4,506,863	— 4.59

Carpet	3,505,980	974,202	27.79	4,348,132	1,087,519	25.01	+ 842,152	+ 113,317	— 2.78
Manufactures of wool	22,400,387	14,943,626	66.71	23,128,502	15,193,291	65.70	+ 728,115	+ 249,665	— 1.01
Manufactures of cotton	14,967,850	5,629,658	37.61	12,033,872	4,828,117	40.12	— 2,933,978	— 801,541	+ 2.51
Manufactures of silk	19,999,119	11,738,469	58.69	21,287,064	10,615,270	49.87	+ 1,287,945	— 1,123,199	— 8.82
Earthen and china ware	4,423,146	1,896,705	42.88	2,568,288	1,438,035	55.99	— 1,854,858	— 458,670	+ 13.11
Glass and glassware	4,271,305	2,327,660	54.49	3,942,765	2,206,789	55.97	— 328,540	— 120,871	+ 1.48
Spirits and wines	5,203,625	3,706,142	71.22	2,801,525	2,632,873	93.98	— 2,402,100	— 1,073,269	+ 22.76
Malt liquors	511,772	227,370	44.43	490,326	235,827	48.10	— 21,446	+ 8,457	+ 3.67

From this statement it would appear that the promised reduction of 20 or 25 per cent. has proved a ridiculous failure. I ought perhaps to state that on page 9 of this report Mr. Nimmo states it as his belief that, owing to causes which I have not now time to repeat, the former report should be somewhat modified, and he estimates the reduction at between 5 and 6 per cent. Whether his first estimate or his second is more nearly correct I do not know. In the first, the figures speak for themselves and indicate a reduction of less than 2 per cent. In the second, the result is based upon a process of reasoning about the accuracy of which there may be differences of opinion. Suppose it be granted that 6 per cent., the utmost that is claimed by any one, measures the amount of the reduction under the law of 1883, what would have been the answer of an indignant people if Mr. KELLEY and Mr. MORRILL had told the public that the bill would only reduce the war-tariff rates 5 or 6 per cent.? The leaders of the Republican party knew very well, as did every one else familiar with public sentiment, that a proposal for so slight a reduction from the enormous war tariffs would have been received with almost universal contempt. They made the most solemn promises to reduce taxation, to relieve the people of at least 20 per cent. of their tariff taxation. No man pretended that less than that would be satisfactory. Every one agreed that the reduction should be made, and be made at once. Those in the minority asserted on this floor that the bill was the handiwork of the manufacturers; that it would not satisfy the popular demand. The minority sought, but in vain, to obtain much greater reductions than Republicans were willing to yield. Under these circumstances the bill was passed. The Tariff Commission was one expedient for delay; the tariff bill of last winter seems to have been little else than a second continuance of the people's suit for a reduction of taxation. But the people are still demanding a trial on the merits.

Thus far the results have shown that the people are not likely to receive any substantial relief from a party whose cardinal doctrine is high-tariff taxation. We who favor this bill charge that the solemn promises made to the people that they should have a substantial reduction of taxation have been most flagrantly disregarded. The party which made those promises can make no denial of the charge. Men have only to read the pledges which were made by those who were responsible for that bill and the reports of public officials of that party high in place to learn how freely the promises were made and how freely they were broken. Not one-quarter of the long-sought and long-promised relief has been given. Now when the deficiency is demanded it is stubbornly refused.

In the face of these solemn promises every man of every class still pays an average of nearly 40 per cent. tariff tax on the great mass of the necessaries of daily life; by the lowest estimate, 42 per cent. on his sugar; 33 per cent. on steel and iron, and manufactures thereof; 62 per cent. on his woolen goods; 39 per cent. on his cotton goods; 56 per cent. on his earthen and china ware; 55 per cent. on his glass and glassware.

The survivors of the brave men who fought their country's battles in the last great war are now on the downhill of life. Since the time when they responded to the solemn call of their country a new generation of men and women have appeared. But the war taxes still remain. They still wring from the earnings of every humble citizen his tribute not only to the Government but to the monopolies whose influence has continued the extraordinary taxation of the war period long after its necessity has passed away.

For years past the most liberal appropriations have been made for all the needs of Government—appropriations so large that more than once they have been heartily condemned as extravagant. Yet, after the payment of all expenses, including pensions, the sinking fund, and interest on the public debt, the fact still stares us in the face that a large surplus remains in the Treasury, increasing year by year.

Here is a plain, simple issue; one which every man can understand: do the people of this country desire us to continue the levying of needless taxation year by year on the theory that Congress can be better trusted than themselves to spend their surplus earnings? Do they wish to pay for the necessaries of life 30 or 40 per cent. more than they are worth in the markets of the world? And, if so, for what purpose? Is it because they think it desirable that after the necessary expenses of Government are paid there should remain annually a surplus of fifty or sixty million dollars to invite fresh raids upon the Treasury?

Those who believe in this policy may be right; yet it may be worth

while to reflect that the $85,000,000 surplus referred to by the Secretary of the Treasury would have paid all the expenses of this Government in 1860 and there would have been some millions to spare. It would have paid more than four times over all the expenses of Government in the days of Jackson. Now our expenses are more than $265,000,000 per year, and they can be increased, the people may be sure, quite as rapidly as they may desire.

If the people enjoy the policy of paying into the Treasury many million dollars each year more than is needed for the legitimate expenses of the Government, they have only to say the word and that policy will be continued. So long as we continue the present rates of tariff taxation the surplus in the Treasury and an increasing surplus will be the necessary result. Nor will Congress find any difficulty in expending that surplus if public sentiment shall indicate that it is regarded as a blessing to be continued. The Republican Senate have already sent us a bill appropriating $77,000,000 for educational purposes. That snug little sum is to be collected from the whole people if we shall approve the bill, and then is to be filtered back through the several States to be expended, not evenly, but in the ratio of illiteracy.

There are other ways in which Congress could easily enough expend such money as the American people may fancy they do not know how to spend themselves. The president of the Mississippi River Commission says that it would be a good investment to expend $75,000,000 in improving that river. The friends of the proposed Hennepin Canal can suggest a way to use divers and sundry other millions, when the people become quite certain that they are going to enjoy forever the high tariffs and the high taxation that Mr. KELLEY and the other leaders on the other side are determined to perpetuate.

Congress ordinarily appropriates six or seven millions per year for the erection of public buildings. There are bills before us at this session asking for about fifteen millions for this purpose. I trust that we shall see to it that a goodly portion of them do not pass; but yet if we felt certain that those who sent us here are longing to have us spend their surplus earnings, we could erect magnificent buildings of rare architectural design in a hundred cities.

I understand that the annual river and harbor bill is to be reported in a few days and that it will ask for about twelve millions and a half. That is undoubtedly more than would be asked but for the plea made every day that we have a plethoric Treasury.

If the people insist upon the policy of paying this large surplus into the Treasury year by year the Government engineers can find manifold ways in which to spend it. They can find a thousand rivers to be dredged and as many harbors to be created. Behold the beauties and the consistency of the high protective system! It has practically driven the American flag and the American ship from the high seas. It has left our foreign carrying trade at the mercy of England. Only 16 per cent. of our foreign commerce is carried out in American bottoms, whereas twenty-five years ago the proportion was 66 per cent.

The system looks with jealousy and distrust upon the approach of every vessel to an American harbor if that vessel brings any product which could be manufactured in the United States. The entire system is adapted to drive away those vessels and those products, especially if they be cheap, and yet with lavish appropriations of public moneys it improves and opens with one hand the same harbors which with the other it seeks to close to the commerce of the world.

High tariffs mean high taxation. A tax is a tax all the same whether paid to the tax-collector in bulk or whether paid in driblets day by day at the store and shop, in the form of higher prices for sugar, cotton cloth, boots, hats, blankets, lumber, and all the necessaries of life. It is still a tax, and it lessens by so much the substance of him who pays it. Those who would maintain the present high taxation and high tariffs insist upon large appropriations. The latter follow as the natural sequence of the former. Our Republican friends on this floor fought long and ably to add to the postal appropriation bill and to the naval bill several million dollars more than we believed to be necessary. They accepted their failure in no merry mood. From the beginning of this session until this hour they have voted in almost solid phalanx to increase the expenses of Government and against reduction. I do not say this in any spirit of criticism, but I state it as a fact known to us all. They vote for large expenditures, not because they like extravagance, but because they are wedded to the system of high-tariff taxation.

That system produces large revenues, which in turn result in large expenditures, just as inevitably as the waters of the swollen river find their way to the sea. The issue has never been so clearly drawn as now. We who favor this bill assert that taxes, whether direct or indirect, should not be levied beyond the proper wants of Government; that a large surplus revenue should not be collected from the people either to be divided partially among the States or to be wasted in needless appropriations; that the true way in which to dispose of an excessive revenue is not to collect an excessive revenue, but to leave whatever is not needed for the legitimate expenses of Government with the people, where it belongs. Any other system is not protection in any just sense, but is extortion pure and simple, and none the less odious because under the guise and pretense of law. We believe that the present surplus should be immediately cut down by a reduction of taxation; that the promise made to the people in the last Congress, though not made by us, should be sacredly kept.

If this reduction of taxation means protection, I am for protection. If it means free trade, I am for free trade. I support the Morrison bill not because it squints toward protection, nor because it squints toward free trade, but because it is the only measure before us promising a reduction of taxation and of the surplus revenue. I believe that this large surplus revenue is a standing menace to honest administration. It is a temptation to every hungry lobbyist. It gives new strength and vigor to every weak and antiquated claim against the Government. It fires the imagination of every crank and excites the cupidity of every knave.

All history teaches that an excessive revenue tends to make extravagance the fashion and frugality unpopular.

The every-day expenses of Government are now more than four times the expenses of 1860. Deducting the items of pensions and interest on the public debt, and they are still nearly two and a half times the expenses at that period. Is it desirable to check this rapid increase of public expenditure? There is one way, and only one way, to accomplish that result: it is to limit and reduce taxation. Any other method will prove a delusion and a snare.

The people whom I have the honor to represent are intelligent enough to dispose of their own surplus earnings. I can not believe that they care to yield that privilege into the hands of this or any other Congress. I have every reason to believe that they would gladly see such a substantial reduction of taxation as the last Congress promised but did not give. The only question then remains, how shall that reduction be made? Mr. KELLEY and those who follow him would exclaim, "If you must reduce taxation, abolish your odious internal-revenue system! Take off the tax on whisky and tobacco!" That is the programme of protection, the programme of the Republican party. I am sorry to say also that it is the programme of Mr. RANDALL and the few protection Democrats who are threatening to form an alliance with Republicans to defeat this bill.

On the other hand, we who support this bill believe that it is more important to give the people cheap sugar, cheap salt, cheap clothing, and cheap lumber than it is to give them cheap cigars and cheap rye and bourbon whisky. I am already committed by my action in this House to the policy of maintaining the internal-revenue system. If, then, I am to favor a reduction of taxation there is but one alternative, and that is to sustain the reduction of tariff duties. It is because this bill promises a substantial reduction of those duties that I give it my support. During this long debate the measure has encountered every form of criticism. Among other things it has been charged that the bill is inopportune; that it follows too quickly after the tariff bill of last year.

No measure can be inopportune which proposes in a fair and moderate manner to reduce excessive taxation. We have waited long enough to learn that the tariff act of last year was a hollow pretense. If this bill should become a law the reduction of tariff rates would be no greater by the operation of both laws than was promised by Republican leaders as the result of the former law.

Then all promised that a substantial reduction should be made. This bill is nothing more than an attempt to pay 100 cents on the dollar of that repudiated debt.

It is charged, too, that the Morrison bill is illogical because it proposes a horizontal reduction of taxation; because it proposes to reduce indiscriminately one-fifth of the tariff tax from nearly every article on the list.

Any objection of this kind applies with equal force to the existing tariff laws. We concede that the present tariff laws are so full of absurdities that no process of addition or subtraction can change their inherent defects.

The inequalities of the present laws have long been the subject of just complaint. When the poor man looks for the symmetry of the existing tariff laws he will find that he has to pay a tariff tax of more than 40 per cent. on his sugar, while his wealthy neighbor pays only 35 per cent. on the sweetmeats imported for his more favored table. The carpenter or farmer pays more than 100 per cent. bounty on the rice for his breakfast table. If the millionaire imports his fancy jellies and sauces he pays only 35 per cent. The blacksmith and the farmer pay a duty on their daily salt of 73 per cent. The more favored gentleman whose labor consists in spending his inherited wealth also contributes to the general weal by paying 10 per cent. upon his diamonds.

The poor man's family pay upon their worsted goods a tax of from 70 to 90 per cent. The rich man's family pay for their embroideries of silk only 50 per cent. This is what is meant, I suppose, by a discriminating tariff.

When the laboring man begins housekeeping he is taxed on the dishes which he buys nearly 60 per cent. When wealth and fashion prepare for the ball, they are taxed upon their jewelry, but only 25 per cent.

When the day laborer builds his home he pays a tax upon his window-glass varying from 55 to 70 per cent. Perhaps he ought to do so cheerfully, especially when he learns that the millionaire for whom he toils pays his share of tax; that is, he pays for the paintings on glass, the statuary and porcelain in his mansion, a tax of 30 per cent.

The farmer or mechanic in Wisconsin is taxed for his jeans or denims about 40 per cent. Mrs. Vanderbilt or Mrs. Astor returns from a Eu-

ropean voyage with her European trousseau costing $5,000 or $10,000 or $15,000, and pays not a cent.

I might go on, if time permitted, almost without limit showing the symmetry of the present tariff and with what tenderness it protects the poor man!

There is one way in which to make the present revenue system sternly logical and consistent. That is, to adopt the unadulterated protection policy; to abolish the tax on spirits and tobacco. Then you would have that system in all its glory; the system which would tax to the utmost the necessaries of life, but would make luxuries free as air. Under that system taxation would rest with leaden weight upon the shoulders of the poor and middle class, while the rich would be as far as possible freed from all contact with such vulgar cares. We have gone quite far enough toward such logic and such perfection. When the gentlemen who criticise the Morrison bill as illogical and unscientific will point out a better plan we will follow it with pleasure. We will join them any day in an attempt to thoroughly revise the old law and to lop off its defects. But they make no such proposition. They expend their patriotism not in suggesting any better legislation, but in denouncing the only plan before us to reduce taxation. The Morrison bill in no way impairs any semblance of symmetry that may be found in the present laws.

It proposes a very moderate reduction of the tax on all those articles which enter into use and consumption in our every-day life. It singles out no one industry or monopoly for attack, but says to all the protected industries you must now surrender to the common people a small part of that tribute the law has so long exacted in your behalf. This small abatement on each article of the war-tariff taxation will in the aggregate swell to a large measure of relief, amounting, it is estimated, to $35,000,000.

One gentleman seemed to think that he had deeply buried this bill beneath the criticism that it is so simple and plain that, as he expressed it, any car-driver could have drafted it. If it is a plain measure, it is in striking contrast with those tariff bills which the manufacturers have heretofore presented for the ratification of Congress; bills so complicated that they were neither understood nor intended to be understood except by the experts who drew them. Those who wish to continue high taxation by skillful indirection are not expected to find any virtue in a bill which only pretends to reduce taxation in the fairest and simplest way.

Those who have no interests to be protected by special legislation, those who pay the taxes, may not find it such an insuperable objection to this bill that its provisions are plain enough to be comprehended by common men.

We all know what kind of a bill would be prepared by the gentlemen who ridicule the simplicity of this one. They would begin their work by announcing with some flourish of trumpets their intention to satisfy the desire dear to every American heart by a reduction of taxation.

In order to place their work far above the comprehension of the common mind, they would begin by adding three or four new classes to the schedules of woolen, cotton, and iron goods. They would reduce slightly an ad valorem rate here and there, but would not forget to increase at the same time the specific duty on the same article. They would occasionally change the duty from ad valorem to specific or the reverse.

After the lapse of a year the public would perhaps find that all relief had been delayed for a year at least, and that a reduction of 1 or 2 per cent. had taken place, but that it had been made in a very scientific manner, and it would prove entirely satisfactory to the "business interests;" that is, to Pennsylvania.

In currency questions a few years ago all became familiar with the saying, "The way to resume specie payments is to resume." We who vote for this bill act upon the principle that the way to reduce taxation is to reduce, and with as little circumlocution as possible.

An intelligent public will not lose sight of the fact that this bill would not reduce the tariff rates below those of the Morrill bill of 1861. It will not be forgotten that the act of 1861 was formed to produce large revenues for the emergencies of war, and that it met the approval of the manufacturing interests as a high protective tariff. It will be remembered that as the rates were afterward still more increased, it was with the understanding, often expressed in Congress, that they should be reduced when the emergencies of war should pass away. There was another reason assigned for the increase of the tariff rates far above those rates which had been maintained in peace, namely, that the long list of internal taxes greatly increased the cost of manufactures, and that the increased tariff rates were in compensation for this new burden. It was promised by those who urged this reason for higher tariffs that those tariffs should be reduced when the direct and internal taxes should be removed. If there were time, I could read copious extracts from the speeches of such leaders as Senator MORRILL to verify this statement. The direct and internal taxes thus affecting the cost of manufactures have long since been removed, but the manufacturers now seem utterly oblivious of the pledges by means of which the high war tariffs were obtained.

By every rule of fairness and good faith the manufacturers ought long before this to have consented to a reduction from the enormous bounties which the laws passed under those circumstances have so long exacted. But it is and has always been the curse of any system of favoritism in government that the recipients of favors will inevitably beggar the liberality on which they feed.

At the beginning of our Government, when manufactures were indeed in their infancy, they had such protection as was given by average tariff rates of about 8 per cent. Under the Walker tariff of 1846, a tariff under which manufactures and commerce enjoyed a prosperity unparalleled in the history of this country, the average rates were only about 23 per cent. Under the circumstances and by the pledges I have already mentioned the tariff rates of the war period were obtained, and they have been to this time maintained to the standard of about 40 per cent. It would be only a graceful and manly observance of their plighted faith if the protected industries would voluntarily reduce their bounties to the standard of the wants of peace.

But they enjoy these bounties quite as well in robust manhood as when they were in tender youth.

A glass manufacturer recently told me that the manufactory in which he is interested in New Jersey had existed for more than one hundred years. During most of that period that industry has had the aid of so-called protective tariffs. The logical tariff bill of last year did not diminish but increased the rate on this youthful centenarian industry. It will also be observed that the tariff law of 1883, which was ushered in with the announcement of reduction, increased the duties on cotton goods and earthen and china ware, although it could scarcely be claimed that those industries were either feeble or of recent growth.

The manufacturers engaged in these industries which have been protected for nearly a century do themselves and their own enterprise great injustice in this claim that they can only live as the petted favorites of Government. Those industries are not the weaklings that such a theory would imply. Our exports of manufactures for 1883 were about $112,000,000. And this, too, despite that narrow commercial policy which discourages to the utmost all foreign trade.

It is an interesting study to trace the wanderings and the destination of our American goods. American furniture is finding its way into the quaint old homes of the Japanese. Those steady-going, conservative people are wearing American boots and shoes and handling American tools. The New Zealanders are making woolen goods with machines which Yankee ingenuity has invented and American workmen have constructed. American-made sheetings are used by the tawny Madagascans, and the cotton drillings, sheetings, and jeans turned out of American factories are welcomed in the staid old empire of China.

American clocks are used almost the world over. Their familiar faces welcome the American traveler whether he be wandering in Zanzibar, Bogota, or Canton. For years American glass has been crowding its way into those old cities of Germany which have long claimed supremacy in that industry. It is well known that the Swiss watchmakers for seven or eight years past have been anxious lest they should be driven from their own markets by the wonderful progress of American skill. The pauper labor of Europe is well represented in broken-down old Spain and Portugal, yet our American labor sends to those ports its products of chemicals, glass, cotton, and other manufactures. American cutlery finds its way into Dresden and Berlin, and the new American stoves are transported beyond the seas to be sold into the old German homes.

In the long list of exports from young America to antiquated Egypt you will find almost infinite variety, from the boot-jack to the cotton-gin, from the ax to the wind-mill, from the paper collar to the billiard-table. We have not only competed with the English trade in cotton goods in India, China, Africa, and South America, but the New England cotton fabrics have contested their ground on the soil of old England and in the very streets of Manchester. The gentleman from Connecticut [Mr. EATON] comes from a protection district, and well represents that sentiment. These are the words used by him on this floor:

> Talk about the cotton of which my shirt is made. There is 50 per cent. duty on that cotton. And it can not be made anywhere on God's great earth except in New England; it can not be made for the same money anywhere else. I know it, I assert it; I defy contradiction from anybody and anywhere. Take the Collins axes, that have driven the English axes out of England, and Scotland, and Ireland, and the Swiss ax out of Switzerland, and yet there is a duty of 50 per cent. on the Collins axes, made in my county, their office under mine. There is not an ax that can be sold anywhere on the face of the earth in competition with the Hartford ax, and yet they pay—permit me to say, to meet the argument of my friend from New York—they pay for what is called raw material, and it is not raw material; it is material, but it is not raw. They pay duty on their iron and steel, and yet make an ax which has driven every manufacturer of every other country out of the market.

And yet when we seek to reduce the tariff duties on such articles as these the manufacturers denounce us with one acclaim. If these statements of the gentleman from Connecticut are true, and they undoubtedly are true, the articles he names should go upon the free-list without one day's delay. It is noticeable that among the industries which are sending their wares to the farthest quarters of the globe are those which have never had any benefit from the protective policy. The American wagons, carriages, sewing-machines, plows, reapers, steam-engines, and other tools and machines are so far superior to those of other nations

that they have needed no protection at home and have been troubled by no competition. The tariffs have hampered them at every step by adding to the cost of the materials entering into their production. Notwithstanding this embarrassment they are being carried thousands of miles beyond the seas to almost every foreign land. Complaint comes to us from many foreign cities that the American trade-marks on their goods are being stolen and counterfeited on the imitations of those who can not compete with Yankee skill.

Those who insist upon that high-tariff policy which tends to exclude foreign trade have but a weak conception of the destiny of American manufactures and American commerce.

We have such natural advantages for manufacturing as are possessed by no people on the face of the globe. England sends to the four quarters of the globe for her raw material. We have ours cheaper and easier of access than any nation on earth. The natural and rapid growth of our population and the opening up of the great West will inevitably give birth to manufactures. Those manufactures will spring up wherever new homes are made and new cities founded. They are the necessity of civilization. Statutes can neither make nor unmake them. They will be such manufactures as are needed and such as will pay. They will be conducted on business principles and will not look to Congress for the breath of life. Such manufactures there are to-day all through our Western States. Those manufacturers have not learned to haunt the room of the Committee on Ways and Means. They do not enjoy the great bounties which the people are compelled to pay to the manufacturers of iron, but they have a healthy and prosperous business, depending upon the natural laws of trade.

Meanwhile those great manufacturing industries of the East, which for nearly a hundred years have been receiving bounties at the hands of the whole people, should commence in earnest their contest for equality in the markets of the world. New railroads are linking us more closely to the vast fertile regions of Mexico and South America. We are united to those countries by such ties of interest and sympathy that our manufacturers could practically control their markets if they should use in that direction half the skill and effort which they devote to tariff legislation. In every civilized nation there is a demand for the genuine products of American skill in the place of those clumsy imitations of European manufacture which now largely take their place. The present high tariffs hamper the manufacturer who would seek this foreign trade at every step. The tariffs on the raw material of course greatly enhance the cost of the finished product and thereby render more difficult competition in the foreign market. They drive from our ports those who would gladly exchange their goods for the products of American skill.

Those great industries which have so long enjoyed protection, with all their wealth and with their almost perfect machinery, should now prepare to cease their trading and lobbying for legislative aid. The history of these last twenty-three years of enormous tariffs has well illustrated the evils of the system to which they cling.

Under such a policy there comes a brief period of prosperity. For two or three years manufacturers are almost bewildered by their prosperity. Stocks pay large dividends, and even when watered command enormous premiums. Manufacturers erect their palatial homes. Extravagance runs riot in the prosperity which gives no sign of its quick decay. Meanwhile overproduction follows as surely as night follows the day. There comes after a time a lull in the unnatural production; dividends cease; stocks are at a discount; banks begin to fail; inflated prices drop as far below their natural level as they had risen above. The millionaires of yesterday are the bankrupts of to-day. Laborers are driven from their employment to fight the hard battle with poverty and want during the weary months, and until the overstocked market needs to be filled anew.

The dazzling but transitory prosperity which such a policy gives to the manufacturer may be fascinating to him; it may account for the eagerness with which he begs for a continuance of the system, but it is a policy which builds up colossal and sudden fortunes for the few; which dooms the many to that condition in which they are not certain even of the poor chance to toil for their daily bread.

It is not in these great extremes of success and disaster that a people find any lasting basis of prosperity. When manufacturers shall learn to depend upon the great laws of trade, of supply and demand, and not upon the unnatural and uncertain stimulus of legislative aid, there will be that regularity of production and that certainty of employment at steady and moderate wages which are the real guarantees of prosperity both to capital and to labor.

For nearly a hundred years the manufacturers of the East have been claiming and receiving bounties on the ground that they were young and feeble industries. They begin to realize that the infancy argument is becoming ancient. And they are now seasoning the old argument with the newer one, that high tariffs and high taxation are necessary to give good wages to the laboring man. They seize hold of the fact that wages are higher in the United States than in Europe, and claim with cool assurance that this is caused by the tariff laws. Wages are higher in this country, I am glad to say, than in any country in Europe. Doubtless the nominal difference is far greater than the actual difference, owing to the greater purchasing power of money, where the necessaries of life are cheap, as in Europe.

I am willing to concede what some do not concede, that is, that the laborer here can obtain more of the comforts of life in exchange for his earnings than can be obtained by the laborer in England. I believe this to be true now and that it has been true during the whole history of our Government; that it was equally true when tariffs were high in England and when they were low in the United States.

The same causes which have in the past given us higher wages than those of Europe will I have no doubt operate in the future in the same manner, and they will be but little affected by any system of taxation or tariffs we may adopt. Our German and Irish fellow-citizens have left their native lands, where more than two hundred people are crowded upon one square mile of land, to find more room and cheaper homes. The cheap lands of the United States are a refuge not only to the crowded nations of Europe, but they afford an outlet to the laborers of every industry in this country. No man can be very long compelled to work for inadequate wages in free America so long as he can have his own fertile farm from the Government on the single condition that he will go and possess it. The standard of wages is high for this reason if for no other. The laborer is independent. The workingman of Chicago can say to his employer "Give me better wages or I will take my homestead in Dakota." The workingman of Manchester or Berlin has no such easy refuge. To him a change means either idleness or a long journey to a foreign land.

The fertile fields of our single State of Texas would furnish a home to every man, woman, and child in the United States, and still would be less thickly settled than Great Britain and Ireland. We shall no doubt have our trials and our troubles as a people, but the problems of an overcrowded population and of pauper labor are not likely to disturb the American people until many generations shall have passed away.

There need be little fear of cheap or pauper labor in the United States if we allow labor and industry to follow their natural channels. If, however, we attempt to coerce labor into unprofitable employments, if we close our doors to foreign trade, if we make it impossible for other nations to bring their goods in exchange for the surplus products of our farms, if we hold out that false stimulus to production which floods the home markets with a surplus to go begging for purchasers, we may be sure that the tendency of wages will be on the downward scale.

Such a policy is the fruitful cause of strikes, of idleness, of discontent, of all those evils which result when thousands of laboring men are turned out of employment and know not where to look for their daily bread. If high tariffs insure high wages how is it that in England, with free trade, wages are considerably higher than in any country of Europe where the high-tariff policy prevails? How is it that the condition of the laboring man in England has steadily improved since the time when the high tariffs were swept away? There was a time when the laboring poor of Ireland and England were told by the protectionists that high tariffs meant high wages and low tariffs the degradation of labor. The great Irish orator Daniel O'Connell answered this proposition in Covent Garden forty years ago. I have only time to quote a part of that memorable address:

> But, then, out comes another landlord "leaguer," a man of the league for making bread dear, another protectionist, another robbery man; he says, "Oh, don't make bread cheap; that would be horrible!" This man says "it would be horrible to make bread cheap, for if you did there would be less employment and lower wages." We will see how that is. If the bread were cheap you would get it cheap by getting corn from foreign countries, where it is grown cheaply, but from whence it can not be imported now. What is the consequence? If it had been imported, then for every pound's worth of corn that you obtain a pound's worth of your manufactured goods would be sent out to pay for it. Those who had not formerly the means of paying for your manufactures would now have them, because you would buy their bread. So that, instead of lessening employment, it would increase it; and then it is as clear as that two and two make four that you must also have increased wages; therefore the argument totally fails. Why, I speak from my own knowledge of Ireland and as one of the representatives of Ireland, and I say that if the corn law was of any use anywhere it would be valuable in Ireland, which is essentially an agricultural country. If that enactment raised wages anywhere it would do so in a country purely agricultural. But are wages raised in Ireland in consequence of its existence? Oh, no! for, unhappily, you can get men to work there for 4*d.* a day. [Shame!] The laborer thinks he is a bountiful benefactor who pays him 6*d.* a day; and he feels supremely blessed if he gets 8*d.* a day.
>
> There is the effect of the corn law for you! It is in full force in Ireland and doing all it can for that country, and yet this is the state of wages there; and what is worse, there is very little employment for the laborer even at these rates. Therefore the people of Ireland and those of the gentry who take a conscientious view of affairs and are kind to the people regard this matter in the same light that I do; so that instead of Ireland being an impediment in the way or one of your difficulties [laughter] you have the people of that country heart and soul at your side. [Cheers.] I declare to you that the injustice and iniquity of the landed aristocracy overcome me with horror and loathing which I can not describe. Why, if there was no corn law now existing, and the ministers were bold enough to bring in a bill to tax the people's bread; if they placed, as they do in some despotic countries, a man at the door of the bakershop to insist on one-third part of the price of the bread, which the baker would of course be obliged to charge to the consumer—if this were attempted there is not a man in the country who would endure such a tax. It would be of no avail for the minister to say, "I want the money for my financial plans; I can not make the year's account balance unless I have such a tax." John Bull would roar out, "No! tax anything else you please, but you must not tax bread." Yet by the swindling scheme of "protection," as it is called, they do the very same thing. They tax the bread, not for the good of the state, in which you might all equally participate, not for protection against a foreign enemy or

to keep domestic peace, but for the benefit of one particular class. All the rest of the community are taxed that that tax may not go into the purse of the public, but that it may go into the pockets of private individuals. ["Hear!" "Hear!"]

The common people of America are not asking for cheaper bread, it is true, but for cheaper salt, cheaper clothes, cheaper coal, cheaper sugar, cheaper lumber. The same argument which demanded cheaper bread for oppressed Ireland demands cheaper goods for overtaxed America.

If high tariffs insure prosperity to the laboring man, how is it that in the United States during the last twelve or fifteen years, while tariffs have been not only protective but in a large degree prohibitory, labor has had so precarious an existence? How is it that labor strikes have been so common as to scarcely excite attention; that manufacturers readily accept the theory of horizontal reduction in wages, though they abhor it in the Morrison bill? Why are more than two-thirds of the furnace fires extinguished and the men who live by them out of work?

I take the liberty to quote a few paragraphs from the able speech of the gentleman from New York [Mr. HEWITT] who is himself a manufacturer, and who has well improved his opportunities of studying the effect of tariffs on the condition of the laboring man. He says:

When I learn that there are miners of iron ore working in the State of Pennsylvania for 75 cents a day, then I know that there is something wrong in the legislation of this country, for the duty upon iron ore was put up by the last tariff act on an average from 40 to 45 cents a ton to 75 cents a ton in order to protect these very miners and to give them high wages. When that act was passed they were in receipt of $1.25 a day; to-day they are in receipt of 75 cents a day. Surely, if there be virtue in legislation these men, hard-working, industrious, independent voters, if you will give them the means of living, ought not to have been reduced to this wretched state of misery.

But the end is not yet. The owners of these great coal-mines have recently met in conference in the city of Philadelphia, which my friend so ably represents, and which I trust he may continue to represent for many years to come—they lately met and solemnly came to the conclusion to suspend work for three days in the week, and after this month they concluded that possibly they might keep up the price of coal by suspending work only nine days in the month. Keep up the price of coal! Ay, to the workman, to the farmer, to everybody who earns his living by his daily labor, and put down the wages of the man who digs it from the earth, and then tell him that he is protected by the tariff. Can there be a more stupendous specimen of audacious assertion than we have heard upon this floor, that the workmen of this country are well rewarded and made happy by the operations of the tariff?

It is conceded on every hand that overproduction by the great industries is being followed by its inevitable reaction; that a large proportion of the laboring men in those industries have been compelled to live in idleness or to seek new employments. Why should we by excessive taxation continue a false stimulus to production when the markets are already full, and when many of the manufactories are already idle?

The whole situation is a warning to manufacturers that they must look elsewhere than to Congress for relief. When they have filled the home markets with the products of their almost perfect labor-saving machinery they must send the surplus abroad. Fourteen hundred million people are eager to get their goods, and eager to get the products of our farms; but if we give them grudging and unwelcome entrance to our ports, they can go elsewhere.

It requires no great foresight to see that if this narrow policy is too long persisted in it will inevitably result in driving the European consumers of our grains and meats to India and Australia for their supply. Already the great nations of Europe are becoming impatient with the policy which treats their goods as unwelcome intruders.

If we should crowd them to the policy of leaving our surplus grains on American soil we would very quickly awake from our delusion that American labor is for America alone.

There is something deeply affecting in the solicitude of the Eastern manufacturers for the laboring man.

They send their agents to Congress year after year to ask justice for the laborer. They well-nigh double the normal price of their goods because they so love the laborer. They are eloquent and liberal—in printers' ink—in the cause of labor. I have not heard that in their prosperity they make any division of dividends with the laborer, but we all know that the laborer never fails to share in their misfortune.

It is well known that these gentlemen have a great aversion to the pauper labor of Europe, and that they delight to expatiate upon its evils. They often seek to demonstrate that American labor can not compete with this hated European pauper labor.

They have lately taken to demonstrating this theory in quite a practical way; that is, by importing the pauper labor they so despise. It will be seen from the testimony taken before the House Committee on Labor that the manufacturers rather enjoy the pauper labor of Europe when it appears on American soil. It is not distance but nearness that "lends enchantment to the view." By thus bringing the pauper labor among us the manufacturers are enabled to relieve American laborers and to materially lighten both their toil and wages. Let the testimony speak for itself.

Mr. Barclay said:

"Paul O. De Esterhazy, Austro-Hungarian consul in New York, has acknowledged the existence of such an agency, but says he is unable to do anything in the matter. The class imported by the coke manufacturers are the lowest beings that have ever been in the State of Pennsylvania, subsisting upon what an American laborer could not eat—such as mules, hogs, &c., which have been killed or died with cholera and other diseases. Not one has ever been known to become an American citizen, but all return to Hungary within a limited time (about four years) with what money they can save by living in this miserable condition of filth and squalor. Women and children work, too, drawing coke and forking coke into cars, commencing work about 1 or 2 o'clock a. m., and returning to their shanties as late as 7 p. m., working through all kinds of weather from two to five days per week. They seldom sleep in beds, but lie on the floor, with a board or a stick of wood under their heads, as large a number probably as forty in one house intended for a miner with an average family, one female serving about ten men in all relations between male and female, housewife and laborer, in the coke-yards. They are not known to purchase any of the luxuries which tend to elevate and enlighten the people, living in filth and wretchedness, but hoard up their small earnings, which they promptly forward to Hungary, thereby draining our district of the circulating medium. Being low in the scale of intelligence, they are the willing slaves of the coke manufacturers, willing to submit to almost any conditions.

"One of the tricks of the manufacturers is to import these people for the purpose of evading the laws enacted for the protection of the laboring classes.

"The 'check-weighman law' is an example. The people being unable to read and write, they promise them 30 cents per wagon of one-half ton each, but when they arrive here they are compelled to sign an agreement, making only 18 cents per ton for mining.

"I have known these beings during the time of the strike to have been dragged from their homes and driven down into the mines by the managers and coal and iron police. I have also known them to have been knocked down and kicked under cars for refusing to do more contract work. In all, they are mere tools by which the manufacturers gain almost any point they desire, to the degradation of our native workmen and the detriment of our business men, making tramps of the former and bankrupts of the latter."

William Ashton, of Philadelphia, Pa., W. G. W. A., said:

"My information is in regard to importation of foreigners to Baltimore, Md. These men were brought under a contract; they were window-glass blowers. The first importation took place in 1879; forty-eight were then brought over by Swindell Bros. The following year Baker Bros. imported seventeen, King Bros. twenty-two, and Swindell Bros. twenty-three. The first importation occurred during a strike; there was no strike when the second importation occurred. Some of the foreigners refused to work and were arrested, but discharged before a hearing was had; their clothing was retained by the firm and it was weeks before they could secure it. They were kept locked in houses when not working, and could not be seen by the Americans. Most of them have since returned home, some being sent by the Glass-Blowers' Association, and some by the Belgian consul, who complained bitterly of the treatment they received. The effect of their importation was the reduction of wages about 12 per cent. An injunction was issued against the American workmen from interfering with them and made perpetual by Judge Brown, of Baltimore. Before these men were imported we had as good a set of American workmen as could be found anywhere. The system in vogue in Europe and America differs materially. The Europeans work according to old methods and processes; in fact, they bring their tools and molds with them. The European workman cannot turn out within 35 per cent. as much ware as the American workman, and as a result do not or are not able to fulfill their contract, hence the employers are at liberty to pay them what they please."

John Schlicker, of Pittsburgh, Pa., W. G. W. A., said:

"The labor of window-glass blowers is very hard; but few men are able to work at it after the age of 45 years; the average is but 35 years. In consequence of the exhaustiveness of the labor, we decided to not make more than forty-eight boxes of glass per week, which amount is more than 200 per cent. more than what was a week's work some years back. This limit of forty-eight boxes is a good week's work. To break this limit was the purpose of the importation. These foreigners could not make this amount, and consequently could not fulfill their contract, and were, therefore, subjected to its penalties for failure. One lot of men that were brought to Kent, Portage County, Ohio, were not employed, as the glass-house was not started, and these poor men and their families were left destitute in a foreign land and in a hostile community, a charge on the public."

* * * * * * *

"The difference in working in the glass industry in this country and Europe consists in the fact that there they have two factories and work eleven months a year. I have worked in glass works for thirty years and have not averaged eight months per year in that time. The difference in wages is not material, when all things are considered, between this country and Europe. At Kent, Ohio, these imported men are working on Sunday."

Mr. A. C. Robertson, of Pittsburgh, Pa., said:

"The number of foreign glass-bottle blowers brought to the Western States under contract is about eighty in all, distributed in five factories, namely: La Salle, Ill., thirty-six; Covington Ky., thirteen; Louisville, Ky., fourteen; the balance in Streator, Ill., and New Albany Ind. They receive about 40 per cent. less wages than American blowers, or, in other words, they get 8 cents per dozen for quart beers, while the American gets 13 cents per dozen. The effect of this competition will be to bring the native workmen down to the level of pauper labor. The hollow-glass workmen west of the Alleghany Mountains have not worked since last June. They have been, during all this time, enjoying the luxury of a lockout. Last years' revision of the tariff virtually increased the duty on green glassware nearly 100 per cent., but notwithstanding this increase, the manufacturers are endeavoring to force a reduction of 20 per cent. in wages. Previous to the revision there was an importation of about 200,000 gross of bottles. Since the new tariff went into effect there has been scarcely any importation of this ware. Two American blowers will turn out eighty dozen bottles per day, while two of the foreign blowers turn out but fifty dozen per day. The manufacturers seem to favor free trade in labor and a high protective tariff upon their manufactured goods or wares."

The manufacturers of Pennsylvania and New England are men of far-reaching sympathies. They are moved by deep solicitude not only for their employés, but for the farmers of the West. It is noticeable that their zeal for him expends itself in liberally taxing him, and they have abundant arguments to convince him that taxation is not a burden but a relief. They survey their swelling bank accounts, their brown-stone fronts, their blooded horses and liveried servants, and exclaim: "Blessed is the tariff, blessed is taxation—for the farmer." Heretofore they have so far controlled the taxing power as to impose a tax on the lumber, the nails, the glass, the iron, that go into his house and barn. They teach him by liberal taxation to appreciate the salt, the sugar, the spices, the rice, the molasses, the dishes, the knives, the forks, the glass which go upon his table. In order to sweeten his daily toil they tax the material which goes into his plows, his wagon, his harness, his reaper, his drill, in fact every implement or tool for which he spends his hard-earned money.

In the list of over 3,000 dutiable items there will be found almost every article which the farmer has to buy for the house or for the farm, for sickness or in health. The tax-paying never ends until the long sleep begins.

The average of this taxation is only about four dollars on every ten paid by the farmer for the necessaries of life. The farmer is supposed to pay this tax from day to day with a lively sense of gratitude because the manufacturers have consented to a tariff upon his wool. This is the poor price which is expected to lead the farmer into alliance with monopoly.

I understand that it is claimed by the wool-growers that they were duped and betrayed by the manufacturers in the provisions of the tariff law of last year. I do not know how well-founded this claim may be. If those who represented the interests of iron, cotton, and woolen manufactures proved more successful in obtaining legislation than the wool-growers whom they had professed to take into the alliance, it is not the first time that the monopolies have postponed the interests of the farmers to their own.

The true interest of the wool-growers lies not in the direction of alliance with the advocates of excessive taxation, but in breaking the power of that combination which compels them in common with all other agriculturists to pay daily tribute to the capital of the East.

The farmer must understand that a high tariff on wool means a high tariff and high taxation all along the line. If the farmer wishes to become the advocate of high tariff taxation and of class legislation, it is his privilege. He may enter into partnership with the monopoly if he will, but when the accounting comes he will look in vain for profits. In my judgment the average farmer pays far more for the enhanced cost of woolen goods alone than he receives in the way of increased price for wool.

The Madison Democrat, a newspaper published in Wisconson, states the account very well, and I will quote from the article its conclusion:

At the end of the year Mr. Coldfacts, who prides himself on keeping track of things, posted up his accounts with protection. It stood thus:

Protection in account with Coldfacts:

CR.	
By tariff on wool, say	$5 00
DR.	
To tariff on lumber	10 00
To tariff on nails	1 50
To tariff on glass	1 50
To tariff on woolen goods	50 00
To tariff on carpet	10 00
To tariff on tools	15 00
To tariff on sugar	2 00
To tariff on sundries	30 00
Total	120 00

Thus Farmer Coldfacts found that though he was frugal and plain, confining his purchases to the mere necessities of life, he and in common with himself the wool-growers of Wisconsin, paid out $24 for the protection of other industries where they got $1 back by the highest tariff on wool.

The farmer is the natural enemy of excessive taxation. However others may escape the burden, he has to bear it. He has no large blocks of stocks or bonds which can be skillfully shifted or concealed from the assessor's view.

I have said enough to show that the tariff duties are so devised that they crowd upon the farmer at every hour of his existence, and that they seem designed to rest but lightly on the rich. Can it be possible that the masses of the people do not desire a reduction of these surplus and useless revenues? We could reduce taxation much more than $35,000,000 per year, and still have abundant revenues for every need of Government. I should not regard it as a calamity if the revenues were reduced much more than is proposed by this bill. If there should arise an emergency calling for greater revenues we could easily supply them by a judicious income tax. A tax levied upon those who receive large incomes from their professions or from accumulated wealth would correct many of the irregularities which now exist.

Gentlemen who oppose this bill need not flatter themselves that its defeat will stay the agitation now going on. The real issue is already before the people. They are wondering how the public good is advanced by the hoarding of many million dollars in the Treasury; how it is that they are compelled year after year to pay this surplus revenue into the hands of officials who constantly report that they have no use for it. There may be enough representatives of the manufacturing interest on this side, joined with the solid vote on the other, to prevent the passage of this measure. But in my judgment the public will hold to a strict account the men who will not raise a hand to lower the excessive taxation which has come to us as the inheritance of the war. You will strike out the enacting clause if you can, but do not indulge the vain hope that it will give you peace.

Said William H. Seward in the Senate of the United States:

You may slay the Wilmot proviso in the Senate Chamber and bury it beneath the Capitol to-day, the dead corse in complete steel will haunt your legislative halls to-morrow.

The opposition threaten by to-morrow's vote to slay this bill. They may succeed in doing that, but let them not delude themselves that thereby they will very long delay or very greatly injure the cause of revenue reform. They may strike out the enacting clause; they may thus behead and bury this bill; but if so, out of its grave will rise other bills. Its ghost will haunt these Halls, and it may be the political lives of those allied to destroy it, until the demand of an indignant people is obeyed, until an excessive revenue no longer exists to burden the people and to tempt their servants.

Protection—Patriotism—Prosperity: A Safe Trinity.

"Let well enough alone."

SPEECH

OF

HON. CHARLES R. SKINNER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. SKINNER, of New York, said:

Mr. CHAIRMAN: Judging by the usual standards of observation, the people of this country are not profoundly interested in the discussion now taking place, and it is a debatable proposition whether we gain more by our speech than we would by our silence. There is no evidence that the people of the United States are dissatisfied with their condition as a people, or with the growth or progress of the nation. They have more reason to be dissatisfied with the hesitation manifested in legislative assemblies to meet the vital questions of the day in a prompt and intelligent manner, and the readiness shown to indulge in aimless and disturbing discussion of a subject upon which one great political party is practically united and another divided against itself. For myself, I have the honor of representing both an agricultural and a manufacturing constituency, and therefore a laboring people, enterprising and industrious, intelligent and watchful, careful and studious in observation concerning the needs and tendency of legislation fair in judgment of men and measures, and from no person among that constituency has ever come any demand for the agitation of the tariff question at the present time. On the contrary there has come not only a general condemnation of the policy which has forced this discussion at an inopportune time, but of the bill itself, the subject of the discussion. There seems to be an accurate understanding of the measure, and it is pronounced defective in design, wrong in principle, crude in conception, and enigmatical in its purposes. There is lacking a correct appreciation of the real needs of the country and an intelligent comprehension of the sentiment of the people.

During the first session of the Forty-seventh Congress there was an apparently sincere demand for a revision of the tariff. There had been no legislation of importance upon this subject since 1867. After an exhaustive and prolonged debate, which opened the whole question in Congress, a bill providing for the appointment of nine commissioners was passed. The duties of these commissioners were specified in the act of May 15, 1882, as follows:

To take into consideration and to thoroughly investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff, upon a scale of justice to all interests.

Commissioners were at once named, and they began their labors without delay. Their careful and elaborate report was presented to Congress at the opening of the second session. A bill was prepared by the proper committee, discussed at great length, the whole subject again opened, and the result was the passage of a measure during the last hours of Congress which is now law, and the effects of which during the past six months have recently been pointed out by the Bureau of Statistics. It is needless to state that a portion of the measure which became law was not fully discussed in both Houses of Congress from lack of time, but it was considered as an answer to the demand, and was accepted as the best that could be obtained. It certainly contained many important features; its defeat would not have been justified, and its passage was a signal that discussion of the subject had ceased and that stability was possible.

NO DEMAND FOR AGITATION NOW.

The business of the country at least was satisfied. It gave a sigh of relief as it conformed to new conditions created, and settled itself down again in the serene knowledge that for six months at least there would be a respite from Congressional discussion and uncertainty, and there was a widespread hope that the subject would not be reopened in this Congress. The feeling a year ago was much the same as that experienced by business industries once every year, that, "Congress having adjourned, the business of the country will be resumed."

There has been no perceptible change in public sentiment upon this subject since that time. Certainly the bill before us comes not in response to any general public demand asking further or present agitation. The manufacturers of the country have not asked it, the laboring interests have made no appeals for it, the farming interests do not want it, neither producers nor consumers are here demanding it; there is no genuine call for it from any source whatever, unless, as may be shown later, it comes from advocates of English free trade or from professional

politicians. Those who take part in the industries and progress of this country are quietly attending to their legitimate business and are content to be "let alone." They know that continued discussion of questions of political economy, which affect so deeply the welfare of all when agitation begins and values fluctuate, is not in the interest of progress or prosperity; they know that agitation keeps trade unsettled, makes business uncertain, capital cautious, and labor fretful and uneasy. The promoters of the present discussion seem to say to the manufacturers, the laborers, the farmers, the producers, and consumers of the country: "You profess to be satisfied with your condition and with the general condition of the nation, but we propose to satisfy you that you are not satisfied with your condition, and to bind you hand and foot by senseless agitation until we convince you of your mistake."

SURPLUS REVENUE.

If the bill has not its origin in a genuine public demand for it from the capital or industry of our country we must seek to find it elsewhere. We are reminded by many who have discussed this subject of the amount of surplus revenue in the Treasury and its relation to the tariff. It is often represented as the embodiment of all the ills which republics are heir to. We are told by the distinguished gentleman from Georgia [Mr. HAMMOND] that "a surplus of anything is bad."

It is true that a surplus existing in the Treasury may tend to liberality if not to extravagance in the minds of many legislators whose chief desire seems to be to "open the doors of the vaults of the Treasury."

Let us see what there is of this much-discussed surplus, what it means, and what it amounts to. If by the term "surplus" the excess of receipts over expenditures is meant, the amount on January 1, 1884, was $55,686,362.11, the net receipts for the six months having been $178,600,157.70, and the net expenditures $122,913,795.59. If, however, the so-called "reserve" is to be included, being the amount remaining after deducting from the total cash in the Treasury the amount of the outstanding demand liabilities, except United States notes, it was on January 1 last $141,610,028.13. It is the aim of the Treasury Department to maintain the reserve at about 40 per cent. of the outstanding notes, which amount to $346,681,016. Admitting the surplus to be at the largest figure, namely, $141,610,028.13, it is not alarming when we consider the obligations now resting upon our Government, the demands being made upon her, and those which will surely follow within a few years.

On the 1st of May, 1884, our national debt amounted to $1,464,030,733.80. It is impossible to comprehend the vast amount represented by these figures. The decrease of the public debt during April was only $5,232,075.29. This is about the monthly average since 1865, but it is far below the average of recent years. There were on May 1, $254,621,950 of 3 per cent. bonds redeemable at the option of the Government.* There will become due September 1, 1891, $250,000,000 of the 4½ per cent. bonds, and on July 1, 1907, the 4 percents, amounting to $737,651,950, will become due.

Considering, then, the amount of the surplus and comparing it with the amount which the nation owes, there is little cause for regret or alarm, except as the surplus may invite to extravagant expenditures. This is not likely to be carried too far with two branches of the legislative department to hold each other in check, with an Executive to protect against mistakes or harmful combinations, and an intelligent people behind us to watch all who are in power.

But the existence and disposition of this surplus seems to perplex many in the consideration of this bill, even though it is claimed by those who have given it careful study that the effect of the bill itself, should it become law, would largely increase the revenues of the Government, and consequently the surplus. Has it never occurred to you, gentlemen, that this "obnoxious" surplus revenue may be, and is, applied to the payment of the public debt? It is hard to understand how a national debt is a national blessing any more than an individual debt is an individual blessing. A wise man generally uses his surplus to pay his debts, if he has any. It is wisdom in a government to do the same thing. Mr. Jefferson was quite right when he said that "public debt is a moral canker, from which we ought to emancipate posterity." It was an English statesman who objected "to doing anything for posterity, on the ground that posterity has never done anything for us."

The most exacting will find it difficult to find much fault with the course already pursued by our Government in the direction of the reduction of national indebtedness. Since this Congress convened in December last the following 3 per cent. bonds have been paid:

One hundred and twenty-second call matured December 1, 1883	$15,272,100
One hundred and twenty-third call matured December 15, 1883	15,133,650
One hundred and twenty-fourth call matured February 1, 1884	10,208,850
One hundred and twenty-fifth call matured March 15, 1884	10,047,850
One hundred and twenty-sixth call matured May 1, 1884	10,093,100
Total	60,755,550

*Amount of 3 per cents outstanding April 30, 1884		$254,621,950
Amount included in one hundred and twenty-sixth call	$10,093,100	
Amount of one hundred and twenty-sixth call before maturity	244,600—	9,848,500
Amount now subject to calls		244,773,450

It will be seen that during the past five months the payments have averaged over $12,000,000 per month. The amount of 3 per cent. bonds now subject to call is $244,773,450, and it is reasonable to suppose that calls will be made as rapidly as public interests require. If necessary to secure the steady payment of the public debt, authority should be given the Secretary of the Treasury to purchase the 4 and 4½ per cent. bonds. At any rate let the debt keep going down.

REDUCTION OF PUBLIC DEBT.

The steady and rapid reduction of the nation's obligations since August 31, 1865, when it reached its highest point, is one of the wonders of modern finance, and demonstrates not only the vitality of our nation, but the wisdom, faithfulness, and honesty of those who have been placed in control of the Government. August 31, 1865, the total debt of the United States was $2,756,431,571.43. The debt per capita was $78.25 for every man, woman, and child in the country. It is not necessary to refer to the cause of this debt, or to the condition of the country's finances before the war of the rebellion.

The following gives the decrease in the public debt during the fiscal years following:

1869	$36,460,779 43
1870	102,643,880 84
1871	94,327,764 84
1872	100,544,491 28
1873	43,667,630 05
1874	4,730,472 41
1875	14,399,514 84
1876	29,249,381 33
1877	39,281,121 73
1878	24,371,391 44
1879	8,579,575 45
1880	85,034,961 03
1881	101,573,483 36
1882	151,684,351 26
1883	137,823,253 24

May 1, 1884, the total debt, as before stated, was $1,464,030,733.80, showing a reduction since 1865 of $1,292,400,837.60. In 1883 the debt per capita was only $28.41—lower than at any point since 1862, and a reduction per capita since 1865 of $49.84.

The following table gives the net revenues and expenditures of the Government since 1856, with the surplus revenue each year:

Year.	Net revenue.	Net ordinary expenditures.	Surplus revenue.
1856	$74,056,699 24	$69,571,025 79	$4,485,673 45
1857	68,965,312 57	67,795,707 66	1,169,604 91
1858	46,655,365 96	74,185,270 39	a 27,529,904 43
1859	53,486,465 64	69,070,976 74	a 15,584,511 10
1860	56,064,607 83	63,130,598 39	a 7,065,990 56
1861	41,509,930 39	66,546,644 89	a 25,036,714 50
1862	51,987,455 43	474,761,818 91	a 422,774,363 48
1863	112,697,290 95	714,740,725 17	a 602,043,434 23
1864	264,626,771 60	865,322,641 97	a 600,695,870 37
1865	333,714,605 08	1,297,555,224 41	a 963,840,619 33
1866	558,032,620 06	520,809,416 99	37,223,203 07
1867	490,634,010 27	357,542,675 16	133,091,335 11
1868	405,638,083 32	377,340,284 86	28,297,798 46
1869	370,943,747 21	322,865,277 80	48,078,469 41
1870	411,255,477 63	309,653,560 75	101,601,916 88
1871	383,323,944 89	292,177,188 25	91,146,756 64
1872	374,106,867 56	277,517,962 67	96,588,904 89
1873	333,738,204 67	290,345,245 33	43,392,959 34
1874	289,478,755 47	287,133,873 17	2,344,882 30
1875	288,000,051 10	274,623,392 84	13,376,658 26
1876	287,482,039 16	258,459,797 33	29,022,241 83
1877	269,000,586 62	238,660,008 93	30,340,577 69
1878	257,763,878 70	236,964,326 80	20,799,551 90
1879	273,827,184 46	266,947,883 53	6,879,300 93
1880	333,526,610 98	267,642,957 78	65,883,653 20
1881	360,782,292 57	260,712,887 59	100,069,404 98
1882	403,525,250 28	257,981,439 57	145,543,810 71
1883	398,287,581 95	265,408,137 54	132,879,444 41

a Expenditures in excess of revenue.

It will be seen by the above table that notwithstanding the steady and resistless growth of the country in all directions, the net expenditures of the Government were less in 1883 than in 1879 or 1880, and less than any year between 1861 and 1876. This fact does not add much force to the charge of those partisans who would make the world believe that this country is on the high road of corruption and extravagance. The above figures also give the interesting fact that with the exception of eight years—just before the war and during the war period—there has been every year an "embarrassing" surplus in the Treasury. And still the country has gone right along growing and prospering at a rate which must astonish some of the Rip Van Winkles of the present day. It is right that it should. It can not be otherwise unless you destroy every element of our greatness. You might as well attempt to stem Niagara with a broom as to prevent this growth upon any argument that a surplus in the national Treasury is dangerous to the industries of our country. Suppose conditions were to be changed; that there was no surplus, but a deficiency instead; that the public debt increased rather than diminished, it is true that our credit would be impaired—we would have none—our industries would lag, enterprise would cease, prosperity be lost, and as a nation we should retrograde where we now advance.

And is it not true that we shall need our surplus, and need to have it increased steadily and surely to meet the bonds coming due in 1891 and 1907? Is it not a provident government which, like a provident person, looks out for the future? Why would it not be wise to establish a sinking fund into which the surplus might go year by year to be used for no other purpose than the extinguishment of the public debt?

SURPLUS MAINTAINED BY ILLIBERAL APPROPRIATIONS.

If you will not do this, why will you not reduce the surplus by appropriating what is needed for the legitimate expenses of Government? You who are in power rigidly deny to the Departments of the Government the amounts asked for by the heads of the Departments for the fiscal year ending in June, 1885, although by your own admissions you concede them to be honest, capable, and efficient officers. You deny the Post-Office Department, for instance, nearly $4,000,000, regularly estimated for and actually needed for the proper conduct of this important branch of the Government, when you can not help but know that the service will thereby be crippled in nearly every direction if your bill should unfortunately become a law. It is extremely doubtful if you intend to permit it to become law. You dare not meet the indignation of the people whom such legislation would deprive of the facilities which they demand and for which they are willing to pay. Your action retains just the amount in the Treasury which you deny to the only branch of the Government which is self-supporting. In nearly every one of your appropriation bills thus far reported you deny what the proper officers tell you they need. You certainly are holding this "perplexing" surplus in the Treasury at the expense of the public service. Do you expect to gain political capital thereby? If so, when you sit down to figure out your anticipated gains through such a policy you will discover that you have no "surplus."

WILL YOU HEAR THE SOLDIERS' DEMANDS?

If you will not give the Departments as they need from the surplus, will you heed the appeals made by the soldiers of the *Union* for less restrictions in the pension laws, for increase in pensions, or for a law giving every honorably discharged soldier a pension regardless of disabilities? These appeals are heard on every hand, and are growing louder year by year. The heroes of this country do not want to be put off until they have all grown gray before their appeals are considered. If this "surplus" is really too much of a burden, why not devise some method to answer properly these patriotic demands before it is too late?

OTHER METHODS OF REDUCING THE SURPLUS.

If you will not do this, will you reduce the surplus by repealing the internal-revenue taxes on whisky and tobacco? When that subject is mentioned there comes up a strong sentiment from many directions that tells you this will not be satisfactory to a very large class of the people. Although this repeal would lessen the revenues about $85,000,000 annually, the time does not seem to have arrived when it can be safely or satisfactorily done.

If you will not repeal the internal taxes, will you reduce the surplus by liberal appropriations for public buildings, for river and harbor improvements, for canals, for the Mississippi River, running the risk that your ideas of liberality may be criticised as extravagance by the people?

If you hesitate to do these things, will you look with favor upon the plan, already approved by the Senate, of distributing $77,000,000 among the States of the Union in aid of common schools? This scheme would certainly open the door of the vaults of the Treasury a little way, if you are prepared to say that it is wise or expedient to do so. In some sections pride revolts against this plan, and in others it is opposed on the ground that an increase of intelligence among the masses is not desired for certain political reasons, which are best understood by those who can best manipulate uneducated suffrage. Others urge constitutional objections against it; the precedent is condemned, and we are told that so long as the fund lasts the sections benefited will relax their efforts to build up their school systems, and do as little as possible to help themselves until the money is exhausted, when they will call out for more.

If you will not do this, will you distribute the surplus year by year among the States, to be applied to the extinguishment of local indebtedness?

If this does not seem practicable, you might reduce the surplus, yes, extinguish it altogether, if you would pay the thousands of claims presented to Congress against the Government. Many of these claims are perfectly just, notably the claims of Union men whose property was destroyed by the Government during the war, but their consideration here hardly goes beyond the committee-room and Calendar. It is safe to say that if only the honest claims were paid, those which have the full indorsement of our committees, the surplus would be nearly if not quite wiped out.

POLITICAL AGITATION.

It may then safely be said that this bill has not its source or inspiration in any public demand for its enactment, and that the surplus revenue in the Treasury affords no good excuse for the pretended anxiety of the friends of "tariff reform," and is certainly no reason for disturbing the business industries of the country by any such experiment as this bill would precipitate. Then we must look elsewhere for the spirit which stands behind the present agitation. Is it the spirit of politics judged from a partisan standpoint? Is this agitation intended as the opening of the political campaign of 1884 and the establishment of the issues which are to be discussed? If the measure be not asked for or indorsed by any of the industrial or moneyed interests of the country, it must get its inspiration in politics. And yet it is difficult to understand exactly how it can be raised to the dignity of a purely party question, for while one great party is practically unanimous in its opposition to the proposed legislation, or to a discussion of the subject at the present time, the opposition is divided into factions, and can find no common ground of union.

A DIRECT ISSUE.

Is not the real question presented, therefore, in plain words—protection or free trade? A portion of the Democratic party is engaged in an attempt to destroy the protective policy so long maintained in the United States, and to substitute therefor a system of free trade. Many would like to hide their real purpose behind that meaningless term, "tariff reform," while others openly advocate the doctrine that protection is robbery and extortion, is the cause of innumerable national troubles, and that free trade will give greater prosperity and higher wages and sure relief from the imaginary burdens which oppress the country. The gentleman from Ohio [Mr. HURD] in a reported interview published in the New York Tribune a few weeks since said:

The thing to be done is to get the Democratic party with its face toward free trade. The platform I want is tariff for revenue only, with the Morrison bill as the first step in the direction of free trade.

In his remarks upon this bill a few days ago in the House he spoke in a similar strain. The gentleman from Texas [Mr. MILLS] tells us that this bill is only the beginning of the work proposed; that future reductions in the same manner will be made until free trade is reached. The gentleman from New York [Mr. DORSHEIMER] is loud in his denunciation of protection, and says if a reduction of 20 per cent. will not reach the object sought, 50 per cent. will. "Some time we will cut to the quick and draw the blood," says my distinguished colleague.

Very many of the gentlemen who have addressed this House since this discussion began have not only denounced protection in all its forms, but also the political party which holds it as one of its principles. They denounce the present tariff, as yet not a year old, as a protective tariff, and therefore as robbery, theft, and extortion. And yet these gentlemen are willing to advocate and vote for a 20 per cent. reduction of that tariff. They are not in favor of robbery, but of robbery less 20 per cent.

IN FAVOR OF FREE TRADE.

Heretofore gentlemen belonging to the Democratic party have hesitated to declare themselves absolute free-traders upon this floor, and have denied that their party contained any such. They are less hesitating now, and openly advocate the doctrine that free trade is better for this country than protection. They make no secret that they are striving to give the United States exactly what England wants us to have—what her celebrated Cobden Club is seeking to bring about in this country by a system of false pretenses, false doctrines, and false figures. They are aiding England in her purpose to make the United States the dumping-ground for her surplus productions, at the expense of the manufacturing industries, the workingmen, and the farmers of this country. They must surely receive their inspiration from a love of English theories and a total disregard for the welfare of American institutions. That may be the reason why the specious doctrines and deceptive theories held by the lords and noblemen who compose the Cobden Club are so often quoted upon this floor by advocates of free trade, and why any movement in this country looking toward the reduction of tariff duties, or even the agitation of the question, is hailed with delight by the dignitaries of that celebrated club, and generally celebrated by a grand dinner and grander speeches, in which the prosperity of England is made to rise in exact ratio to the intensity of feeling and the probability or possibility of a reduction of tariff duties.

In May, 1869, the American Free-Trade League was organized in New York, and a large amount of money was contributed by gentlemen of foreign lineage or connections, to be used to advance free-trade doctrines in America. The London Mining Journal said of this movement:

If this league succeeds, we may hope for a very large trade from that country.

Lord Derby, who presided at the Cobden Club dinner in London in July, 1881, said:

Sooner or later free trade must become a sectional question in the United States.

The wish was father to the thought in his case, but we are far from that condition to-day, and as the country grows sectionalism will disappear. At a more recent meeting of the same club it was announced that a million free-trade pamphlets had been sent to this country within a few years and largely used in our Congressional campaigns. The same organization has also offered prizes of gold and silver medals for the best essays upon political economy—free trade, of course—by students in American colleges.

That England desires tariff reduction in this country as a positive benefit to her royal condition and that she relies upon the Democratic

party to advance her interests here are abundantly proved by the following extracts from her journals:

The London Iron and Coal Trades Review, for December 7, 1883, says:

The greatest interest is always manifested by our business men in American politics when they are likely to affect the tariff. It is pretty evident that the protectionists are no longer to have it all their own way.

The Machinery Market, of London, said in January last:

The year is likely to see important political changes on the other side of the Atlantic which will have their influence on business here. Events move rapidly in America, and the coming triumph of the Democratic party there means the triumph of the free-trade movement in the States. It is not to be supposed that there will be free imports into the States, but "a tariff for revenue only," which is the leading cry of the Democrats, will open an immense additional field for the sale of English manufactured goods in the States.

The London Spectator, of December 8, 1883:

Of course the north of England holds that American free trade would be greatly to the interest of British manufacturers.

The Pall Mall Gazette:

The progress of the Morrison bill will be watched with considerable interest by English exporters to the American market, inasmuch as it can hardly fail to tend in their favor.

The above apt quotations from the English press are taken from Mr. McKINLEY'S able speech on this subject on the 30th of April last.

Lord Goderich said in the House of Lords in the early debates on this question:

Other nations knew as well as the noble lord opposite, and those who acted with him, that what we meant by free trade was nothing more nor less than by means of the great advantages we enjoyed to get the monopoly of all their markets for our manufactures, and to prevent them, one and all, from ever becoming manufacturing nations.

One of the most prominent manufacturers of Bradford, England, recently said:

The truth is, the higher the foreign tariff the lower we must make our goods, and the less we can afford to pay labor. The least possible reduction in the United States tariff will be a grand thing for Bradford, but how it will affect your industries I can hardly say.

FREE-TRADE METHODS.

The Chicago Western Manufacturer of October 18, 1881, describes some of the methods used by agents of England to circulate free-trade doctrines in this country. It tells how one Professor Sheldon, from London, called at the office of "one of the leading agricultural journals in that city" and urged its editor to publish, "entire or in abstract in his columns," the Mongredien Western Farmer pamphlet, especially that portion of it urging farmers "to give their support to no candidate for Congress who does not pledge himself, if elected, to propose or vote for the abolition of import duties."

The Manufacturer also says:

Another agent and correspondent of the Cobden Club, duly delegated, one Professor Bigelow, of New York, was in this city a day or two recently, consulting with local free-traders. He was going to Indiana well supplied with British pamphlets, with which he proposed to influence votes against candidates for Congress who were not pledged to propose or vote for the abolition of import duties, if elected.

The quotations made above demonstrate very clearly what is the great desire of England, and also the methods by which she hopes it may be realized. Her desire is simply this: to secure through the aid of allies in this country, mostly found within the Democratic party, a general agitation in favor of free trade, with the hope that the United States will finally be coaxed or driven or deceived into the adoption of such a policy. She knows by her own experience that free trade lowers prices, lowers wages; that it would result in the ruin and decay of American industries and enterprise. This is the hour which she awaits, when by the declaration of her own leaders she will step in to realize her boasted ambition of centuries to "overwhelm all foreign competition and step in for the whole trade of the world when prices revive." This is England's ambition, to advance which she has sacrificed millions of treasure, degraded her own labor, let her own industries lag, and, great as she is, faces to the rear in the progressive march of enlightened nations. And this is England. This is the great empire from which we sprang and from which we severed ourselves because of the injustice, the wrong, and oppression which she heaped upon us because we sought to help ourselves. She has not the power to-day, but she has the disposition to load us down with practices which would ruin our own nation to build herself up. This is England, which for centuries established and maintained the most proscriptive protective system ever known among enlightened people. Let us examine her protective record.

ENGLAND'S PROTECTIVE LAWS.

In 1870 she enacted laws regulating the importation of goods manufactured on the continent by Germans.

In 1431 laws prohibiting the importation of goods except in English ships were made.

In 1504 an act was passed to regulate or restrict the importations of foreign-made silk.

In 1567 a law was enacted that for the exportation of sheep the offender "should forfeit all his effects, suffer imprisonment for a year, and then have his left hand cut off in a market town, and on a market day, to be there nailed up; and for the second offense should suffer death."

In 1559 to 1603 some of her laws were as follows: The exportation of wool prohibited; the importation of minerals, finished leather, &c., prohibited; the immigration of skilled labor, smiths, miners, &c., was encouraged, and duties laid on imported cloths.

In 1700 the importation of calicoes and muslins was prohibited.

In 1720 any person found wearing a printed calico dress was fined £5, and the seller fined £20.

To illustrate the iron hand by which England ruled her American Colonies for her own benefit at their expense, the following paragraph from Henry C. Carey's The Slave Trade, Domestic and Foreign, is concise and interesting.

The first attempt at manufacturing any species of cloth in the North American Provinces produced a resolution on the part of the house of commons (1710) that the erecting of manufactories in the Colonies had a tendency to lessen their dependence on Great Britain. Soon afterward complaints were made to Parliament that the colonists were establishing manufactories for themselves, and the house of commons ordered the board of trade to report upon the subject, which was done at great length. In 1732 the exportation of hats from province to province was prohibited, and the number of apprentices to be taken by hatters was limited. In 1760 the erection of any mill or other engine for splitting or rolling iron was prohibited; but pig-iron was allowed to be imported into England duty free, that it might be there manufactured and sent back again. At a later period Lord Chatham declared that he would not permit the colonists to make even a hobnail for themselves; and his views were then and subsequently carried into effect by the absolute prohibition in 1765 of the export of artisans; in 1781 of woolen machinery; in 1782 of cotton machinery and artificers in cotton; in 1785 of iron and steel making machinery and workmen in those departments of trade; and in 1799 by the prohibition of the export of colliers, lest other countries should acquire the art of mining coal.

This is England! Did she favor free trade then, when she had her iron heel upon the throat of the American Colonies and made them pay costly tribute to her ambition to rule the markets of the world? Ah, no! She protected every industry in her realm even unto death. During all her early history, century after century, she could not make her protective laws too strong. She protected everything but Ireland. She threw her ports open only when she could no longer produce food for all her people. This time came less than half a century ago, and since it came she has been persistent in her endeavors to induce her largest customer and greatest rival, the United States, to adopt the same policy, not for our best good, but for her own; and yet this persistent mother can not convince her own children of the benefits of her favorite free trade. Canada and Australia repudiate the doctrine and choose to follow England as she was, not as she is.

England's policy of free trade, so heartily indorsed by some of our doctrinaires in the study of political economy, is repudiated by many of her most inteiligent people. She can be convicted of inconsistency and insincerity by the utterances of her own manufacturers, her own practical men, her own representative statesmen.

Lord Derby has said:

I can hardly allow myself to believe that America will long maintain at the public expense a privileged class of manufacturers and producers.

Sir Edward Sullivan, in alluding to this, said:

But the American people laugh at this. They know that every prosperous manufacturer means a hundred or two of prosperous workmen, and every ruined manufacturer, one or two hundred ruined workmen; that if the employer is losing money the employed can not be making it. More than this, they understand that manufacturing and agricultural industries are inseparably bound up together; that prosperous manufactures mean prosperous agriculture, and *vice versa*; that each consumes what the other produces; that each is the best customer to the other.

Mr. Wood, a manufacturer, in a letter to the Sheffield Telegraph, said:

Since 1853 upward of 3,000,000 of our people have emigrated, principally to extreme protective countries, where their labor has found better reward.

The testimony, therefore, is overwhelming:

1. That England protected her industries in the most rigid manner for centuries, so long as it was for her interest to do so, and until she failed to produce food enough for her people there was no tendency toward free trade.

2. That the United States, being the best market for her productions, her ruling ambition is to send her surplus product here, and to do that to her great advantage she seeks to strike down all barriers which prevent free commercial intercourse between the two nations, knowing that any legislation which would permit this to be done would ruin the industries of the United States in order to build up those of England.

PROTECTION VS. FREE TRADE.

The question must then come home directly to every American: Shall we have protection or free trade? If the struggle resolves itself into a discussion of this question, the contest may be short and sharp or long and tedious, but it can have just one result. Free trade must go down, or patiently wait until we are ready for it. Free trade can never live in a republic which is sustained and strengthened by the industry and thrift of her people. It is a dry-rot upon the body-politic, which will ruin any country until the conditions are such as to make it acceptable. Those conditions must necessarily be the growth of centuries. It is a theory only, based upon faith in prejudice and impossibilities, and can never be reconciled with the conditions which follow honest industry, thrift, and enterprise. History proves this again and again. It makes slavery of honest labor and mocks at capital which would invest itself in healthy manufactures. The gentleman from New York [Mr. HEW-

ITT] never expressed a truer thing in his life than when, in 1870, he wrote:

Free trade will simply reduce the wages of labor to the foreign standard.

As illustrating the fact that free trade is a theory, and that education and experience convert its advocates, the following from Hon. A. D. White, president of Cornell University, may be of interest:

When he leaves college every man is generally a free-trader. The theory is undoubtedly correct. But when a man comes to look about him and see the business interests of the country that have been fostered by protection he generally modifies his theory.

On the other hand, protection is practical, straightforward, plain, and open-handed. It is the true policy of every prosperous nation which depends upon its own intelligence and industry; it is an inspiring and guiding element in our highest national aspiration. Protection is strong because it is national, because it does protect, because it supports and develops the temperate, diligent industries of the land, because it is conservative and not wasteful, and therefore it is bound to aid and not sacrifice its home allies. Protection should be non-partisan. It is not Republican alone; it is not Democratic alone; it is national in all its tendencies and results.

Mason, in his Short Tariff History of the United States, truly says in opening the first chapter of his comprehensive work:

All the prosperity enjoyed by the American people, absolutely all the prosperity, without any reservation whatever, from the foundation of the United States Government down to the present time, has been under the reign of protective principles; and all the hard times suffered by the American people in the same period have been preceded either by a heavy reduction of duties on imports or by insufficient protection.

Is there the slightest incentive to abandon a principle upon which our prosperity has been built, which has brought greatness and happines to our people in the fullest measure?

If our people were content to receive the wages that are paid abroad, if they were willing to accept the scant comforts and squalid surroundings of European workingmen and their families, it is possible that protection might be abandoned and our manufactures still live; but they will not be content with such rewards for their labor, nor would it be for the best interests of society and the nation that they should be. A reduction of duties at this time would not only still further reduce the wages of labor, but would cause the stoppage of industrial establishments in every State of the Union.

See what this country produced in 1860 and in 1880, in twenty years, under a protective tariff, so earnestly condemned by the advocates of free trade as robbery and delusion. Remember that this twenty years, covers also the period of one of the most devastating civil wars known in history. Read these figures showing the results of protection in increased national power and wealth, and then give any reason why the protective policy should be abandoned.

GROWTH OF THE NATION UNDER PROTECTION SINCE 1860 IN POPULATION, WEATH, INDUSTRIES, AND COMMERCE.

In the following table from official sources we have an exhibit during the period from 1860 to 1880 of the growth of the nation in population, wealth, industries, and commerce:

Subjects.	1860.	1880.	Increase per cent.
Population of the United States	31,443,321	50,155,783	60
Value of farms	$3,271,575,426	$10,197,161,905	212
Wheat produced.....bushels	173,104,924	498,549,868	188
Wheat exported.....bushels	4,155,153	153,869,935	3,603
Corn produced.....bushels	838,792,742	1,717,434,543	105
Corn exported.....bushels	3,314,305	98,169,877	2,862
Wool produced.....pounds	60,264,913	232,500,000	286
Cotton produced.....bales	3,826,086	6,343,269	65
Oats produced.....bushels	172,643,185	407,858,999	136
Barley produced.....bushels	15,825,898	44,113,495	179
Butter exported.....pounds	7,651,224	39,236,658	413
Cheese exported.....pounds	15,524,830	127,553,907	722
Petroleum produced.....barrels	251,000	22,382,509	8,817
Pig-iron produced.....net tons	919,770	4,295,414	367
Rails produced.....net tons	205,038	1,461,837	613
Hogs packed	2,350,822	6,950,451	196
Merchandise imported	$353,616,119	$667,954,746	89
Merchandise exported	$333,576,067	$835,638,658	150
Gold and silver produced	$46,150,000	$75,200,000	63
Gold and silver exported	$66,546,239	$17,142,919	
Gold and silver imported	$8,550,135	$93,034,310	988
Railroads, miles	30,635	88,237	188

And all this in a nation which has hardly turned its second century. Surely the ideal of such a country, with such power and resources, is hardly within the scope of the imagination.

Apropos here are the following words taken from Hon. Ellis H. Roberts's recent work on Government Revenue:

That State is nearest to the ideal standard; which employs all of its energies, which builds up every one of its own resources, which adds everything possible for it to add to the sum of human wealth and power and progress.

And again:

That nation which does its own work most thoroughly, which trains its own citizens to the most complete usefulness and ripest development, serves the whole world most effectually and adds the most to the achievements and the happiness of mankind.

Certainly these words have fit application to a nation which has protected itself and grown great by the development of its own resources.

America will thrive so long as she protects herself, and can more safely trust her own people than those of any other power on earth. It was Mr. Garfield who said in this House in 1878, when a tariff bill was under discussion, as follows:

For the present the world is divided into separate nationalities, and that divine command still applies: "He that provideth not for his own household has denied the faith, and is worse than an infidel." And until that era arrives described by the gentleman from Virginia, patriotism must supply the place of universal brotherhood. For the present Gortchakof can do more good for the world by taking care of Russia. The great Bismarck can accomplish more for his era by being as he is, a German to the core, and promoting the welfare of the German Empire. Let Beaconsfield take care of England; let McMahon take care of France, and let Americans devote themselves to the welfare of America. When each does his part for his own nation to promote prosperity, justice, and peace, all will have done more for the world than if all had attempted to be cosmopolitans rather than patriots.

LABOR, WAGES, AND CAPITAL.

It will not do in the course of this discussion to attempt to evade the real question by provoking a conflict between labor and capital with wild appeals to the workingmen to throw off the imaginary yoke which protection places upon them. The workingmen of this country can not be so easily deceived into the adoption of a theory which, when carried into practice, will bring lower wages and consequent discontent. The testimony is overwhelming that wages in protective countries are higher than in any other.

The London Mining Journal of June 26, 1880, contained a communication from one of its English readers, over the signature of "Free Trade," in which the writer showed why the United States could not become a serious competitor with England in supplying the world's markets with manufactures of iron and steel. He said:

The reason of this is that it is practically impossible to reguiate wages except upon the basis of the highest prices obtainable for the article manufactured, so that if the tariff permits the American ironmaster to sell to local consumers at $10 per ton higher than before, the full proportion of that $10 must be paid to the workmen, and the British ironmaster in all markets except the American is benefited to the extent of the extra wages paid in America.

Mr. Casson, the general manager of the Earl of Dudley's Staffordshire iron-works, on his visit to Pittsburgh, in answer to a question by a reporter of the Pittsburgh Commercial Gazette, said:

I find that in many respects you have the advantage of us as regards mechanical appliances, while in others we are greatly ahead of your manufacturers. We can manufacture iron at just one-half the cost as far as the price of labor is concerned. I find that your rate of wages is about exactly double what we have to pay.

There can be no settled conflict between labor and capital. They are mutual in their interests and dependent upon each other. Capital must remain idle without labor, and labor without capital to give it employment must fret, wither, and die. If capital enters your State and establishes manufactories, must not labor follow it? And will not labor thrive so long as the fountain lives? Do we not always hail with delight the establishment of manufactories in our midst? It must be a God-forsaken locality indeed that does not welcome the manufacturer. Do we not everywhere encourage the establishment of manufacturing industries by lessening local burdens wherever possible? And why? Simply because it means growth, the coming of industrious people, the increase of population and material resources, development, life, and it means a local market, the best market in the world for the agriculturist, who finds at home a demand for his production.

The laboring classes are not to be deceived by any false light. They can see the condition of laborers abroad as well as those who would degrade American labor to a foreign standard. Consult all the tables you will, arrange the vast wilderness of statistical figures as you choose, distort or hide facts as you may and do, but the indisputable fact still remains that the American laborer is the best paid, best fed, best housed, best dressed, best behaved, and best educated laborer in the world. He lives like a man, his wife may be a lady with the best, his children attend school, and if sober and honest they may all be prosperous and happy. Compare him with the English laborer or the laborer of any other country in the world, and the advantage is his at every comparison. Come to some of our Northern manufacturing towns, you who advocate free trade, and study the condition, the manners and customs of our working people under protection. Go into our mills, see the operatives at work, go to their homes and see the thrift and happiness there, go to our churches and our schools and see the workingman's and the capitalist's children studying the same books, toiling in the same path, with equal ambitions, opportunities, and possibilities. See all these things, and you will not call protection robbery or oppression. It was a Senator of the United States who said he had visited some of the great workshops of New England, had seen the workingmen in their shops and in their homes, had studied their methods of living, and discovered, as he admitted, two things—that there was after all some practical good in protection, and that the skilled laborers in the towns he visited lived better and enjoyed themselves better than he did.

SELF-PROTECTION.

Why, you who represent the States most likely to furnish the largest votes in favor of this bill can all see the value of protection when it

is brought into your own State, into your own Congressional districts, or into your own cities and towns. Nothing was more noticeable in the discussions which took place in the last Congress upon the tariff bill than the eagerness shown by Representatives from all sections to have the industries of their own people properly protected. This was particularly noteworthy in the Southern States. When the item of sugar was reached, Louisiana demanded protection, West Virginia said "let our great glass industries alone," Missouri was content to have no reduction upon lead, Virginia insisted that a 20 per cent. duty was none too high for "extract of sumac," and when iron was reached the gentleman from Alabama [Mr. HEWITT] said:

No great measure has promoted the general prosperity of the country to a greater extent than the protection of American labor and American industries. * * * New England farmers have prospered because they have their factories near and a market at their door for all they have to sell. The Alabama farmers are as much interested in the development of coal and iron and the building of cotton-mills as any class of persons. The coal and iron of Alabama are equal to the supply of the world for many centuries.

These illustrations simply prove that protection after all does protect, when we take questions directly home to ourselves. The State of Georgia is to-day an excellent illustration of what protection will do when coupled with energy, intelligence, and liberality. No State in the Union is making more rapid strides in prosperity. And in this connection the following statement recently made by Governor Bullock, president of the Atlanta Cotton-Mills, on the effect of the present tariff laws on Southern cotton manufactures is especially interesting, not only as indicative of advance in thought, but as bearing upon the present discussion:

The chief product of our Southern mills is what is known to the trade as three-yards goods, that is, brown sheeting one yard wide, weighing three yards to the pound. These are generally made from twelve and fourteen yarn, with forty-eight to fifty picks or threads to the inch. The tariff certainly has no depressing effect on brown cottons. There is no restriction on export, and no tariff on any part of brown goods, except the machinery with which they are made. Many Southern mills are sending abroad over 60 per cent. of their product at prices which are more satisfactory than in the home market. These are purely matters of trade, in which each mill seeks its own interest, and over which the tariff has no special control. English machinery is now offered for sale in this country cheaper than the best grade of American work, but the superiority of the American machinery insures its sale, even at the higher prices. I agree with Mr. Hickman that the best thing to do is to do nothing. The threat of frequent change is more vexatious and hurtful to the manufacturer who is affected by a tariff than any fixed plan could be. I would say abolish absolutely and entirely all direct or internal taxes by the General Government, and let the present tariff stand until after the next census. Then, with all the facts and figures of the growth and condition of the country before us, adjust it for another decade, according to the needs of the Government.

FREE-TRADE STATES PROTECT THEMSELVES.

Many who are so loudly exclaiming, "Let us buy where we can buy the cheapest, let us establish free trade everywhere," must not forget that they represent States which to-day have on their statute-books the most obnoxious of all protective laws, laws which prevent free trade among the States. This refers to the laws requiring commercial agents or travelers to pay a heavy license in certain States before they can do business therein. The District of Columbia has the same obnoxious law, which is in force in the following States: Maryland, Virginia, North Carolina, South Carolina, Texas, Kentucky, and Connecticut. A letter from a manufacturer in my own city, recently received, stated that he could not send his agent into Virginia or North Carolina until he had sent each State a draft for $200 for a year's license. That is certainly carrying protection further than conservative protectionists will go.

THE QUESTION OF POLITICS.

It would be a benefit to the industries of the country if the question of a tariff, of protection or free trade, could be kept out of politics. But that seems almost impossible, and the present discussion has not served to weaken party lines on the subject. We have heard protection repeatedly denounced as robbery, and the Republican party as the robber. No words have been too severe to use against the party which is not afraid to stand up for the best interests of the people, whether they be manufacturers or workingmen, capitalists or laborers. And if this question is to be discussed purely on political grounds, the fate of this bill in this House is of little consequence. The people do not want the law, they do not care for even a discussion of it; and therefore if a Democratic House chooses to pass the bill a Republican Senate will defeat it, and the election of the Republican candidate for President would be thereby practically assured. If party lines are to be drawn, we are ready to fight the battle here and now. If it is to be made the issue of the approaching campaign, it will be fearlessly met.

It need hardly be said that the Republican party has always advocated the policy of protection. It has fearlessly stood by this position from the organization of the party, whether in legislative halls or before the people, confident that it was the policy laid down by the founders of the Republic and followed by those who made the first half-century of our country's existence brilliant with dignity, prosperity, and vigorous national life. It has never swerved from the line marked out, but has kept itself true to that section of the Constitution which provides for the general welfare of the people. It has never gone straying off into the fields of theory to catch votes by demagogy or deception, but has ever held up to the people the advantages it affords and under which our prosperity has been unparalleled. It has never asked the people to worship false gods, but has given practical demonstration of the benefits to be derived from a system which proves its own value.

Protection is to-day one of the cardinal principles of the Republican party; not protection for the sake of protection, but for the honest and just protection of American industries, American labor, American enterprise. It was one of the firmest planks in the platform upon which the party won its first victory. Protection and freedom went hand in hand. The party is pledged to it as firmly as it ever was to the abolition of slavery, to sound and honest finance, to the sure payment of the public debt—the sacredness of public pledges, fair elections, and honest politics.

PLATFORM DECLARATIONS.

Let us quote here the public declarations of both political parties upon the subject of protection, revenue tariff, and free trade in national conventions since 1856:

Democratic.	*Republican.*
1856. * * * "The time has come for the people of the United States to declare themselves in favor of * * * progressive free trade throughout the world."	
1860. Reaffirmed.	1860. "That while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imposts as to encourage the development of the industrial interests of the whole country; and we commend the policy of national exchanges, which secures to the workingmen liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the nation commercial prosperity and independence."
1864. Subject not mentioned.	1864. Subject not mentioned.
1868. * * * "A tariff for revenue upon foreign imports and such equal taxation under the revenue laws as will afford incidental protection to domestic manufactures, and as will, without impairing the revenue, impose the least burden upon and best promote and encourage the great industrial interests of the country."	1868. Subject not mentioned.
1872. * * * "Recognizing that there are in our midst honest, irreconcilable differences of opinion with regard to the respective systems of protection and free trade, we remit the discussion of the subject to the people in their Congressional districts, and to the decision of the Congress thereon, wholly free from executive interference or dictation."	1872. And that revenue, except so much as may be derived from the tax upon tobacco and liquors, should be raised by duties upon importations, the details of which should be so adjusted as to aid in securing remunerative wages to labor and to promote the industries, prosperity, and growth of the whole country.
1876. "We denounce the present tariff. * * * We demand that all custom-house taxation shall be only for revenue."	1876. The revenue necessary for current expenditures and the obligations of the public debt must be largely derived from duties upon importations, which, so far as possible, should be adjusted to promote the interests of American labor and advance the prosperity of the whole country.
1880. "A tariff for revenue only."	1880. We reaffirm the belief avowed in 1876 that the duties levied for the purposes of revenue should so discriminate as to favor American labor.

It needs no explanation to show where the Republican party has stood. And the current political events of the day show that there is no disposition to take any backward step upon this question. To prove this let us examine some of the

Republican State platforms for 1884.

NEW YORK.

The Republican party of New York, in State convention assembled, declares:

4. Its approval of that policy of protecting home industry from foreign competition which has through a century of national being encouraged immigration, rewarded labor, fostered enterprise, and assured unparalleled progress and prosperity, all variations from which policy have been the occasion of business confusion and disaster, and which, therefore, is alike justified in intelligence and by experience.

MARYLAND.

The Republican party of Maryland declares:

That the prosperity of our country requires the fostering protection of our industries; that the Republican party has always supported this system of protection, and is pledged to maintain it in the future; that the Democratic party is pledged to a financial policy which would be ruinous to the prosperity of our agricultural, manufacturing, and commercial industries; that we view with alarm the action of the Democratic majority in the present Congress in favor of reckless and indiscriminate reduction in the tariff; that any revision of the tariff which may be needed should be intrusted to the friends and not to the enemies of a protective system.

MASSACHUSETTS.

We advocate tariff laws which, while furnishing necessary revenue, shall favor the labor and industrial enterprise of the country and not assail them. While we insist upon a reduction of customs duties because of the dangerous surplus in the Treasury receipts, at the same time we deem it essential that this reduction should be made with the least possible injury to the labor and manufacturing interests of the country; and we condemn the arbitrary percentage reduction proposed by the present Democratic House of Representatives, because it fails to reform any inequalities of taxation, disregards the business wants of the country, and, if adopted, would cripple many industries and at the

same time would probably increase the revenue. We also recognize in the progressive changes in industrial conditions the necessity for an investigation of the tariff upon a scientific basis, to the end that it may be considered as to its real influence upon labor, capital, production, and revenue.

MAINE.

Resolved, That from the establishment of our National Government to the present time the judgment of our best statesmen and the experience of the country have favored an American policy which collects the national revenues mainly on foreign importations, imposed in a manner to give protection to American skill and labor, to build up our manufactures, to augment the volume of our combined internal and foreign commerce, to expand our network of railroads, thus increasing the value of our agriculture and all the legitimate interests of American labor and capital.

NEW JERSEY.

Resolved, That the prosperity of our country depends on the number of its independent households and happy homes; that this requires the protection of our home labor against ruinous foreign competition; that the Republican party has always supported this system of protection, and is pledged to maintain it in the future; that the Democratic party is pledged to a financial policy which would be ruinous to the prosperity of our agricultural, manufacturing, and commercial industries; that we view with alarm the almost solid array of Democratic votes in the present Congress in favor of persistent reductions in the tariff; that any revision of the tariff which may be needed should be intrusted to the friends and not to the enemies of the protective system.

PENNSYLVANIA.

Resolved, 2. We unqualifiedly approve and demand the continuance of that system of protection to home industry which has proved itself to be the basis of national independence, the incentive to industrial skill and development, and the guarantee of a just and adequate scale of wages for labor, and we denounce all attempts to reduce the rates of the tariff below the level which will accomplish these objects.

VIRGINIA.

Resolved, That we demand a protective tariff, so that the manufacturing and mining industries of Virginia, in common with those of the other States of the Union, may continue to grow and prosper, and that agriculture may find a ready and remunerative home market for its produce, while our free labor may receive that reward which will be denied if it is brought into competition through free trade with the servile labor of other countries.

IOWA.

Resolved, 1. We denounce as unwise and unpatriotic the present effort which the Democratic party in Congress declare to be only their first step to further derange trade and oppress American industry by an indiscriminate reduction of duty on foreign products and manufactures which compete with our own. * * * In the common interest of all our industries, all our labors, and all our natural property we call upon Congress to halt in this destructive work.

TARIFF FEELING IN NEW YORK STATE.

During the present agitation of this subject Mr. Theodore C. Teale, of Greene County, New York, issued a circular, asking the sentiment of the people in the different counties of the State on the question of protection and free trade. Replies received by him from thirty-eight of the sixty counties in that State are given below, and prove, with a volume of testimony which can not be explained away, that the Republicans of that State are unwavering in their faith in and allegiance to the doctrine of protection, and that many Democrats stand with them.

Following is an abstract of replies from counties:

Allegany: "We have between six and seven thousand Republicans in Allegany County and scarcely one free-trader; nearly all favor protection to home industries. * * * If the tariff was made an issue, from one to two hundred Democrats would vote this year with the Republicans."

Broome: "The Republican sentiment in this county is in favor of protection to home industries. I think we have a good many Democrats of the same opinion. * * * Should the Democrats put a free-trade plank in their next platform, I think the Republicans will easily elect their President."

Cayuga: "Cayuga County is quite strong for a protective tariff. The Democrats here as elsewhere are divided on the question. * * * I think Cayuga County would give a large majority for the protective tariff were the question put to a vote."

Chautauqua: "I am of the opinion that our party in Chautauqua County are unanimous, or very nearly so, for protection, and my views are in entire accord with the party on that question. I know of several Democrats in our city, who are engaged in manufacturing, who would support the nominees of our party at Chicago in the event of their party nominating a pronounced free-trade ticket, and that being the issue."

Chemung: "The Republican sentiment is nearly unanimous for a protective tariff, and many leading Democrats favor it."

Chenango: "Among reading, thinking Republicans I know of but very few free-traders. Those I do know would hardly vote the Democratic ticket if there should be a direct issue. I know of some Democrats that naturally favor a high tariff."

Cortland: "The Republicans of Cortland County are generally favorable to a protective tariff. I know of a good many Democrats who believe in a protective tariff. * * * I am strongly in favor of a protective tariff. While in Congress some years ago I advocated and voted for protection to home industries in this country, and my views on this subject have undergone no change."

Clinton: "The sentiment of this county is nearly unanimous for protection. All Republicans and most of the Democrats are in favor of a protective tariff."

Delaware: "The Republicans are well-nigh unanimous in favor of protection, and commend the New York Tribune as an able exponent of these principles."

Dutchess: "The majority of Republicans of this county favor a tariff that will protect the industries of this country, and this is my view of the subject."

Erie: "The Republican sentiment of this county is very largely for protection—a few college-bred free-traders among us. A considerable minority of Democrats favor protection, headed by our mayor." * * * "I am for protection to American labor and American industries."

Fulton: "There is but one feeling in this county among Republicans on the tariff question. They are for protection. The more intelligent Democrats are of the same opinion."

Greene: "The Republican party of Greene County are almost a unit for protection for American labor through a protective tariff. From this position it would be useless to attempt to dislodge the solid column of the intelligent, patriotic Republicans of this county."

Herkimer: "The Republican sentiment in this county is largely in favor of protection, and in the south part of the county many Democrats favor it."

Jefferson: "I believe the Republican sentiment to be almost universally for protection as against free trade, that is, protection to American industries and American labor. I believe that many Democrats favor the policy of protection."

Livingston: "The sentiment of the Republicans of this county is in favor of a high protective tariff, and there are quite a large number of Democrats in the county who are strong tariff men. My views are in favor of a good, strong protective tariff."

Montgomery: "My views are that we need a strong protective tariff, and I think the Republicans of Montgomery County agree with me. Many Democrats hereabouts favor protection."

Madison: "The Republican sentiment of this country is unmistakably in favor of protection. There are many Democrats that also favor protection. Some of them would not vote for a free-trade man for President. * * * Our strong position as a party is on a protection basis. The people believe in it, and will have it."

Monroe: "In my opinion the Republicans of Monroe County are strongly in favor of a protective tariff. There are but few, if any, Democrats that advocate protection."

Onondaga: "The universal sentiment of Republicans here is that the party must make no mistake on the question of protection to American productions. There are many Democrats who are deeply interested in the question, and always vote with us when the issue is protection."

Ontario: "The Republican sentiment in my opinion is mixed, with a fair preponderance in favor of protection. I am in favor of revenue reform."

Orange: "The sentiment among Republicans in Orange County is decidedly in favor of a protective tariff. * * * A good many Democrats entertain like views upon this question. As for myself, I may say that although my early education was in the other direction my views have undergone something of a change, and are now in harmony with those of the great majority of the Republicans of the country. I was brought up from my earliest boyhood upon the New York Evening Post, and of course became somewhat influenced thereby in favor of free trade. But I was pretty young when thus influenced."

Oswego: "The Republicans of Oswego County favor a protective tariff. The Democrats favor a tariff for revenue."

Otsego: "The Republicans of this county almost to a man are strongly in favor of a protective tariff. Many Democrats with whom I have talked favor a protective tariff. In my opinion protection means to the American manufacturer prosperity; to the farmer everywhere good prices and a ready market for all he can raise; and to the laboring man good wages, a comfortable home, and an education for his children."

Putnam: "The Republicans of Putnam in my judgment are strongly opposed to any agitation of the tariff at the present time, believing that the law of last winter should have a fair trial, and that the business interests should not so soon again be imperiled by agitation in Congress. * * * I am of the opinion that no substantial reduction should be attempted at the present time, and that the business interests should have a rest from Congressional interference and protection from competition with foreign labor."

Queens: "My opinion, which is made up from conversations held with leading men of both parties, is that a majority of the people are in favor of protection to American products and a reduction in the internal-revenue taxes."

Rensselaer: "The Republican sentiment in this county is overwhelmingly in favor of a tariff, and many Democrats are in favor of it. Free trade as an abstract proposition or principle may be sound, but as a practical business principle is wholly inexpedient for this country at this time. Free trade must come some time, but to adopt it now, or for many years to come, would be ruinous to many great manufacturing, mining, and mechanical interests and industries of this country, and would just as seriously affect the laborer, by reducing his wages to the starvation point. The Republican party can not succeed this fall without a sound tariff plank in its platform; it knows where the enemy is and must fight."

Rockland: "I think that the Republican sentiment in this county is that the present tariff, with few exceptions, is satisfactory. I think about one-third of the Democrats are in favor of protection."

Schenectady: "The sentiment in Schenectady County among Republicans is decidedly in favor of protection. Many Democrats declare that if their party favor free trade they will vote with the Republicans. I think the success of our party depends upon the handling of this question."

Schuyler: "I am fully convinced that the people of this county are strongly in favor of a protective tariff; in other words, this county may be termed a tariff county, and the sentiment prevails quite strongly in the Democratic ranks. I cansee no safety to this country except with protection to home industries."

Seneca: "In my opinion the Republicans of Seneca County are in favor of a protective tariff, and I think we have a few Democrats who also favor it."

Saint Lawrence: "I believe the Republicans of Saint Lawrence County to be in favor of protection—a moderate tariff, that will furnish all the revenue that can be used to advantage, and at the same time that is framed with an eye to the protection of all the important industries of this country. Many Democrats are protectionists, but the issue must be drawn very sharply to shake their party allegiance."

Steuben: "The Republican sentiment in this county very strongly favors a tariff for protection. Many Democrats talk the same way. I favor a protective policy which will promote manufacturing industries, thereby making a home market for farm productions."

Tioga: "I think there are very few free-trade Republicans in this county, and I think there are more Democrats here in favor of protection than there are Republicans who favor free trade. I believe that a low tariff for revenue only would be disastrous to many of the manufacturing interests of this country."

Ulster: "Ulster County Republicans undoubtedly hold the same views you expressed in your circular and published letters on the subject of the tariff. There are quite a number of Democrats possessing similar convictions."

Warren: "So far as I am able to judge the Republicans are in favor of a protective tariff. I think the Republican party entirely harmonious on this question in this country."

Wayne: "The Republicans of this country are very generally in favor of protection. A few Democrats are also in favor of protection."

Wyoming: "I think 99 per cent. of the Republican voters of Wyoming County are in favor of protection. Many Democrats are also protectionists."

Very appropriate right here is the following from the Orange County (New York) Farmer:

It is not "politics" at all, but it is business. The farmers are interested above all others in the protection of home industries, for it is those industries that increase our population and thus make a market for the supplies of the farmers. No political party has any right to destroy that market for the farmers; and when any party does destroy or attempt to destroy it, then it is time for the farmers to throw "politics" to the wind and begin to roll up their sleeves for work and business. Let the agitation and discussion go on. It is business.

With this important testimony before us there is little doubt that the people of New York State are not in favor of free trade; and if her Representatives follow the people rather than sentiment or politics, they will legislate in favor of a proper system of protection.

DEMOCRATS AS PROTECTIONISTS.

The Democratic platform in 1880 was "a tariff for revenue only." The Democratic candidate considered the tariff question as "a local issue;" the country differed with him very materially, and he was stranded on the rock. The Democracy have had spasms of common sense since then, and in the following States Democratic conventions

have declared in favor of protection: North Carolina, Ohio, Virginia, Pennsylvania, New Jersey, Connecticut, Indiana, and New Hampshire.

The following States, in Democratic conventions, have declared in favor of a "tariff for revenue only:" Illinois, Michigan, Minnesota, Nebraska, Iowa, Kansas, Kentucky, Oregon, and Texas.

The Democratic conventions in the following States have made no decisive expression upon the subject: Maine, Maryland, Massachusetts, Delaware, New York.

A WESTERN FARMER'S VIEW OF THE TARIFF

is so complete and well expressed that it may well be carefully read:

A tariff for revenue only, if it means anything, implies the following cause and effects:
A general reduction of the existing duties on imports.
To be followed by a larger importation of foreign-made fabrics.
To be followed by a falling off in the demand for those made at home.
To be followed by the closing of American workshops.
To be followed by a relatively greater number of men engaged in agriculture.
To be followed by an increase in the supply of farm products, with no corresponding increase in the demand.
To be followed by a reduction of the farmer's profits.
I, for one, do not like it.

STEPHEN PEEBLES.

PACIFIC CITY, IOWA.

NEWSPAPER ADVICE.

The gentleman from New York [Mr. DOESHEIMER] in his recent speech said:

Our opponents will do well to listen to the advice of their leading journals like the New York Times, the Buffalo Express, the Boston Herald, and the Springfield Republican.

We are glad to know that the friends of the Morrison bill consult the newspapers. We can not follow blindly the Boston Herald and Springfield Republican until we are assured they will not lead us into the Democratic camp, for my colleague will remember that these excellent newspapers supported the Democratic candidate for President in 1876. The other able journals mentioned by my colleague are of course entitled to their opinions and can express them freely, as they do, but within one month from to-day the Republican national convention will meet at Chicago, it will nominate a candidate for President upon a platform which will encourage protection to American industry, and these two journals will be found heartily supporting the nominations made. If it is all the same to our distinguished friend from New York, who from long association with Republicans knows something of their tastes, we will for the present follow the lead of the newspaper formerly conducted by a strong advocate of protection, who was the standard-bearer of the Democracy in 1872, about the time that our friend joined that party, and the very year that the subject of protection and free trade was shrewdly but not safely dodged by the Democratic national convention.

Now, will our friend from New York, who is so free with his advice to us, receive kindly a little in return? If so, will he calmly cast his discriminating eye over the following extracts from purely Democratic newspapers, sharply criticising the course of the Democratic party, and then inform us why he and his friends do not take warning accordingly? It requires no proof to show the politics of these newspapers. The New York Sun, for example, is so thoroughly Democratic that it recently declared that it would support a "crank" for President (giving the name of a Democratic member of this House) in preference to any Republican. Read the following

DEMOCRATIC ESTIMATES OF DEMOCRATS.

[From the New York Sun.]

WHAT IT IS HERE FOR.

"Congress," says the Boston Herald, "has been in session more than three months without affording any answer to the question: What is the Democratic party here for?"

This is a great mistake. The answer has been given and it is so plain that even the fools ought not to misunderstand it.

The Democratic party seems to be assembled in Congress principally to render the success of the Republicans at the next election as certain as human frailty will allow.

[From the Atlanta (Ga.) Constitution.]

DEMOCRATIC BLUNDERS.

The Democratic House of Representatives has now been in session three months, and all it has done is embodied in a tariff bill that can never become a law and the recommendation of the Ways and Means Committee that the bonded-whisky-bill swindle be adopted.

[From the New York Sun, April 3, 1884.]

THE PROSPECT.

A year ago it seemed tolerably certain that the Democrats would elect the next President of the United States.

The prospect was good, so good that it did not appear to need any improvement.

And yet people had never then heard of the Morrison bill.

Even in politics it is frequently wise to let well enough alone.

[From the New York Sun.]

EDITORIAL NOTE.

When we examine the votes of the Democratic Representatives from New York upon the question of considering the Morrison bill we find that nine voted for consideration and eight against. If there is anything in such indications, it doesn't look as though there was much prospect of the Democrats carrying New York with the Morrison bill as a platform.

[From Washington Post, February 21, 1884.]

WANTED—A LEADER.

Wanted very, very badly: A Democratic leader in the House of Representatives.

THE MAJORITY DOMINATED.

Not only an actual majority of votes but a majority of brains, on hand and available, is necessary to prevent the rule of a compact and skillfully handled minority in such a legislative body as our national House of Representatives.

During the Forty-sixth Congress the Republican minority in the House were the leaders and the Democratic majority the followers more than half the time. A few members for whom a drinking saloon had greater attractions than the post of duty neutralized the majority in that body. It was a humiliating spectacle, and its frequent exhibition was one of the reasons why the Democrats found themselves in minority in the next House.

[From the Washington Post, February 27, 1884.]

BUSINESS CAPACITY WANTED.

Is there not a call for positive virtues, for a demonstration of capacity, for prompt and faithful performance of good work?

The business of the session is not in a hopeful or creditable state of forwardness. It lags—it almost languishes. There is lack of unanimity, want of cohesion, and a general appearance of hesitating uncertainty. Time is wasted in frivolous talk, and there is no end to the perpetration of essays on every possible occasion.

Where is the leader who can bring order out of chaos and set the majority of the House on the road to a successful close of the session?

[From the New York Sun.]

THE WEAKNESS OF THE MORRISON BILL.

In opening the debate upon his bill for a horizontal reduction of the tariff, Mr. MORRISON is reported to have said that a reduction "alike" or horizontal is not the most logical or best, but that none other was practicable.

What does he mean by practicable?

He knows perfectly well that the Senate and President will prevent the enactment of his bill into a law, even if he should succeed in getting it through the House of Representatives. It is idle, therefore, to speak of it as a practicable measure in any sense.

Nevertheless, the use of such a word serves to show that the framers of the Morrison bill have not had the courage of their convictions. When a man says that he has not done what he knows to be best, because he was apprehensive that it would not be practicable, he confesses that he has sacrificed his principles to his sense of expediency.

Herein lies the weakness of the Morrison bill. It really satisfies no one; not even its author. It is indefensible on principle, and we do not think it is any stronger on the ground of practicability.

[From the Cincinnati Enquirer.]

COLONEL MORRISON'S WAY OF DEFEATING THE DEMOCRACY.

WASHINGTON, *April* 29.

Mr. MORRISON ought to be a happy man to-night. He has worked his tariff issue, and thereby secured an organization of the House of Representatives which blocks the way of all legitimate business. He has put the wedge in the Democratic party right on the eve of a Presidential election, until now very few Democrats have any hopes of success, and Republicans are every where jubilant as they contemplate the discordant ranks of their opponents. Personal spite is partially appeased and his personal vanity gratified as the leader of this show; but the result of it all is a tariff bill which belies every honest profession of the revenue reformers, consecrates the war tariff of MORRILL as a part of the United States statute-book, and affords by its complexity a temptation to dishonest officials and a torturing problem to the civil-service reformer.

The original idea of a tariff bill built on philosophical and business principles was soon abandoned to establish a sham and a cheat. The free-list has been cut down, and more changes are promised to the credulous, the hope being to get votes, no matter how, so as to be able to say that the House did indeed pass a tariff bill. Meantime the divisions of the Democratic party have become wider and wider, until the great body of the party are looking to the managers of the House of Representatives as the chief obstacle to a Democratic triumph in the coming autumn, and are hoping that the convention at Chicago will do something to relieve them from the consequences of the blundering and mismanagement of the clique of doctrinaires.

[From the New York World, April 25, 1884.]

ARRANT STUPIDITY.

Congress has been in session for over four months and a half. The country looked to the Democratic majority in the House of Representatives to mark out an aggressive, vigorous policy, upon which the Democratic party could appeal to the people to reject the Republican candidate and restore the Republic.

The election of Mr. CARLISLE was desired by the Democracy because it was feared that Mr. RANDALL had too much sympathy with the protectionists. Mr. CARLISLE encouraged the belief that he recognized the imbecility of a fruitless agitation of the tariff question at this time. * * *

What has been done? Instead of uniting the party and rallying the people to its support, the Democratic branch of Congress has done its best to divide the party.

* * * * * * *

The Democratic House of Representatives has failed to bring into the campaign in an effective manner any one of these living issues, and has wasted its energy on a fruitless agitation of a question on which the party is divided. The Democratic Congressmen, instead of training their guns on the enemy's works, have turned them on their own.

This arrant stupidity should cease at once.

[From the New York Sun.]

MR. MORRISON'S PRESENT ATTITUDE.

The Morrison bill in its present shape, according to the opinion of its author, will reduce the revenue from twenty-five to thirty millions. But when we look at the enormous complexity of the problem and the previous failure of experts to foretell anything like the true results of a change in the tariff, such predictions become of little practical value. Other economists, and of greater experience than Colonel MORRISON, differ with him in regard to the figure of the prophesied reduction. Some, and among these Mr. HEWITT, even assert that under the proposed revision of the tariff the revenue would be greater than it is now. So, when we consider in what an uncertain form the bill would emerge from the House of Representatives, provided it ever did pass that body, it becomes apparent that with the question of revenue reduction that measure has little or perhaps no relation. It would be as likely to increase the revenue as to diminish it.

The idea, then, embodied in the Morrison bill, it is fair to say, is that the tariff must be slashed, even at the risk of swelling the enormous and indefensible surplus of taxes which is now annually piled up in the national Treasury.

Such is the present attitude assumed by the tariff-reform statesmen, and such is the business in which they would exhaust the strength of the Democratic party when opportunities for success and usefulness were laid before it such as have not been offered to any political organization since the close of the civil war.

If these are not sufficient to convince the gentleman [Mr. DORSHEIMER] that he is not following the good advice of the leading news-

papers of his party, of which party he is not the eldest in point of service, he is kindly referred to the following list of Democratic newspapers which do not commend the Morrison bill: Louisville Post, Louisville Commercial, Nashville American, Nashville Banner, Memphis Avalanche, New Orleans Times-Democrat, New Orleans Picayune, Mobile Register, Birmingham Age, Atlanta Constitution, Macon Telegraph and Messenger, Augusta Chronicle, Richmond Despatch, and Chattanooga Times.

It is well to note that these newspapers are published in a section of our country which is to be largely benefited by protection, and which is beginning to realize that fact.

CONCLUSIONS.

In conclusion, Mr. Chairman, the Morrison bill should be defeated for the following reasons:

1. Because it is a firm first step toward free trade in the United States.

2. Because what it seeks to accomplish is not in accord with the tested principles of any great political party.

3. Because it agitates and disturbs the business industries of our country at a time when it can not result in anything but discord, discontent, and uncertainty. Its passage would be injustice to the manufacturing, laboring, and farming industries of the country.

4. Because nobody asks for it except politicians, who care more who is to be the standard-bearer of the Democracy in the approaching campaign than they do for the real interests of the manufacturers or laborers of our country. They recognize its impracticability, they know that it can never become law, and they are willing to distract and disturb the country by an untimely discussion on which even their own party seems hopelessly divided. They know that such a measure can never pass the Senate, could never receive executive sanction, but they seek for political capital by begging or forcing it through this House.

5. Because the bill itself is based upon a plan which is not understood. Even members of the Democratic party claim that it would not reduce the revenues of the Government. If so, they can give no intelligent estimate of the amount of such reduction. Its author would arrange the industries of the country in a line, like a class in profane history, and say: "You shall all conform to one standard of height and breadth." And he would take his horizontal cleaver and go through his class, making such reductions as would conform to one standard. He would take the scalp of one industry, the brain of another, the whole head of the third, perhaps the next would escape entirely, and the fifth be cut midway. So on through the class. He would make his horizontal reduction uniform, but he would certainly spoil the looks and efficiency of his class.

PLAIN WORDS FROM AN "INDEPENDENT."

The following extract from a letter written by the gentleman from Massachusetts [Mr. LYMAN] to the Tariff Reform League of his State expresses very concisely and truly many of the most serious objections to the bill under consideration:

The following are my objections to the Morrison bill: First, there is no probability that the proposed reduction of 20 per cent. in the tariff dues, as set forth in sections 1 and 2, will produce any serious reduction in our revenue. It is the opinion of experts that the increased importation under the lower rates will keep the revenue nearly or quite at its present point; second, the free-list, as set forth in section 3, promises a reduction of less than $3,000,000; third, it is the opinion of officers of the Treasury, as explained in detail in the speech of Mr. MCKINLEY, that the proposed rates are so complicated, by being made to depend in certain cases upon the Morrison tariff, as to render their calculation well-nigh impossible.

If the bill be taken up for amendment it is certain that the House will pass many weeks in bitter debate over the almost endless details, and this to the exclusion of appropriation bills and other pressing legislation. Any one who knows the methods in the House and Senate will acknowledge that the bill must, if passed, appear finally as a mutilated and useless measure. In one word, the Morrison bill is the measure of an indolent and indifferent man, who, to save himself investigation and work, makes a horizontal reduction of tariff rates, heedless of those whose industries may be ruined. * * * Feeling as I do that the Morrison bill can only result in a waste of time, disturbance of commerce, and failure essentially to reduce our revenue, I shall do what I can to kill it or to have it recommitted. * * * Allow me to say, in conclusion, that I am entirely in sympathy with your tariff reform league so far as it favors the removal of our surplus revenue, the free-list for articles in the first process of manufacture, and a scientific revision of the present tariff.

PROTECTION IS RIGHT.

Mr. Chairman, the policy of protection is right. It means protection to America and all her best interests, of her business, her commerce, and her homes. It does not mean protection for protection's sake, but it does mean the protection of our young and struggling industries until they are able to compete with the markets of the world. Until they are able to stand squarely upon their feet, and fight upon equal terms the battle for their life, the policy of this Government should be to protect them. When fairly established, they will not ask it. The country is full of such enterprises. Let us build them up, not tear them down. In some instances there may be a difference of values, but it will be for the benefit of the working classes. We do not want to receive the surplus of English cheap labor at the expense of our own prosperity. We have almost a boundless country and inestimable resources. Frequent changes in our laws may be necessary. Revision of the tariff system may be demanded. The errors and mistakes need correction, but let us correct our mistakes, revise our tariff laws upon some scientific, sensible plan. There may be need of constant attention to details as we progress, but do not let us regulate our greatest source of revenue upon a plan which is experimental, if nothing worse. The country does not ask tariff revision upon that plan, and are willing to wait for more intelligent action by a party which has never failed to give prosperity to the country. It prefers to trust the friends rather than the enemies of protection, to revise the tariff as it may need it.

The tendency of American institutions may be toward free trade. It may yet be our destiny. But if we look at England with her centuries of protection, and turn to our own country to study one century of her progress—a simple comparison of the two countries and their conditions, their people and their customs, will convince us that protection will not go at present, and that when free trade comes, if it ever shall, we and many generations of our successors will be calmly surveying earthly scenes from a higher standpoint, and be wondering how poor deluded mortals can get excited over so small a thing as a tariff bill.

ADDENDA.

[From the Washington Post (Dem.) May 15, 1884.]

MUST GO.

The protectionists must go.

[From the Boston Herald.]

CHAMPION OF FREE TRADE.

The Democratic party has no future, save as the champion of free trade.

[From the New York Sun.]

IN FAVOR OF FREE TRADE.

If the Democratic party shall decide to make the tariff the chief issue in 1884, the national Democratic convention must put forth a clear and unequivocal declaration in favor of free trade.

[From the Philadelphia Call.]

HE TURNED FREE-TRADER.

JONES. You don't mean to say you have become a free-trader? Why, you are a manufacturer, and depend for existence on protection.

SMITH. I was a manufacturer until a few weeks ago, when I sold out and bought a newspaper, a political organ, in a neighboring city.

JONES. But free trade will hurt newspapers just as much as any other business.

SMITH. It won't hurt me. On the contrary, free trade would make my fortune.

JONES. How in the world do you figure that?

SMITH. Well, you see, my paper is going to get all the sheriff's advertising.

[From the New York Sun, May 23, 1884.]

CAN A MAN BE BOTH A DEMOCRAT AND A PROTECTIONIST?

Being asked whether the Democratic national convention would adopt as a part of its platform a declaration in favor of a "tariff for revenue only," Mr. HUED replies in the following style:

"Most assuredly it will in so many words. But I shall urge more than that with all my power. * * * I want it to be clearly defined whether it is possible for a man to be both a Democrat and a protectionist."

A PLAIN ADMISSION.

I am an absolute and thorough free-trader.—*Hon. J. C. S. Blackburn, of Kentucky, in his address before Tammany Hall, New York, May 23, 1884.*

The Tariff—Protection of Wool—Reduction of Duty Explained—The Ohio Fraud—Democratic Jugglery—Tariff of 1867 Demanded—Magnitude of Wool Industry—Protection of Labor.

SPEECH

OF

HON. JOSEPH D. TAYLOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. JOSEPH D. TAYLOR said:

Mr. CHAIRMAN: This discussion has been in progress almost three weeks, and if it were not for the fact that others have been derelict in their duty I should not under these circumstances and at this very late hour say a word. I propose, however, to place upon record the manner in which the Democratic party has betrayed the wool-growers of this country. I want to show the wool-growers of Ohio how well the thirteen Democratic members of this House have kept the pledges made in the last Ohio campaign. During this long discussion no Democratic member from Ohio, or from any other State, has seen proper to place before the House or before the country the grievances of which the wool-growers complain or the arguments in favor of the restoration of the duty on wool. Day and night these discussions have gone on, until almost every argument pro and con on every other subject and in regard to every other industry has been worn threadbare, and yet this industry, which reaches into every State and Territory, which employs a million men and over five hundred millions of capital, has been almost wholly ignored.

When the Converse bill was before the House a few weeks since,

under the iron-clad rules which now prevail, only thirty minutes were allowed for discussion, twenty-six of which were occupied by the Democratic side, and four were graciously assigned to the Republican side. These four minutes were occupied by Major McKINLEY. We did not complain of the division of the time. It has been considered expedient during this session in the management of the wool question, as in the management of other questions, for Republicans to keep in the background. The fact is that it is scarcely considered good manners for a Republican to make a motion to adjourn or a motion that the committee rise. Although I introduced a bill to restore the duty on wool the same day that Mr. CONVERSE introduced his bill I saw it was useless to attempt to bring my bill forward. Anything that is expected to succeed in this House, where almost two-thirds of its members are Democrats, must be moved by a Democrat. Of the thirty minutes allowed for the consideration of the Converse bill one-half was given to Mr. HURD, of Ohio, in opposition to the bill. I make no complaint that anything was left undone that could have been done in the short time allowed for the consideration of that bill. It was difficult to get even this time, and most of the Democrats had done all they could do to prevent any consideration of the bill at all.

But I do make complaint, Mr. Chairman, that so little has been said or done during this discussion on behalf of the wool-growers of the country. The bill now under consideration proposes a further reduction of the duty on wool, and a reduction that will strike down sheep-husbandry in this country; and yet no Democratic member during this long discussion has pleaded the cause of the wool-grower. No Democrat during the discussion of this bill has seen proper to place the arguments and facts in regard to this great industry before either the House or the country. The case of the wool-growers has not been argued as it was argued on the stump and in the press in Ohio last year. Their cause has not been presented in this prolonged discussion as they had a right to expect. Why has not this been done? Why were the wool-growers denied this full hearing when so good an opportunity was presented? Why has such a remarkable silence on this subject prevailed? It was certainly not because there was any want of arguments or facts worthy of presentation. This silence, Mr. Chairman, on the part of the party that promised to espouse the cause of the wool-grower is significant.

Information was collected with great care and labor and presented to the Committee of Ways and Means, but it was there buried and forgotten. I do not want to do this committee injustice. The addresses delivered by Hon. Columbus Delano and others who represented the wool-growers were printed, as was everything else that transpired before that committee, but they were not printed for distribution. If the facts presented by these gentlemen to this committee were laid before the voters of the United States no political demagogue could stand before the tempest which they would create. But, sir, it was not intended that these facts should reach the people.

I supposed that when this bill came before the House for consideration these facts and statements, with others, would be presented to the House and to the country. In view of the pledges made by the Democratic party of Ohio last year; in view of the platform of the Democratic State convention of that State; in view of the speeches made by Judge Hoadly, now governor, in his campaign; in view of the speeches made on every Democratic stump in the State, and in view of the publications made in all the Democratic newspapers of Ohio, I had a right to expect, and the wool-growers had a right to expect, that a strong effort would be made in this discussion to place their claims properly before the country. Thirteen Democrats are representing Ohio on this floor, and all of them except one participated in the promises and pledges made to the Ohio farmers in the campaign of last year. I waited to hear them plead the cause of the wool-growers; but I waited in vain. Mr. HURD, who had made his fifteen-minute speech against the Converse bill, appeared again in this discussion and made an able and lengthy speech in favor of the Morrison bill, and in favor of a further reduction of the duty on wool.

Mr. CONVERSE has taken no part in this discussion, thinking perhaps that he had done his duty in his advocacy of his own bill, and perhaps did not care to open any wider the chasm between himself and his party. Mr. GEDDES made a speech which was listened to with profound interest, but all that he said in regard to the duty on wool occupies less than half a page of the RECORD. General WARNER made a very able speech in vindication of the "Ohio platform," but he did not pretend to discuss the wool question, and only referred to it incidentally to show how the reduction of the duty on an article fails to reduce the revenue. Mr. WILKINS, who was allowed one minute in the discussion of the Converse bill, made some very pertinent and forcible remarks. No other Democrat saw proper to say a word on this subject.

I hold in my hand, Mr. Chairman, a most remarkable pamphlet. It was published and distributed last year by the Ohio Democratic State committee. It was placed in the hands of every wool-grower in the State, no matter to which political party he belonged. It denounces what it calls the "infamy" of the Forty-seventh Congress, and pledges the honor of the Democratic party for the immediate and unconditional restoration of the duty on wool. The title-page of this pamphlet reads as follows: "The reduction on wool—Republican tariff tinkering cost the Ohio wool-growers six millions of dollars—Fleecing the flockmasters: How it was done, and who did it."

The State was flooded with it. It was the only Democratic document that attracted any considerable attention during the campaign in the wool-growing districts of the State. It contains fifteen pages of closely printed matter, and should have been made a part of the speech of some Democratic member from Ohio and printed in the RECORD.

The first chapter of this pamplet is headed, "Importance of the wool-growing industry in Ohio," and contains facts which would have been pertinent in the discussion of the tariff bill now before this committee. The subject of the next chapter is, "What the wool-growers have a right to demand and expect of the National Government," under which I find these words printed in large type:

Bear these facts in mind, farmers of Ohio: The Republican Congress reduced the duty on wool at a time when there was absolutely no public necessity for doing so, and its preservation was most necessary to you. The Republican Congress did this to accommodate the New England woolen manufacturers, who already enjoyed too many favors. The Republican party is under the thumbs of the New England manufacturers, and you have absolutely nothing to hope from it.

This was the tone of the Ohio Democratic campaign last year; a bitter denunciation of the Republican Congress that reduced the duty on wool, and, if possible, a still more bitter denunciation of the New England woolen manufacturers. It says that the wool-growers "have absolutely nothing to hope for" from the Republican party. I can imagine by this time, Mr. Chairman, how much hope the wool-growers have in the Democratic party. And if we are able to prevent the further reduction of the duty on wool, which this bill proposes, we shall do it by the votes of the Republican party, including the votes of the New England members, who were branded as "thieves and robbers" by the Ohio Democracy in the last campaign. Unless the members of this House who are supposed to represent the New England manufacturers vote against this bill it will pass, and the wool-growers will go down in the common wreck of American prosperity.

To return to this pamphlet, for it is too valuable a paper to be overlooked.

The caption of the next chapter is, "The wool tariff of 1867," and the facts herein would have read well in and added greatly to the speech of any Democrat. The heading of the next chapter is, "How the reduction of last winter will affect the price of clips." Here, too, the Democratic members could have found food for thought and facts for utterance, if they had been in the spirit. This chapter states that in 1881 Ohio produced 22,651,801 pounds of wool, and while the previous chapter estimates the loss at 8 cents per pound this one places it at 5 cents per pound, and gives a tabulated statement showing the product of each county in the State and the corresponding loss, from which I will only quote the counties which compose the district which I have the honor to represent: Belmont 737,798 pounds, loss $21,146.30; Guernsey 864,232 pounds, loss $43,211.60; Harrison 953,339 pounds, loss $47,666.95; Jefferson 620,069 pounds, loss $31,003.45; Noble 418,130 pounds, loss $20,906.50; making an aggregate loss in these five counties of $163,934.80, and in the whole State of $1,132,590.05.

The caption of the next chapter is, "How the reduction will effect the value of sheep." The substance of this chapter is that a reduction in the price of wool is necessarily followed by a corresponding reduction in the price of sheep, and this loss is placed at 25 per cent. on the average value of sheep, which is placed at $4, or at $1 per head; and here follows another tabulated statement of all the counties of the State, accompanied with the estimated loss on the sheep, from which I will copy the estimated losses of the same counties: Belmont, $163,509; Guernsey, $182,431; Harrison, $189,116; Jefferson, $122,974; Noble, $97,929; making an aggregate loss on sheep on the carcass alone in these five counties of $755,959, and in the whole State of $4,594,607.

This, again, is followed by another tabulated statement, in which the counties of the State are again repeated, showing the aggregate loss on wool and on sheep in Ohio last year, from which I quote the losses of the same counties, as is herein given: Belmont, $200,398.90; Guernsey, $225,642.60; Harrison, $236,782.95; Jefferson, $157,977.45; Noble, $118,835.50; making an aggregate loss in these five counties of $939,637.40, and in the whole State of $5,776,078.20. These are all Democratic figures, and I will not be responsible for their accuracy.

The next chapter has for its subject "How the reduction will affect the value of land," and goes on at great length to explain the extent of this injury. The next chapter has for its caption "Who is responsible for all this," in which is found the following language: "The Democratic party opposed the reduction from the beginning, and is the only party which can be relied on to restore the duty."

In the same chapter I find this language:

Who are our enemies that have thus laid their hands on our throats while these unworthy, mercenary monopolists of New England have rifled our pockets.

The answer given was, of course, the Republican party. It did it. It held the farmers of Ohio by the throat while the New England monopolists rifled their pockets. I would like to inquire, Mr. Chairman, who is now holding the wool-growers by the throat while Great Britain is rifling their pockets?

The next chapter discusses the conference committee and the action of Congress upon its report, and says—and I want you to remember this language, as I want to refer to it again—"This committee, without one Democratic member, drafted the bill as passed." This is true, for the Democratic members of the conference committee refused to act or

even to be present. This pamphlet gives a list of all the members of the Forty-seventh Congress, and professes to give the politics and the vote of each. Mr. BURROWS, of Michigan, Judge TAYLOR, of the Garfield district, and myself are written down as Greenbackers, in order to diminish the number of Republicans who voted against the bill. It did not want the fact to appear that seven of the Republican members voted against it. Further on it says, and prints it in italics, that "every Democratic member voted against it," while the previous page shows that sixteen Democrats voted for it.

The next chapter discusses "How the bill was passed," the next discusses "JOHN SHERMAN," and the next "How the Democratic party stands, and what it proposes to do for the wool-growers." Under this head it repeats the pledges of the Democratic platform, the speeches of Judge Hoadly, and the declarations of Mr. CONVERSE made a year ago on this floor, that this reduction will strike down the wool industry and compel the wool-growers to turn to the exhausting process of grain growing, and assures the wool-growers that all these declarations perfectly represent the Democratic view of this question.

The concluding chapter has for its caption "The importance of the coming election to the farmers of Ohio." It begins as follows:

Is it possible to obtain a restoration of the duty entire? This is the question which every sheep-owner in Ohio is asking himself. We say to every farmer, and with all possible emphasis, that the question must be answered now. NEXT year will not do.

The reason is clear: the issue has been raised in the present Ohio campaign, and the wool interest elsewhere, as well as the enemies of the wool interest, are unanimous in recognizing that the result of the Ohio campaign will decide whether the duty shall be restored immediately, or whether its restoration shall be left to the chances of the future.

The election of Hoadly, on the other hand, means the triumph of the Democrats and the success of their objects, of which the unconditional restoration of the duty on wool entire is one of the most important.

* * * * * * *

Farmers of Ohio, can you trust the party that has, in our National Legislature, outraged and robbed you at the bidding of the capitalists of New England? Is there any hope for you from such a party, who have thus deliberately sacrificed your dearest and best interests? The party that created this great wrong can not be trusted to give you relief. The Democrats in Congress were your friends. They sought by every means in their power to prevent this wrong from being inflicted on you. Trust the Democratic party in this matter; it has promised to, and will, give you relief.

This was the language of the Democracy in the Ohio campaign of last year. This is the proclamation made by the Democratic executive committee of the State, the official representatives of the party.

Mr. Chairman, I do not hold all the members of this House responsible for this fraud. I do not know positively that any Democrat outside of Ohio assented to this miserable cheat, though they kept very quiet at the time. I do not know that all the Democrats in Ohio assented to it. I know of one who did not. I know that the distinguished chairman of the Ways and Means Committee, Mr. MORRISON, the author of this bill, was no party to it. Before this House was organized, and before the committees were appointed, he expressed his contempt for the course pursued by the Ohio Democracy in regard to wool. He said publicly and in the presence of members of this House that the statement that the Democratic party was in favor of the restoration of the duty on wool was false. When some one said to him that certain distinguished Democrats, naming them, had so stated in their speeches in Ohio last year, he indignantly replied, "If they did they lied!"

When Mr. Cowden, a prominent Democrat of my district and president of the Ohio State board of agriculture, was addressing the Committee on Ways and Means, arguing in favor of the restoration of the duty on wool, he said, "I shall make use of my ballot to further my interests," and went on to assure the committee that the wool-growers, without respect to party, proposed to use their votes to secure this end. Mr. MORRISON, the chairman, spoke out in his emphatic manner, "These gentlemen" (pointing to the Republican members of the committee) "took it away from you, and so far as I am concerned I promise not to give it back to you."

And Mr. MORRISON is not any more outspoken on this subject than the other leading Democratic members of this House. Not a single prominent Democrat outside of Ohio will take his place on this floor and advocate the restoration of the duty on wool. And the very least that I can say for the Ohio Democratic members is that they have been very modest in making a claim of this sort. The whole tendency of Democratic legislation is the other way, and hence a Democratic member in good standing hesitates to suggest an increase of duty on anything.

The responsibility for this reduction has been sought to be placed upon the Republican party, because it had the majority in Congress when the bill was passed. I admit that it was a great and grievous mistake, and so said to members of both Houses and both parties, and for this reason I voted against the bill. But let us inquire a moment into the causes which contributed to this result.

In 1882 there swept across this country a tidal wave demanding a reduction of the revenues. There came up from all parts of the country a demand that taxes be reduced. On the 15th of May, 1882, in obedience to this demand, the Forty-seventh Congress passed an act establishing a tariff commission. The President of the United States was authorized to appoint nine men, whose duty it should be to investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same were necessary to the establishment of a judicious tariff. The commission was authorized to visit different sections of the country, and was required to make to Congress its final report on the first Monday of December the same year. The commission was appointed, did its work, and made its report within the short time allowed.

The Tariff Commission stated in its report that early in its deliberations it became convinced that a substantial reduction of tariff duties was demanded, not by mere indiscriminate popular clamor, but by the best conservative opinion of the country. Entertaining these views, the commission sought to reduce the tariff duties an average of 20 per cent., and when it made its report it expressed the opinion that it had made an average reduction of 25 per cent.

At the opening of the second session of the Forty-seventh Congress the Secretary of the Treasury and the President of the United States urged upon Congress the necessity of providing by legislation some method of freeing the Treasury of an excess of assets, calling attention to the fact that the revenues were far in excess of what was necessary for a wise and economical administration of the Government. The surplus revenue at the close of the preceding fiscal year was $132,879,444.41.

The opening of the second session of the Forty-seventh Congress was confronted with a public sentiment almost overwhelming, in which the Democratic press of the country figured most prominently, demanding an immediate reduction of the revenues.

The Tariff Commission unanimously recommended a bill which included the reduction of the duty on wool, and it afterward became a law. This being the short session of Congress, there was very little time for the consideration of any tariff measure. The Senate Finance Committee, to which this class of legislation in the Senate, and the Committee on Ways and Means, to which this class of legislation in the House is always referred, at once began the consideration of the report of the Tariff Commission, and each committee in due time prepared and reported a bill of its own. There were then three tariff bills before the country, the one reported by the Tariff Commission, the one reported to the Senate by the Finance Committee, and the one reported by the Committee on Ways and Means to the House, and in each bill the reduction of the duty on wool was the same.

The report of the Tariff Commission went out through the country like an electric flash, and the Senate and House committees having the tariff question under consideration were soon crowded with those who supposed themselves injuriously affected by the report of the Tariff Commission. There never was a time when so many people seemed to take such vital interest in the legislation of the country. The hotels were crowded to overflowing, the streets and avenues were lined with strangers, the halls, galleries, and corridors of the Capitol were filled with interested spectators, and the doors of the committee-rooms where this question was being considered were surrounded day and night. The members of these committees had scarcely time to eat or sleep during the time they were hearing complaints and reconciling the incongruities of the mass of testimony hurled upon them like an avalanche, during the few weeks allotted them for this purpose. Thousands of people who failed to get a hearing sent printed circulars, petitions, memorials, and pamphlets, not only to these committees, but to all the members of Congress, pleading for relief.

The Senate bill was completed and reported to the Senate on the 9th of January. Subsequently the House bill was completed and reported to the House. They were both printed. They both adopted the reduction of the duty on wool recommended by the Tariff Commission. Now, Mr. Chairman, I want to state a surprising fact. Up to this time, up to the time when the work of these committees was completed, up to the time when these two bills were in print and in the hands of the two Houses of Congress, no man in Congress or out of it, in Washington or out of Washington, had lifted his finger to prevent the reduction of the duty on wool. No man appeared before either of these committees; no petition or protest was ever presented to either committee or to Congress on this subject; no letter was written to any member of Congress on this subject up to this time, so far as I could ever learn. The voice of the wool-growers of this country up to this time had been silent. No effort had been made by them to prevent this reduction. Every other industry, every other interest affected by this bill, was represented here.

Hon. Columbus Delano and Mr. Markham, who had been here before, were then absent. I was elected to Congress in January, 1883, received my certificate on the 16th of January, and took my seat on the 17th; and when I came here I was unable to find anybody, on either side of the House or in either House of Congress, who was giving this question any attention whatever. On the day of my arrival I saw Judge KELLEY, the chairman of the Committee on Ways and Means, who informed me that his committee would follow the report of the Tariff Commission in the reduction of the duty on wool, which he said was entirely satisfactory to the wool-growers of the country. I expressed surprise at this statement and said to him that I knew it was not satisfactory to the wool-growers of Eastern Ohio. He then assured me that the men who were on the commission who were supposed to represent the wool-growers, and men who represented State and national wool-growing associations, whom he then named, had consented to the reduction and had agreed to be content therewith if no further reduction was made.

After this I saw members of the Senate and Senate Finance Committee and members of the House and other members of the Committee on Ways and Means, and each member gave me substantially the same information. They all understood that the proposed reduction was satisfactory, and none of them up to this time have heard anything to the contrary from their constituents.

Not to be baffled in this way, and in order to let the wool-growers know the true situation, I wrote to prominent wool-growers in Ohio and stated these facts and named the gentlemen who were represented as having consented to the proposed reduction. One of these letters in some way got into the newspapers and was generally published throughout the State. This created some little excitement at the time and I was censured by the Democratic papers for urging the wool-growers to come to Washington to look after their interests, saying that I had become frightened and had sent for the lobby. I saw the danger, and knew that the wool-growers had not taken the necessary steps to prevent it.

In response to this letter Hon. Columbus Delano, Mr. Markham, Mr. Harpster, Mr. Sprague, and others came, but it was so late when they arrived that they did not succeed in preventing the reduction. No men could have worked harder or done more from the time they came till the close of the session.

It is due, Mr. Chairman, to the officers of the Wool-Growers' Association, to whom I have referred, to say that they denied having consented to the reduction of the duty on wool. The consent they had given was as to other matters, and they had been misunderstood. Both committees, however, and members of both Houses of Congress, supposed that this reduction was satisfactory, having been so informed, and they were certainly not to blame for this when the two members of the commission who were understood to be the representatives of the wool-growers had signed the Tariff Commission report, and when the officers of the Ohio Wool-Growers' Association, and the National Wool-Growers' Association, to whom I have referred, were known to be in this city at the time, had failed to go before either committee to enter an objection to the reduction which the Tariff Commission had previously recommended. The silence of these gentlemen, though they did not know it at the time, the silence of the wool-growers, the absence of petitions and protests, were misinterpreted and naturally led to the conviction that the reduction made was satisfactory to the wool-growers.

Is it surprising, Mr. Chairman, that under these circumstances this reduction should be made? But I am asked why the duty was not restored when Congress was informed that the wool-growers had not consented. I am asked why the importunities of these gentlemen who came here in response to my letter were not heeded. I will answer: They came too late. Mr. Delano says in his address to the Ways and Means Committee that the law of 1867 was more than a law; that it was a compact between the wool-growers and the wool manufacturers; that it was the result of long and careful consideration, and should not have been ruthlessly abrogated. This being the case, Congress was bound to preserve the ratio of duties between wool and woolen goods as established by the law of 1867, and which is still understood to be a fair adjustment of the duties between the two products.

I know, Mr. Chairman, that it has been claimed that the duty on wool was reduced, while the duty on woolen goods was increased. This was the claim made by the Democrats in the Ohio campaign of last year. No such claim will be made by any Democrat on this floor. It is absolutely untrue, as I shall hereafter show. At this point I only wish to show the difficulties which stood in the way of the restoration of the duty on wool in the bills which were pending before both Houses of Congress at the time this request was first made. On the 19th of February Senator SHERMAN made a vigorous effort in the Senate to amend the tariff bill reported by his committee so as to increase the duty on wool. This was opposed mainly for the reason that there was not then time enough to make the changes in the schedule of woolen goods which would be affected by a change in the duty on wool. On that occasion Senator MORRILL, of Vermont, said:

> I am sorry to have to be placed in the attitude of objecting to the amendment of the Senator from Ohio, but I know the bill can not pass with the amendment he proposes without readjusting the whole schedule, which is one of the most difficult that we have had to deal with.

Senator HAWLEY, of Connecticut, said:

> It is a complex subject. If you begin a change in the wool the administration of common, decent justice can not stop without running up through the scale and making a readjustment upon the higher class of woolen goods. Common justice will demand a readjustment of the whole of this complicated schedule.

Senator BECK, of Kentucky, said:

> I hope this schedule will not be disturbed, because if it is it is apparent that we shall have to go over the whole schedule and readjust it, and then we shall have to turn back to the iron schedule again and readjust that in accordance with the woolen.

He said he represented a State largely interested in the wool industry, and that his only son had all that he had in the world invested in sheep in Wyoming Territory, and hence could not be prejudiced against the wool industry.

It was claimed by members of both Houses, with a very few exceptions, that this readjustment could not be made in the short time which could be devoted to this purpose. The committees were then worn out and some of them were sick, one of whom, Mr. HASKELL, never recovered from the overtaxation of his labors on the Committee of Ways and Means during that session. This change in the duty on wool would make it necessary to change the duty on hundreds of woolen goods in order to adjust the duty on each so as to give to the schedule rate of duties on woolen goods the same increase. It would be necessary to know how much cotton, if any, was used in the manufacture of each article, the amount and quality of wool used, &c., which would necessarily take a great deal of time. This was the only objection I met when presenting the matter to any Republican in either House. These are the circumstances, Mr. Chairman, under which the Forty-seventh Congress reduced the duty on wool. For this mistake the Republican party was severely punished in the Ohio campaign of last year.

But to understand who is responsible for this reduction as between the two political parties, it is necessary to show what connection the Democratic party had with this reduction. It was claimed in Ohio last year that the Democratic members of Congress stood shoulder to shoulder with the wool-growers, and resisted this reduction at every point and in every possible way. This wool-pamphlet says that the Democratic members of Congress opposed this reduction from beginning to end, and that the Democratic party is the only party that can be trusted to restore it. In order to discuss this question fairly I wish to make this assertion; I desire to state a fact which the wool-growers of this country ought to know: The Republican members from Ohio who voted against the tariff bill did it because the tariff on wool was reduced, while the Democratic members of Congress, from all parts of the country, who voted against it did so because the duty on wool was not reduced more. I know of but a single exception to this. There may possibly be more. The Democratic party clamored for greater reductions on everything, and was dissatisfied with the bill that became a law because it did not make greater reductions in the tariff schedule, as I shall now proceed to show. And in the proofs I shall offer I shall refer to the records of the Forty-seventh Congress and in proof of the following incontrovertible facts:

1. When the President recommended in his message to the second session of the Forty-seventh Congress the reduction of the duty on wool and woolen goods, no Democratic newspaper or member of Congress uttered a word or took a step toward preventing it.

2. When the Tariff Commission made its report on the first Monday in December, 1882, recommending a reduction of the duty on wool and woolen goods, no voice or vote came from any Democrat in Congress or out of it against the proposed reduction.

3. When the Finance Committee of the Senate reached the woolen schedule, every Democratic member of that committee voted in favor of the reduction of the duty on wool.

4. When the woolen schedule was reached in the Senate in the consideration of the Senate tariff bill, every Democratic Senator voted in favor of the reduction of the duty on wool.

5. When the Ways and Means Committee of the House reached the woolen schedule every Democratic member of that committee voted in favor of the reduction of the duty on wool.

6. When Senator SHERMAN, on the 19th day of February, 1883, moved to increase the duty on wool in the Senate tariff bill only three Democrats voted in favor of the increase.

7. When the Ways and Means Committee held a special meeting, during the last days of the Forty-seventh Congress, to reconsider the woolen schedule in the House bill, every Republican member of the committee voted to restore the duty of 1867, and every Democratic member voted against it.

8. When the Senate bill was taken from the Speaker's table in the House and sent to a conference committee, where the final changes were to be made, RANDALL of Pennsylvania, MORRISON of Illinois, and TUCKER of Virginia refused to serve on the committee as representatives of the House, as did BAYARD of Delaware, BECK of Kentucky, and VOORHEES of Indiana, as representatives of the Senate, refusing to act as members of the conference committee, where they would have had an opportunity of voting to restore the duty on wool, knowing that this was the last opportunity of restoring the tariff of 1867.

9. The Democratic members of the House tried to force the passage of the Senate bill, in which this reduction of duty was the same as that which finally became the law, and tried to prevent the Republican members from sending it to the conference committee, where it was expected that the duty on wool would be restored, when it was believed that with the help of a few Republican votes from the West they could pass the Senate bill, which contained this same reduction.

10. It was a notorious fact, known to all the members of the House, that there were but two or three Democratic members who could be relied on to act with the Republican members in the plans that were then being made from day to day to amend any bill that might come before the House so as to retain the tariff of 1867.

These, Mr. Chairman, are matters of record and matters of history. They are found in the CONGRESSIONAL RECORD and in the records of the various committees, and are known to the members of the Forty-seventh Congress. This is only what occurred during the second session of this Congress; and if I were to go further back in that Congress, or still further back in other Congresses, I could show that in all the tariff bills the Democratic party ever framed, that in all the votes the Democratic members ever cast, and that in all the speeches the Democratic members ever made, if wool was in controversy, they either favored a reduction of the duty or favored placing it on the free-

list. The Republican party passed the law of 1867, and it has been the policy of the Democratic party to destroy it. This is simply history; and it is a history of which the Democratic members of this House boast. The glory of the Democratic party is the reduction of revenue; a "tariff for revenue only, limited to the necessities of the Government economically administered."

The bill prepared by the Tariff Commission was the framework and basis of the two bills prepared by the two Houses of the Forty-seventh Congress. The classifications and rates of duty were in the main followed. There was this difference: the Ways and Means Committee of the House, of which Judge KELLEY was chairman, in making changes recommended higher rates of duty on leading articles than the Senate Finance Committee, of which Senator MORRILL was chairman. In other words, there was more protection in the House bill than there was in the Senate bill. This was probably owing to the fact that there was a small Republican majority in the House, while in the Senate the two parties were equal, with Judge Davis, of Illinois, thrown in. Each House was ambitious to have the bill it matured become the law. The Senate committee knew that no law could pass the Senate that did not contain such reductions of duty as would make it acceptable to certain Democrats, and hence it pared the duties down. The House committee was disposed to keep the duties higher, and for this reason it was very objectionable to the Democratic members of both Houses. The House bill was considered in the House day after day for several weeks, until it became apparent that it never could be completed; but the schedule of wool and woolens was never reached, and this is the reason that the wool question was never discussed in the House.

The only remarks made in the House on this question were made when the conference committee presented its report, and they were compressed into ten minutes' time, five of which were occupied by Mr. CONVERSE and the other five by General ROBINSON, who has taken a great interest in this question from the first. This difference between these two bills explains why the Democrats wanted to pass the Senate bill in which the duty on wool was reduced in preference to the House bill, which the Ways and Means Committee had agreed to amend so as to retain the law of 1867. This shows the position of the two parties in the Forty-seventh Congress on this question. Perhaps I should explain that the so-called Senate bill originated in the House, where all such bills must originate, prior to the Tariff Commission report, but it was so changed in order to make it conform to the bill prepared by the Tariff Commission and to the views of the Senate committee that for convenience it was then called and is still called the Senate tariff bill.

There is one other thing, Mr. Chairman, in this connection which I wish to explain. The Ohio Republicans who voted against the bill which reduced the duty on wool have been charged with inconsistency because they voted to send the Senate bill to a conference committee, instead of voting against the adoption of the rule which made this possible. This charge is wholly without foundation. Before this vote was taken we were assured that the Democrats with the help of a few Republicans would pass the Senate bill as it came from the Senate containing this reduction if we did not send it to a conference committee and have it amended. And at the time this vote was taken we had the pledge of every Republican member of the Ways and Means Committee, from whom the conference committee would be necessarily chosen, that they would do their utmost in the conference committee to have the duty on wool restored. Besides, we knew that the Ways and Means Committee had previously carried this amendment, and we knew that Senator SHERMAN would be on the conference committee and do all he possibly could to accomplish this result. This was the last and only hope we had of preventing the reduction of the duty on wool.

Mr. Chairman, I wish to call attention to another remarkable fact in this connection. The Democracy has changed base on the wool question. They now deny that they ever promised to restore the duty on wool. They now say that the Democratic platform of Ohio, to which we have referred, did not promise to restore the duty on wool. The distinguished Representative from New York, Mr. COX, who was understood to have promised the Ohio wool-growers last year that the Democracy would restore the duty on wool, has denied on this floor that he ever made any such promise. These denials, to say the least, come late and at a very inopportune time. Mr. CONVERSE in his speech, however, says:

> Can this Congress afford to deny this relief? A Republican President recommended a reduction of rate of duty on wool. A Republican Congress did it. Can a Democratic Congress refuse to restore it? These very men who are knocking at the door of Congress for relief have the power to elect the next Congress, and can elect or defeat any candidate for President. I have no doubt they will exercise that power. They gave us Ohio last year on the pledge from the stump all over the State that we would make an honest effort to restore the duty on wool.

He puts it mildly, I admit, but he says that the Democrats of Ohio pledged that they would "make an honest effort to restore the duty on wool." How have they kept this pledge?

I also copy from the RECORD the following terse statement made by Mr. WILKINS, which is worthy the consideration of every Democrat in this House. In referring to the promises made last year by the Democracy of Ohio to the wool-growers, he says:

> It has been said to me since the agitation of this question was begun: "We have no right to make any such promises." What, sir! No right to promise that a wrong so transparent that even the party who committed the wrong are to-day regretting their act, and are willing to join hands with us to correct their acknowledged error; have we no right to promise the substitution of right for wrong? Had we no right to promise that a Democratic Congress would follow the same line, the same policy, inaugurated by Jefferson, which has come down to us advocated by Madison, Jackson, Pierce, Polk, and Buchanan, "a fair and just protection to all the great interests of the whole Union?"

If you will read the Ohio Democratic platform of last year between the lines, as Mr. COX desires we shall read his Ohio speeches, we will discover the trick. They meant that their promises to restore the duty on wool should accomplish a purpose. On that pledge they carried Ohio and elected their entire ticket by an overwhelming majority, and now come here and deny that they ever made any such promises.

There is a wide difference, Mr. Chairman, between the situation now and when the Forty-seventh Congress reduced the duty on wool. That Congress adjourned on the 4th of March, and had little time or opportunity to know the wishes of the wool-growers or the needs of sheep-husbandry in this country. Now it is different. The farmers and wool-growers from almost every State in the Union have been here, and have been before the Ways and Means Committee either in person or by petition, asking and praying for the restoration of the duty on wool. The wool-growers of my district have petitioned, and their names are now stowed away in the dusty pigeon-holes of the committee-room. You turn up your noses and laugh when we talk about wool. Some of the Democratic members who voted for the Converse bill did it in such an apologetic manner that we could not help inferring that they wanted to say: "We are from Ohio; we have to vote this way."

Mr. HURD was in accord with his party when he advocated the reduction of the duty on wool, and was loudly cheered for his advocacy of this measure. The refusal to restore the duty on wool and the proposal under this bill to reduce the duty still further are not the result of a demand from the people. No petitions came here asking a further reduction. No protests came here against the restoration of the former duty. The course of this House is dictated by that blind party bigotry which has dominated the Democratic party and kept it out of power for a quarter of a century. You have refused to do justice to a patient and deserving people, and now propose to do them greater injustice. They have met in State and county, in church and school-house, in town and country, and have passed resolutions. Legislatures have memorialized you and a million of people have laid their petitions and prayers at your feet. Delegations of intelligent men have crossed the continent to plead their cause. State, county, and township organizations have entered upon the work of securing the restoration of this duty. They have asked but little. They do not fear the passage of this bill. If the tariff of 1867 is not to be restored, it makes little difference to them how much more you reduce the duty. It is the restoration of the duty they have asked, but you have turned a deaf ear to their petitions, you have spurned their requests, and you are now adding insult to injury. They ask you for bread and you offer them a stone.

If the Forty-seventh Congress had been petitioned as this Congress has been, if public meetings had been held by the farmers and wool-growers all over the country then as they have been since, if resolutions, memorials, and entreaties had poured in upon the Forty-seventh Congress as they have upon the Forty-eighth Congress, no reduction would have been made. Mr. Victor E. Piollet, an influential and intelligent Pennsylvania Democrat, said to the Ways and Means Committee in my presence, "If farmers had come before the last Congress the duty on wool would not have been reduced." Mr. WILKINS, of Ohio, in his speech makes the same admission. The Ohio Republican Legislature sent a memorial to Congress against the reduction of this duty in February, 1883, but it came too late. The Ohio Republican convention of last year was the first convention to recommend the restoration of this duty. The Republican party is the only party in this country that advocates protection. The Democratic party is the only party that opposes protection. And if this duty is ever restored it will be done by the Republican party. There is not a single Republican in the Forty-eighth Congress who will not vote to restore the duty on wool if the corresponding duty on woolen goods is restored, and almost all of them will vote to restore it in any event, as the vote on the Converse bill shows.

The wool-growers of this country anxiously awaited the action of this Congress. The immense interests of this great industry were involved in the solution of this question. After many months' delay Mr. CONVERSE called up his bill. The vote was taken. The bill was defeated. The Democratic side of the House cheered the result and rejoiced at the victory. The farmers and wool-growers were defeated. Only 38 Democrats out of 200 voted for the bill, while on the Republican side 80 voted for it and only 12 against it, although the bill increased the duty on wool and not on woolen goods. If the duty on woolen goods had been increased every Republican member would have voted for it. And what is very strange, some of the Democrats who voted for the Converse bill have since voted to take up the Morrison bill, which now proposes a further reduction. The Democratic members stood 3 to 1 against the Converse bill, while the Republicans stood 7 to 1 for it, declaring by this vote that the loss of $15,000,000 which was borne by the farmers last year is to be borne by them again this year in the continued reduction of the price of wool.

would make it an object to still further improve the grade of our sheep.

The injury to Ohio wools is for this reason from 3 to 5 cents per pound greater than the reduction of the duty. In order to show the influences of the act of March 3, 1883, in a manner wholly unknown at the time of the passage of the law, I wish to call the attention of the House to the following statements made by Messrs. Manger & Avery, of New York, to Hon. Joseph Nimmo, jr., Chief of the Bureau of Statistics:

105 AND 107 READE STREET, NEW YORK, *March* 17, 1884.

DEAR SIR: Yours of 14th is at hand and noted.

THE TARIFF ON WORSTED YARN.

The reduction of the tariff on worsted yarn has enabled the foreign manufacturers to send over their manufactures of fine worsted at figures which render their production here unprofitable, except at greatly reduced prices for the raw material.

EFFECT OF THE TARIFF ON FINE DELAINE WOOL.

For this reason fine delaine fleeces are only salable at about the prices of clothing wools of the same quality and condition. We have written for full details on this subject, and in the course of a few days will be able to send you facts and figures in support of above statements.

DEFINITION OF DELAINE WOOL.

Domestic wools are graded into two classes irrespective of grade, namely, clothing and combing wools.

Delaine wool is really a combing wool, but generally of finer quality and shorter in staple than combing. It is used in the manufacture of the finer softer grades of yarns. Worsted manufacturers have usually paid from 3 to 5 cents per pound more for selections of wool suitable for delaine; but since last summer the demand for this kind of domestic wool has slackened, as a result of the tariff act of March 3, 1883, and a class of wool of which the State of Ohio produces a percentage of from 25 to 30 per cent. of her entire clip is thereby depreciated in value. In other words, by reason of the reduction of duty on worsted yarn (*i. e.*, yarn made from wool which can be combed) in the tariff act of March 3, 1883, the value of 25 to 30 per cent. of the clip of Ohio which has heretofore always commanded a price 3 to 5 cents per pound above ordinary Ohio wool is now worth no more than ordinary fleece. This is independent of the direct effect of the reduction in the duty on wool apparent on the face of the law.

To a somewhat less extent all of the wool-growers east of the Mississippi will suffer.

MANUFACTURE OF CLOTHING.

Both combing and clothing wools enter into the composition of fabrics for clothing, but when an article is composed entirely of combing wool it is classed under the head of "worsted goods."

All genuine worsted goods are made of combing wools, or mohair, or alpaca, as the case may be. In many kinds of goods, both worsted and woolen (carded wool) yarns are used to produce desired patterns or effects.

105 AND 107 READE STREET, NEW YORK, *March* 24, 1884.

DEAR SIR: In further explanation of our letter of March 17, we would say that under the tariff of 1867 a fine worsted yarn would cost, including charges and duty on the charges, say $1.60 per pound. Under the tariff of March, 1883, the same yarn, costing the same price (first cost), can be bought here by the importer at $1.33 per pound. Reduction by duty of March, 1883, 27 cents per pound.

It is estimated that it takes three pounds of wool to make one pound of worsted yarn; therefore the loss is equivalent to 9 cents per pound on the raw material, which is about the extent of the decline in price of delaine wool—from 48 cents in March, 1883, to 39 or 40 cents in March, 1884.

Meanwhile the manufacture of fine worsted yarn is seriously crippled. That some unusual stimulus has been given to shipment of worsted yarns to America is shown by the statistics reported, we believe, by the United States consular agent at Bradford.

Worsted yarn exported to United States, January, 1883, $6,335.
Worsted yarn exported to United States, January, 1884, $50,810.
Worsted coatings exported to United States, January, 1883, $94,930.
Worsted coatings exported to United States, January, 1884, $214,935.

From this it will be seen that in addition to the increase in the exports of worsted yarns there has been a very large increase of manufactured yarn in the shape of worsted goods.

This increase in the importations of worsted goods is certainly marvelous.

105 AND 107 READE STREET, NEW YORK, *April* 10, 1884.

DEAR SIR: Yours of the 9th at hand and noted. Any wool, in fact all the wool grown in the United States, or in the world for that matter, can be manufactured into clothing; in other words, can be carded, although some of the long, coarse breeds of wool would make trouble with the cards.

Originally only a wool of a growth of five to six inches could be combed, but with the improvements in combing machinery a staple two and one-half inches long can now be combed with facility. There is very little wool grown now east of the Mississippi that does not have that length; but as a large percentage of the wool, owing to condition or feed of sheep, is weak or diseased, only the perfectly healthy wool is suitable for combing purposes. If anything interferes with the health of the sheep at that period of the growth of the fiber it will be affected, and when tension is applied the fiber will break or part at that very point in the wool.

You are correct in your conclusion that the combing of the wool previous to spinning constitutes the basis of the distinction between "worsted" and "woolen goods," but the processes are somewhat different all through. "Woolen goods" are generally "fulled," *i. e.*, shrunk up in finishing, while worsted goods are generally finished without fulling. The peculiarity of most worsted goods is the silky or glossy finish which they have. The bulk of our fine wools go into ladies' dress goods, but knit goods, cassimere shawls, overcoatings, braids, bunting, in fact a large variety of goods, are made now of worsted yarns.

By the process of manufacture which separates the short and weak staples the fibers that are left are uniform in length and strength, and laid side by side; the yarn can thus be drawn out further and is smooth and glossy. For any class of goods requiring to be light and strong worsted yarns are especially suited.

105 AND 107 READE STREET, NEW YORK, *April* 11, 1884.

DEAR SIR: In answer to the questions you put to Mr. Lynch in your letter of 10th we would say:

First. The characteristics which go to make all wools valuable are "quality," "condition," "staple." "Quality" is the degree of fineness; "condition" is its cleanliness or freedom from grease, dirt, burs, and any other animal or vegetable matter; "staple" is applied to the length and strength of the fiber.

In all the above essentials the wools of Ohio are superior to the wool of any other State. The breed of the sheep averages higher, the feed is probably better, and the sheep receive generally better care. Therefore it is that "Ohio produces the best wool."

From our letter of yesterday you will understand that combing wool is the longest and strongest, the healthiest wool selected from the wool as it is brought to market. When selected from fine wool it is called "delaine," for the reason that it is a selection from clothing wools and has always commanded higher prices than ordinary clothing wools. We think combing wool can fairly be called "better than clothing wool."

Combing wools are used in the production of heavy men's goods as well as clothing, but it makes a choicer and more expensive fabric, and the production is not so great.

As a further proof of the effect of the law of March 3, 1883, on the manufacture of worsted goods directly, and indirectly on wool, and especially on Ohio wool, I call attention to the following statement made by Mr. T. C. Search, of the Fairmount Worsted Mills of Philadelphia, in answer to certain inquiries made by the Chief of the Bureau of Statistics:

DEAR SIR: Your letter of the 10th instant, asking for information in regard to the manufacture of worsted goods in the United States, is received.

I desire to call your attention to the condition of the fine worsted trade of the United States as being perhaps to-day the most unfortunate exponent of the unequal bearing of the late tariff reduction. In order to present the subject in a comprehensive light, allow me to preface the conclusion by a brief glance at the magnitude of the industry.

The census of 1860 gives the first record of the value of these manufactures, and consequently one can obtain from this a correct idea as to the comparatively recent growth of the trade. The valuation was then placed at $1,320,027, in 1870 it had grown to $22,090,331, and in 1880 to $33,549,942, and since 1880 the rate of increase exceeds that of any former period of same length by a large percentage. In short, the industry can only be recognized as a standard one; the process of combing wool having been recognized as one which preserves all the strength and beauty of the original fiber, and at the same time gives a thread far better adapted to securing strength, beauty, and utility to the woolen fabric.

The protection afforded by the tariff act of 1867 without doubt was the cause of the enormous growth shown by the above extract from our census reports.

The figures are as follows:

Worsted yarns valued at not exceeding 40 cents per pound, at 20 cents per pound and 35 per cent.

Worsted yarns above 40 cents and not exceeding 60 cents per pound, at 30 cents per pound and 35 per cent.

Worsted yarns above 60 cents and not exceeding 80 cents per pound, at 40 cents per pound and 35 per cent.

Worsted yarns above 80 cents, at 50 cents per pound and 35 per cent.

And all fabrics made from these yarns, except knit goods and goods weighing under four ounces per square yard, were protected by a duty of 50 cents per pound and 35 per cent.

These duties were replaced by act of March 3, 1883, the schedule now being on worsted yarns—

Valued at not over 30 cents per pound, at 10 cents per pound and 35 per cent.

Valued at over 30 cents and not over 40 cents per pound, at 12 cents per pound and 35 per cent.

Valued at over 40 cents and not over 60 cents per pound, at 18 cents per pound and 35 per cent.

Valued at over 60 cents and not over 80 cents per pound, at 24 cents per pound and 35 per cent.

Valued at over 80 cents, at 35 cents per pound and 40 per cent.

And all fabrics made from these yarns, except knit goods and goods weighing not over four ounces per square yard, are dutiable at 35 cents per pound and 35 per cent., if not costing over 80 cents per pound; and 35 cents per pound and 40 per cent. costing over 80 cents per pound.

The reduction effected being as follows:

On yarns not over 30 cents per pound, 10 cents per pound.
On yarns over 30 cents per pound and not over 40 cents, 8 cents per pound.
On yarns over 40 cents per pound and not over 60 cents, 12 cents per pound.
On yarns over 60 cents and not over 80 cents, 16 cents per pound.
Over 80 cents, from 10 to 11 cents per pound.
Besides the reduction of all duties on "charges."

The raw material has been reduced practically 11 per cent., because we import but little wool now which costs over 30 cents per pound. The duty on wools between 30 and 32 cents was only reduced 5 per cent. by the act of March 3, 1883, so that manufacturers now buy only those wools which cost less than 30 cents, and thus obtain the 11 per cent. reduction.

But the most serious trouble to worsted spinners is due to the fact that yarns which, until the passage of the tariff act of March 3, 1883, cost more than 80 cents per pound, now can be bought in for less, owing to the efforts of the foreign manufacturer to get his cost down, and because of the charges not being dutiable. So that the protection on many classes of yarns, which was formerly 50 cents and 35 per cent., is now 24 cents and 35 per cent. per pound, a difference of 26 cents per pound. Of course, the worsted manufacturers are seriously in trouble; the bars have been dropped at both ends, and until the prices of raw material are reduced to meet this disparity, or the duty on manufactured goods is properly adjusted, we can not hope for any lasting improvement in the fine worsted trade.

I have a recent letter from Henry T. Coe, treasurer of the Washington Woolen Mills, Boston, Mass., in which he calls my attention to the fact that Ohio wool has been reduced more in price by the reduction in the duty on worsted yarns and worsted goods than it was by the reduction of the duty on the wool itself, and he insists that it will be no benefit to the wool-grower to increase the duty on these wools unless the duty on the manufactures of wool are increased at the same time. He calls my attention to the immense increase of the importations of worsted yarns and worsted goods, which has almost stopped the manufacture of this class of goods in this country and to this extent destroyed this market for the highest grade wools.

It is just as injurious to the wool-grower, Mr. Chairman, to have wool imported into this country in the shape of yarn or in the form of cloth as in the fleece. And hence we have done a hundred-fold greater injury to the wool-grower and to the wool-manufacturer than was contemplated at the time. Consequently we should at once correct the mistake. Especially should this House be ready to correct this mistake when the party in the majority at the time it was made was the first to discover its mistake and the first to declare its readiness and willingness to restore the duty. The destruction of the wool industry, especially when the wool-growers have reached a point where they can supply the best quality of combing wool, would be a great loss to this country. If this industry shall be abandoned much of the clothing worn in this country will be made out of an inferior quality of wool.

and we will all bear the loss. Mr. Harpster, who was here during this session of Congress, claims that our best wool is superior to wool grown anywhere else in the world. He offers to demonstrate this to the satisfaction of any one. Mr. Harpster is the president of the Ohio Wool-Growers' Association, and a very intelligent gentleman. If you prefer European shoddy, if you prefer such wool as was worn by the soldiers during the war, if you prefer to reject wool grown in Ohio, in West Virginia, Pennsylvania, in Michigan, and in other States, where the soil, climate, and feed enable the careful farmer to grow the best wool in the world, vote for the Morrison bill.

In order to show, Mr. Chairman, how Great Britain can control the wool market, as well as to show where the various kinds of wool are produced, I shall attach a series of tables as an appendix. When our sheep are slaughtered, when our people have gone into other pursuits, England can hold up the price of wool by controlling the importations of wool.

We can not compete with wool-growers whose sunny skies and verdant fields last all through the year; where no feed or shelter is ever needed; where land and grass are as cheap as the winds which sweep across their plains; where labor is cheap and where taxes are unknown. No, Mr. Chairman, if a tariff for revenue only is to be introduced, the American shepherd will lay aside his crook and seek some other vocation.

I have been surprised, Mr. Chairman, at the lack of information in regard to sheep husbandry. Few men seem to know the extent of this industry in this or any other country. The number of men employed, the number and value of sheep owned, the value of the wool grown, seem to be a surprise to most men. It is a matter of regret that a knowledge of so important an industry has not been more widely diffused. I wish to call the attention of the House to some statistics on this subject.

The following table, prepared by Mr. J. R. Dodge for the Treasury Department, shows the production, imports, exports, and the quantity of wool retained for home consumption, beginning at 1839 and coming down to and including 1882.

Quantities of wool produced, imported, exported, and retained for consumption in the United States for the years 1839, 1849, *and* 1859, *and from* 1862 *to* 1882, *inclusive.*

Calendar year.	Production.	Imports.	Total production and imports.	Exports.			Retained for home consumption.
				Domestic.	Foreign.	Total.	
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
1839	35,802,114	9,898,740	45,700,854	.....	85,528	85,528	45,020,578
1849	52,516,959	18,669,794	71,186,753	35,898	.....	35,898	71,150,855
1859	60,264,913	26,282,935	86,547,848	389,512	133,493	523,005	65,749,635
1862	106,000,000	75,121,728	181,121,728	355,722	708,850	1,064,572	180,057,156
1863	123,000,000	91,250,114	214,250,114	155,482	223,475	378,957	213,871,157

1870	160,000,000	68,058,028	228,058,028	25,195	1,305,341	1,330,506	226,727,522
1871	150,000,000	126,507,409	276,507,409	140,515	2,266,393	2,466,908	274,100,501
1872	158,000,000	85,496,049	243,496,049	75,129	7,040,386	7,115,515	236,380,534
1873	170,000,000	42,939,541	212,939,541	319,600	6,816,157	7,135,757	205,803,784
1874	181,000,000	54,901,760	235,991,760	178,034	3,567,627	3,745,661	232,156,099
1875	192,000,000	44,642,836	236,692,836	104,768	1,518,426	1,623,194	235,019,642
1876	200,000,000	42,171,192	242,171,192	79,599	3,088,957	3,168,556	239,002,636
1877	208,250,000	48,449,079	256,699,079	347,854	5,952,221	6,300,075	250,399,004
1878	211,000,000	39,005,155	250,005,155	60,784	4,104,616	4,165,400	245,839,755
1879	232,500,000	128,131,747	360,631,747	191,551	3,648,520	3,840,071	356,791,676
1880	240,000,000	55,964,236	295,964,236	71,455	5,507,534	5,578,989	290,385,247
1881	272,000,000	67,861,744	339,861,744	116,179	3,831,836	3,948,015	335,913,729
1882	290,000,000	70,575,478	360,575,478	64,474	4,010,043	4,074,517	356,500,961

From the above table it will be seen that the wool product of the United States increased from 60,264,913 pounds in 1859 to 290,000,000 pounds in 1882, and that the consumption of wool in the United States increased from 65,749,635 pounds in 1860 to 356,500,961 pounds in 1882.

Mr. James Lynch, of New York, in response to a letter from the Treasury Department, on the 22d of March, 1884, made the following statement, which is regarded by the Treasury Department as an accurate estimate of the wool product of the United States for the year 1883. His estimate of the total wool product of 1883 is 320,000,000 pounds, and he classifies the wool crop of 1883 as follows:

	Pounds.
Clothing wool, for woolen goods, felt goods, hosiery and knit goods, and felt hats	233,000,000
Combing wool, fine, medium, and coarse, above the carpet grade	65,000,000
Carpet wool	22,000,000
Total wool product for 1883	320,000,000

The census returns, as tabulated by the Agricultural Department, show that there are in the United States 1,020,728 flocks of sheep, exclusive of those on ranches, as follows:

Alabama	23,879	Montana	137
Arizona	35	Nebraska	2,119
Arkansas	20,595	Nevada	97
California	4,326	New Hampshire	11,206
Colorado	406	New Jersey	5,822
Connecticut	3,194	New Mexico	814
Dakota	1,819	New York	75,523
Delaware	1,986	North Carolina	52,541
Florida	1,001	Ohio	93,984
Georgia	25,514	Oregon	4,605
Idaho	128	Pennsylvania	72,425
Illinois	39,803	Rhode Island	790
Indiana	54,069	South Carolina	10,049
Iowa	17,220	Tennessee	62,924
Kansas	3,804	Texas	8,390
Kentucky	60,598	Utah	2,001
Louisiana	5,449	Vermont	16,573
Maine	34,132	Virginia	32,494
Maryland	10,498	Washington	1,067
Massachusetts	3,488	West Virginia	30,909
Michigan	62,119	Wisconsin	58,487
Minnesota	24,208	Wyoming	44
Mississippi	15,466		
Missouri	63,990	Total	1020,728

The product of wool for last year, as before stated, reached 320,000,000 pounds, and its value was over $100,000,000; the value of mutton from sheep slaughtered for food was over $50,000,000, while the real estate invested in this industry is estimated at $500,000,000.

Mr. Lynch also furnishes the following table, showing the quantity of clothing wool, combing wool, and carpet wool produced in the United States, in connection with the quality of each class of wool as defined by the law, imported into this country, the ad valorem rate of duty, the duty per pound, and the price per pound during the year ended June 30, 1883:

	Produced in the United States during the calendar year 1883.	Imported into the United States during the year ended June 30, 1883.	Duty during the year ending June 30, 1883.		Import price per pound.
			Rate per pound.	Ad valorem rate.	
	Pounds.	*Pounds.*	*Cents.*	*Per cent.*	*Cents.*
Clothing wool	233,000,000	11,546,530	12.51	56.28	22.24
Combing wool	65,000,000	1,373,114	12.83	51.22	25.05
Carpet wool	22,000,000	40,130,323	3.87	27.84	13.91

From this it appears that the quantity of carpet wool, the coarsest grade of wool produced in the United States, is comparatively very small, constituting but 7 per cent. of the total wool product of the country. The quantity of carpet wool imported during the year ended June 30, 1883, was, however, more than three times as great as the quantity of both clothing and combing wool imported. The carpet-wool product of the United States is almost exclusively the fleece of sheep of Mexican origin, which are raised chiefly in Texas, New Mexico, Arizona, and certain other Territories of the mountain region of the country situated between the Mississippi Valley and the Pacific Slope. As the market price of carpet wool in the United States is not much more than half that of either clothing wool or combing wool, the tendency is constantly toward improving the breed of sheep the fleece of which produces carpet wool, the effect of which is to decrease the carpet-wool product and to increase the clothing and combing wool products of the country.

I desire also to call the attention of the House to a special report recently

prepared by the Agricultural Department, giving the number and value of sheep in all the States and Territories.

Table showing the estimated number and value of sheep on farms in the several States and Territories in the United States, January, 1884, stated in the order of magnitude of value.

[From special report No. 4, new series, Department of Agriculture.]

Order.	States and Territories.	Number.	Value.
1	Texas	7,957,275	$17,822,056
2	Ohio	5,000,036	14,650,105
3	California	6,203,064	11,785,822
4	New Mexico	4,435,200	7,539,840
5	Michigan	2,412,422	7,261,390
6	New York	1,732,332	6,323,012
7	Pennsylvania	1,749,236	5,580,063
8	Oregon	2,571,378	4,654,194
9	Indiana	1,145,084	3,217,686
10	Wisconsin	1,336,403	3,180,639
11	Illinois	1,126,908	3,008,844
12	Missouri	1,439,380	2,878,760
13	Colorado	1,248,360	2,696,458
14	Kentucky	980,166	2,577,837
15	Vermont	448,712	2,032,665
16	Kansas	821,709	1,889,931
17	West Virginia	671,226	1,751,900
18	Maine	577,236	1,627,806
19	Arizona	812,700	1,625,400
20	Iowa	497,161	1,382,108
21	Montana	465,750	1,350,675
22	Wyoming	598,000	1,303,640
23	Utah	564,300	1,297,890
24	Virginia	487,194	1,256,961
25	Tennessee	655,214	1,172,833
26	Washington Territory	456,300	1,090,557
27	Georgia	543,415	815,122
28	Nevada	385,350	793,821
29	Minnesota	275,463	732,732
30	Nebraska	333,834	727,758
31	New Hampshire	209,686	629,058
32	North Carolina	452,176	624,003
33	Maryland	172,022	572,833
34	Alabama	343,925	512,448
35	New Jersey	117,008	505,475
36	Dakota	182,000	493,220
37	Idaho	187,500	468,750
38	Mississippi	293,477	460,759
39	Arkansas	227,293	370,488
40	Massachusetts	69,346	277,384
41	Connecticut	58,831	226,499
42	Louisiana	124,984	208,723
43	South Carolina	116,476	194,515
44	Florida	98,940	173,145
45	Rhode Island	21,077	85,151
46	Delaware	22,077	71,750
	Total	50,626,626	119,902,706

Ohio stands third in number of sheep, second in value of sheep, but first in quantity, quality, and value of wool.

The development of wool-growing began when our protective system began, after 1860, and has had a permanent growth since the passage of the wool tariff of 1867. To show the slowness of the growth of this industry from 1850 to 1860, and the rapidity of its growth thereafter, I present here the following table:

Census years.	Sheep.	Wool.
	Number.	*Pounds.*
1850	21,723,220	52,516,959
1860	22,471,225	60,264,913
1870	28,477,951	100,102,387
1880	43,576,899	235,648,834
1883 (agricultural statistics)	50,500,000	320,000,000

I have seen proper to present these facts in order to give this House some idea of the magnitude and importance of wool-growing in this country. The law of 1867 was no war tariff; it was passed since the war, and was understood to be a permanent law and a permanent adjustment of the duties on wool and woolen goods. Under this implied promise more than a million men have become flock-owners, and these flock-masters employ in this industry more than a million others. They have invested $120,000,000 in sheep and $500,000,000 in land. They have erected buildings and made permanent improvements. All this has been done under the influence of this legislation, which has now been stricken down. During the first seventy-eight years of this Government wool had no adequate protection, and consequently had no permanent growth. The improvement in the quality of wool, and the increase in the average weight of fleeces, are as remarkable as the increase in the number of sheep and in the quantity and quality of the wool. The benefit to the soil, the market for hay and grain, the value it gives to grass and grazing lands, the employment it furnishes to labor, the wealth it adds to the country, the change it works in the balance of trade, are potent reasons why the wool tariff of 1867 should be immediately restored.

Of all the money expended for the products of the United States none are so widely distributed as the money paid for wool. It adds at least to the permanent wealth of the country $150,000,000 a year, while the destruction of this industry would diminish our resources this much every year. It furnishes employment for 2,000,000 men, and to this extent adds to the diversity of employment and to the number of our consumers. It adds value to our lands and furnishes subsistence to a worthy people. If this industry should be abandoned, as it must be if it is not protected, it will take at least two decades to build it up again. The American people will be clothed, and it is only a question whether the wool shall be furnished by our own people or whether we shall purchase it abroad; whether it shall be grown by men who live beneath the Stars and Stripes, who pay our taxes and fight our battles, or by men who live under another flag and in another clime; whether we shall encourage the men whose muscle and money increase our markets and enhance our wealth, or the foreigner whose only object is to drain our resources and diminish our prosperity; whether we shall protect American industries or degrade American labor.

Mr. Chairman, the Democratic members of this House have presented a bill and at the same time they admit that it is not right. It proposes a horizontal reduction of the duties of 20 per cent., when they say it ought to be 40 or 50 per cent. They do not show the courage of their convictions. They do not dare to do what they declare to be right. They hold that protection is robbery, and that no such doctrine has any warrant or authority in the Constitution. They argue this on this floor from day to day and from night to night, in the face of precedent and authority that seem to me absolutely conclusive. In the second act of the First Congress the fathers who made the Constitution used these words:

SECTION 1. Whereas it is necessary for the support of the Government, for the discharge of the debts of the United States, and for the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported:

Be it enacted, &c.

This act was approved by George Washington on the 4th day of July, 1789, the second law that he signed as President of the United States. It was a patriotic act, done on a patriotic day; and yet gentlemen on the other side say that these men who made the Constitution and made the first laws under it did not understand it.

There is another class of Democrats, to which I am happy to say the gentleman from Indiana [Mr. HOLMAN] who has just taken his seat does not belong, here who are few in number, but they are fearfully and wonderfully made. They believe, like their brethren, in strict construction, limited powers, free trade, tariff for revenue, and in all the old-school ideas of pure and unadulterated Democracy; but when they come to consider some article that is largely produced in their districts, like the Latter-day Saints, they fall back on a new revelation and talk about "incidental protection," hoping thereby to incidentally protect the home vote. I can understand free trade, which is the goal of Democratic ambition; I can understand a tariff for revenue, because it is only imposed when the necessities of the Government make free trade impossible; but I can not understand how a man can trim between this and protection and not be in favor of the one or the other. This new species of Democracy is not recognized as legitimate by the majority of this House, though its paternity is not questioned in Ohio, where all new Democratic ideas are born. This new class of politicians are all things to all men. They have certain rules, but the exceptions always reverse the rules. It is as a sounding brass and a tinkling cymbal.

Incidental protection, as defined by its advocates, is never to be employed until the necessities of the Government economically administered demand the levying of a duty to meet these necessities; consequently it is wholly inapplicable and unavailable until the revenues of the Government are reduced to the point of necessity. There must be no protection until it is preceded by the necessities of the Government, and then the protection must not be intentional or voluntary, but incidental. When the revenues are reduced $100,000,000, or when two or three Morrison bills are passed, and when the duty on wool is reduced to 4 or 5 cents a pound, it will then be about time to consider whether the necessities of the Government economically administered will not admit of "incidental protection."

The only thing to be gained, as I learn from this discussion, by a tariff for revenue, with every particle of protection eliminated, as is insisted upon by the Democratic side, is, first, to have an easy conscience on account of not violating the Constitution; and, second, to open up to the American people the markets of the world. I would not be so uncharitable as to interfere with the tender consciences of my Democratic friends on this point, but I want to say a word in regard to this oft-repeated idea that tree trade will whiten every sea with our commerce, will crowd every port with our American ships, and open up the markets of the world to our products. Last year, or during the year ending June 30, 1883, before we had any reduction of tariff, our exports reached $800,000,000, 90 per cent. of which were the products of the farm. What makes a market abroad for our products? When men talk of the balance of trade they speak of the result of individual transactions, the aggregate of which no man can calculate in advance. Trade is not carried on between nations as nations, but is carried on between individuals. The man to whom we sell an article buys it because he can buy it of us cheaper than he can buy it of anybody else. We do not necessarily sell to a man who buys American products, nor does a purchaser stop to inquire whether our laws favor free trade or protec-

tion. Hence there can be no possible connection between the tariff duties we place on imports and the sales we make abroad. To show that our exports have grown under our protective system I shall call the attention of the House to the following table:

Value of the exports of domestic products of agriculture, of manufactures, and of all other domestic products during the fiscal years 1860, 1870, *and* 1875 *to* 1883, *inclusive.*

Year ended June 30—	Products of agriculture.	Products of manufactures.	All other.	Total.
1860	$256,560,972	$45,658,873	$14,022,578	$316,242,423
1870	361,188,483	47,921,154	46,098,704	455,208,341
1875	430,306,570	75,755,432	53,175,636	559,237,638
1876	456,113,515	81,374,077	57,430,123	594,917,715
1877	459,734,148	88,007,773	85,238,933	632,980,854
1878	536,192,873	91,416,576	68,140,481	695,749,930
1879	546,476,703	89,117,215	63,944,824	699,538,742
1880	685,961,091	79,510,447	58,474,815	823,946,353
1881	730,394,943	89,219,380	64,311,624	883,925,947
1882	552,209,819	103,132,481	77,887,432	733,239,732
1883	619,209,449	111,890,001	73,064,182	804,223,632

If there is to be a reduction of the tariff why not make it on articles that we do not produce at all, or only produce in small quantities. The Government received in duties on sugar and molasses last year $46,245,976.46, while the duties collected on wool and woolen manufactures were only $32,320,892.52. The former we can produce only in small quantities, while we can produce wool enough to supply the entire American demand, and more. There is a reason for the protection of wool-growing, because of our facilities for producing it, which does not apply to sugar and molasses, as we can produce but a small part of what we consume. There is no trouble, however, with the surplus revenue. If we pay the soldiers the pensions to which they are entitled, if we educate the illiterates who now hold the balance of power in this Republic, if we build up our broken-down commerce and strengthen our Army and Navy, we will need every dollar that is now collected. There are rivers and harbors, post-offices and post-roads, Government buildings, and Indian tribes, upon which a vast amount of money could be wisely expended. And besides all this we have an immense debt as yet unpaid.

The farmer is told that he pays a large share of these duties in the increased prices which he pays for the articles he consumes; that the duty on any article is necessarily added to the price which the consumer would otherwise have to pay. If this were true why should the Cobden Club, an English combination of manufacturers and capitalists, who have undertaken the task of inculcating in America the doctrine of free trade, take such a deep interest in this matter? If it be true, as is claimed, that the American consumer pays the price of these articles in England, plus the cost of transportation, plus the tariff, there is no need of the Cobden Club doing missionary work in this country. England, if this be true, does not lose a single cent by our protective laws; nor would she gain a single cent by our adoption of the doctrine of free trade. But this is not true. England is now compelled to reduce the price of her goods until she can pay the duty on them and then sell them in this country at the American price, which is almost always much lower than the prices of the same quality of goods imported.

If we were to increase the duty on wheat, flour, iron, nails, shingles, lumber, stoves, plows, wagons, or any other article which is produced easily and cheaply in this country 200 per cent., what effect would this have on the selling price of these articles? None whatever. There are hundreds of articles on which there is a high duty selling lower here than any place in the world.

The farmer who is 50 years of age is only required to turn back upon his own memory and recall the prices from 1846 to 1861 under revenue tariff, not only the prices of what was bought but the prices of what was sold, to understand and fully appreciate the workings of a protective tariff as compared with the Democratic dogma of a tariff for revenue only. It may not be amiss to suggest in this connection that the Democratic party was not burdened during this period with a surplus of revenue or a surplus of national credit. But this is true, that the farmers of this country sold their products during this period for at least one-third less than they have been receiving since, and paid an average of one-third more for everything they bought. When I was a boy we hauled our wheat forty miles to market over high hills and rough roads, and sold it at 45 cents a bushel. Corn was often sold at 25 cents and oats at 12½ cents. Apples and potatoes and other vegetables rotted upon the ground for want of a market. Coffee, calico, and cotton cost 100 per cent. more than they do to-day. Furniture, agricultural implements, wagons, carriages, cooking-stoves, sewing-machines, clothing, dress goods, books, newspapers, iron, nails, glass, and other articles are at least, taking the same qualities, one-third less than they were then. Facts and figures brought within our own personal knowledge are unanswerable.

Good horses were sold at $50 to $75, good cows for $10 or $15, and other things in about this proportion, and all the money a farmer expected in a whole year was enough to pay his taxes. The business of the country was mere barter and the little money in circulation was almost worthless; men were in debt, interest was high, and labor was cheap. I remember the cry of "Tippecanoe and Tyler too," when brawny men left home and family to swell the log-cabin processions with the hope that the iron hoof of free trade, which was then crushing the hearts and hopes of the people, should be lifted. These are the times to which the free-trader wishes to return.

They tell us that protection fosters monopolies and that manufacturers feed and fatten on the hard earnings of the poor. If this be true, why do we not have these factories in every town? Why is it that we are unable to get foreign capitalists to invest in manufactures? Again it is insisted that labor is no better paid in this country than it is in Europe. If this is true, why is there a constant tide of immigration into this country, when no American laborer ever thinks of going abroad to better his condition?

The Democrats are opposed to free trade when the Chinaman wants to come to America. They are opposed to free trade in patent-rights. The gentleman from New York [Mr. HEWITT] sued the Cleveland Rolling Mill for $200,000 damages for an infringement of a patent-right, the notice of which was in the morning papers lying on the members' desks when he was making his free-trade speech. A nation is a great family. If it buys more than it sells it will come to want. A family that only earns $1,000 a year can not pay out $1,200 a year without ultimately going into bankruptcy. If we pay annually $200,000,000 for wool, woolens, sugar, coffee, tea, and other products to foreign countries, and only sell abroad $150,000,000 in the same time, the balance of trade will be against us to this extent, and hard times will come as certainly as night follows day.

Free trade is a scheme to make the rich richer and the poor poorer. The only demand for revenue reform which has come to this Congress this season has come from the free-trade clubs of New York, among whom wit passes for worth and wealth for brains, and from retired capitalists who have gone out of business to live on their coupons and incomes. The direct effect of opening our markets to the world is to place American labor in competition with the half-paid, half-clad, half-fed labor of India, China, Japan, and other foreign countries, and to increase the value of money—to increase its purchasing power by diminishing the price of the products of the world to the lowest possible level. Not only this, but it will blight the hopes and happiness of the toiling millions who are the glory of our Republic. It will take the carpets from their floors, the clothes from their backs, the flowers from their gardens, the books from their libraries, comfort from their homes, and gladness from their hearts. It will turn colleges into tenement houses, churches into hospitals, and homes into hovels. It will strike down our printing-presses, our public schools, and our institutions of learning and charity. The blighting specter of poverty and want, of hunger and cold, of penury and wretchedness will sit at the cheerless fireside of every laborer's home, an unwelcome but an abiding guest. The laborers of this country can not live on nine or ten cents a day as do the Mongolians, the Japanese, and the laborers of India. The life of this Republic and the prosperity of our people demand that the laborers of this country shall be well paid, shall have comfortable and happy homes, shall have books and schools, churches and colleges, comforts and luxuries, for to them we are indebted for the strength and power, the glory and grandeur of the Government, beneath whose overshadowing wings 55,000,000 of people dwell in peace and unity.

Mr. Chairman, I have seen proper to consider at some length the tariff on wool. Having the honor to represent in part a State that grows more wool than any other State in the Union, and having the honor of representing a district which produces more wool than any other district in the United States, I felt it to be my duty under existing circumstances to give this question that consideration which its importance demands. Having lived on a farm from childhood to manhood, and having engaged in this industry, I have probably a greater familiarity with raising sheep and growing wool than most members of this House. Believing as I do that the reduction of the duty on wool was done inadvertently and in haste, I desired to state the circumstances under which the reduction was made. Knowing, as I do, the course pursued by the Democratic members of the Forty-seventh and Forty-eighth Congresses, and the pledges made by the Ohio Democracy, I wished to expose the unblushing hypocrisy which has characterized their treatment of this question. The pretense that the Democratic party will restore the wool tariff of 1867 is a sham and a cheat, and in this statement I shall be corroborated by a very large majority of the Democratic members of this House.

I hold in my hand the resolutions of the wool-growers of Ohio and Pennsylvania, in which they pledge their support at the ballot-box to such men and measures as will restore the wool tariff of 1867. They will resent in October and November the outrage which was perpetrated in the campaign of last year and the indignity with which they have been treated by this House. A million men can not be crushed by any political party. I know you laugh at the idea of farmers discarding their party affiliations, and say they will get bravely over that before the election. Mr. CONVERSE told you that your failure to restore the duty on wool would influence half a million votes in the coming election. Mr. WILKINS intimated the same. The elections of this year will decide whether the wool-growers of this country can be ignored and trampled upon with impunity. The House of Representatives of the Forty-eighth Congress, where a measure to increase the duty on wool

must necessarily under our Constitution originate, was specially charged with the duty of restoring the tariff of 1867. The refusal to do so will overwhelm the Democratic party and destroy the last expectation of victory in 1884.

The wool-growers fully understand the situation. They know the position occupied by the two parties on this question. The party that gave homes to the homeless, freedom to the slave, and protection to American industry is the only party that can be trusted to restore this duty. I speak in no partisan sense. The Democratic members of this House had a grand opportunity of securing the support of the wool-growers of the country, but they spurned it with contempt and suffered it to pass away; and now are struggling to drive the wool-growers still farther away. And yet this is what should have been expected. How can any man who believes in a revenue tariff, or in the Ohio Democratic platform, favor the protection of any industry? No member of Congress can succeed when he is constantly stultifying himself.

I have probably taken more time, Mr. Chairman, than I should have done had some Democratic member seen proper to represent on this floor the wool-growers of the United States. This should have been done by a Democrat in a Democratic House. I had expected to say something on the merits of this bill, but I had not until within the last day or two thought of entering upon a full discussion of this subject. The discussion closes to-morrow and I am advised that this subject will not be discussed by any gentleman who is hereafter to speak. This is my only apology for occupying so much time in presenting this subject. My sympathies, my voice, and my vote are with the farmers of this country whose great industry has been assailed, and I shall earnestly and faithfully labor to restore the law of 1867. This will be a prominent feature in this campaign, and, mark me, it will not down at your bidding. It is an important question and can not be turned aside. We spent ten or twelve days in the consideration of the "bonded whisky bill" in the interest of a few distillers; we spent as much more time in the investigation of the record of a soldier whose disobedience of orders and unfaithfulness to his country's flag brought dishonor upon himself and defeat upon his comrades, but this Congress has no time to give to the consideration of a question which touches a million men and affects a million homes and which is closely identified with the vital interests of the country. Protection of American industries, protection of American labor, and protection of American homes is the polar star of American prosperity, and its steady light will cheer and gladden the hearts of American citizens when the champions of free trade, revenue tariff, and incidental protection are forgotten.

APPENDIX.

TABLE No. 1.—*Showing rates of duty on wools prior to the passage of the act of March 3, 1883, and also under the present tariff.*

Class.	Rate before revision, March 3, 1883.	Equivalent ad valorem.	Present tariff.	Equivalent ad valorem.
		Per ct.		*Per ct.*
Wools of the first class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be 32 cents per pound or less.	10 cents per pound and 11 per cent.	55.74	10 cents per pound.....	44.74
Wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed 32 cents per pound.	12 cents per pound and 10 per cent.	39.18	12 cents per pound.....	29.18
Wools of the second class, and all hair of the alpaca, goat, and other like animals, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be 32 cents per pound or less.	10 cents per pound and 11 per cent.	47.08	10 cents per pound.....	36.09
Wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed 32 cents per pound.	12 cents per pound and 10 per cent.	42.33	12 cents per pound.....	32.33
Wools of the third class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be 12 cents or less per pound.	3 cents per pound.....	25.49	2½ cents per pound.....	21.24
Wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed 12 cents per pound.	6 cents per pound.....	31.32	5 cents per pound.....	26.11

Wools of the first class, when imported washed, shall pay a duty of twice the amount to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

TABLE No. 2.—*Showing rates of duty on woolen goods prior to the passage of the act of March 3, 1883, and also under the present tariff.*

Class.	Rate before revision, March 3, 1883.	Equivalent ad valorem.	Present tariff.	Equivalent ad valorem.
		Per ct.		*Per ct.*
Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding 80 cents per pound.	50 cents per pound and 35 per cent.	71.66	35 cents per pound and 35 per cent.	59.60
Same, valued at above 80 cents per pound.....	50 cents per pound and 35 per cent.	71.66	35 cents per pound and 40 per cent.	65.40
Flannels, blankets, hats of wool, knit goods, and all goods made on knitting-frames, balmorals, woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals, except such as are composed in part of wool, not otherwise provided for in this act, valued at not exceeding 40 cents per pound.	20 cents per pound and 35 per cent.	90.97	12 cents per pound and 35 per cent.	75.39
Same, valued at above 40 cents per pound, and not exceeding 60 cents per pound	30 cents per pound and 35 per cent.	90.72	18 cents per pound and 35 per cent.	68.43
Same, valued at above 60 cents per pound, and not exceeding 80 cents per pound	40 cents per pound and 35 per cent.	89.68	24 cents per pound and 35 per cent.	48.50
Same, valued at above 80 cents per pound.....	50 cents per pound and 35 per cent.	66.96	35 cents per pound and 40 per cent.	62.37
Women's and children's dress-goods, coat-linings, Italian cloths, and goods of like description, composed in part of wool, worsted, the hair of the alpaca, goat, or other animals, valued at not exceeding 20 cents per square yard.	6 cents per square yard and 35 per cent.	68.75	5 cents per square yard and 35 per cent.	63.13
Same, valued above 20 cents per square yard.....	8 cents per square yard and 40 per cent.	67.05	7 cents per square yard and 40 per cent.	63.67
If composed wholly of wool, worsted, the hair of the alpaca, goat, or other animals, or of a mixture of them.	New; formerly rated in class above.	.....	9 cents per square yard and 40 per cent.	.....
Provided, That all such goods weighing over four ounces per square yard shall pay a duty of.....	50 cents per pound and 35 per cent.	68.09	35 cents per pound and 40 per cent.	63.87
Clothing, ready-made, and wearing apparel of every description, not specially enumerated or provided for in this act, and balmoral skirts and skirting, and goods of similar description or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, except knit goods.	50 cents per pound and 40 per cent.	62.51	40 cents per pound and 35 per cent.	55.37
Cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel, and goods of similar description or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made or up manufactured wholly or in part by the tailor, seamstress, or manufacturer, except knit goods.	50 cents per pound and 40 per cent.	.....	45 cents per pound and 40 per cent.	.....
Webbings, gorings, beltings, bindings, braids, galloons, fringes, gimps, cords and tassels, dress-trimmings, head-nets, buttons, or barrel buttons, or buttons of other forms for tassels or ornaments, wrought by hand or braided by machinery, made of wool, worsted, the hair of the alpaca, goat, or other animals, or of which wool, worsted, the hair of the alpaca, goat, or other animals is a component material.	50 cents per pound and 50 per cent.	68.30	30 cents per pound and 50 per cent.	60.98
Endless belts or felts for paper or printing machines.....	20 cents per pound and 35 per cent.	57.16	20 cents per pound and 30 per cent.	52.16

Total imported	488,985,057

Tariff and Protection—Profits and Wages—Women-workers and Infants—Toilers in the Factories—Wealth and Poverty.

Under this policy [protective tariff] commerce has been obstructed, the cost of production has been increased and the earnings of labor have been confiscated. These taxes are not needed for revenue, and they can not be legitimately or beneficially maintained for any other purpose. There is not an instance in the history of the world in which a government has made its people rich and prosperous by imposing unnecessary taxes upon them.—*Mr. Speaker Carlisle—letter to Hon. John Kelly, May* 22, 1884.

The vast wealth which attends the apparent prosperity of this period is not the wealth that gives greatness and strength to a republic. The wealth that builds palaces, undermines the foundations of free government and wrings from the heart of labor the cry of despair.—*Holman.* [*Appendix, 1st Sess. 48th Cong., p.* 17.]

You compare the nation, perhaps, to a parched tract of land, and the tax to a fertilizing rain. Be it so. But you ought also to ask yourself where are the sources of this rain, and whether it is not the tax itself which draws away the moisture from the ground and dries it up.—*Bastiat.*

Woe unto you also, ye lawyers! [νομικοῖς] for you lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers.—*Luke,* xi, 46.

SPEECH

OF

HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. COX, of New York, said:

Mr. CHAIRMAN: Gentlemen in this debate have discussed economy as if it were a party question. Economy knows no party; it knows no nationality. Economy has reference to cash and credit. Its philology shows that it is the "law of the house." It is not the law of a faction. It is not the law of contending elements or parties. So far as I am concerned, I know no sure rule for my action on this question except the law of economy. No party can tell me that abundance is a curse and that scarcity is a blessing. No party can tell me that taxation is conducive to human happiness. Onerous taxation is nothing if not an obstacle to comfort and prosperity. No party platform, no caucus resolution, no convention shibboleth can make or unmake the everlasting laws of supply and demand, and of interchange among individuals, communities, and nations.

FEDERALISTS AND DEMOCRATS.

Gentlemen quote Federalists and Democrats, Hamiltons and Jeffersons, Jacksons and Madisons, Websters and Clays, Wrights and Walkers, in behalf of this or that economic theory. The sentiments attached to these great names are nothing to me unless they conform to the eternal law of economy. Two and two can never be made equal to five though indorsed in a thousand ways by party platforms or great statesmen. Is it said that Jackson was a protectionist, and that Madison advocated certain duties as an encouragement for home manufactures? Granted. So I may say that Hamilton said in the Federalist that—

Exorbitant duties on imported articles serve to beget a general spirit of smuggling which is always prejudicial to the fair dealer and eventually to the revenue itself; they tend to render other classes of the community tributary, in an improper degree, to the manufacturing classes, to whom they give a premature monopoly of the markets; they sometimes force industry out of its most natural channels into others in which it flows to less advantage; and, in the last place, they oppress the merchant, who is often obliged to pay them himself without any retribution from the consumer.

Not being accustomed to swear in the words of Hamilton, or of any master, I attest his statement by the laws of economy and his practice under them; for did not Hamilton in the first instance propose to encourage manufactures by admitting free the raw materials? Whether he be Federalist or Democrat, it matters not. This policy may have been wise or unwise in his day; but it is certainly wise now, because it is in conformity with the higher laws of economy, and is best for the people.

DEMOCRATIC POLICY.

It is a peculiar satisfaction to me to know that the great bulk of the party with which I act, not only in their platforms but their legislation, has demanded that there shall be equality of taxation; that the burdens of government shall fall equally upon all; that one class shall not be taxed for another; and that monopolies should be overwhelmed by an indignant people. When I find Jefferson at Paris—inspired with an earnest purpose to serve America and France—demanding that our surplus of rice, tobacco, furs, peltry, potash, and timber (which France wanted) should go to her, while her surplus of wines, oils, brandies, fruits, and manufactures (which we wanted) should be interchanged for our commodities, I recognize the wisdom, justice, and democracy of his policy and philosophy. He said that "the Government have nothing to do but not to hinder their merchants from making the exchange."

Fortified by this philosophy and practice, I propose to place on record a few suggestions in answer to what fell from the gentleman from Pennsylvania [Mr. KELLEY] in the speech he made on the 15th of April, and to some remarks made by other gentlemen on the pending bill.

REDUCTION OF PRICES.

He starts out by saying that he does not believe "that a cheapening of goods which involves a reduction of wages can relieve any stagnant American industry." This assumes that the cheapening of our products of manufacture must result in a reduction of wages. Why should this be the result? Do not wages depend on the supply of labor in the market, and the skill of the laborer? Do not the supply and skill of

labor now regulate the wages in the factories? Do not the statistics of the last census show that the profits of manufactures would allow larger wages than those now paid? Why are not larger wages paid? Because there is fierce competition for employment, and a limited market for manufactured products at present prices. The cheapening of goods would, to the extent of their reduction in price, enable 55,000,000 of people to consume our manufactured products more largely than they now do. I see no other result from "cheapening" until a reduction of tariff enables us to sell surplus products in foreign marts.

POWER OF CONSUMPTION.

The very next assertion made by the gentleman [Mr. KELLEY] is proof of this. He says "the power of production the world over has, upon the prevailing basis of the distribution of the joint production of labor and capital, outrun the power of consumption;" and "that all markets are overstocked; that in every land multitudes of skilled and industrious people have from many proximate, but all of which are secondary, causes, been idle for a large portion of many recent years."

The gentleman makes no exception of the United States. Is he correct in this assertion? What is the remedy? Obviously the only scientific remedy is to develop a better system of exchange of products. People will consume industrial products if they can obtain for their surplus other products in exchange. There are no limitations on consumption except those imposing restrictions on production and exchanges. All obstructions placed in the paths of trade and commerce are illogical.

OVERSTOCKED MARKETS.

Asserting that our markets are overstocked with our own industrial products, the gentleman [Mr. KELLEY] proposes as the only remedy, restrictions on the exchange of our surplus for the surplus products of other nations! It is well known that our factories are now so far developed in capacity that they could, at present high-tariff prices, by running on even the eight-hour plan six or eight months of the year, glut our home market with their products. Yet the gentleman proposes, in such a condition, to confine for all time these products to the home markets! And at the same time he holds out to our farmers the comfortable prospect of having at no distant day no foreign markets for their products! Will such a condition of production tend to the general prosperity of the people? Will a system of manufacture which is now able to glut the home market be improved by a system of agricultural production which will have no foreign market? The gentleman must admit, so far as manufactures are concerned, that we have now a development of capacity for production too large for the home markets. Will he benefit manufacturing capital or labor by enlarging that capacity? Surely not. Will that capital or labor be benefited by the loss of a foreign market for our agricultural products? Surely not. Yet his theory is that we must increase our manufacturing army, an army that is now too large, in order to create a home market for our agricultural products! On the conditions which he states himself, is not his theory simply absurd? The gentleman's theory is practicable in one way only: the Chinese way. To put it into successful operation all our industries should be developed only in proportion to our population; and when that proportion is reached further development should be stopped, by law of course, in order to prevent overproduction. The people would require so many bushels of wheat per annum, so many yards of cloth, and so on in respect to every article to be consumed. If the rolling-mills turned out more iron than might be wanted, they would have to be closed until the surplus which glutted the market was sold for consumption. We must, according to the Pennsylvania plan, diversify our industries so as to produce our own sugar and everything else we want. Stop raising surplus wheat, says the gentleman; raise sorghum; and so on in respect to other products. What about our cotton? Must we raise only what we can consume of that staple?

THE DISMAL SCIENCE.

Is not this the theory of "protection" as laid down by its greatest apostle? I want no better indorsement of my recent "Address to Congress" than the gentleman's speech. In the latter, the gentleman expressly demands the Chinese wall that I spoke of—the Chinese system. To that extent his speech is logical. In its economical argument it is absurd and refutes itself.

I admit that if our industries were regulated so that their products would exactly fill our home demands and no more, and if all persons engaged in them were subject to distribution so far as to be compelled by law to shift about from one calling to another, according to the extent of production in each calling, we might by and by be as independent of other nations as China and India were for thousands of years. It is a system of this sort that is implied in the gentleman's [Mr. KELLEY'S] speech, or else there is no sense in it.

I do not desire such a system. I know that if we adopt such a system it must produce castes of labor in this country. It must result in a municipal custom or law that will in time affect and regulate every kind of labor, and leave nothing to enterprise. It would do this as certainly as it has done it in India and China. We would have no business to transact with the "outside barbarians" of Europe under the gentleman's system of home consumption.

The American people have now come to that stage of development in which the gentleman [Mr. KELLEY] sees no chance for them to maintain themselves except by the abolishment of commerce. He looks all over the world and says we must come to this. This frank admission, that Americans must consume all our industrial products, is an assertion of the best policy that the leading protectionist in the House can suggest. The gentleman illustrates the "dismal science" of which he talks.

THE PROTECTION OF AMERICAN WOMEN.

Are the American people prepared to pursue this home policy until the object of the protectionists has been attained? This is the important question before the country to-day. Is there no labor to be considered but factory and forge labor? The gentleman [Mr. KELLEY] cites the condition of labor in Austria, Germany, Switzerland, the Netherlands, France, England, and other countries, and assumes that our labor is protected from such a condition by high tariffs. I would ask the gentleman, would the laborers of these countries be in their present condition had they our institutions, our immense domain of cheap and fertile land, and no enormous standing armies to support? The gentleman wants to protect American women from being degraded as he has seen women degraded in these countries. So do I. I might here remark that I would like to see a system of manufacture different from that carried on in Philadelphia under heavy protective tariffs, where for years thousands of American mothers have been forced, in mid-winter, to rise by gas-light, at 5 o'clock in the morning, and walk the streets in snow, sleet, and rain, to leave their little children, even nursing babes, at the nurseries established by charity in that city, to be cared for until the same mothers call for them after a hard day's work, at 7 or 8 o'clock at night, to bring them home to their miserable lodgings! If exclusively American manufacture means this Philadelphia kind of "protection to American women," I am not in favor of taxing fifty-five millions of people for the benefit of their employers, who are living in luxurious splendor on the 40 or 50 per cent. profit on capital which high tariff makes possible.

I want to try a system of production that will give different results. I want to throw open the market of the world for America, so that Americans can exchange the surplus of the bounties with which nature has endowed them for the bounties of other climes. I want something more cheering than the gentleman's [Mr. KELLEY'S] "dismal science," something more Christian, something more humane, something not so utterly and terribly selfish. I believe in commerce and progress, not in exclusion, stagnation, and starvation! [Applause.]

I will append to my remarks, for the information of the gentleman from Pennsylvania, a statement furnished me by a lady who supports herself by daily toil. It is in regard to the conditions in which women who have to labor for a living are placed in Philadelphia—that high-tariff city of eminent respectability and sweet-sounding sanctity.

THE CONDITION OF LABOR IN PHILADELPHIA UNDER PROTECTIVE TARIFFS.

The statement referred to is made by a lady who resides in Philadelphia. It describes the operation of the *Crêche* or public nursery and kindergarten system established in that city for the care of the children of such women during the hours of daily labor.

This lady belongs to one of the most respectable families of Philadelphia. She is an active worker herself in this truly benevolent system of aid to labor. I am not permitted to use her name, but my other friend from Pennsylvania [Mr. RANDALL] knows her family well; indeed, she is a resident of his district. Her father was at one time one of the largest ship-owners of Philadelphia. In his lifetime he was a good Democrat, and a constituent of the gentleman [Mr. RANDALL].

INFANTS IN THE MILLS.

It will be seen by this statement that notwithstanding high tariff protection on cotton goods, infants are harnessed to mill machinery in that city in operations that are considered dangerous to adult labor! I allude to "spooling," in which the little hands that should have no tasks but play, grow weary at toil and are liable to mutilation. Is not this Herodian protection of the industries? One of the mill-owners is humane enough to desire the invention of a machine that would enable him to dispense with the sacrifice of infant hands to the Moloch of manufacturing greed. Well may he desire this. It would be more consonant with his humane feelings and decidedly more advantageous to his pecuniary interests. I do not desire for my country the wealth fostered by such sacrifices of the innocents. Verily I say unto you, "It is easier for a camel to pass through the eye of a needle than for [such] a rich man to enter the kingdom of heaven."

That enterprise which depends for its success upon the work of children whose palates have not yet lost the flavor of their mother's milk is a blot upon our boasted progress and a crime against humanity. Civilization does not demand the sacrifice of the human family upon the altar of greed, nor does it allow that man is created as a part of the machinery of commerce.

Such enterprises must be fostered by acts of Congress in order to enable them to compete with the pauper labor of Europe, say those who oppose tariff reform. How do the employers fare? Is the wolf at their door?

THE ANNUAL INCREMENT OF WEALTH.

Mr. Chairman, the development of our industrial resources has added, year after year, millions to our aggregate wealth. Who are the beneficiaries? I will show you that the producers of this wealth—the la-

boring classes—are not the beneficiaries. Their possessions are not accumulating. Is this condition of labor one that the lover of his country can contemplate without apprehension for its welfare? To such an one, will not the lines of Goldsmith seem prophetic?

Ill fares the land, to hast'ning ills a prey,
Where wealth accumulates and men decay.

I will give you some statistics and calculations in regard to the accumulation of our wealth that has been going on these many years.

All wealth comes from labor. In the distribution of our annual increment of wealth, the owners of 253,852 manufacturing establishments got of this increment for the last census year, $1,024,801,847!

The report for the last census year, 1880, states the assessed valuation of all the property in the United States as follows:

Real property	$13,036,766,925
Personal property	3,866,226,618
Total assessed valuation	16,902,993,543

The State, Territorial, county, city, and all other local taxation levied on this property, as stated in the same report, amounted to $302,200,694. This levy was at the rate of a fraction less than 1.80 per cent. (1.79) on the owners of the property. Do not the owners regard this small tax as a burden—an onerous burden? How would a proposition to double the rate of this levy be received by the tax-payers? How would they receive a proposition to triplicate it? Double the rate would be $604,401,388, triplicated the rate would be $906,602,082.

OPERATION OF THE TARIFF LAWS.

Would there not be a terrible outcry against such an increase of taxation? If the purpose of the triplicated increase was to grant two-thirds of the proceeds to the manufacturers with a view of protecting the wages of their employés from foreign labor competition, would the tax-payers consent to such taxation? Would they consent, if the manufacturers were to pocket the two-thirds instead of paying it to their employés? Of course they would not consent to such an increase of taxation. Yet, in effect, this is the operation of the tariff laws. Consumers, including of course all classes of labor, occupy houses of some sort on which a property tax is levied, and this tax is included in the rents. If there are no tenants, the owners pay the tax. The bulk of State and local taxes accrues on realty.

The manufacturers of the United States had in 1880 capital employed in their business to the amount of $2,790,272,606. The gross return to that capital, as stated in the last census report, after deducting the cost of all materials used and all wages and salaries paid, amounted to $1,024,801,847!

TARIFF PROFITS AND LOCAL TAXES.

"What relation have these profits to State, Territorial, county, and municipal taxation?" some gentleman may ask. I will show that there is a relation—a very striking one, too. If three times the sum of these taxes were assessed to the people, the amount levied would be $906,602,082. This levy would fall short of the sum of the manufacturers' profits in 1880, exactly $118,199,765. The latter amount would give a return of over 4 per cent. to the capital employed in manufactures that year.

In the address I delivered before this House on the 20th of March last, I gave official figures from the census report of 1880 which proved that on the average our manufacturers' capital got a return of between 36 and 37 per cent. Was not other capital that same year eagerly seeking investment in the public debt for 3 or 3½ per cent. interest? The profit accrued to the capital of the manufacturers yielded a sum equal to 6 per cent. of the assessed value of all the real and personal property in the United States! The amount of profits to manufacturers' capital reported for the last census year would have paid all the State, Territorial, county, city, and local taxes three times over that year, and still have left a surplus that would have given a return of over 4 per cent. to their capital!

When owners of inert capital are willing to pay a premium for investments in 3 per cent. bonds of the United States, is not 6 per cent. a fair return to active capital? Six per cent. profit in 1880 would have given to the manufacturers' capital $167,416,356, and have saved the consumers of their products $857,385,491. Out of this saving the latter could have paid all the State, Territorial, county, and municipal taxes levied that year and still have in bank to their credit the vast sum of $555,184,797!

EARNINGS STOLEN FROM LABOR.

Suppose we figure the return to the capital of the manufacturers at 10 per cent.—and is not this rate ample?—what would have been the result to consumers for the last census year?—A saving of $745,774,587—a sum that would have paid all the State and local taxes named, and still have left to the credit of the consumers $443,573,893! The latter sum saved annually for six years and invested in United States 3 per cent. bonds would amount to $2,861,051,610—a sum $70,779,004 in excess of the total capital invested in 1880 in the manufacturing industries of the United States. This six years' savings would pay off all State, Territorial, county, municipal and other local debts, and still leave unexpended $1,804,645,402! This six years' savings would exceed by $247,445,346 all the paid-up capital of all the railroad companies in the United States in 1880! Six years more of such savings would pay off all the bonded and all the unfunded debt of these railroad companies, as reported in 1880, and leave an unexpended balance of $48,935,314!

These figures show that if the labor of the country got the benefit which in the spirit and theory of tariff protection it has a right to get, it would soon be able to pay off all the debt referred to, buy out all the railroad companies, and still have an enormous surplus fund of its own. We Americans do things on a grand scale. We tax our consumers and rob our mass of producers in a ratio proportionate to the grandeur of our empire and the immensity of our resources!

The total amount of wages (including salaries of officers and clerks) paid in 1880 in these industries was $947,953,795. On a 6 per cent. return to the capital invested, the manufacturers could have paid in 1880 to their employés 90.44 per cent. in excess of the wages paid that year; and on a 10 per cent return to the capital they could have paid their employés 78.62 per cent. in excess of the wages paid that year.

The foregoing calculations show what consumers have to pay our manufacturers in excess of just and reasonable profits, on the theory of protecting the laborers employed in American manufacturing industries from competition with the "pauper labor of Europe." The manufacturers could have paid from the returns accrued to their capital in 1880 all the State, Territorial, county, and municipal taxes and 46.79 per cent. more wages to their employés than they did, and still have a return of 10 per cent. on the capital employed in their business!

It will not do to say that the incidental expenses of manufacture, such as insurance, repairs, and interest, offset to any considerable extent the profits of the manufacturers. Few if any of the large corporate establishments are in need of borrowed money. These make the largest profits and they can get money at less than half the rates that farmers have to pay. There is less risk in lending to the manufacturers; their profits are secured by act of Congress.

THE AVERAGE WAGES.

I showed in a former speech at this session of Congress that the average wages paid in the manufacturing industries of the United States was about $1.16 a day. It is said that the year covered by the census reports from which I made my calculations was exceptionally prosperous. Admitting this, it follows that $1.16 a day is exceptionally prosperous wages in the factories. It may be objected that this rate includes the wages of women and children. So it does, but it also includes the salaries of presidents, directors, superintendents, clerks, and foremen, and the highest wages paid to the most skilled workmen. Including these payments, and allowing the 713,560 women and children who worked in the factories during the census year $3 a week each, the average wages paid to the able-bodied males would not exceed $1.37 a day. What would the rate be with the salaries of the officials and clerks deducted? Deduct from the wages the recoupments of tariff profits and what would be the purchasing value of such wages? I challenge a fair inquiry on the wages question. It is on the sham pleading of protecting wages that all the high-tariff arguments are based. Labor is deceived on the false issue made by such pleadings.

SOME FIGURES FOR THE LABORERS.

In the many years of my public service I have often attempted to explain the operation of our tariffs to those most affected by them. I have often endeavored to make the wrongs of the system clear to the comprehension of those most interested. I mean the workingmen.

The laboring man has for his capital, brawn and brain. He draws upon both. His earnings should be an equivalent to the demands of a condition of respectable citizenship. Take the case of a workingman in this country. Suppose he earns $15 per week. That sum is above the average wages of a first-class artisan. It would give him $780 for a year of three hundred and thirteen working days. Now the problem in which the respectable workingman is most interested, is how to live on an income of that amount. Suppose he has a wife and four children. It would be impossible on such an income to maintain a family, even with strict economy, in meager comfort, without approximating closely to the following expenditure:

ANNUAL EXPENSES OF AN ECONOMICAL FAMILY.

House rent, $10 per month	$120 00
Fuel—	
Coal, 5 tons, $6.50 per ton	32 50
Wood, 3 cords, $6 per cord	18 00
Clothing and shoe bill	100 00
Milk and groceries, $5 per week	260 00
Butcher, $2 per week	104 00
Doctor's bill, say $16	16 00
School books, three children	10 00
Newspapers, two weeklies	4 00
Books and magazines	6 00
Amusements for whole family	10 00
Society dues, including life insurance	25 00
Possible days of lost time	25 00
	730 00
Balance in his favor	50 00
	780 00

This expenditure does not provide for such luxuries as fruit, fresh vegetables, and fish. Without these it leaves a balance of $50 at the end of the year for a rainy day. If such a workman should even mod-

erately use tobacco and spirits, say at an outlay of 12 cents a day, it has been computed, by one of his class, that at the end of the year he would have only $5.70 on the credit side of his ledger. But I have taken a case which is not the minimum of the workingman's wages. A man at $1.50 per diem (and this is not the minimum rate), with steady employment for the working days of the year, and with a wife and three children to support, would, at a proportional expenditure, be in debt $11.50 at the end of the year.

In these calculations you will find whence comes the spirit of unrest, whence come the strikes. Here you can see the skeleton in our household—the skeleton Want. His bony finger points at your feasts like that of the Egyptians in the days of the Ptolemies!

TARIFF EXACTIONS.

The tariff exactions enable Dives to clothe himself in purple and fine linen, and to fare sumptuously every day, while they compel the workingman to sit at the palace gate. Here you have the *fons et origo* of the "labor troubles."

A workingman of New York advises me that his wages have been $7.50 per week. The ordinary expenses, even if he were a boarder, counting two suits of clothes a year, without books, newspapers, or amusements—simply looking to his clothing, board, lodging, and washing, would leave him in debt every week at such wages.

If such cases do not come every day to the notice and conscience of men who are keen to foster "business interests," it may not be out of place here to give in detail some of the onerous tariff duties which press so heavily on the industrious poor—tariffs which we hope to remove by liberal legislation. It is well known that many seamstresses are employed in making clothing. For coarse trousers the regular pay is 7 cents a pair. They make ten pairs per day of twelve hours. Are they not very illy paid for their labor? If any one should be relieved by legislation should it not be workers of this class? How are they taxed on the articles they consume in their work? Their very needles are taxed 25 per cent., and their thread 80 per cent., their bees-wax 20 per cent., and their scissors 25 per cent., their buttons 25 per cent., and their pins 30 per cent. I am told that these poor women are compelled to provide their own thread, needles, thimbles, and other implements. Are we to refuse them relief?

Take the ordinary business of writing a letter, practiced by every one. With a large surplus of over $100,000,000, we have such minute exactions as a tax of 25 per cent. on paper and envelopes, 30 on ink, 60 on ink-stands, 54 on pencils, 20 on mucilage, 39 on steel pens, and 30 on pen-holders. We will not allow our paper manufacturers to have free the materials which enter into the manufacture of these articles. Does not this illustrate the wide-spread mischief of maintaining heavy duties on articles of every day consumption?

THE ASSESSMENT ON HOMES.

I would like, Mr. Chairman, to see the man who is a representative of the poor and working population, go forth and plead against the reduction of war taxes and for the retention of the fast-increasing and corrupting surplus. To take this stand he would be compelled to plead for a tax on the necessaries of life. He would have to advocate the taxation of woolen clothing before a jury composed of both manufacturers and consumers; and for whose benefit? The benefit of a handful of sheep-raisers?

The people of this country are coming to know the difference between a tariff for revenue and the tariff that despoils them. The farmers who have to pay a heavy tax on blankets and window-glass will not much longer be inquiring the cost of their shelter, their sunlight, and other comforts.

I know that the taxes on the various articles which enable a family to live in comfort may seem small in detail, when applied to our population individually. You may say that with our 55,000,000 of people it will cost them, under the tariff for taxes evenly distributed, only 7 cents per capita on seeds for breadstuffs and rice, 11 cents on chemicals, about 23 cents on cotton goods, about 7 cents on earthen, stone, and china ware, 14 cents on flax manufactures, 5 cents on hemp, 30 cents on iron and steel, 7 cents on leather, 13½ cents on metals and manufactures of metals, 2½ cents on paper, 36 cents on silk, more than 5 cents on tobacco, more than 3 cents on wood, about 60 cents on wool, and, what is most monstrous of all, 85½ cents on sugar and molasses!

These in detail may not seem much; but when we think of the 3,000 tariff articles ramifying through all the various wants of the people, the assessment is enormous.

ZANTE CURRANTS—AS AN ILLUSTRATION.

Allow me for one moment to bring to your attention one little item which may attract the notice of heads of families. Zante currants are well known to commerce. They are produced only in Greece. They can not be grown elsewhere. We import them into this country. The Greek Government is desirous of having the duties we levy on this article reduced, as currants are the only important modern Greek production that we import. Experience has shown that with each reduction of duty on Zante currants the revenue therefrom has increased. We could easily abolish this duty. It brings in little revenue. From 1865 to 1869, when the duty was 5 cents per pound, the importation was on an average of 2,000 tons yearly. This quantity gave a revenue of about $200,000. After that time the duty was reduced to 2½ cents per pound, and in 1871 the importation increased to 5,000 tons, giving a revenue of $250,000. In that year the duty was reduced to 1 cent per pound, and the quantity imported in 1882 was nearly 14,000 tons, giving a revenue of about $278,000. The duty might readily be reduced to half a cent or one-tenth of a cent per pound. But, on the principle of a free breakfast and dinner table for the working classes, the duty might as well be abolished. To certain classes in our country, currants are useful, being employed to make their bread more palatable, and to make a refreshing drink for the sick.

CLASSIC RECIPROCITY.

The Greeks think that a reduction of the duty would do them great good. Why not humor them? It will cost us little if anything—it would only be reciprocity. They have, on recent representations, admitted American pork. The national swine now grunts the Doric of New Atlantis where Homer sang, and Sappho loved not wisely but too well. Our lard is admitted to compete with the olive of the Academy of Plato. The land of Pericles is the asylum for the noble animal which the Teuton rejects with bristling wrath. The Greeks have taken off their tariff on our sewing-machines and agricultural implements. All these American products go into Greece free of duty now. The Greeks offer to give us a larger interchange if one can be found.

But of what use is all this tender of reciprocity? Do gentlemen fear the Greeks bearing gifts? They give nothing except in mutuality. We must raise more revenue out of these little currants from the classic land, and thereby make the cost of living dearer to our workingman.

EXPATRIATED TUBERS.

By a parity of reasoning, we are in such need of surplus revenues that we have a tax of 15 cents a bushel on potatoes. What for? To enact class legislation against the Irish who have come here? Is not the potato an original native American—racy of the soil? Shall we expatriate its descendants, merely because of accidental birth? Shall we, semi-Celts, submit to a tariff on the tuber that puts the iron in our blood? Let the gentleman who, in part, represents Chicago answer this question when he makes his next philippic against the British lion.

I turn for more comfort on this question to another gentleman from Illinois [Mr. MORRISON], one who has worked laboriously and wisely to alleviate the burdens of the people and relieve our overflowing Treasury. He brings the tariff exactions home to us by such illustrations and generalizations as this:

> On sugar, an essential article of food in every home, we pay 50 per cent. That is to say, whenever the earning of three days' labor are used to buy sugar one day of the three goes to the Government for taxes or to the planter for bounty. And this is not the most grievous of these burdens. They are continued, while the Treasury, already full, lures the avaricious—invites the venal and corrupt. All talk of administrative reform which ignores these conditions but illy conceals the bad purposes of those who would continue existing abuses. The reduction or removal of unnecessary taxes lies at the bottom of all reform.

FREE-TRADERS AND SLAVE-TRADERS.

Whether we take the *minutiæ* of the tariff bounties or the gross results, as illustrated by our production and taxation, there is the same lack of economy, and the same injustice and tyranny. To generalize: Labor is about the only un-*tariffed* thing that is permitted to pass our custom-house! American salt, scissors, silks and such, are coddled as bountifully as the tariff conspirators could desire; but the makers of salt, scissors, silks, and such—the laborers—get not one scintilla of protection. If the milk of Congressional kindness must be fed out in the form of protection pap, our workingmen are ready to ask, nay, to clamor, that it be fed to live men and women instead of to soulless corporations. They want it to nourish laborers who can appreciate it. Of what importance is the dead matter that is forbidden to pass the custom-house freely? It can not distinguish between cuffs and courtesies, but the laboring man can. Suppose it were proposed to levy a tax of 50 cents per pound, live net weight, on every immigrant that landed here, what indignation and horror would be exhibited! This proposition would make the high-tariff men show their hands; it would bring their "protection to home labor" very close to their pockets. Do not be surprised when the workingmen hoist their banner for free men and free matter. They will then draw the line between freedom and the slavery that forbids labor to have its own. When I am called a "free trader" because I would lighten the burdens of labor, I am proud of the title. The man who opposes me must be a slave-trader!

NO ONE ASKS FOR REFORM.

In the delivery of his speech the other day (April 16) in favor of high protective tariffs, the gentleman from Massachusetts [Mr. RUSSELL] asked us, with the utmost confidence of putting a poser, in respect to the reduction of tariffs:

> Has any interest or any section of the country asked for the reintroduction of this disturbing element? Is there any appeal by petition or otherwise for the reopening of the revision of our tariff laws?

The gentleman, triumphantly answering his own interrogatory, said:

> There is but one response to this question: No!

I must assume that the gentleman has not examined the economical side of the question in the light of the best attainable data, in the light of the special investigations of the census officials.

POLICY AND STATESMANSHIP.

I would remind the gentleman from Massachusetts [Mr. RUSSELL] that there is a demand for tariff reform—the demand of conscience, of good policy, of statesmanship. Will he say that these do not demand the curtailment of taxation that yields the enormous profits I have shown by the official figures? I would remind him, and other gentlemen on this floor, that the Democratic party is, in virtue of its majority in this House and of the sentiment that made that majority, pledged to a substantial tariff reform.

THE ISSUE BEFORE THE PEOPLE.

As far back as 1872, the most lame and impotent of our party platforms had these words:

There is in our midst honest but irreconcilable differences of opinion with regard to the respective systems of protection and free trade. We remit the discussion of the subject to the people in their Congressional districts, and the decision of Congress thereon wholly free from executive interference or dictation.

The sentiment of the people is not yet for absolute free trade; no one proposes such a measure now. Some dream of it, by gradual steps. But few intelligent men deny the soundness of the doctrines of frugal administration, or that we must soon come to such measure of reform as will reduce our corrupting surplus.

Some Democratic members who accepted this plank of their party platform, and who now array themselves with the opposition to reform, fail to remember that the people of the Congressional districts have submitted the issue of reform to Congress. We have a very large majority in this House. The policy of our present organization is for tariff reform. Shall that policy be now ignored? We are asked, "Where are the petitions for reform?" My answer to this is, petitions are for small grievances—for individuals. The ballot is the mode of redress for all-pervading national evils. Look around. The ballots have been cast in the districts, and behold the result—the great Democratic majority of this House! Must there be unanimity in every Democratic district before Democrats in Congress can venture on reform? The question of reform is forced upon us as a party issue. In such an issue must the few control? Is that party organization?

REDUCTION OF TAXES A PARTY ISSUE.

What a day for the country when reduction of unnecessary and most hurtful taxation is made a party issue! What a day for the country when laws that secure such profits to manufacturers such wages to labor as those I have shown, find so many unblushing advocates for their maintenance on the statutes! These laws are the foundation and chief corner-stone of monopoly. These laws secured the vast wealth to the few that has made great monopolies possible in this country. High tariffs are the tares that have grown and fructified into rank monopoly in the fields of industry. They have sapped the soil, exhausted every honest industry, and destroyed the harvests of labor. This has been going on for more than twenty years. This explains the vast accumulations which have enabled the few to monopolize all the great corporate enterprises that hang, like leeches, on the whole body-politic of the nation. Here we have the true origin of monopoly.

THE TRUE MOTTO OF INDUSTRY.

How is labor to disenthral itself? Is it by the maintenance of your tariffs? Is it not by the eradication of the cause, rather than by fostering it, that a natural distribution of the results of labor is to be reached? The revenue derived directly from the tariffs hurts nobody. It is the indirect revenue that results to corporate capital that hurts. It is the vast accumulations which come to the few that is the evil. This evil is worse, far worse, than national poverty. In the latter condition there is equality of opportunity, equality of burdens. The greatest good to all is the true motto of industry as well as of democracy.

RECUPERATION FROM THE SOIL.

The South at the close of the rebellion was stripped of everything except its natural resources. Where is she to-day? Does any industrious man or woman suffer there for any of the necessaries of life? Have not all the people of that section abundant food, abundant shelter? Is not the ownership of a home within the reach of the humblest laborer there without any extraordinary effort? Is this the result of your tariffs? No, Mr. Chairman, it is in spite of them.

Strip the New England and our other manufacturing States, devastate them as the South was devastated until they are absolutely deprived of all wealth, and property in every form except their natural resources, and where would they stand in the scale of wealth twenty years hence? Is it not true that all power of industrial recuperation is vested in the soil? Surely we owe a just equality for industrial progress to those who develop the resources of the soil.

A QUESTION OF RIGHT.

By what right do you decree that the great mass of our producers shall be deprived of a fair proportion of the annual increment of national wealth? By what right do you decree that the farmers of the South and West shall be required to pay on every tariff-protected article that they use in their farming operations and households a price far beyond fair value? By what right do you decree that the owners of our quarter million factories shall take annually from the consumers $422,574,838 in excess of a return of 21.5 per cent. to manufacturing capital? This excess was equal to 2½ per cent. of the whole assessed wealth of the nation in 1880! It is forbidden in Scripture to "seethe a kid in its mother's milk." Who can deny that these exactions have capitalized the transportation corporations that are now bleeding our producers at every pore?

Mr. Chairman, a bill providing for a very small reduction in these exactions is now under discussion.

THE DUTY OF CONGRESS.

It is said again and again that no one asks for relief from these exactions. It is also said that the maintenance of our manufactories depends on the continuance of these exactions. The first objection, even if true—which it is not—is unworthy of a moment's consideration. Are we not here to legislate for the best interests of the people—the whole people? Is not the Congress presumed to be inspired with the will and ability to do this? The other objection is based on the assumption that Congress is not informed of the true condition of our manufactures and of the labor employed in them. We are abundantly informed that this labor can not by any possibility be in a worse condition than it is in and has been in for years. When women and little children are employed by the hundreds and thousands from ten to twelve hours a day in the production of textile fabrics in our factories, can labor be in a worse condition? When you read the testimony taken before the Senate Committee on Education and Labor, in an investigation that has only skimmed the surface of a few manufacturing centers, can any of you have the effrontery to rise in this House and talk of protecting the wages of American labor by tariff laws? I will read a few extracts from the evidence of two most intelligent witnesses. Those of you who come from the manufacturing districts need not such testimony to open your eyes to the appalling degradation in which textile and other tariff "protected" labor is placed.

CONDITION OF OUR IRON-WORKERS.

I find from the testimony of Mr. Robert D. Layton in regard to the iron industry at Pittsburgh, Pa., that the following facts are proved:

First. That skilled workers earn wages on an average of $2 a day for three hundred days in the year.

Second. That the other laborers in this industry earn about $300 per annum.

Third. (I quote from the report.) That—

Our iron-masters live, in many instances—there may be a few exceptions where their aspirations do not find vent in that direction, but as a general thing, they live in very elegant palatial residences, they have carriages and horses, and fine grounds, and servants, and everything that a person would suppose would go to make life enjoyable.

Fourth. (Speaking of the dwellings of these skilled and unskilled laborers.) That—

In Pittsburgh, for example, on the south side, where our mills are numerous, you will find row after row of houses that are single tenements, each composed of three rooms and a basement kitchen. Again, there are other buildings, large structures in which rooms are rented, but those houses, as a general thing, are very close to the works. I know of one instance where I called upon a friend at his house in the summer time when the doors were open, and we had to talk very loud to be heard on account of the noise of the mills. In such a situation as that sickness in the family is terrible. They [the houses] are in one continuous line, all joined together, just a partition separating them. They are simply one long house divided by partitions; divided into apartments; but each has an independent entrance of its own. * * * Here and there there may be an alley-way between the houses, but there are not many such breaks. This description is true of all that part of the city down about our place. It is more densely populated on the flat than up on the hill. * * * In the other parts of the city they run in blocks; the houses are larger, and in many instances each house has an alley-way by which you can take your coal, or anything else that you wish, around to the back. In the more densely populated portion the ashes and everything that has to be carried out must go through the house.

I can name you other portions of our city where there will be five or six families in one house, some in the cellar, some on the first, second, third, and fourth floors—as high up as the house goes.

In reply to the question—

What grounds have they around them, what shade, what grass, what opportunities for the children of the family to have out-door recreation?

The answer was—

If there is any grass on the south side of Pittsburgh attached to a tenement house it is in a little box sitting on the window-sill. I do not know of any existing on the earth. They would have to take up a brick to sow the grass, if they had any. I know numbers of houses where the back yard of each is not more than eight feet by ten, and that is allowing more territory than many of the landlords do. * * * The children are compelled to play on the streets. They have no other place. For out-door exercise they take the pavement in the middle of the street. What little ball-playing they indulge in is done on the streets at the risk of breaking windows and being stopped summarily by the police.

In reply to the questions—

What opportunities have men who live in these tenement-houses and their families for recreation on Sundays and holidays? What resorts have they? Where do they go to? Do they stay in their houses or do they go out into the country or into the parks?

The answers were—

If they take the street-cars and go to the limits of the city—our lines generally run to the suburbs—they can go out into the country. Usually they are tired and they stay at home. They may walk around sometimes on Sunday to see a friend, or they may go to church, but if they don't do that they stay at home and rest. The public libraries are closed on Sunday and our poor men can not get into them to read or study.

Does this evidence show a pleasing result to labor in our best tariff-protected industry?

CONDITION OF OUR COAL-MINERS.

Let us glance at the condition of the coal-miners in Pennsylvania. I will cull a few extracts from the testimony—

In some mines they (the miners) work where the vein is seven or eight or nine feet thick, and the work there is comparatively comfortable; but where it is only three and one-half or four feet thick it is very uncomfortable. Then they are constantly in danger; never out of danger; they do not know at what time a piece of "horse-flag" may fall and crush them to death; it falls when it is least expected. If it were expected, preparations could be made to avoid the danger in many instances, but that can not be done. The miner goes to work in the morning just as the sun is coming up above the horizon, and he comes out of the mine in the evening just as it is going down, so that his life is pretty nearly all night. The work is very hard and exhausting. The men have no advantages of society, or very little. Coal-mines are not situated in busy centers; they are out in isolated places. The operator does not live in the midst of the mines in ninety-nine cases out of one hundred. The men mingle only with their fellows in their own little villages and communities. In the mines they may work two together. That is pretty nearly the extent of the miner's social habits. In winter it is night to him all the time. From the shortening of the days to the lengthening of them he seldom sees the sun; it is night all the time, and the only company he has is that of the other miners engaged with him in his work. * * * The miner, unlike other mechanics, except carpenters and pattern-makers, is required to furnish his own tools and buy his own oil, powder, and lamps.

In reply to the question—

I had the idea that men were seduced into that sort of employment by extraordinarily remunerative wages?

The answer was—

The average miner's earnings, as I think will be shown to you, do not amount to more than $350 a year. That is the seductive compensation given to the miner for spending the greater portion of his life in utter darkness. In Pennsylvania the miners and other citizens had a law enacted at the last session of our General Assembly prohibiting these truck-stores of which I have been speaking—"pluck-me" stores, as the operatives call them; they are known universally by that name in the mining regions—we had a law passed, I say, to prohibit such stores, but our able constitutional lawyers, I believe, found holes in it, and the institutions continue. We want a law making it a misdemeanor for an operator to say to his men that if they do not deal in his store he will discharge them. We want such a law passed, with a penalty behind it, so that a man violating the law can be prosecuted and put in prison—a law which will prevent the operator from compelling his workmen to accede to his demands or else lose their work and starve to death.

FRAUDS AND OPPRESSIONS ON LABOR.

The "pluck-me" stores are owned by the employers of the miners. In respect to the chances of competition by other stores, the evidence is—

I never knew of anything of that kind being attempted, for the simple reason that if they were built the operatives could not deal with them; they would be compelled to deal at the "pluck-me" store or else to quit the place. That is well understood.

The evidence is to the effect that the operators of the mines compel the miners to purchase all their provisions, clothing, and other articles at these "pluck-me" stores, at an excess cost of from 10 to 25 per cent. above ordinary retail prices. The quality of the goods is seldom equal to those of lower price elsewhere. Orders on these stores are the legal-tenders paid for wages. Hence the desire for the enactment of the law referred to. What care the employers about the clause in the Constitution that no State "shall make anything but gold and silver coin a tender in payment of debts." What have coal-miners to do with constitutional rights? Their tariff-protected rights are only of the "pluck-me" class. Do not the tariff laws hand over all consumers to the "pluck-me" manufacturers—the 25 to 50 percenters?

Not content with the exactions of the "pluck-me" stores, it appears that the miners are cheated in the weighing of the coal they mine, by the use of a "sliding link" on the scales. "Our miners almost universally complain of being cheated in the weight." Shall we put coal on the free-list? Never! The wages of American coal-miners must be protected!

BOYCOTTING BY EMPLOYERS.

"Black-listing" is another grievance of which miners, as well as most other skilled laborers, complain. Those who are active in organizing strikes for living wages are "black-listed," refused employment, and the notice of their names is sent to manufacturers and employers as a mode of protecting our industries from independent men who dare to assert the rights of American citizenship. Here is an extract from the evidence on this point:

The mere fact that the men had joined the Knights of Labor was deemed sufficient reason by the potteries there [East Liverpool, Ohio] and their association to declare the men discharged and to shut down the works until the men would agree to go back to work not as members of any labor organization. We have resisted that action on the part of the employers, believing that as American citizens we have a right to join an association for our own defense, our own advancement; we have resented that action of theirs, and the struggle has been a bitter one and is continuing yet. We are slowly gaining a few points, but the struggle, as I have said, has been long and bitter. That probably is the latest and most prominent issue that we have had with the employers in which a large number of men have been engaged, but we have thousands of isolated cases of individuals who have been victimized and driven from their homes and early associations simply because of the fact that they have been members of labor organizations. In many cases no other cause was ever assigned, even after they had done everything possible to discover why they were discharged. And not only this, but in many cases the employers, the coal operators especially, have banded themselves together and put men on what they call the "black-list" merely for being members of labor organizations—not the Knights of Labor alone—but other organizations, and have prevented them from going to work at their homes or anywhere within a reasonable distance of their works. I have known one shovel manufacturer to keep two sober, industrious men, with families, from getting work for nearly two years. He followed them from the city of Pittsburgh clear down to Ames's, in Massachusetts, and all the way back again.

A PICTURE FOR THE PROTECTIONIST.

The following extracts show how the tariff-protected coal-miners live:

Q. Can you tell us anything in regard to the physical conditions and surroundings of the working people, their food, their clothing, and whatever occurs to you pertaining to their mode of living?

A. There are differences of course in those respects, depending upon the amount of wages paid. The daily laborer perhaps lives more poorly than any of the others, has the least house-room and the most illy-ventilated rooms, the least means of educating his children, and the least opportunity for society and other advantages. Then comes the coal-miner, who receives more wages, but who generally lives in a little two-room house. These houses are built in long rows, not painted, with no grounds and no fences about the houses, and the men deal in the companies' stores, who tax them about all they can earn for their goods. * * * The kitchen furniture consists generally of a stove and some dishes, a few chairs and a table. They have no carpets on the floors so far as I have seen. I am speaking now about the lower parts of the houses; I don't know about upstairs. * * * In many instances there are no cellars under the houses. If there were cellars the miners would be enabled to lay in a stock of supplies.

Q. Of what material are the houses usually built?

A. They are always frame houses. I can not recall an instance of one being built of any other material than wood.

Q. Are they plastered inside?

A. In some instances they are and in others they are not.

Q. Is the kitchen also the sitting-room of the family?

A. Yes, sir; it is the sitting-room, kitchen, and parlor.

Q. And library?

A. And library. Sometimes they have some little pictures on the walls.

Q. What kind of pictures?

A. Oh, some little chromos or prints.

Q. Does the miner usually have a newspaper?

A. Yes, sir; wherever he can afford it.

Q. He is usually an intelligent man?

A. Yes; he generally can read.

Q. How are they supplied as to clothing?

A. Well, it is absolutely necessary for a miner to have two suits. The one that he wears when working in the mine is of the poorest quality, and usually very black and dirty, and then he has an ordinary suit of clothes besides.

Q. How are his wife and children clothed?

A. They are clad in the plainest possible garments, as a rule.

Q. What wages does the miner get generally?

A. The wages may average $2 or $2.50 a day; but, dealing in these truck-stores, when the end of the month comes around he generally has very little left. I have known some of them to receive in actual money at the end of the month 35 cents after the rent was taken out.

Q. Are they charged rent for these houses?

A. Oh, yes.

Q. What amount of rent?

A. All the way from $4 up to $8 or $9 a month. Some of these houses have more than two rooms, but in the majority of cases they have only two rooms.

Q. How are those people situated as to school privileges?

A. Usually the miner in the soft-coal regions, and I think in our hard-coal regions too, puts his boys to work in the mine very young. I have observed boys of from 8 to 14 years of age working in the hard-coal region, and in the soft-coal mines boys of 10 or 12 years of age are able to assist their parents materially in the mine, and unless the miner has a large number of them his boys are usually employed in that way helping their father. If there are only one or two boys in the family the father generally takes them into the mine with him. They go to school some, but their means of education is very limited.

Q. Is that because the father prefers that the boys should assist him in his work or because of a lack of school privileges?

A. The school privileges are generally good enough, but absolute necessity compels the father in many instances to take the child into the mine with him to assist in winning bread for the family.

Q. Do any of those miners ever accumulate any money?

A. There are some instances of that, exceptional cases—as there are in almost every occupation—cases where miners have accumulated a little funds.

Q. What are the personal habits of the miner generally as to economy or a disposition to save his wages?

A. He gets so very little to save from that he rarely saves anything. His desire may be to economize, but his opportunities for it are so poor that he seldom is able to accumulate any savings, let his desire for economy be ever so great.

I have given you these few extracts from the testimony of Mr. Robert D. Layton, of Pittsburgh, Pa., before the Senate Committee on Education and Labor. I would ask the advocates of tariff to read the testimony of this gentleman before they talk to us of protecting the wages of American labor by act of Congress.

NEW ENGLAND FACTORY LABOR.

Bad as is the condition of the iron-workers and coal-miners of Pennsylvania, it is infinitely superior to the condition of the operatives in the textile factories of New England. Had I time I would quote at length from the testimony of Mr. Frank K. Foster, of Massachusetts, before the same committee. But as nothing short of a full reading of this testimony would do justice to the subject, I, refer the inquirers after truth, the honest friends of American labor, to the report of the evidence, pages 41 to 93. If the condition of labor, male and female, adult, youth, and infant, is any worse in the English factories than in those of Massachusetts, I have yet to learn of it.

I want to hear no more hypocritical advocacy for high-tariff wages from the robbers of our laborers, the persecutors of manhood, the tyrants of working-women, the blasters of youth, the destroyers of infants. No honest, intelligent man can read this testimony and still say that the people should be required to contribute over a billion dollars a year to swell the vast revenue of the employers of this labor. Yet this will continue to be the result unless you reduce your tariff. Such will be the condition of our labor, and daily getting worse, until you abolish all protective tariffs.

NO SUDDEN RADICAL REFORM.

There is absolutely no sufficient remedy for this condition of labor but the repeal of the law that has put factory and mill production on an artificial basis, instead of the natural one of supply and demand. To this we must come soon. No one proposes a sudden radical reform. No one proposes immediate free trade.

Shall the present small advance to reform pass? Shall we take a step toward eradicating the system that is monopolizing the results of all productive labor? Or, shall we aid in concentrating the national wealth

in the hands of the few at the rate of 2½ per cent. per annum? It is said that the proposed reduction must cause a corresponding reduction of wages or else a closing of the factories. Such reduction of wages is impossible simply impossible. As I said in my tariff talk before the House on the 20th of last March, as I often said before, and as every factory hand knows but too well, wages now are and long have been regulated not by rates of tariff, but by competition for employment. I say that wages are now down to the lowest living rates. The present rates afford barely sufficient means to keep the body and soul of the operatives together. What is true of textile production is true of other manufactures. It is true of mining.

Labor organizations and executive and legislative investigations are fast exploding the theory that tariffs protect wages; yet the most interested are the blindest!

TARIFF AND LABOR EMPLOYMENT.

As to the claim that the factories must close if we reduce the tariffs, I reply to this by relating the following anecdote:

In 1881 some English sugar-refiners imagined that they needed protection from French competition. In discussing this matter, Mr. Cross, M. P., in his speech of August 12, 1881, in the House of Commons, pleasantly alluded to the fact that notwithstanding the dismal prospect some members of one great Scotch firm had bought land on the Thames, were spending £150,000, and were going to add to the general depression by producing 70,000 tons a year more of refined sugar.

I heard—

Said he—

something the other day which will illustrate the position of the sugar-refiners. Some six sugar-refiners, I think, from Liverpool called to see an honorable member and met him in the lobby. They told him their dismal story, to which he listened with patience. When they had finished he said: "Well, gentlemen, if you can find me a sugar-refiner who lives in a house of less than £200 a year rent I will support Mr. Ritchie's motion." They sighed, but they went away sorrowful, for they had great possessions. Next day he met two of them in the Royal Academy and asked if they had bought any pictures. "No," they said; "there is nothing worth buying;" but one of the gentlemen * * * before he left town * * * bought a pleasant little house for the modest sum of £37,000. * * * In such cases as these—

Said Mr. Cross—

I do not think much sympathy is needed.

RELATIONS OF LABOR AND CAPITAL.

Our manufacturers, those who come to Congress protesting against tariff reform, seldom live in houses limited to $1,000 rental. The most of them can afford to purchase houses equal in value to that bought by the modest sugar-refiner. Let us give them Mr. Cross's answer. Let us not tax labor for their benefit. Let us put capital and labor on a more equal footing than is possible under high tariffs. Instead of creating or maintaining conflicts between labor and capital, let us declare a common and advantageous equality for them. In this connection we should repeat to our artisans and laborers the words addressed to English labor by Mr. George W. Medley, at Sheffield, on November 8, 1881:

Endeavor, if possible, to master some of the first principles of political economy. Acquaint yourselves, for instance, with the meaning of the word capital. Recognize in capital that portion of wealth which is devoted to reproductive purposes, and that as one of its chief purposes is the payment of wages it should be treated as a friend, to be cultivated and encouraged, not as an enemy, to be plundered or destroyed.

To this advice I would add that no such friendship can exist without fair reciprocity. It can not exist under a tariff system that enables manufacturers to hire artisans and laborers under the law of supply and demand, and at the same time depreciates the purchasing power of the wages prescribed by that law, by adding the tariff rates to everything that labor consumes.

THE PRESS, MONOPOLY, AND LEGISLATION.

Trades-unions and co-operative companies are doing good service in educating English laborers in the economies.

Most of our press and many of our public men are doing exactly the opposite here. The press is largely owned and controlled by monopolist capital, and wealth is becoming, if it is not already, a more powerful element than intellect in American legislative bodies. This tendency must be stopped—stopped short, else there will soon be an end of the Government established by our fathers. This tendency is of such grave import as to demand vigorous and immediate action. I can not remain silent when I see the spirit and genius of our Constitution being crushed to earth by the sordid hand of Mammon. I want a return of the healthful days, when men such as Stephen A. Douglas and Robert J. Walker were the standard-bearers of the people. The Republican party has long since passed into the hands of the plutocracy. Reform is possible only through some other party. Is that the Democratic party? Yes; beyond doubt, I say, if it will arise and gird up its loins and be brave and true to its declared principles, and spurn with contempt every compromise with injustice, any compromise with plutocratic monopoly.

THE "DISMAL SCIENCE" OF EXCLUSION.

The burden of all the speeches delivered by the advocates of high tariffs on the reform bill now pending is—that these are intended for the protection of the American laborer. There is nothing new in any of them except the frank admission of the gentleman from Pennsylvania [Mr. KELLEY], that we need not expect a restoration of commerce, that we must find a home market for all our products in the near future; in short, the "dismal science" of tariffs.

RESULTS OF CIVILIZATION.

It is insisted that the competition of manufacturers will eventually reduce the price of their products. Have we any evidence that this will be the result? You may cite the fact that certain articles, perhaps most articles, are cheaper than they were twenty years ago. This citation is plausible, but it is not proof. Prices are relative things. Things attainable by the laborer a century ago only as rare luxuries are now necessaries of life. If such a condition were not the proper result of civilization, the latter has for the average human being no advantage over barbarism. Indeed barbarism might be best for the race, since it insures general equality of condition.

It is not the price of any one or more articles that affords a criterion. It is by the ability of the wages-earner to obtain the things that he wants that we must measure the results of high tariffs. The laborer must be advancing in comfort. He must advance in independence in proportion to the cheapening of products, else what is the advantage to him of your high tariffs? Has this advancement taken place? On the contrary, the laborer finds himself each day less able to surround himself with the comforts which advancing civilization turns into the necessaries of life.

COMBINATIONS OF MANUFACTURERS.

Our system of manufacture can not be carried on without large capital, sole or aggregate. It is only the few who have such capital. It requires phenomenal efforts, of which few are capable, to become possessed of sufficient capital nowadays to engage in any of the important branches of manufacture. The great eat the small. They are like the fishes of the sea. The great, like "princes, are combined." They know their power to dictate prices. They know that for them combination is lawful, and better than competition. Therefore they do not compete, or they compete only for the purpose of breaking down those who will not combine with them. I cut the following out of an evening newspaper of the 1st instant:

The galvanized-iron manufacturers of the United States, in session at Pittsburgh, Pa., yesterday, formed a national organization. When prices are established, each firm will be compelled to sustain them.

This illustrates the truth of what I am saying. Have not most of our great manufacturing industries formed like organizations? Why, we have our wool and our iron and steel associations. I know not where such associations stop. Hard ware and soft ware and even the fluids are combined. Have we not the distillers' and the brewers' national associations? Are any of these formed with the object of reducing prices in proportion to the cost of production?

Oh! the sham of wages and competition in tariff-protected production! We are no nearer such competition than we were twenty years ago. Look at the protection given to galvanized iron. I turn to "The existing tariff," as reported by Senator MORRILL (Report No. 12, Forty-eighth Congress, first session), and on page 66, section 151*b*, I find the present tariff on sheet-iron to be, according to thickness, from 1.1 cents to 1.5 cents a pound; and it is provided in section 151*c*, following—

That on all such iron, * * * when galvanized or coated with zinc or spelter or other metals, or any alloy of these metals, three-fourths of 1 cent a pound additional.

With a protective tariff at the rate of from $37 to $45 a ton of 2,000 pounds on galvanized iron, we find the manufacturers of this article combining in a "national organization" to establish prices "which each firm will be compelled to sustain." This is a sample among hundreds of the kind of competition that is to be developed under your high protective tariffs! Each firm in your "associated industries" must sustain prescribed prices. To do this they must at stated times suspend work in the mill or factory when there is that industrial result which the gentleman from Pennsylvania [Mr. KELLEY] calls "overproduction"! The plausible way to do this is to give notice of a 5 or 10 per cent. reduction of wages, and the desired result of a "strike" generally follows. This sort of "overproduction" is the natural consequence of a system that enables producers to fix a price on articles which compels the most economical instead of the most generous consumption.

TARIFFS PREVENT COMPETITION.

Is the tariff-reform party, the Democratic party, composed of babes and sucklings in the economies? Are we to be told with everlasting brazen effrontery, that competition in domestic manufactures is the remedy for the greed that inspires the maintenance of high tariffs, when we see so much evidence that every effort is being made to avoid the remedy? The aim of the associations is to maintain high prices and low wages. This they are abundantly able to accomplish while your tariff laws are on the statute-book.

TARIFF-PROTECTED ITALIANS.

Here is another instance of the way that protection works in the State from which the gentleman comes who most urgently advocates high tariffs:

A STRIKE ENDED.

READING, PA., *May* 2.

The four hundred Italian laborers on the new Schuylkill Valley Railroad, who struck for an increase of wages, returned to work to-day. They heard the

contractors had received an offer of three hundred foreign laborers, delivered here free of railroad charges from New York, and this caused a stampede to resume work.

These laborers demanded the outrageous wages of $1.35 a day from this corporation that dictates the price of coal to ten or fifteen millions of people. Who will vote to put coal on the free-list? Must not we protect the American laborer from the pauper labor of Europe?

SOULLESS CORPORATIONS.

The fraud on American labor that is implied in the idea of excluding certain immigrants is most contemptible. The emigrants of some nations are so poor as to be at the mercy of corporate employers when they land here. The supply of labor is in excess of the demand of corporate employers. The latter fix the wages at rates which suit themselves. The tariffs enable them to do this.

EXCLUSION OF CONTRACT LABOR.

The gentleman from Pennsylvania [Mr. KELLEY] insists that coal brought to the surface is not a raw material; hence it must be protected. Is the clay in the brick-yard, the furrow turned by the plow, a manufactured article? He is not opposed to the immigration of raw labor, provided it is not contract labor. Is not the gentleman aware that under our laws no contract for manual labor made by a foreigner in a foreign country can bind that laborer when he lands on our shores? Such contracts are null and void. Does he suppose that our courts would compel the return of such a contract laborer to his own country when they would hold that there was no such contract recognized by our laws? Any excuse to avoid the direct issue—to avoid reform! If you exclude Italian and Hungarian laborers it must be because of their nationality. To do this you know you must abrogate treaties. You have no intention of doing this. This was made apparent in the peculiar argumentation upon the Chinese bill. I assert without fear of contradiction, the Republican party has no such intention. The idea of excluding foreign labor is a delusion and a snare; it is too utterly attenuated to catch a solitary intelligent vote.

RESTRAINT ON IMMIGRATION.

I am in receipt of a letter to-day from a young mechanic who is my constituent. He has been dismissed, along with many others, because his employers went to Castle Garden and hired, at small wages, some thirty immigrants newly arrived. He writes to know if it be fair to "allow the men to come in from abroad and not the matter." By which he means that while the products of foreign labor are prohibited when cheap, the labor that made them is not excluded. This is the very jewel of economic consistency. It is for the tariff advocate to reconcile this inconsistency with his tenets.

If you really desire to exclude these laborers you will no doubt find willing assistants in the King of Italy and the Emperor of Austria, who are by no means anxious to lose any of their "food for powder." Even that kind-hearted monarch, the Emperor of Germany, does not look with favor on the emigration of his subjects to the United States. Her "Gracious Majesty" Victoria would infinitely prefer that British emigration should go to her colonies. And I may be allowed to remind the gentleman from Illinois [Mr. FINERTY] that our good friend Mr. Parnell does not look with favor on the expatriation of the Irish people. Will any member of this House seriously propose a political issue involving the exclusion *bona fide* of foreign labor from our shores? If so, let him now propose it.

SHIPPING INTERESTS.

In answer to what fell from the gentleman from Illinois [Mr. FINERTY] yesterday about our shipping interests, all I have to say is that when that gentleman, representing the Irish element, undertakes to read me or any one a lecture upon protection, he must remember that on my amendment for free ships he gave a vote to pay annually $140,000,000 of freight and fare to the English carrying trade, and not to America. And I want the gentlemen who were so opposed to my free-ship amendment, which is now being discussed in the Senate, and who cut off my other amendment for free materials—I want them to remember that the time is coming, owing to the advancement of economic thought and the better knowledge growing out of new relations in time and in space, when, if we in America can not have the right to buy abroad, we will with a better tariff build ships here. If we can not at once build ships after we have bought them abroad, we can begin, as Germany did, to make ship-yards for the repairing of vessels, which in time will lead to building vessels. Our olden commerce will then come back with the liberality of our exchange. Does the gentleman desire commercial relations between this country and Ireland? If the free-ships amendment becomes a law, there are capitalists in New York ready to invest $10,000,000 in a line of the best and swiftest steamers that can be built, to ply between that city and Valentia in Ireland. Would not free exchange of industrial products be beneficial to both countries? Would the gentleman deny them this advantage on the sentimental ground that these steamers might be built in Belfast, Ireland, where the magnificent steamers of the White Star line were built?

LARGE PRODUCTION AND GENEROUS CONSUMPTION.

Mr. Chairman, advancing civilization, with its thousand increasing wants, demands an industrial system that will foster the largest production and the most generous consumption of commodities.

There is not one article among the millions that constitute our "surplus products" that would not be consumed if people were free to find an exchange market. There is a limit here beyond which you can not go, while you have a tariff that enables producers of one industrial class to fix the price of their commodities when all other producing classes have to accept natural commercial prices. That limit is the ability of consumers to pay artificial, fixed tariff prices. What matters the rate of wages when you exhaust the purse of the laborer? The earnings of each day are barely sufficient for the day. When the stage of overproduction is reached the wages stop, but the necessity for food and clothing and housing continues.

IDLE LABOR IS A TAX.

With increasing wants none can afford to be idle. Every idle laborer is a tax on those employed. The only remedy is to cheapen products, not to stimulate prices. No people are as well able to cheapen products as the Americans. We have a vast area of soil and comparatively sparse population. We have great industry and surpassing inventive genius. Why should our labor want any comfort?

ARTIFICIAL RESTRAINTS OBNOXIOUS TO TRADE.

I regard every invention that enables us to increase our products as a blessing and not as a curse. Under natural laws "overproduction" here would be impossible. You must leave American industry and genius to these laws, the inflexible laws of trade and exchange, which can neither be repealed nor modified by artificial regulations. Permit the American people to act on their own unbounded resources without artificial restraints, and so long as these resources remain adequate in proportion to population, our condition must be in advance of that of all other people who are not equally endowed with natural wealth and physical and mental vigor.

If all abstract reasoning and practical results fail to convince, let us resort as Bastiat did to the parable or fable for instruction. He believed that the social organs would be developed most harmoniously in the grand air of liberty. He likened their restraint to the distortion of the body by rings, chains, hooks, and other artificial methods; and he thus pictured the analogues:

A child had just been born, and a crowd of soothsayers, magicians, and quacks were around it, armed with rings, hooks and bandages. One said: "This child will never smell the perfume of a calumet, unless I stretch his nostrils." Another said: "He will be without the sense of hearing, unless I draw his ears down to his shoulders." A third said: "He will never see the light of the sun, unless I give his eyes an oblique direction." A fourth said: "He will never be upright, unless I bend his legs." A fifth said: "He will not be able to think, unless I press his brain." "Stop!" said the traveler. "Whatever God does, is well done; do not pretend to know more than He; and as He has given organs to this frail creature, allow those organs to develop themselves—to strengthen themselves by exercise, use, experience, and liberty."

Left to itself, I believe our manufacturing industry would soon be on a better basis for labor and a more moral one for capital. We can double the consumption of our products if they are cheapened 25 per cent. We can export largely. If you bring your manufactured products down to natural prices, all other industries will grow in proportion. There must be reciprocity in the prices of all products in order to have reciprocity of exchange. With such reciprocity there can be no overproduction. You must give the farmer a fair exchange for his wheat, corn, beef, and pork, and then he and his household will consume more of your cloths and fabrics. Iron, steel, and all the metals will be more in demand. All products will be more in demand. The only economical problem that would require solution in such a condition is one for which no solution has yet been found, namely, the honest mode by which a man can live without work.

THE HERITAGE OF THE SOIL.

Equality for all is the law of God and the law of nature. It is the law of our national system. In the interest of the workingman I cite your tariffs before that law, and they are condemned, condemned, condemned! Produce, and exchange products. Wages are a measure, a yard-stick, a mere means of exchange. There is no such thing as overproduction under just laws. Produce and exchange, produce and exchange! Let the luxuries of to-day be the common fare of to-morrow. This is civilization, or else civilization is slavery, is worse than barbarism. Cite to me no more contrasts between our wages and foreign wages. The American laborer is a freeman. He has a heritage in the soil. He is a sovereign by right. His condition should be beyond compare! "The laborer is worthy of his hire." Remove the burdens that oppress him in his toil.

There is no escape from the doom of the race. By the sweat of your brow shall you earn your bread. We recognize the justice of this doom. We would not escape it if we could. But in this doom it is written between the lines that no man's brow shall sweat to earn bread for those who do not labor. No man shall be taxed to enrich his brother. "Bear ye one another's burdens." [Applause.]

I yield the remainder of my time to the gentleman from Illinois [Mr. SPRINGER] who now occupies the chair; and in doing this I append for the information of the gentleman from Pennsylvania [Mr. KELLEY], who is so dispirited over the fate of women-workers in England, the statement to which I referred in the opening of my remarks.

APPENDIX.

THE STATEMENT.

Women are generally employed in all the factories—the woolen and cotton mills, paper mills, and in all shops and factories where paper or textile fabrics are made or used. They are extensively employed in shoe factories; and women are employed in nearly all the shops where sewing is done and materials are made up by hand.

In all the establishments where perfumery and toilet articles are manufactured women are extensively employed in making and packing the products. In the chemical works and laboratories women are also largely employed. Straw goods and artificial flowers are made mostly by women. Trimmings, army and navy goods, embroidery, and bullion-making give employment to many women. The book-binderies and many printing houses employ women, and most of the work in fruit, meat, fish, and vegetable canneries is done by women. Silver burnishing employs women, and this, like some of the other classes of work mentioned, is extremely injurious to health.

I have seen hundreds of little girls as young as 7 or 8 years of age employed in the Frankford cotton-mills. These little ones work more than half time. They are employed at what is known as "spooling," because their small hands can do the work with less risk of breaking the threads. Their hands being small and the machinery close together, it is considered that there is less risk of mutilation than if full-grown persons were employed in this work. The spools wound by these children are used in weaving cotton cloths. The spools furnish all the material for such weaving, and little girls of this tender age do the spooling. The effects of this work on children of such tender years are apparent in their wan appearance. Frequently the mothers of these children work in other departments of the same factories. One factory-owner expressed to me the desire that some kind of machine may be invented by which this infant labor could be superseded.

There are extensive potteries in Trenton. There I saw a great many children, little boys and girls from 9 years old and upward, coming from work in these potteries. I understood that they worked full time. Women are employed to do the larger portion of the work. I think that many mothers are among the employés.

I know that women are extensively employed in dyeing yarns in Philadelphia. Women are the principal laborers employed in the Germantown knitting and hosiery mills. The cheap restaurants and dining-rooms mostly employ women as waiters and for kitchen work. Excepting the class last mentioned, the great mass of the women employed in the various departments of labor that I have mentioned are intelligent; many of them have a good ordinary school education. They are considered to be good, respectable people. Women are extensively employed in this city and its suburbs for various reasons. One reason is, because they have to work in order to support themselves and help to sustain their relations or families. Another reason is, because employers can get them to do the same work that men do, and at much less wages; indeed, much of the work can be done better by women than by men. Still another reason is, because women are more uncomplaining than men; they will submit to impositions to which men would not submit.

Women are often imposed upon in regard to denials of payments, and they submit from a fear of losing their employment. They do so because of the great competition by women for employment. For example, I know of a case where a woman was cheated out of two weeks' wages by a large manufacturing firm here, under a rule of the firm for retaining the first two weeks' wages in order to insure regular attendance at work. This woman worked for the firm referred to nearly a year, and when she left they refused to pay her the money so retained. She needed the money badly. There are, no doubt, many such cases. On the other hand many employers are generous. The treatment of the women workers depends upon the disposition of their employers. Of course strict rules must be maintained. As a rule, I think women are not imposed upon by employers, except in the matter of paying low wages and exacting long hours of work.

Women generally go to work at 7 o'clock in the morning. They work, with one hour's intermission, until 6 o'clock in the evening—ten hours per day!

When they go home at night these women are often compelled to work several hours at household affairs, such as preparing meals, washing, ironing, sewing, patching, scrubbing, and such other necessary duties. There are dull seasons in all manufactories, and, indeed, in all classes of business. In the busy seasons the wages of women in the factories would, I think, average from $5 to $7 a week; a few earn more than this on piece-work. Nearly half the year most women are unable to find work for more than half time. In the latter case their earnings are in proportion. A good deal of the time work is totally suspended.

MODE OF LIVING.

In regard to the mode of living, I would say that most of the girls begin factory life when they are very young. They grow up with little knowledge of economy or housekeeping. It is very common for factory girls to deny themselves necessities in order to clothe themselves nicely. In this way many of them dress beyond their means and station in life. When out of employment they are often on the brink of starvation. No matter how nice and tidy these girls and women may appear in the streets, "poverty" is, as a rule, the only word that can be applied to their homes. "Home" is a word that has no real meaning to the majority of them. They have no homelike surroundings and comforts. They go to work as children, and are kept at work until they grow up into womanhood. They live amid squalor and misery, and marry men who have grown up under similar conditions. Husbands of this sort are often more of a burden and drag on their wives than helps to them, or providers for their families.

I am not surprised to learn that at Washington the existence of this condition of industrial labor at Philadelphia is questioned. I believe its existence would be denied here in Philadelphia by most well-to-do people. The latter are mostly as ignorant of the real condition of the women and child-laborers of this city as if they were a hundred miles away. They see children running about the streets in the poorer quarters of the city whose parents are at work—children often locked out in the streets until their parents come home at night—and they think, if they think of the matter at all, that such children are only playing on the streets convenient to their homes and mothers.

I thoroughly know the condition of the women laborers in the ward in which I live, the fifth ward. I have been through every lane and alley in it hundreds of times.

I know it is a common practice on the part of many mothers going out to work to lock out their children in the street. Some mothers do this because they think it is safer than locking them in their rooms. Fatal results have followed the latter practice.

In the central part of the city the laboring people—those employed in the kinds of work above named—do not often occupy separate houses. They live mostly in rented rooms, frequently only one room to a small family, and several families in the same house. In the outskirts of the city laboring people are better off as regards accommodations. There are many small houses in the suburbs that can be obtained at low rents; nice, comfortable houses.

PUBLIC NURSERIES AND KINDERGARTEN.

It is only since 1873 that any real effort has been made to establish in this city the *Créche* system, which has been for years in operation in Paris. We have now five of these nurseries, where infants are cared for while their mothers are at work. The infants are brought in by their mothers between 6 and 7 o'clock a. m., and are cared for by competent hired nurses until called for by the mothers as soon after 6 o'clock p. m. as is possible. Infants of 3 weeks old have been thus taken care of. But this is not encouraged. It is generally a rule that infants under 2 or 3 months old are not taken in.

These nurseries are supported by subscriptions from charitable people in the ward and city. The nurseries are of limited capacity. There are kindergärten in connection with these nurseries for the instruction and amusement of children over 3 years of age. These are similarly supported and the State Legislature has made a small appropriation for them. When the children are brought to the schools or nurseries in the morning they are washed and bathed and dressed when necessary. They are provided with three good wholesome meals daily under the supervision of paid teachers and nurses. The schools are provided with kindergärten apparatus, toys, &c. This system of aid for laboring women is doing a good work. The accommodations and surroundings at the schools and nurseries are all that could be desired. These institutions are indeed little paradises for such children. The nurseries where the babies are kept are provided with cradles, nursing bottles, and rich, pure, genuine milk. A kind-hearted matron (paid) presides in the nursery. Most of the little ones can get in and out of their cradles and are able to amuse themselves. Some of the mothers of such infants work in the factories, but most of them are engaged in common laboring work.

Many of these infants are thus cared for in the nurseries until they are 3 years old. Then they graduate into the kindergarten attached to the nursery. Here they are cared for and taught until they are 6½ or 7 years old, when they are sent to the public school in the vicinity. After they are thus sent to the public schools, they are still cared for at the nurseries; the parents continuing to bring the children to the latter each morning when they go to work and to call for them on returning from work to take them home. They are still fed, washed, and clothed, when necessary, as before. At present there are only five such nurseries in the city, but there are twenty-four kindergärten of the kind described; the leading feature of which is that the teachers shall discharge to these little ones the duties of a mother when the mothers are absent at their daily labor.

I append hereto, marked "A," an extract from the City Mission Directory descriptive of three of these nurseries.

From the same directory I append an extract marked "B," showing the number and locations of the kindergärten.

I also append, marked "C," a report from one of these nurseries.

CHILDREN ROAMING THE STREETS.

There are several sections of this city in which it would be no exaggeration to say that there are daily thousands of little children roaming the streets uncared for in the absence of their parents. The reasons for this neglect are:

First. The absence of parents who are engaged in various industrial and laboring pursuits.

Second. Even in cases where both parents are not so absent, the cramped space of their lodgings, bad ventilation, and general discomfort combine to make the open air, although foul and unhealthful from reeking streets, better in a sanitary point of view for the children than if they were locked up in-doors during the parents' absence.

Third. The great danger of locking up little children by themselves all day in a room. Of course there are some cases where neighbors or relatives keep some sort of supervision over such children during the absence of their parents.

Fourth. Prejudice on the part of the parents against the nursery and kindergarten system, absence of proper parental affection, and, probably, the distance of the nurseries and schools from the homes of the parents.

If all the children of working people in this city, who are thus left to wander in the streets, were required to be cared for at the kindergarten schools, the latter would have to be increased by several hundred. This will no doubt be done as soon as the parents begin to appreciate the importance and benefits of such harbors of refuge.

It is a common practice for working mothers who have babies and other children, to pay some poor woman a few cents for taking care of the baby during the day. The other children are generally locked out into the street. In very many cases the children are given a piece of bread, when so turned out. This is all the provision that is made for them until the mothers return from their work at night. Some mothers give their children a few pennies to buy bread from the neighboring bakers for dinner. I believe there are thousands of such cases. There is a great need for the spread of the *Créche* system. There is plenty of missionary work for the kindergärten and missionaries. Remoteness from these schools and nurseries no doubt deter many parents from availing themselves of their benefits.

A mile or two is not at all an uncommon distance for mothers to carry babies to these nursery schools. I know of a case where a woman carried her child to one of these schools three miles every morning, and then walked back a mile to the factory where she was employed. She had to repeat the same walk when returning from work after 6 o'clock in the evening. This she kept up during the four years she was employed in that factory. It makes no difference as to the kind of weather there is to be encountered. Just think of it; hard-worked, worn-out women scarcely half clad, having to get up on a winter morning at, say, 5 o'clock to prepare a scanty breakfast, and then having to walk with a babe perhaps in her arms and a couple of little children trudging alongside to a kindergarten nursery through rain, snow, or sleet in the gaslight! The old saying "that one half the world does not know how the other half lives" is eminently applicable to our women who have to earn their living by daily labor.

It appears to me that the condition of the laboring class is getting worse instead of better. One of the causes, perhaps the great cause, of this condition is the want of steady employment. There is of course a large "lazy" and "worthless" class of people in the city, but is not this their misfortune as much as their fault? It is only the active and worthy who can obtain steady employment even at the best of times. If there were employment for all, I believe there would be comparatively few of the so-called "lazy" and "worthless" class. When a man or woman can find employment for only six months out of twelve and is dependent on labor for support, it requires some spirit, virtue, and energy to resist the demoralizing effects of enforced idleness. Depression of spirits is conducive to drunkenness. I think this vice of the laboring classes is due as much to the want of steady employment at living wages as to any other cause.

The employment offered to women in the retail stores is eagerly sought for, although the work is very arduous and the wages small. Women so employed, especially those in the large stores, are required to dress well, indeed handsomely. To do this on such wages as they receive leaves but a small pittance for support. There are thousands of women so employed in this city. Many of them have children or relations wholly or partly dependent on them for support. Latterly I have noticed a tendency on the part of merchants who advertise for "sales ladies" or women clerks to announce that they preferred to employ only those who are living "at home." The evident object of this announcement is to obtain young girls who can afford to spend all their wages on dress, so as to present a handsome appearance in the stores. Such girls look more attractive to the merchant's patrons or customers than women or girls who have to contend with the cares of life on small wages.

The result is that those who have need of employment in the stores are frequently unable to obtain it, and those who do obtain such employment are sometimes demoralized by indulgence in fine dress beyond their means and station in life. Employers insist on the fine dress, however inadequate the wages. Oh, the fate that too often follows! One is often reminded of Hood's pathetic lines:

"Take her up tenderly,
Lift her with care;—
Fashion'd so slenderly,
Young, and so fair!"

A.

LOMBARD STREET DAY NURSERY.

No. 430 Lombard street.

The object of this charity is to aid poor and industrious mothers by taking charge of their children during their absence from them in working hours. It provides daily shelter, care and food, and also kindergarten instruction.

By means of this industrial training, children of 3 years old begin to learn attention, order, and manual skill, together with truthful, dutiful, reverent ways. Those who are old enough attend public and parish schools, returning to the nursery, as to a home, for meals.

Children are brought at 6½ o'clock a. m. Bathing is carefully attended to, and three full meals are given each day.

Number of children on the roll (December, 1881), 414; largest attendance in one day, 48; meals supplied, 25,115.

DAY NURSERY FOR CHILDREN.

No. 2218 Lombard street (incorporated 1873)

The object of the Day Nursery is to receive and care for, during the day, the young children of poor, industrious working-women whose employment calls them from their homes, and who would otherwise be obliged to leave their children entirely without protection and subject to the perils of fire and accident.

Three meals a day are given of good wholesome food, and washing and bathing are strictly attended to.

Children are received at 6½ o'clock in the morning; and none are admitted who are over 8 years of age.

Such instruction as they are capable of receiving is given them by the matron, who also exercises a careful supervision in the play-room which is provided for them.

Those who are old enough are sent to the public schools, and return to the nursery for meals and during the school recess.

THE NORTHERN DAY NURSERY, OF PHILADELPHIA.

No. 923 N. Seventh street (chartered).

Receives and cares for children (not over 8 years old) of working-women whose employment calls them from home.

The nursery is open daily at 6½ a. m. The children must be brought neat and clean as possible, and called for at 7 p. m. Six cents per day is charged for each child. Three meals furnished, and all that can be done for the comfort and interests of the children.

B.

KINDERGARTEN INSTRUCTION.

The movement in behalf of neglected children under school age, and for the prevention of crime and pauperism, has resulted in the establishment of quite a large number of free kindergarten, among which seventeen have been instituted under the auspices of the various ward associations. They are as follows:

No. 1, for 50 pupils. Public-school building, eighth section, southwest corner Twenty-second and Locust streets.

No. 2, for 50 pupils. Public-school building, sixth section, New street, between Front and Second streets.

No. 3, for 50 pupils (colored). Progressive Workingmen's Club, 424 South Eleventh street.

No. 4, for 30 pupils (colored). Church of the Crucifixion, Eighth street, above Bainbridge.

No. 5, for 50 pupils. Bedford-street Mission, 619 Alaska street.

No. 6, for 25 pupils. Day Nursery and Children's Home, 723 Saint Mary's street.

No. 7, for 25 pupils. Mission church, Saint Mary's street, above Sixth street.

No. 8, for 25 pupils. Office of Charity Organization of Third ward, in co-operation with House of Industry, 718 Catherine street.

No. 9, for 50 pupils. Office of Charity Organization of Fifth Ward, 338 Griscom street.

No. 10, for 25 pupils. Office of Charity Organization of Sixth Ward, 309 Branch street.

No. 11, for 25 pupils. 2331 Jefferson street, in co-operation with Charity Organization of Twenty-ninth ward.

No. 12, 116 Diamond street, in co-operation with Eighteenth and Nineteenth Wards Charity Organization and Kensington Day Nursery, for 25 pupils.

No. 13, Southern Home, for 25 pupils.

No. 15, Pulaskitown, Germantown, for 25 pupils.

No. 16, Biedeman public-school building, Saint John's street, in co-operation with Eleventh Ward Charity Organization, for 25 pupils.

No. 17, 2428 Spring Garden street, in co-operation with Fifteenth Ward Association of Charity Organization, for 25 pupils.

These schools will be extended as fast as funds are provided. The annual expenses of those now carried on are about $5,000. Visitors will be cordially welcomed, and it is hoped that all who are interested in the object will approve the means and contribute to their support. Donations and annual subscriptions may be sent to the treasurer, Sub-Primary School Association.

DAY NURSERY RULES.

1. That children shall be brought as clean as circumstances will allow.
2. That they shall be taken home in good season, as soon as the mother's working hours enable her to come for them.
3. That articles of clothing lent be carefully returned and in good order.
4. That payments for children be made as regularly as possible.
5. That no gifts of money be offered to those in charge in the house for care of particular children, but any money which mothers may wish to give will be gladly received by the treasurer to aid in maintaining the nursery and adding to the comfort of all the little children it shelters and provides for.

Kindergärten referred to in the foregoing statement:

SUBPRIMARY SCHOOL SOCIETY—FREE KINDERGÄRTEN.

No. 1, for 50 pupils. H. Lenox Hodge Kindergarten, public-school building, eighth section, southwest corner Twenty-second and Locust streets.

No. 2, for twenty-five pupils. Public-school building, sixth section, New street, between Front and Second streets.

No. 3, for 25 pupils (colored). Progressive Workingmen's Club, 424 South Eleventh street.

No. 4, for 25 pupils (colored). Church of the Crucifixion, Eighth street, above Bainbridge street.

No. 5, for 50 pupils. Bedford-street Mission, 619 Alaska street.

No. 6, for 50 pupils. Day Nursery and Children's Home, 713 Saint Mary street.

No. 7, for 50 pupils. Beulah Coates Kindergarten, mission church, Saint Mary street, above Sixth street.

No. 8, for 25 pupils. House of Industry, 718 Catherine street.

No. 9, for 50 pupils. Office of Charity Organization of Fifth Ward, 338 Griscom street.

No. 10, for 25 pupils. Public-school building, sixth section, northwest corner Crown and Race streets.

No. 11, for 50 pupils. Beideman public-school building, eleventh section, Saint John street, below Buttonwood street.

No. 12, for 25 pupils. Hoffman public-school building, fifteenth section, northeast corner of Seventeenth and Wood streets.

No. 13, for 25 pupils. Day nursery, 116 Diamond street.

No. 14, for 50 pupils. Pulaskiville, Germantown.

No. 15, for 25 pupils. Christ-church chapel, Jefferson street, below Twenty-sixth street.

No. 16, for 25 pupils. Western Temporary Home, 35 North Fortieth street.

No. 17, for 25 pupils. Southern Home for Destitute Children, southeast corner Twelfth and Fitzwater streets.

No. 18, for 50 pupils. Anna Hallowell Kindergarten of the Eighth Ward Charity Organization, 238 South Tenth street.

No. 19, for 25 pupils. Public-school building, sixth section, New street, between Front and Second streets.

No. 20, for 25 pupils. House of Industry, 112 North Seventh street.

No. 21, for 25 pupils. Public-school building, ninth section, Filbert street, above Twentieth street.

No. 22, for 25 pupils. Union Temporary Home, northeast corner Sixteenth and Poplar streets.

No. 23, for 25 pupils. Morton street free Kindergarten of Germantown, Morton street, above Haines street, Germantown.

No. 24, for 25 pupils. Monroe public-school building, fourteenth section, Wood street below Twelfth street.

School term: First Monday in September to July 1.

School session: Every week-day, except Sunday, from 9 to 12.

These schools will be extended as fast as funds are provided. Visitors will be cordially welcomed.

The result of kindergarten training in Saint Louis, Boston, Philadelphia, and elsewhere show that the kindergarten furnishes the best method of child-training for all classes, and especially for the destitute and neglected.

C.

PINE STREET DAY-NURSERY.

No. 427 Pine street.

At the close of its fifth year (1883) the Lombard street day nursery obtained the ampler space and larger rooms so much needed for the welfare of the children under its care. It was removed from 430 Lombard street to 427 Pine street on the 2d of June, the new home having been altered, to prepare it for occupancy, during the previous month. The airy, well-ventilated apartments, and the pleasant play-ground afford all that is desirable for health and enjoyment. The house having been provided without expense to the nursery, the fund gathered "for purchasing or altering property" remains for use in future improvements. The kindergarten class for the little ones, and the daily attendance at parish and public schools by the older children, as well as the nursery teaching of housework and sewing, furnish opportunities for training in every department of education and industry suited to the years of its inmates. It remains to ask that the generous friends of these little children will still continue to supply the means and material for the maintenance of the new home, as well as their daily food and a certain amount of needful clothing. Provision was made at the Christmas festival for eighty children, all habitual attendants on different days, and the mothers were as usual invited to tea.

On the same afternoon, the 26th of December, before the festival, the house was dedicated to its special use by the bishop of the diocese, assisted by Rev. Dr. Davies, in an informal service, in which the children united by singing their Christmas hymns and chanting verses of the twenty-third psalm. The only shadow resting on this happy afternoon was the loss, three days previously, of a faithful attendant, whose term of service began with the existence of the nursery, and ended only with her death on Sunday evening, December 23. Assistance is still rendered in the house by little girls who, having early learned in the nursery kindergarten habits of accuracy and industry, now show the good result of these lessons by skill and usefulness in various departments of service. Each of these little workers receives, during the summer holidays, the gift of a dress, which she is taught to make for herself. Some forms of useful industry are also found for the boys, and the nursery is thus enabled to retain children under its care longer than would otherwise be possible, instead of parting with them during the years when its protection and guidance are still greatly needed. Many thanks are due to Dr. —— for his faithful and generous aid to the nursery as its physician; and many, also, to its steadfast friend, Mrs. ——, whose kindness has again supplied an assistant kindergartner, as well as to Mr. ——, for furnishing the nursery with ice during successive seasons of six months each, and to the many other friends to whose thoughtful kindness the children are indebted for much-needed articles of food and clothing, and various sources of comfort and enjoyment, unknown otherwise, amid the hardship and privation of their little lives.

Names on the roll		605
Number of children added since last report		85
Daily average attendance		29
Largest number in one day		46
Number of meals supplied		25,845
Balance remaining December 31, 1882		$164 30
Amount received to date, from—		
Donations	575 00	
Subscriptions	605 00	
Rent of upper rooms	234 00	
Mothers' payments	430 93	
	2,009 23	
Expended for furniture, repairs, milk, fuel, provisions, salary and wages	1,461 48	
Leaving a balance of		547 75

The report this year includes a period of twelve months, instead of thirteen. From money derived from contributions, $796.55 have been appropriated to the expenses of the nursery, while the resources of the house have supplied $664.93, making the sum of $1,461.48, which represents the expenditure for the past twelve months, exclusive of the kindergarten.

The fund contributed for "purchasing or altering property" amounts to $785.

Contested Election—English vs. Peelle.

SPEECH

OF

HON. STANTON J. PEELLE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 21, 1884.

The House having under consideration the contested-election case of English vs. Peelle—

Mr. PEELLE, of Indiana, said:

Mr. SPEAKER: I trust I shall have the reasonable attention of the House while I endeavor to present this case on behalf of the people whom I have the honor to represent. I ask this House, sitting as jurors, to decide the case according to their best judgments of the law and the facts in the case, and to dispose of it as you would were it a case involving your own right to a seat on this floor. I am not here to justify bad precedents which may have been established by both sides of this House; but, sir, I would not hesitate to submit this case on any precedent which may have been established by either side, however bad it may be, for in all my investigation of the various cases brought into this House I have found no one sufficiently bad which if applied to this case would justify this House in unseating me, much less seating the contestant.

But, sir, the gentleman from Ohio [Mr. CONVERSE] who reported this case from the Elections Committee does not pretend either in his report or in his argument of this case that there is a single precedent in all the range of cases which would justify his action, nor does he cite a single authority either of any State or of the nation to sustain his novel position. He rests the case, in the absence of either law or precedent to sustain him, upon his own statements couched in his report and in his witness-like speech on this floor. But, sir, the gentleman forgets that there is no evidence whatever in the record to sustain his conclusions, and his speech on this floor will readily convince any one who has examined this case that he has not given it that examination which his position required.

Has he examined the case simply far enough to believe that a careful examination might still further test his convictions as a lawyer? Under severe pressure some men close their eyes to the truth, that they may be rocked into forgetfulness of duty. I venture the assertion that there is not a man on this floor who has examined this case who has arrived at any other conclusion than that the gentleman from Ohio has, to say the least, committed an error and one which will torment this House in the future. There is not a man on this floor, including the Speaker of this House, who if sitting as a judge would not unhesitatingly decide, on the record presented, that the contestant was not entitled to a seat; and yet the gentleman from Ohio asks you to unseat me and seat the contestant.

Now, Mr. Speaker, let us examine the several grounds upon which the gentleman in his report claims that the contestant is entitled to represent the seventh Congressional district of Indiana. The gentleman assigns six reasons, and here they are, as recapitulated by him in his report:

First. The correction of the error in counting the vote in Marion County gives contestant 99 additional votes.

Second. The fraud and coercion practiced upon the 51 paupers, 34 of whom were Democrats, and compelled to vote for contestee, would, if corrected, add to contestant's vote 68 additional votes.

Third. The fraudulent jail vote counted for contestee makes in the result a difference of 34 additional votes.

Fourth. The 12 counterfeit tickets which were counted for contestee, and should have been counted for contestant, make in the result 24 additional votes.

Fifth. Votes of naturalized citizens, and others fraudulently rejected, 100 additional votes. Total, 325.

Sixth. The destruction of the secrecy of the ballot by contestee's friends in the use of the spring-back tickets undoubtedly made a difference in his favor of several hundred more votes in the final result, to which he is not entitled.

The first ground refers to the so-called recount of the ballots by Austin H. Brown, and now how was that recount, so called?

SO-CALLED RECOUNT.

Soon after the November election in 1882 a contest was instituted over the office of sheriff by the defeated Democratic candidate, and the circuit court, under a provision of the statute authorizing such proceeding, appointed three commissioners to recount the ballots on sheriff. That commission consisted of two Republicans, Henry C. Adams and Norman S. Byram, and one Democrat, Austin H. Brown. These commissioners were sworn to perform that special duty and none other. Before the recount of the ballots under the order of the court had commenced Mr. William H. English, the father of the contestant in this case, approached Austin H. Brown and employed him to count what he denominates the "spring-back" ballots, and Mr. Brown in his testimony swears that the senior English did employ and pay him for that service. Here is his testimony on that point (page 88):

Cross-examination by Mr. PEELLE:

Q. State your politics.
A. I am a Democrat.
Q. Have you not been very active in the interests of the Democratic party in this State for years?
A. Yes; I was not very active last year.
Q. But you have been an active politician?
A. I did not work at the polls last year.
Q. I will ask you to state at whose instance you kept an account of the vote for Stanton J. Peelle during the time of the Lemon-Hess contest?
A. Mr. William H. English came to me, I think it was a day or two before we commenced our duties here, and asked me to take an account of all of the so-called "spring-back" tickets—that is, the character of the tickets that have been explained in this evidence as such—and offered to compensate me for it.
Q. Did he do it?
A. He did.

And he admitted to Mr. Adams that he was employed by Mr. English, sr., to keep count of all the votes, and this he does not deny anywhere. Here is Mr. Adams's testimony on that point (page 405):

Q. What did he say he was keeping that count for?
(Objected to as incompetent.)
A. He said he was keeping it for Mr. English; that he had been employed by Mr. English to keep it.
Q. Did he say that he was employed by Mr. English to keep count of the vote, or simply to keep count of the number of Republican tickets upon which Mr. English's name appeared?
A. He said he had been employed to keep count of all the votes, which he proceeded to do.

Now let it be borne in mind that Mr. Brown was the paid employé of Mr. English, sr., to perform that service. Now before I proceed further let me read from the report of the Committee on Elections, made by the gentleman from Ohio, and see how fairly he states the case:

Your committee are fully aware of the danger attending recounts to set aside official returns. They fully indorse the doctrine that recounts to be of value must be honest, fair, and correct.

How fair he seems to be! And now let us see if that so-called recount was "honest, fair, and correct."

It is conceded by the contestant that this so-called recount of the ballots cast for Congress was made at the same time the ballots were being recounted on sheriff under the order of the circuit court, and when the commissioners were sworn to perform that special duty and none other. And yet during the recount of the ballots cast for sheriff, Austin H. Brown, as the paid employé of Mr. English, sr., attempted to, and swears he did, count the ballots cast for Congress; and he further swears that he kept the count on Congressman secret from the other members of the commission, and that he had been counting the ballots on Congressman two or three days before it became known to Mr. Byram, who was near him, that he was counting the ballots on Congressman at all. Here is his testimony on that point (page 380):

Q. Did not you point out errors to Mr. Byram as you went along?
A. No, sir; not on Congressman. It was the third day before he knew I was keeping the vote on Congress. We had passed largely into the precincts.

So that by his own testimony he not only admits that he was employed by Mr. English, sr., to count the ballots on Congressman, but admits that he was making such count secretly and without the knowledge of Mr. Byram or any other Republican. That he was admonished by his employer to perform the work as he did there can be no doubt. The gentleman from Ohio had evidently not examined that testimony when he put into his report that—

"They fully indorse the doctrine that recounts to be of value must be honest, fair," &c.

Had Mr. English, sr., or the contestant, said to me or any of my friends at any time before the recount of the ballots for sheriff that he desired a friendly agreement to recount the ballots cast for Congress, such an agreement would readily have been acceded to, as without a majority of votes over the contestant I could not have consented to remain in my seat in this House. But no such proposition was made to me or to any one else, and yet the gentleman from Ohio in his blindness says in effect that such recount was honest and fair. In the light of such honesty and fairness every member's seat upon this floor would be insecure, and instead of being the Representatives of a majority of the voters in our respective districts, we would be at the mercy of any and every man who could be employed to secretly and clandestinely recount the ballots cast, and at the mercy of one who, under such an employment, was interested to give his employer value received for his money.

Why did Mr. English so employ Mr. Brown to count those ballots? Was he not anxious to have a result that would enable him to have his son seated on this floor? And was not the employed anxious to gratify his employer? The objective point in the recount was to so reduce my majority as that a majority might appear for the contestant. My majority over the contestant in the district was 87 votes, and that could not be overcome by a less vote. So that Mr. Brown made the discovery that I had 99 less votes than were returned for me by the board of canvassers, which would give the contestant 12 majority. Small, to be sure, but then it was quite enough for the purpose if such recount were to be sustained by this House, in whose political faith Mr. English, sr., has from the beginning manifested most extraordinary confidence.

I deny the competency of the testimony of Mr. Brown in such unauthorized and secret recount, made as it was under employment from one whose interest it was to have a favorable result regardless of the real truth, and I challenge any member of this House to cite a single authority in support of the competency of such testimony. Mr. Brown fails wholly to point out a single error in any one of the eighty precincts in Marion County, and if an application had been made to the court for a recount of the ballots, based upon his testimony in this case, the application would have been denied for the want of some specific allegation of fraud or mistake (section 280, McCrary on Elections, second edition, and authorities there cited), and yet the gentleman from Ohio seemingly rests the case upon the so-called recount, and then, notwithstanding his was the first speech made in this case, he proceeds to testify as to the good character of Mr. Brown, as if some one on this side of the House had attacked him.

Why, sir, it is unnecessary for the purposes of this case to attack Mr. Brown's character. All that is necessary for me to do is to state the circumstances and the manner in which he served his employer in that matter. And now let me proceed further, if such testimony is to be considered as competent in a case involving the rights of 36,000 voters. As stated before, there are eighty election precincts in Marion County, a county that casts over 26,000 votes. After Mr. Brown had counted some twenty precincts in the county, Mr. Byram, on his own motion, concluded to keep count of the ballots cast for Congress also, and during such count they would frequently disagree at the end of the precincts, and then, that their counts might agree, changes were made without again counting the ballots until their counts did agree. And now on this point let me quote from the testimony in the record in this case. Mr. Byram and Mr. Adams, the other two commissioners, Mr. Hawkins, a watcher in the room in the interest of the Republican sheriff-elect, and also Mr. Myers, the Democratic watcher in the interest of the Democratic contestant for sheriff, all testify on this point, and it is the only testimony given, except the testimony of Mr. Brown, in which he denies having made any corrections. Here is the testimony *verbatim:*

Mr. Byram, on page 390:

Q. When you would get through counting a precinct, what, if anything, was said by you or Mr. Brown with reference as to how the vote stood for Congressman?
A. Well, I sometimes asked Mr. Brown how the vote stood for Mr. English or Mr. Peelle, how he had it; and sometimes he would ask me how I had it.
Q. What was done at the end of each precinct there, if anything?
A. If our results were not alike, there was frequently corrections made or the work gone over again, and a memorandum was kept to show, and sometimes corrections were made.
Q. Did Mr. Brown make some corrections or not, as you went along?
A. Yes, sir.
Q. Did you make some corrections sometimes?
A. I think probably I did, in one or two instances.
Q. What kind of corrections did you make?
A. I could not tell, except I tried to make them compare with Mr. Brown's figures.
Q. How many times were those corrections made?
A. That is a question I could not answer. I do not know.
Q. Was it pretty general, or was it only a few times?
A. It was only a few times.
Q. Was there any time when Mr. Brown refused to make corrections to correspond with your count?
A. Not that I know of; he never refused to do it; no, sir.

Mr. Adams (page 405):

Q. I will ask you to state whether or not at the end of each precinct after the count had been made of each precinct, what was said or done between Mr. Byram and Mr. Brown with reference to the vote for Congressman?
A. They just struck a balance—that is, compared notes to see how they stood.
Q. Did Mr. Brown make any corrections, or not, as he went along?
A. Yes, sir; sometimes he and Mr. Byram did not agree, and they always ended it by agreeing except in one instance.
Q. How was that?
A. I do not recollect exactly how it was. I remember one instance, and they agreed except that one instance. I remember of laughing about it at the time—about their disagreeing on that point.

Mr. Hawkins (pages 419 and 420):

Q. Did Mr. Byram or Mr. Brown make any comparison of their vote at the end of each precinct for Congressman?
A. Yes, sir; in almost every instance, my impression is.
Q. Did they or not make corrections pro and con?
A. Yes, sir; I think in more than Franklin Township; but my recollection is not so distinct about counting the tickets over for Congressman in other precincts, but I know the count was delayed and they looked over the returns in connection with the general returns of the election, and made their comparison afterward to see which was wrong and where the mistake occurred.
Q. Was there any time in which Mr. Brown or Mr. Byram refused to make corrections?
A. My recollection is there was one precinct, I do not know which it was, that they could not agree on.

Mr. Myers, the Democratic watcher in the interest of Mr. Lemon, in his cross-examination (page 469) says:

Q. You were there as watcher at the solicitation of Mr. Lemon, were you not?
A. Yes, sir.
Q. He was the Democratic candidate for sheriff?
A. Yes, sir.
* * * * * * *
Q. Did you not state it would be impossible for him to keep the vote for Mr. Lemon correctly if he undertook at the time to keep the vote on Congressman?
A. No, I did not say that.
Q. Did you not say that to Mr. Hawkins?
A. No, sir.
Q. I will ask you if within the last two or three weeks you did not state to Mr. Hawkins that it was impossible for Mr. Brown to keep a correct account in the manner in which he kept it, and if you were called as a witness you would so swear?
A. No, I did not make the statement.
Q. What did you say?
A. The statement I made was this: He asked me if I did not remember that two or three or four times, I forget now the number of times, that Mr. Brown and Mr. Byram would disagree in their counts as to the number of votes cast for Congressman, and I told him I did, and I remembered once or twice the entire vote was counted over for a certain precinct and ward, and still they could not agree, and they would fix them up and make them agree, leaving a vote or two or three. I forget the number.
Q. I will ask you if it is not a fact that it was impossible for Mr. Brown to keep an accurate account on the vote for sheriff and Congressman at the same time and under the circumstances in which they were making their count?
A. I do not know in regard to Mr. Brown's capacity for anything of that kind. It is a pretty difficult job, but I presume he could do it. He is an expert in this business.

Such was the manner in which that so-called recount was made, and yet the gentleman from Ohio says it was honest, fair, and correct. Would he think so if his seat were involved? Why, sir, if he were unseated upon such testimony he would never cease denouncing it. He asks the House to accept the so-called recount of Brown as "fair, honest, and correct" as against the official returns attested at each election precinct by five witnesses, or four hundred witnesses in the county, verified by eighty inspectors, constituting the official canvassing board. But this is not all, for at the conclusion of this so-called recount Mr. Brown admitted that Mr. Peelle's vote would be increased on a recount more than the Republican sheriff had gained, and it was conceded that Mr. Hess, the Republican sheriff, had increased his majority in the recount 49 votes, and that he should so report to Mr. English, his employer. Let us examine the evidence on this point.

Mr. Byram (page 422):

Q. Was anything said in that conversation about Mr. Peelle gaining more on a recount than had been gained for Mr. Hess?
A. Yes, sir; I made that statement to the parties there, that a recount would show a larger gain for Mr. Peelle than for Mr. Hess.
Q. Did he say anything about reporting to Mr. English?
A. My recollection is rather indistinct of that part of it, but it is that he stated that he did not think it would do any good for Mr. English to go on or have a recount; that it would be no benefit to him, and he would say so to Mr. English. That is only an indistinct recollection of it now.

Mr. Hawkins (page 419):

Q. Were you present after the recount had been had at the time in which there was a conversation between Mr. Byram and Mr. Brown about the recount for Congress?
A. Yes, sir.
Q. State what occurred.
A. My recollection is that the question was asked there by Mr. Adams or by myself jointly—I do not know who it was—of Mr. Byram about the recount on Peelle, and we were sitting there together, all of us, and something was said about the recount on Peelle and English, and how it would compare with the Hess and Lemon recount. Mr. Byram then said that he thought Mr. Peelle would gain more than Hess gained by the recount; and Mr. Brown—I do not know that I can give the exact language—but my impression is the same as Mr. Adams's, that Mr. Brown said that he did not think there was anything for Mr. English to gain by a recount, or that he would not advise him to have a recount, or something of that kind.

Mr. Adams (page 404):

Q. At the time, during the count of the vote or at the conclusion of the count of the votes cast for this county for sheriff, what was said, if anything, by Mr. Brown or in Mr. Brown's presence as to how the vote would stand on a recount for Peelle and English?
A. Well, it was after we were through counting and after the count was over, and it was the morning of the day we reported.
Q. After the count had concluded?
A. Yes, sir; it was after we had agreed, and Mr. Brown, Mr. Byram, and myself had agreed on our return that we should make, and Mr. Brown said—I believe he said—he would like for Mr. Cropsey to look at it and to have them see it; and Mr. Lemon, and probably Mr. Cropsey, was in the room and looked at it, and we were waiting for some time for some purpose or other, and Mr. Byram and Mr. Brown and myself, and, I think, Mr. Hawkins, were standing at the end of the table, and we were talking about the English count. It was our impression and my impression that the advantage in the recount, or that the advantage in the recount of the vote for Congress—that it would have made a gain in favor of Mr. Peelle, and that remark was made to Mr. Brown, and I spoke to him about it and he acquiesced in it.
Q. State what he said.
A. My best impression is he said right then that that was the case, and he should say the same to Mr. English, and that Mr. English would have nothing to gain in a recount, and he would tell him so.
Q. Was Mr. Byram present when that occurred?
A. Yes, sir; and Mr. Hawkins.

So that here at the conclusion of this so-called recount of the ballots for Congress he admits that my vote would be increased more than Mr. Hess's had been, and that he should so report to Mr. English. Now, it must be conceded from this evidence that the sitting member in this case nor any of his friends had any notice whatever that errors had been discovered in such recount to lessen his majority, and yet the gentleman from Ohio says that such recount was honest and fair. But how does Mr. Brown meet this evidence? When on the stand in behalf of the contestant in chief he denies having made any such statement at all, but after sitting by and hearing the testimony of Mr. Byram, Mr. Adams, and Mr. Hawkins, gentlemen whose characters are above reproach, he comes to the witness-stand under the guise of rebuttal, and here is what he then says, when he knows the case on the part of the contestee has been closed (page 458), on direct examination:

Q. Did you say anything that day in the presence of Mr. Byram, or Mr. Hawkins, or Mr. Adams as to what would be the probable result of the votes for Congress as between English and Peelle should a recount be made in the future? And, if so, state what you did say and your reasons for saying it.
A. I never made any statement as to the result of the count. I may have

stated, and I have an impression that I did, that I would not advise Mr. English to have a recount of the ballots, for the reason that the tickets which we had just completed counting, in my opinion, had been tampered with as to sheriff before they reached us, and what would be done in that case might be done in any other if it was necessary to accomplish a given purpose. I do not think I ever made any remark in any other connection in reference to a recount.

And the only and sole reason given by Mr. Brown why he believed such tickets had been tampered with was because during the time he was attempting the double duty of recounting the votes for sheriff and the votes cast for Congress he could not find the ticket he himself had voted—a ticket which he said he would know anywhere.

Mr. Speaker, while I deny that there was any tampering with the ballots, or that the evidence justifies such a conclusion, yet I say, if it be true that the ballots had been tampered with in any way, then it is clear under all the authorities that such recount goes for nothing, and McCrary on Elections (section 555, second edition) says:

That the party offering such ballots in evidence must show affirmatively that they have not been tampered with, and that they are the identical ballots cast at the election in question.

The burden of proof is upon the contestant; but instead of introducing testimony to show affirmatively that the ballots are the same, as were returned by the several precinct election boards, he casts doubt upon the genuineness of the ballots by the testimony of the same person by whom he seeks to establish the correctness of the recount, and yet the gentleman from Ohio says that this recount was fair and honest.

Why, Mr. Speaker, if I continue I shall certainly convince this House that the gentleman from Ohio knows less about what constitutes a fair and honest count of ballots than Satan does about the plan of salvation. But I am not done yet. Now, Mr. Brown swears that at the time of that recount he had a memorandum-book in which he kept the count of the ballots both for sheriff and for Congress, keeping both counts in the same book, and that after the commissioners had made out their report to the circuit court as to the ballots cast for sheriff he went home. The recounting of these ballots commenced on the 23d and ended on the 27th day of November, 1882, nearly three weeks after the election. That the next day after the recount had been concluded he sat down and drew up a statement which he puts in evidence in this case over contestee's objection, which is as follows (page 87):

BROWN'S STATEMENT OF THE RECOUNT.

Q. Did you at the time make any report of the result of that count?
(Objected to as immaterial.)
A. Yes. I made a statement in writing, which I have here.
Q. If you have that record please produce it and read it and attach it to your deposition as a part thereof.
(Objected to as immaterial and incompetent and as an indirect attack upon the returns.)
A. (Reading); "In the election contest for sheriff of Marion County, Indiana, in the case of Lemon *vs.* Hess, I acted under appointment of the circuit court as a commissioner to recount the ballots received for that office at the general election held in that county November 7, 1882. The recount took place between the 23d and 27th of that month. At the same time I counted the vote for Congressman for that district, every ballot passing through my hands and being closely scanned by me, and of the ballots for Stanton J. Peelle for that office 12,551 were of the kind commonly called card-board, or spring-back tickets; and the aggregate of all the ballots showed said Peelle's plurality over William E. English in that county to be 99 votes less than the number returned by the board of canvassers, making his plurality 443 without the vote of the second precinct of the twelfth ward of the city of Indianapolis, which precinct the board of canvassers returned as 98 majority for Peelle. My count embraced the ballots in all the election precincts of the county except the ballots in the second precinct of the twelfth ward, which could not be found; but the vote of that precinct was returned to the board of canvassers by the inspector of elections of that precinct as 98 majority for Peelle in said precinct. This 98 majority added to the aggregate of my count of the ballots of the other precincts would make Peelle's vote 541 more in Marion County than English's, being 99 less than the number returned by the board of canvassers November 9, 1882.

AUSTIN H. BROWN.

INDIANAPOLIS, *November* 28, 1882.

Such were the deductions drawn by Mr. Brown from the memorandum which he kept of the so-called recount—no one going over his figures to verify their correctness—and when cross-examined as to the whereabouts of his memorandum he had lost it. But here is his testimony on that point (page 379):

Q. In that testimony you said that you concluded the count with reference to sheriff and went home in the afternoon very tired, and that the next day you made a statement which you put in evidence in your testimony before?
A. Yes, sir.
Q. Did you have that book before you at the time you made that statement?
A. I had the memorandum; yes, sir.
Q. What did you do with that after it was made?
A. My recollection is I put it away with some papers in my desk, and afterward in cleaning up my desk, which I do two or three times a year, I regarded those papers as of no value and destroyed them, is my recollection now.
Q. Have you seen that little memorandum of the vote for Congress since you made that statement?
A. Not to refer to it, unless in the way I spoke of in overhauling my papers; but I had all the facts before me at the time.
Q. At the time you made that statement from the figures you kept what did you do with the statement?
A. I told Mr. English about it; it was my duty to tell him so.
Q. Why did you retain it?
A. I thought it was a very good paper to keep.
Q. Why?
A. I supposed it might be of some use.
Q. Where and how?
A. As a matter of evidence if this contest was to go on.
Q. You thought the result of those little figures that you had made would be better evidence, did you, or not, than the book itself?
A. It never entered my head in regard to that, one way or the other.
Q. When you made that statement, then, as I understand, you anticipated that it might be useful as evidence in this contest, did you?
A. I did not know; I thought it might be useful; I thought the paper of some use outside.
Q. You did not think the memorandum-book from which you made that statement of any value?
A. No, sir; because I had all the facts collated that were in that memorandum-book, and a good many other matters besides; matters pertaining to the sheriffalty.
Q. Matters pertaining to the sheriffalty in that county?
A. I kept both counts in the same book.

The sitting member was entitled to an inspection of that memorandum from which Brown says he arrived at the conclusion that Mr. Peelle's majority in Marion County was 99 less votes than had been returned for him, but it was gone, and that fact is a very suspicious one in this case. He had destroyed the memorandum-book and retained the statement, as he says, because it might be of some use in this contest. He says he told Mr. English about it because it was his duty to tell him, but he carefully avoids telling any one else, and not until he came on the witness-stand in this case did I know anything about it as a matter of fact. And yet the gentleman from Ohio says that this so-called recount was honest, fair, and correct. But this is not all. I want to show this House now from Mr. Brown's testimony that he did not recount the ballots at all as to the contestant but that he simply attempted to note what he terms errors against Mr. Peelle, leaving the vote of Mr. English to stand as returned for him by the board of canvassers. The majority for Mr. Peelle in Marion County as returned by the board was 640, whereas Mr. Brown says that according to his count my majority was 541; and now how does he arrive at that conclusion? Here is what Mr. Brown (page 90) says on that point:

Q. You say that, according to your count, Mr. Peelle had 541 votes over Mr. English. Now, do you mean he had 541 votes over the vote as actually returned for Mr. English, or over his vote as actually counted by you?
A. According to the board of canvassers you had a plurality over Mr. English of 640, and my count gives that 541—a difference of 99.
Q. That is the majority simply over the vote as returned for Mr. English, is it not, by the board of canvassers?
A. Well, it is two different counts, I take it. If you take theirs it is one way, and if you take my statement of the count it is different.
Q. Is not that majority for Peelle based upon your count as compared with the actual return for Mr. English by the board of canvassers?
A. Yes, sir.

* * * * * * *

Q. I will ask you if in that examination in the votes for sheriff for the Republican candidate if the vote was not largely increased over the returns made by the board?
A. The Republican candidate got more votes.
Q. According to that count?
A. Yes, sir; I have it here exactly. Mr. Hess's vote was actually increased 7, and Mr. Lemon's was 35 of a loss.
Q. Making a difference of how much gain for the Republican candidate for sheriff?
A. The whole number of votes decreased. The ballots less were 35.
Q. How many gain would that make for the Republican candidate over the return of the board?
A. About 49, sir.
Q. Can you give me the total number of votes you counted as cast for Mr. Peelle for Congress?
A. I can not, sir. I can give you the total number of a certain ticket, on the "spring-back" ticket, but your name was on some Democratic tickets and on a few national tickets.

By the above testimony it will be seen that he counted, as he claims, the ballots cast for Mr. Peelle and accepted the returns as made for Mr. English, and that he did not count the ballots cast for English at all.

Again I insist that according to his own testimony he did not count the ballots at all for either, and that he was unable to give the total vote for either Mr. Peelle or Mr. English, and that he only kept the count by majorities as he went along, as he swears. Here is what he says at page 380:

Q. What was the total vote, according to your count, on Mr. English?
A. I could not give you that, sir; I did not keep it in that way; I kept it by the different majorities and in precincts as I went along.
Q. What errors were there in the precincts of the first ward for or against Mr. Peelle or Mr. English?
A. I can not state.
Q. What errors were there for or against Mr. Peelle or Mr. English in the precincts of the second ward?
A. You need not ask them all. I tell you I have no memorandum that I can refer to now giving any facts.

* * * * * * *

Q. Have you any recollection as to errors occurring in any particular precinct; you have not, as I understand you?
A. No, sir; I have a distinct recollection of a certain class of variations that occurred, which ran through the whole count.
Q. I understand you to say that you can not give the total vote that was counted by you for either Mr. Peelle or Mr. English.
A. No, sir.

From that it will be seen that he was unable to point out a single error in any one of the eighty precincts, or to give the number of ballots counted for either, and yet the gentleman from Ohio says that this so-called recount was honest, fair, and correct.

But this is not all, Mr. Speaker, for during the time this recount was going on Mr. Byram on his own motion concluded to count the ballots for Congress also when he discovered what Mr. Brown was doing, and so Mr. Byram commenced counting at the tenth ward, or about the twenty-first precinct, and from that time on he counted all the ballots for Congress as well as for sheriff; and accepting the returns as made in the twenty precincts he did not count, he gives the sitting member 127 more votes than were returned for him by the board of

canvassers, making his majority in Marion County 767 instead of 640. And now as to the twenty precincts not counted by Mr. Byram, I proved by Mr. Byram, and it was not denied by Mr. Brown, that the only change on the vote for sheriff in all the twenty precincts not counted by Mr. Byram for Congress was a gain of two votes only for the Republican sheriff, and it is, therefore, hardly possible that the sitting member lost 99 in those precincts.

In addition to this the sitting member put the official returns in evidence; and now by what authority of law or precedent will you set aside the official returns by such a count—a count made by one unsworn, unauthorized, secretly, for pay. If the returns in this case are set aside by such a recount, then where is the security for one's seat on this floor. My friend from Pennsylvania [Mr. ELLIOTT] argues that it was the duty of the sitting member to have the ballots recounted when he came to take his testimony in this case, because the recount of Mr. Brown had destroyed the *prima facie* case made by the official returns. Now, conceding the ballots to have been properly kept and not tampered with, I assert that the gentleman from Pennsylvania [Mr. ELLIOTT] nor any other gentleman upon this floor can find one single authority to support that position, nor is there a single precedent in all the election cases which sustains that position. McCrary on Elections (section 440, page 373) uses this language:

SEC. 440. But of course the parol evidence offered to set aside a return upon the ground of fraud must be such as to establish the fraud or mistake in the reception and deposit or in the count or return of votes. The official acts of sworn officers are presumed to be honest and correct until the contrary is made to appear.

It has accordingly been held that a return can not be set aside upon proof that a recount made by unauthorized persons some time after the official count has been made showed a different result from the official count. This was upon the ground that the count made by sworn officers, immediately upon closing of the polls was better evidence of the true result than a count made by interested parties, not sworn, at a subsequent period, and after the result of the official count had been made known. Such evidence comes far short of establishing either fraud or mistake in the official count.

And that is the rule which has been adhered to by this House since the first Congress convened, and if there is a single precedent to the contrary I have been unable to find it and would thank any gentleman to cite me to it. I quite agree with the chairman of the Committee on Elections [Mr. TURNER], who in his report in the Wallace-McKinley case on the 14th instant, says:

But since Congress passed the act governing contested elections they are instituted upon regular pleadings like any other suit, the proofs taken by the parties before designated officers, and all the proceedings are conformed to judicial precedents. We respectfully submit that it is greatly to be desired that these cases should be adjudicated upon the principles as well as the forms which prevail in the courts.

And now, Mr. Speaker, was that so-called recount honest, fair, and correct? If it was, then I have examined the wrong dictionary and Noah Webster was a fraud. I leave it for the considerate judgment of this House and the country whether or not that so-called recount was honest, fair, and correct. There can be but one conclusion for men disposed to be fair-minded and of legal acumen, but you are the jurors, and I shall not complain of your verdict, let it be what it may.

POOR-HOUSE VOTE.

I next come to what the gentleman from Ohio pleases to term "the fraud and coercion practiced upon the 51 paupers, 34 of whom were Democrats, and compelled to vote for contestee." Now, it is a little strange that so great a proportion of that vote should be Democrats; but what proof is there that any were Democrats, or, if Democrats, that they voted otherwise than as they desired? It is not denied but that they were legal voters, even if they were unfortunate enough to be inmates of the county asylum, but the only claim is that they were coerced into voting the Republican ticket, but whether they voted for Mr. Peelle or Mr. English is nowhere shown, and but one witness was examined on this subject, and I will read his testimony, that the House may see upon what testimony this ground of contest rests. Hiram W. Miller (pages 145 and 146) says:

Re-examination by Mr. WILSON:

Q. Did the use of the Republican ticket at your precinct prevent any person from voting his sentiments, if you know?
A. I think I answered that once before.
Q. What is the answer?
A. I answered that I believed it did, and Mr. Peelle wanted to know who, and I told him the paupers from the county farm.
Q. Did it affect the votes of any number of persons?
A. There was quite a number from that place that voted.
Q. Do you know what their politics were?
A. I think I do.
Q. What were they?
A. I think two-thirds of them were Democrats.
Q. How do you know that?
A. Well, sir, they had voted for me, and I claim to be a Democrat.
Q. How did they vote on that day?
A. They voted the Republican ticket.
Q. I mean on November 7, 1882?
A. They voted the Republican ticket.
Q. How many of such votes were there?
A. I polled the house, and I made it 50 or 51; something like that. There was 57 voted that day—paupers and seven employés.

* * * * * * *

Q. Could they have voted the Democratic ticket without it being known by those who had charge of them what ticket they were voting?
A. I think not.
Q. Who had charge of them when they came down?
A. Well, sir, a part of the officers and employés of the farm.
Q. Would two-thirds of those voters in that poor-house have voted the Democratic ticket on that day if they could have voted it without any influence—if they could have voted themselves?
A. That is my impression.

Question by Mr. PEELLE:

Q. Were they challenged?
A. Yes, sir; part of them were, I think. I challenged several voters myself.
Q. Were they sworn in or did they vote?
A. They were sworn in.
Q. Were they legal voters at that precinct?
A. Well, sir, that is something I am unable to say.
Q. Has there ever been any prosecution on account of the men sworn in?
A. No, sir; not that I know of.
Q. The county asylum is located in Wayne Township?
A. Yes, sir.
Q. You were a candidate for township trustee on the Democratic ticket some years ago?
A. Yes, sir; I was twice; I was elected twice.
Q. You say about two-thirds of those folks voted for you when you were a candidate for township trustee?
A. Yes, sir; I think there was more than that.
Q. You polled them at the last election, did you?
A. No, sir.
Q. How did they come to be on that poll-book; you said you polled them and there were 51?
A. I did not take their politics at all.
Q. Did you poll it at all?
A. Yes, sir.
Q. For what purpose?
A. For election purposes. Mr. Wright and his daughter gave me their names.
Q. You had voted them before for you?
Mr. WILSON. He did not say that.
Q. They had voted before for you?
A. I think they had.
Q. And they were polled out there that time by the Democrats for election purposes?
A. Yes, sir; I polled them four days before the election.

Questions by Mr. WILSON:

Q. When they voted for you was there any difference between the tickets used by the two parties at your precinct?
(Objected to for the reason that the ticket is the best evidence of the fact.)
A. There was not any.
Q. I mean no difference in the ticket.
(Objected to for the reason that the ticket is the best evidence of the fact.)
A. No distinguishing difference.
Q. Under whose control was the poor-house—what party, and what were the politics of the men in control of the poor-house when you were elected?
A. Republican.
Q. Were they the same men that are now in control?
A. Yes, sir; that is, at one election they were and one they were not. The first election it was under the control of Mr. Larry Logston, and at the last or second election they were under the control of Mr. Wright, the same man that controlled them on November 7, 1882.
Q. How many years ago was that election held there—the first time when you were elected?
A. That was in the spring of 1877, I think.
Q. The second election, what date was that?
A. It was two years later.
Q. 1879 that would be?
A. Yes, sir.

Such, Mr. Speaker, is the testimony upon which the gentleman from Ohio says 68 votes should be counted for English. That is, because he thinks two-thirds of them voted for him in 1879, and he is a Democrat, that therefore in 1882, three years later, the same number were Democrats; although Marion County contains 125,000 people, there were no deaths or changes in the county asylum from 1879 to 1882, if his testimony is to be accepted. He says only part of them were challenged and that they were sworn in and that no one was prosecuted for any violation of law. Where is the proof of coercion? It exists only in the brain of the gentleman from Ohio, for it never found a lodgment even with the contestant's counsel. He is an ingenious fellow, that gentleman from Ohio. He actually asks this House to take from me 34 votes without any proof whatever that they were cast for me, and then to round out the climax he asks you to count them for English, making a difference of 68 votes against me.

Again, he asks this House to do that without the least proof in the world that a single one of them would have voted for English. Why, if they were coerced into voting for me, then I should think the gentleman from Ohio would be satisfied to simply deduct them from my vote; but then the gentleman knows that there is a majority of 87 to overcome, and he finds it necessary to multiply by two for fear the votes elsewhere will not make it up. The contestant's witness, Mr. Miller, testifies, as we have seen, that it is his impression that two-thirds of them would have voted the Democratic ticket if they had not been influenced to vote the Republican ticket. The gentleman from Ohio in his report to this House says these 51 persons were compelled to vote the Republican ticket. By whom and how were they compelled to vote the Republican ticket? Why, I will tell you. The county asylum was under the control of Republican officials, and these unfortunate persons were accompanied to the precinct by some of the officials of the institution; therefore they were compelled to vote the Republican ticket. There is no testimony that one of them was even asked to vote the Republican ticket, or that a single being ever spoke to one of them on the subject. I have given you the only evidence introduced on the subject. But, sir, why dwell here? This House will never sanction such a monstrous proposition, whatever else it may do or fail to do, and I shall now leave the subject where it had no doubt been left by the House before I took it up.

FRAUDULENT JAIL VOTE.

The third ground of contest is what the gentleman terms in his

report "the fraudulent jail vote." Some witnesses were examined by the contestant, who stated that certain persons had told them that they had just come out of the jail and had voted the Republican ticket. There is no pretense that they were illegal voters, but simply that because of the use of the Republican ticket they could not vote the Democratic ticket without it being known by the Republicans that they had so voted. The names of seven persons are given, and contestant's own witness, Mr. Dowling (page 115) testified that Jack Crowley and Jack Porter were challenged by Republican challengers. Here is what he said:

Q. Were they challenged?
A. Certainly they were.
Q. Did they get their votes in?
A. Not to my knowledge. They were denied the privilege of voting.
Q. Those men that had Republican tickets given them, that came down there to vote, did not get to vote?
A. No, sir.
Q. They were challenged by the Republicans?
A. Yes, sir; challenged by the Republican police officers.
Q. You say one of them was a Republican?
A. Yes, sir. Porter, at least, claimed to be a Republican, but he would be damned if he was going to vote the Republican ticket, and he took the Democratic ticket and walked up to the chute and was looking at it and trying to vote it. That is the remark he made.

That witness would have us understand that notwithstanding Republican officials released Jack Porter, who was a Republican, yet he says Porter said he would be damned if he was going to vote the Republican ticket. Such testimony carries its own antidote. The man who is so lost to self-respect as to admit that he has been released from jail to enable him to vote is not entitled to belief, and yet such alone is the testimony of every witness who testified on this subject.

Here is the testimony of John W. Fultz (pages 117 and 118), brought out by contestant's counsel:

Q. Do you know of any voters who would have voted the Democratic ticket, including William E. English for Congress, and who voted the Republican ticket, or else did not vote at all because of the Republican ticket being printed on material which distinguished it, and thus affected the secrecy of the ballot?
(Objected to as going back to the direct examination.)
A. I know of three men; one of them lives in the first precinct, and he voted the Republican ticket against his will, never having voted it before in his life, and when he acknowledged the fact to me he was crying. I know another one that was compelled to vote the Republican ticket. I don't know that he was compelled, but he was coerced and persuaded, and he never voted the Republican ticket in his life before, and I have since been informed that he laid and cried all night about it. And I know of another one that tried to vote the Democratic ticket; he had been arrested for some offense, and he was let out of jail as a "trusty." He lived in the second precinct of the twenty-fifth ward, and he tendered his vote and his vote was refused, and they came down to me in the third precinct to come up in the second and see what the trouble was, and see if I could not assist him to get his vote in. He was a young man that I had known for some time, and he had worked with me in the shop where I was employed, and they challenged his vote and I asked them on what grounds, and they called my attention to a clause in the election laws where a person serving a sentence for a misdemeanor or crime was not entitled to vote, and they refused to receive his vote. These other men I spoke of, they had also been prisoners in jail, and they were not let out as "trusties;" they were let out for the purpose of voting the Republican ticket and gained their freedom by so doing. That they acknowledged.
Q. Do you know of anybody else that would have voted and did not on account of the character of the ticket?
A. I know others that claimed they were let out of prison to vote the Republican ticket to gain their freedom.
Q. My question was whether you knew of anybody else that was prevented from voting on account of the character of the ticket?
A. There was one man that I saw, but I can not tell you his name now, in the third precinct of the twenty-fifth ward. I can state the circumstances, but I can not give the man's name. If that will answer the purpose I will answer your question.
Q. I did not ask you for the names. The question was whether you knew of any other person, whether you knew their names or not, that were prevented from voting by the use of that heavy ticket that you have described?
A. I did, at one time, have a list of 26 or 28 names, I believe, who were coerced into voting the Republican ticket that never had voted it before—let out of prison for that purpose—but who they are now I can not tell you. I know the names of two of them, probably three.
Q. What are their names?
A. One is named Edward Tettenbrock and one is named John Condon. I could give the names of two others, but I promised them I would not use their names at the time they told me this. They wanted me to suppress their names, and gave as a reason that the police would run them in on some future occasion every time they got a chance if they did it. If you want to know the circumstances of this other man voting I can tell you the circumstances. I know he did not vote his sentiments. I am satisfied about that.
Q. State the circumstances.
A. They are simply these: There was a man came up into the chute in the third precinct of the twenty-fifth ward, and he had a Democratic ticket in his hand, and was going to vote it, and a Republican policeman was standing there challenging, and he caught him by the shoulder, and he says, "Come here a minute; I want to see you." I was satisfied that when he called him out he was going to try to coerce and bulldoze the man into voting the Republican ticket, and he took him around the corner and was speaking to him, and I tried to get close enough to hear what he was saying; but when he saw me approaching he took him on the other side of the street. The man was a Democrat, and never voted anything else but the Democratic ticket, and when he came back again he had a Republican ticket in his hand. I could tell by the difference in the paper, and he pulled his hat down over his eyes and was going up to the chute, and I said to him, "I would like to see you a moment," and he would not pay any attention to me, but walked right up and voted his Republican ticket.

And then on cross-examination he testified as follows (page 118):

Q. You say you know some man in the first precinct of the twenty-fifth ward that was let out of jail for the express purpose of voting the Republican ticket?
A. Yes, sir.
Q. What was his name?
A. Edward Tettenbrock.
Q. Did he vote it?
A. He told me that he did.
Q. Did you see him vote?
A. I did not see him vote.
Q. Did you see him let out of jail?
A. No, sir; I know he was in jail.
Q. You think he was let out of jail on that day?
A. He told me so.
Q. Was he a Democrat?
A. He claimed to have been a Democrat.
Q. All you know is what he told you?
A. Yes, sir. He was crying when he told me. He said he never voted the Republican ticket in his life, but he voted it that day to get his liberty; that his liberty was sweet, and he voted it.

All he knows about it was what he was told and the man was crying because he had voted a Republican ticket. His having been in jail does not appear to have troubled him much, but voting a Republican ticket lacerated his feelings so that he cried. Such is the character of the testimony all through on this jail vote. There is no competent testimony that any voted on condition that they were released from the jail, nor is there any evidence that the men so claimed to have been released were not legal voters; upon the contrary it was conceded by the witnesses and by contestant's counsel that they were legal voters. Now if there was any proof in this record that any Democrat was released from the jail on condition of his voting the Republican ticket, or if any one else was released on that condition, I should not consent to have such vote counted for me, but there is no competent proof on that subject; all the proof is hearsay and therefore incompetent. If persons were so released and had no such pride as would deter them from telling others that they had been so released, then why were they not put upon the witness-stand to tell their own story?

The chairman of the Committee on Elections [Mr. TURNER], on the 14th instant, in the case of Wallace *vs.* McKinley, uses this language in his report to this House:

The vicious tendency of hearsay evidence in election cases needs no demonstration. An unlawful vote may be cast for one party, and then upon the unsworn statement of the voter it may be deducted from the other party.

The witness Fultz quoted above says he at one time had a list of 26 or 28 names of persons who were coerced into voting the Republican ticket that had been released from the jail, but what their politics were or whether they voted for English or for Peelle is not shown; and yet the gentleman from Ohio wants this House to deduct the votes of 34 persons whom he claims were released from the jail and coerced into voting the Republican ticket, and this he asks this House to do on hearsay testimony, without any proof whatever as to the politics of the great majority of them and absolutely no proof as to whether they ever voted for me. But 9 persons were named, and 2 of those were named by two different witnesses, so that in point of fact, if the testimony should be considered at all, there were but 7 of them. But upon such proof will you disturb the title of a member on this floor? If so, then all that will be necessary to make a successful contest in this House will simply be to put upon the witness-stand three or four witnesses to swear that a given number of persons told them that they had been released from prison and coerced into voting such and such a ticket.

"It matters not whether their names are given or not," says the gentleman from Ohio. "All that will be necessary is to find a sufficient number of persons who will say to some one else: 'We have been released from prison and coerced into voting the Democratic ticket or the Republican ticket.'" It matters not whether their statements be true or false, just so they make the statement. Such is the conclusion of the gentleman from Ohio, as shown by his report; and if he examined the testimony in this case he must as a lawyer concede it. I shall not further dwell on this point.

COUNTERFEIT TICKET.

The next ground of contest is what the gentleman in his report speaks of as the "counterfeit ticket." There is no evidence as to what precincts these tickets were voted in nor by whom voted, nor is there any evidence in the record that they were distributed except at one place, and that among some men employed at a freight-house, where ten out of twelve of them were Democrats, who knew the kind of tickets they were getting. Here is the only testimony on that subject given by the contestant's own witness.

Mr. Sullivan (page 542):

Direct examination by Mr. WILSON:
Q. What is your business?
A. Freight agent of the Cincinnati, Indianapolis, Saint Louis and Chicago Railway.
Q. How long have you lived in Indianapolis?
A. All my life; 25 years.
Q. Were you in this city in November, 1882, at the time of the Congressional election?
A. Yes, sir.
Q. I will ask you if you attended that election that day?
A. I voted.
Q. Where were you most of the day?
A. At my place of business.
Q. Where is that?
A. On South Delaware street, on the corner of Louisiana street.
Q. Did you see any ticket headed "Democratic ticket" and all the names Democratic except Mr. Peelle's name was on as the candidate for Congress?
A. I did.
Q. Where, and under what circumstances, and who had them?
(Objected to as not rebuttal.)
A. I was out in the freight-house on the morning of the election, and Mr. George Hawkins (who was deputy collector of customs) had some of those tickets, and handed me one and said, "Here is your ticket; vote this."

Q. Did you read it?
A. Yes, sir.
Q. Where did you read it?
A. I read it at the time he handed it to me, and was informed by the man who has charge of the freight-house down there that the tickets were not good; that the name of Mr. Peelle was inserted for Congress.
Q. That was the first time you knew of it, when your attention was called to it?
A. Yes, sir.
Q. How many tickets did he have?
A. I could not say as to that.
Q. Did he have a bundle of them, or only one ticket?
A. He had several in his hands at the time.
Q. Did you know Mr. Hawkins's politics?
A. No; I do not know him politically, but I presume he is a Republican of course.
Q. Do you know whether he left any of those tickets with anybody else there?
A. Yes, sir; he did. He distributed them among the freight-house men.
Q. Do you know the politics of those freight-house men?
A. There is about ten out of twelve Democrats.

Now, while there is no proof in the record that these men voted that ticket, there is proof that not more than a dozen tickets of that kind were found in all the county, as testified to by Mr. Brown (page 88):

Q. In that recount did you find any ballots that purported to be Democratic tickets and contained the names of the Democratic candidates for the various offices, except that Stanton J. Peelle's name was printed for Congress in place of William E. English; and if so, how many?
A. Yes, sir; I think there were not more than a dozen in the whole county got in the box of that character.

And here is what Mr. Byram said as to the number of such tickets (page 421):

Direct examination by Mr. PEELLE:

Q. I recall you for the purpose of asking you if you noticed any Democratic tickets in the boxes at the time you were counting the vote for Lemon and Hess and Mr. Peelle with the name of Mr. Peelle printed on instead of Mr. English?
A. Yes, sir.
Q. Straight Democratic tickets, except Mr. Peelle's name was printed in there instead of Mr. English?
A. Yes, sir.
Q. How many were there of that kind of tickets?
A. I do not think there was to exceed five or six; I do not know that there was that many; there was a few.

Here is what Mr. Adams, the other member of the commission at the recount, had to say (page 404):

Q. Did you find any Democratic tickets in that box with the name of Mr. Peelle printed on them?
A. Yes, sir.
Q. How many?
A. Not more than five or six to the best of my recollection.

So that it will be seen that there is a preponderance of testimony that not more than 5 or 6 of such tickets were voted in all the county, and if voted at all was most likely voted by those to whom they were given at the freight-house. There is no evidence in the record anywhere that such tickets were seen at any precinct during the day. The only other witness who testifies on the subject of Democratic tickets with my name printed in was Mr. McDonald, and now here is his testimony, at pages 532 and 533, on direct examination:

Q. Did the Republicans use, or attempt to use, any counterfeit Democratic ticket, or any ticket imitation of the Democratic ticket, at the November State election in 1882, in this county; and if so, describe the ticket?
(Objected to as not rebuttal.)
A. Early in the morning, as I was going to the committee-rooms, some one gave me a ticket headed "Democratic ticket," that was, on examination, a facsimile, as near as could be made, of the Democratic ticket printed and used that day, except that it had Mr. Peelle's name instead of Mr. English's for Congress. I saw several of them during the day; how numerously they were issued I do not remember, but I made a special examination of that one, as it was the first one presented.

And then, on cross-examination, here is what Mr. McDonald says (page 533):

Q. Who first handed you a copy of the counterfeit ticket that you spoke of?
A. I am unable to say.
Q. Was it a Republican or a Democrat?
A. I think he was a Democrat. I can tell you where it was handed to me better than I can the name of the party. I was going down to the committee-rooms in the First National Bank building, and within a few feet of the stairway leading up some one handed me this ticket.
Q. You say it was a Democrat?
A. My impression would be that it was a Democrat, because he seemed to be bringing it to me for inspection.
Q. Did you see any other ticket of that kind during the day?
A. I am not able to recall any.
Q. I understood you to say in your examination-in-chief that you saw other tickets of that kind during the day?
A. It might be that I did.
Q. Did you see any of those tickets in the hands of Republicans anywhere?
A. I do not recollect the ticket in the hands of any Republican canvasser.

From that testimony it will be seen that while Mr. McDonald in his direct examination says "I saw several of them during the day," &c., yet on cross-examination he was forced to admit that notwithstanding he had been going from precinct to precinct during the day, he was able to recall but one single ticket he had seen of that kind during the day, and that was handed to him by a Democrat. There is no pretense in the record in this case nor has the gentleman from Ohio even claimed that such ticket was illegal. It is a legal ticket under the laws of Indiana, and not until the contestant shows that such tickets were voted by persons under the belief that they were voting for him can this House transfer such ballots from Peelle to English. There is no proof that any fraud or deceit was practiced, or that a single one was ignorantly voted by any one; so that the presumption is in favor of the tickets having been voted by persons knowing what they were doing, and this presumption is strengthened by the testimony of Mr. Sullivan that such tickets were distributed among Democrats who knew the kind of tickets they were getting.

Now, upon such proof as this the gentleman from Ohio asks this House to deduct 12 votes from Peelle, and not content with that he asks that you count them for English. He is not willing even that you should take 6, that being the highest number testified to by both Mr. Byram and Mr. Adams, but he asks you to accept the testimony of Mr. Brown who says there were not more than a dozen. He does not pretend but that there may be less, and certainly 6 would not be more than a dozen, but I apprehend this House will not for a moment consider that question as affecting my right to a seat on this floor. This contest is not a matter personal to myself; it is a matter in which the people whom I have the honor to represent are concerned, and their rights rather than mine should be considered by this House. All presumptions should be reckoned in their favor.

Fraud and wrong-doing should not be presumed unless the proof be strong and convincing, and I have no hesitancy in asserting that the gentleman from Ohio can not find a single precedent from the foundation of the Government to the present time that would justify or sustain the position he has taken; that is, that tickets recognized as legal where voted could be deducted from one candidate and counted for another without the consent of those voting such ballots and without any proof whatever that any one was deceived. It will not do to say that such tickets were intended to deceive and therefore did deceive, but the proof must show what was in fact done. Every presumption is in favor of compliance with the law, and voters who had nothing to do with the issuance of such tickets should not be disfranchised or have their votes counted for some one other than they voted for, unless there be sufficient proof that they were deceived and thereby voted differently from what they intended, and even then I doubt if such votes should be counted for contestant without some affirmative proof that they intended to vote for contestant. But enough on this point.

REJECTION OF VOTES BY INTIMIDATION, ETC.

I now come to the fifth ground of contest, which is that 100 or more votes were rejected in the second precinct of the seventeenth ward in the city of Indianapolis fraudulently and by intimidation. It is claimed by the contestant that in this precinct on election day, by reason of the police, certain persons were deterred from making affidavits touching the qualification of voters, and that in consequence thereof a large number of persons were prevented from casting their votes.

Now, what is the proof on this point? The contestant in his case in chief examined but one witness on this subject, and that was Mr. Frenzel (page 151), who testifies as follows:

Q. What time did you go to the second precinct of the seventeenth ward?
A. I think it was about half past one. I went there in the afternoon of that day.
Q. Why did you go?
A. I was called there because of some disturbances that were going on there.
Q. Did you go over there?
A. Yes, sir.
Q. Did you find any trouble there growing out of the use of this Republican ticket; and if so, what?
A. I found that owing to the Republican ticket being so easily distinguished from the Democratic ticket, that when a Democrat went to vote the Republican challenger, and particularly this patrolman, would know that he was voting the Democratic ticket, and immediately when they found that out they would bulldoze and browbeat the man so that he was either afraid to vote or was challenged and left.
Q. How many men were there of that sort, if you know?
A. I think there must have been at least sixty.
Q. Were those sixty Democrats?
A. Yes, sir; I think they were.
Q. What do you mean by patrolman?
A. A member of the police force, called patrolmen.
Q. Was there more than one policeman there?
A. There was one policeman and two captains of police.

That was all the testimony offered in this case in chief, and to meet that the contestee examined quite a number of witnesses to show that there was no disturbance at that precinct; that no one who was entitled to vote was prevented from voting, and that the usual vote was polled at the precinct. But here is the testimony offered by the contestee on this point, found at page 231, as follows:

E. J. Conway, who was being examined by contestee, on cross-examination by contestant's counsel was asked this question:

Q. Were there any policemen around that voting precinct that day?
A. Yes, sir.
Q. Who were they? What were their names?
A. Tim Splann was there a while, and Len Crane and Sam. Gerber, and there may have been one or two others for a short time. I don't recollect.
Q. Was Splann on the police force?
A. He was the captain of the police at that time.

Then again, on page 244, when the witness J. H. Bowlby was on the stand, on cross-examination he was interrogated and answered as follows:

Q. How many policemen were there?
A. I think there were two.
Q. Were there not more than two?
A. The captain was there a while. He drove down there.
Q. And were those two all that you recollect of? Who were those two?
A. I can not call their names. I never can call names very well. In fact I am not well acquainted with none of them by name. Campbell was there off and on.
Q. And Crane—was he there once in a while?

A. Crane—I do not know by name. I know him by sight, I expect.
Q. Do you know Mr. Gerber, a policeman?
A. No, sir.
Q. Captain Splann—was he there?
A. He is a large man, is he not? I am not particularly acquainted with Captain Campbell, but I know most of them by sight.
Q. You say some of these policemen were around there all day?
A. Yes, sir.
Q. And they were there to keep order?
A. I suppose that is what they were there for.
Q. Was there any particular need of having order kept at that precinct?
A. I did not see anything out of the way.

At pages 327 and 330 will be found the testimony of Mr. Splann, the captain of the police, and he testifies as follows:

Q. While you were in that precinct of the seventeenth ward where Mr. Frenzel was, was there other policemen there?
A. Yes, sir.
Q. Who were they?
A. Crane and Gerber were there.
Q. What Crane?
A. Leonard Crane.
Q. What is Gerber's name?
A. Samuel Gerber.
Q. They were patrolmen?
A. Yes, sir.

From that testimony it will be seen that there were two and only two policemen stationed at that precinct; that there was no trouble of any sort, as admitted by Mr. McDonald, page 463, on cross-examintion, who said there was no row there and no fights; and yet that is a strong Democratic precinct, and was carried by the contestant by 62 majority, and the gentleman from Ohio would have this House understand that from 60 to 100 voters were intimidated in that precinct and did not get to vote, all without any disturbance, row, or fight of any kind. The Democrats in that precinct are not so timid as the gentleman from Ohio would have you understand. Then, again, no affidavits were rejected, and the vote at that precinct was the usual vote, as testified to by the inspector at that precinct, Mr. Hetherington, at pages 331 and 332, as follows, on direct examination:

Q. How did the vote there correspond with the number of names recorded on the poll-book?
A. Well, that came out pretty well; better than we did at the last election.
Q. What election do you refer to?
A. The one we had here lately. We polled a very poor vote.
Q. What was the number of votes as compared with the number of names on the poll-list as compared with the election of 1882, if you remember?
A. I can not say exactly.
Q. Do you remember whether there were more or less votes than in 1882?
A. No, sir; they were about what is generally polled there.

And on cross-examination he testified as follows:

Cross-examination by Mr. WILSON:

Q. How old did you say you were?
A. Fifty-three in October.
Q. Do you use glasses?
A. Yes, sir; when I read.
Q. Is your vision as good as that of most anybody—as people of your age usually?
A. Well, I am unfortunate in having only one eye, but it is a very good one, and I can see as much as anybody with it, and it is very strong and powerful, but I read so much at night I find it is a benefit to wear glasses.
Q. When Mr. Peelle asked you about that Republican ticket you put your glasses on before looking at it a while ago?
A. Yes, sir; I recognized the names.
Q. But you could tell the difference between those tickets by feeling them?
A. I could.
Q. Was there anybody there challenged and sworn in that was not allowed to vote at your precinct—that was not allowed to vote after they were sworn in?
A. Yes, sir; several. I understood you to ask me if there was anybody sworn in?
(Question repeated.)
A. No.
Q. No trouble of that sort at all?
A. No; some voters—I frequently had trouble in getting parties to swear them in, and they made a business of getting Chris. Schoettle to do it, and I stopped it.
Q. How did you stop it?
A. Because he did not know the parties he was swearing in.
Q. How do you know that?
A. I asked him. I said, "Do you know that man, Chris.? Do you know his name? Do you know where he lives?" "No." Then I says, "Then don't you do that."
Q. Did not you refuse to take votes after they were sworn in?
A. No, sir; when parties were sworn in with a party that had authority to swear them in I never refused a vote.
Q. The question is about Mr. Schoettle.
A. I never refused a vote after they were sworn in.
Q. Did not you refuse votes that he swore were residents of the ward and had a right to vote there?
A. No; Mr. Schoettle swore in 2 votes, and I saw he was making a business of it, and I put the question to him, "Do you know that man, Chris.?" and he says, "I know he is a voter." "Do you know his name?" "No." "Do you know where he lives?" "No." Then I said "Don't you do that any more."
Q. You told him, then, he must not swear in any more votes?
A. I did; and he did not do it.

Here it affirmatively appears that no vote was refused after it had been sworn in as stated by the witness.

Under the statute of Indiana (section 4702 Revised Statutes 1881), when a voter has been challenged he shall step aside, and in addition to his own oath as to his qualification as a voter some one in the precinct who has been a *resident householder and freeholder for at least one year prior to the election* shall also swear as to the qualification of the voter; but there is no evidence whatever in this record that either Schoettle or any one else who attempted to swear in voters at that precinct was a householder in the precinct, or that he owned real estate in the precinct for one year prior to such election.

There is not a syllable of evidence in the record that Schoettle was authorized under the statute to swear as to the qualification of voters, nor is there any evidence that the other man (Wehla) owned real estate or was a householder at all in the precinct; so that neither of those two persons were authorized to swear as to the qualification of any voter, and such affidavits if tendered were rightly rejected, unless the party making the challenge had withdrawn it, but there is no evidence that any challenge was withdrawn. The contestant's own witness, Mr. Hicklen, swears that Schoettle and Wehla were the only two men in that precinct who attempted to swear in voters, and that they did not own real estate, as required by the statute. Here is Hicklen's testimony, pages 482 and 483:

Q. Do you know of another voter down there whose vote was refused after he had been sworn in other than the one you mentioned?
A. Yes, sir; I saw them sworn in.
Q. I mean men who were challenged and sworn in. How many of that kind were refused? How many of that kind were rejected by the inspector?
A. I could not say how many there were.
Q. Did you see more than that?
A. Yes, sir; I saw more than one.
Q. Did you see more than two?
A. Not sworn in according to the laws of Indiana, but men who were residents of the ward, and every one knew, would come in there with their affidavits made out in full and present it to the inspector; but they were men who had no real estate in the ward.
Q. And the challenges were not withdrawn, were they?
A. The challenges were not withdrawn.
Q. And the inspector would not receive that kind of affidavits, as the law required the affidavits to be of some one who owned real estate in the ward. Is not that the fact?
A. That is the law in this State.
Q. And it was that kind of affidavits you are referring to?
A. It is that kind of an affidavit.
Q. You say you have a personal knowledge of one man whose vote was refused after the affidavit had been made for him?
A. Two men that I know of.
Q. Was there more than two rejected after the affidavits had been made?
A. No; but there would be more men not coming to vote who had ascertained that they could not vote by being sworn in by some one who owned no real estate.
Q. As the law required?
A. Yes, sir.
Q. Then you only know of two men whose votes were rejected when affidavits properly prepared had been offered?
A. No; I do not say that. I say that I know there was any amount of men who did not come up and apply, and did not go in the chute to vote because they knew their votes would be challenged and rejected.
Q. Give me the name of some man who did not vote and did not come to the chute because he knew that he was going to be challenged.
A. I do not know the names of the parties.
Q. You do not know the name of one of them, do you?
A. I can not call one to mind now.
Q. All the votes that you say you saw rejected were two; is not that really so?
A. No. I saw men that I knew were voters in that ward, and I wanted them to come up and vote, and they replied if they went up there their votes would be challenged and the challengers would not withdraw them.
Q. Did you see the inspector reject any but two votes at that poll?
A. No rejection.
Q. Did you see the inspector, Mr. Hetherington, reject more than 2 votes?
A. All Mr. Hetherington had to do was to wait for the outside man to challenge. He did not challenge any votes.
Q. Did he receive any vote of any one that was offered to him?
A. I do not know whether he did or not.
Q. I mean did he refuse any vote that was offered him?
A. Not that I know of.

So that by the testimony of the contestant's own witness these men did not own real estate in the ward, as the statute requires, and further along in his testimony he admits that Schoettle and Wehla are the only two men who were there swearing in votes, and by his testimony he corroborates the testimony of the inspector that no vote was rejected after it had been sworn in. Neither Schoettle nor Wehla are put upon the witness-stand. From the testimony which I have read it will be seen that the contestee fully met the testimony of Frenzel that 60 voters were prevented from voting in that precinct, and now under the guise of rebutting testimony the contestant examines several witnesses, all of which is cumulative and not rebuttal. But assuming that this House will consider all the testimony, notwithstanding the contestee has had no opportunity to meet the same, I will now read from the testimony of such witnesses as were examined in rebuttal, so called. But before I do that permit me to remark that it is gravely stated in this report that there are in the city of Indianapolis seventy-four regular policemen and that on the day of election there were one hundred and fifty extra policemen appointed, and it further appears in the record in this case and in the brief of contestant's counsel that there were eighty-five United States officials in that county on election day.

This is dwelt upon as very remarkable and unusual; but this House will be surprised when I say that nowhere in this record is it shown that there was a single Federal officer at any precinct in that whole county during the entire day, and nowhere is it shown in this record that a single one of the extra policemen complained of were even seen on the day of the election, much less interfering with voters; and yet the gentleman from Ohio, in his report, misleads this House by asserting that these officers intimidated voters. And now what is the testimony introduced in rebuttal, and upon which this House is asked to count 100 votes for the contestant that were never cast for him and without any proof whatever that they would have voted for him even

had they voted. The House will notice, as I read along, that not a single name is given of any one who was intimidated and prevented from voting. Here is the testimony of Mr. Frenzel (pages 477 and 478):

Q. You said awhile ago that there was a German man whose vote was rejected and for whom an affidavit was prepared?
A. Yes, sir.
Q. Who was swearing him in?
A. Chris. Schoettle.
Q. You say he was a naturalized German. Do you mean that he had simply taken out his papers and became a citizen?
A. I could not say as to that. It might be that he had only taken out his intention papers.
Q. It was that day he took them out?
A. I could not say whether it was that day or the day before.
Q. Was not the ink still wet on the paper?
A. No, sir; not that I remember of.
Q. Do you remember who it was?
A. No, sir; I do not know that I can now say?
Q. Do you know where he lives?
A. No, sir.
Q. Do you know whether he was a voter in that ward to your own knowledge?
A. He was properly identified to me as being a voter there by responsible parties.
Q. Do you know anything about that, or about him, except what was told you that day?
A. Only what was told me by reliable parties, and I had seen the man there.
Q. That day?
A. I saw the man that day, and I had seen him before.
Q. You do not know how long he had been in this country, or how long he had been in that precinct?
A. No, sir.
Q. That was the only man's vote that was rejected that had been sworn in?
A. Yes, sir.
Q. You say at the time the inspector claimed he was not a resident?
A. The inspector claimed that Schoettle, who swore him in, did not actually know him.
Q. Did he question Mr. Schoettle as to his knowledge of the man and his residence?
A. I think he did.
Q. And it was after that that Mr. Schoettle withdrew himself, did he?
A. Mr. Schoettle left the polls then.

* * * * * * *

Q. You say there was only one vote that you saw for whom an affidavit was offered there that was refused. Do you know whether there were voters depending upon that affidavit; and, if so, how many?
(Objected to.)
A. I thought there was a good many, and it was my impression that there must have been at least fifty or sixty that were scared off, as it appeared to me.
Q. Did you make any statement about that at the time as to the number?

* * * * * * *

Q. Do you know of any man that did not get his vote in there that day?
A. It would not have been possible for me in that large crowd and with the amount of excitement going on there to have even identified my friends.
Q. You do not know the name of any man whose vote was not gotten in?
A. I can not state at this distant day.

The witness only makes a general statement as to the number as being 50 or 60, and out of that whole number he is unable to give the name of a single one; and yet upon such testimony the gentleman from Ohio asks this House to count those as votes cast for the contestant. But let me read further.

Here is the testimony of William Buehrig (pages 485 and 486):

Q. Do you know how many voters, on account of the refusal of those affidavits, there were who did not vote?
(Objected to as not rebuttal; and for the further reason that counsel had announced that he was through with the witness, and the contestee had no cross-examination to make.)
A. I judge there were 100 or more. From noon on I do not think we got in a dozen votes; in fact, I asked a dozen to vote, and they said, "What is the use? they won't let us vote." I know individual cases of men who had lived in the ward a number of years and they would push them right out of the chute and would not let them vote; and late in the day, when wagon-loads of Democrats would come there, they would hold some Republican in the chute and keep him there; and the chute was crowded a while before the polls closed, and parties that wanted to vote could not vote.

* * * * * * *

Q. Who made the affidavits?
A. Mr. Schoettle made some, until they scared him off, and Mr. Wehla.
Q. How long was Mr. Schoettle there?
A. He was there off and on all day.

It will be noticed that his statement as to the number is also general: "I judge there was 100 or more." He gives the name of no man, and the same men who were attempting to swear in those men, who owned no real estate, &c., as the statute requires, is mentioned; and yet he says that 100 men were dependent upon the affidavits of men not authorized under the law to swear as to the qualification of voters, and upon such testimony as that the gentleman from Ohio asks you to count 100 votes for English, and, too, without a line or word of evidence that a single one of them was a legal voter in that precinct.

But let me read from the testimony of Mr. McDonald, a prominent candidate for the nomination for the Presidency (pages 461–463):

Q. What was your position as to that campaign?
A. I was chairman of the Democratic State central committee, and also chairman of the executive committee.
Q. Now I will ask you if when you went to either precinct there in the seventeenth ward you had any conversation there with reference to swearing in voters? If so, state fully what you said and what was said at that precinct, if you recollect.
(Objected to as immaterial, and for the further reason that the question does not disclose with whom he had a conversation, if any one.)
Mr. WILSON. I state here as to the admission of the evidence that the witnesses for the contestee from the second precinct of the seventeenth ward have testified as to alleged conversations of Senator McDonald, in the language of the statement made at that precinct concerning swearing in voters, and we have a right to call for the entire conversation.
A. I will state at one of the precincts in the ninth ward I met John Frenzel, who was a member of the executive committee and treasurer of our State central committee, and who had been on a committee acting in concert with the county central committee to see about qualifying voters that might be challenged, and I learned from him who in the seventeenth ward was expected, or had been, or had been spoken to about qualifying such voters as might be challenged, as we understood there were quite a number of voters in that ward who were employés of some machine-shops in the western part of the city across the river, and he gave me the names.
Q. Do you recollect that name?
A. No; it is a German name.
Q. Was it Schoettle?
A. It was some such name. It was a German name. When I got down to that precinct of the ward I found trouble there about the votes of certain parties being received and inquired about this man, whose name had been given me by Mr. Frenzel, to know if he would file an affidavit to qualify a voter who was then challenged, and Mr. Pierce Norton, whom I found there—whether he came before me or after I do not know—took a blank affidavit and had it filled up and went to the voter to have it signed and sworn to before a notary public, as I understood. I did not know the man, but I understood he was a notary public; and Norton and myself, and this voter, whom I did not know, but I remember to be a young man, and the witness who had signed the affidavit, this German, started up to the poll to have this man's vote presented. We went up through the chute, and when the voter got to the window the affidavit was presented and his vote, and the inspector asked the witness something about this man or what he knew of him and what his name was, or something of that kind, and the German not answering to his satisfaction, the vote was refused. I then turned to see who had interposed the challenge. I felt satisfied that this person who was tendering his vote was a legal voter. I understood he had just come across from the shops with quite a number of others who had been at work during the forenoon and had adjourned to come over in the afternoon to vote, and there was nothing about them to indicate that they were not legal voters, and nothing to show that there was any attempt on their part to put in illegal votes. I turned to see who it was had made the challenge, and a person standing off at the right was pointed out to me as the person, and I asked the question—I said, "Do you know that this man is not a legal voter? I do not want any man to vote here who is not a legal voter, and unless you have some knowledge that he is not a legal voter I suppose you would hardly challenge him;" and he said: "No, I do not know he is not a legal voter, and I do not know that he is; but if he puts it in he is to put it in according to law," and he spoke in a very brusque sort of a way; and I said: "This man has complied with the law." By that time the German witness, who had filed his affidavit, seemed to be a little inclined to back out. He did not understand what was going on, or did not seem to very well. He was growing somewhat timid, and he was backing out of the chute, and in the mean time parties on the outside were saying: "Put them out! Get them out of the way!" or words of that kind were passing around, and we got out of the chute and I did not hear what the inspector said, but finally it resulted in the vote being refused. That much I clearly understood. Not being able to talk with this man in his own language, I then told my son Frank, who was with me in the buggy, to drive back to the ninth ward and bring down Mr. Frenzel to see if he could not get a better understanding with this person and unlock this trouble about the votes; and about the time Frenzel came there—I remained until he did come, and soon after he came I went away. The person that I spoke to I did not know, but I had the impression he belonged to the police force—that is, the person pointed out to me as the one who made the challenge, but I do not know that. He spoke up quite brusquely, and seemed quite determined that this man should not vote.
Q. You made your statement, did you, in the presence of the gentlemen standing around the chute?
A. Oh, yes, sir; the conversation took place while I was in the chute, and Judge Norton was in the chute, and the man whose vote we were presenting and the witness—we four were there.

Cross-examination by Mr. PEELLE:

Q. He then told you to clear out of the chute, so that others could pass up to vote?
A. Yes, sir; they got impatient.
Q. It was in order to enable others to pass up the chute to vote?
A. They did not want that affair to stop the vote any longer.
Q. Do you know who that man was that was challenging?
A. I do not.
Q. Did you examine the affidavit?
A. I am very confident I did. It was written by Pierce Norton. I recollect of his bringing the affidavit up after he had filled it up. It was a printed form.
Q. You do not know who the man was that was offering to vote?
A. No, sir.
Q. Do you know where he lived?
A. Nothing, except what I was told there.
Q. You do not know whether he was a legal voter or not?
A. No, sir; except what I was told there, and that was that he was from the workshops on the other side of the river and boarded in that ward.
Q. All you know about it is what was told you by those persons?
A. Yes, sir.
Q. Personally you have no knowledge upon the subject?
A. Personally I have no knowledge of the parties at all.

* * * * * * *

Q. I will ask you this—if the inspector did not ask that man who was vouching for this voter whether or not he knew him?
A. It is possible he did.
Q. And if he did not tell him he did not know anything about him, and he did not know him at all?
A. He could not give him his name; I remember that.
Q. Did not he say he did not know the man?
A. No; I do not remember that he said he did not know the man. He was a German, and I did not understand him very well myself.
Q. And the inspector refused to receive the vote after he had questioned the man who had vouched for him?
A. Yes, sir.
Q. Is it not a fact that the reason he gave for refusing was that the man that swore him in knew nothing about him?
A. He was not satisfied with the man's information. I think I said to him if the man is satisfied to make the affidavit he could make it anywhere else as well as to come here.
Q. And when the German ascertained the difficulty he began to back out and became a little timid?
A. Yes, sir; he was hesitating.

* * * * * * *

Q. No trouble there and no fighting?
A. No fights.
Q. No row?
A. No row.

From the statements made on this floor this House might infer that Mr. McDonald was a very timid man, as he had been ordered out of

the chute—meekly submitted; but upon examination of his testimony it will be seen that Mr. McDonald was asked to get out of the chute simply to enable persons who were there to pass up and vote. It will be seen that this same man, Schoettle, was then trying to swear in the vote that Mr. McDonald refers to, but the man did not own real estate, as required by the statute, nor is there a line of evidence that he was a freeholder; besides, Mr. McDonald himself was forced to admit that Schoettle did not know the man's name who he was swearing as a legal voter in that precinct, but this House is asked to count such votes for the contestant. Now, Mr. Speaker, such is the character of the testimony on this point all through. Not a single witness pretends to give the name of a single one of the 100 claimed to have been scared away, nor is one of them put upon the stand to testify. If any such number were prevented from voting certainly some of them could have been procured as witnesses, and before any such votes can be counted some of them at least must testify that they desired to vote and made reasonable effort to vote, but were prevented, &c. I refer the House to the case of Norris *vs.* Handly, Forty-second Congress, and to McCrary on Elections, section 431, where he says:

> Where it is alleged that a large number of persons have been deterred from voting by violence and intimidation, the testimony of those persons or some of them should be produced. The opinions and impressions of others is not sufficient.

He then quotes in support of this from the case of Norris *vs.* Handly, *supra:*

> It would seem that if over two thousand electors were deterred from voting by violence, threats or intimidation, some of these electors could be found to come forward and swear to the fact. Your committee think that it would establish a most dangerous precedent to allow a fact of this character, so easily established by the direct and positive testimony of so many witnesses, to be proven solely by hearsay and general reputation, &c.

The rule of law there laid down was long since adopted by this House, and yet you are asked to set aside that well-founded rule without the testimony of a single one of those timid voters, and without any testimony as to how they would have voted; the gentleman from Ohio and my colleague [Mr. LOWRY] both ask the House to count 100 votes for the contestant. When it is remembered that my majority in the district was only 87 votes, it is not surprising that 100 men are claimed to have been prevented from voting. That, as well as the number of votes claimed to have been lost to Peelle on that so-called recount, is not alarming when you consider that 87 majority had to be overcome. If this House should find that fraud and intimidation had been practiced at that precinct, being but one of the eighty precincts in the county, so that a fair election was prevented at that poll, then, under the rule laid down in McCrary on Elections, section 425, &c., the precinct should be thrown out, and in that event 62 votes would thereby be added to the contestee's majority. But, Mr. Speaker, I can not think that this House will be so lost to all sense of fair dealing and well-founded law as to sustain the report of the Committee on Elections.

I now come to the sixth and last ground of contest presented by the report.

ILLEGAL OR SPRING-BACK TICKET.

The constitution of Indiana provides:

> All general elections by the people shall be by ballot. * * *

Under that provision of the constitution the Legislature of Indiana has enacted the following statute:

> All ballots which may be cast at any election hereafter holden in this State shall be written or printed on plain white paper of a uniform width of three inches, without any distinguishing marks or other embellishments thereon, except the names of the candidates and the offices for which they are voted for. (Section 4701 Revised Statutes 1881.)

Now, did that Republican ticket conform to the statute? It was printed on plain white paper; it contained no distinguishing marks or other embellishments; it was three inches in width, and contained the names of the candidates and the offices for which they were voted. The supreme court has repeatedly held that the heading constituted no part of the ticket. (See Drulinger *vs.* The State, 29 Ind., 308; Millholland *vs.* Bryant, 39 Ind., 363; Stanley *vs.* Manly, 35 Ind., 275.)

And, in addition to that, it was expressly agreed between Hon. Joseph E. McDonald, chairman of the Democratic State central committee, and Hon John Overmyer, chairman of the Republican State central committee, that no exceptions should be taken to the headings of the tickets (see page 534). But the contestant does not claim that such is a distinguishing mark; his only claim is that the paper upon which the Republican ticket was printed was so heavy and thick as that it could readily be distinguished from the Democratic ticket, which, by the way, was so thin and light as that it could readily be distinguished from the Republican ticket.

The statute does not define what kind of paper; it does not say plain white book-paper, plain white news-paper, plain white writing-paper, or plain white plate-paper, but simply "plain white paper," and it was to obviate the difficulty that might arise by the use of technical terms and the difference of opinion that might exist in case of contests that the Legislature of Indiana in the section quoted used a general term applicable alike to plate-paper, book-paper, print or news-paper, &c.

The object of that statute was to make the tickets uniform in external appearance, as decided by the supreme court in the case of Drulinger *vs.* The State (29 Ind., *supra*), in which the court say:

> This object would seem to be secured, as far as legislative enactment could effect it, by requiring all the ballots cast to be uniform in *external appearance*, and such we think is the proper meaning of the section of the statute under consideration.

Again the supreme court of Indiana in the case of the State ex. rel. Julian *vs.* Adams (65 Ind., 393), which was a proceeding by information under the statute to contest the election of a circuit judge; and in that case it was alleged that the "ticket was printed on very white, thin, and hard paper, which rendered it quite transparent; that at the head of said ticket the words 'Republican ticket' were printed in with very peculiar and unusual type and in unusual form and with very black ink, and by reason thereof the words 'Republican ticket' were readily seen and easily read and understood by an inspector of the other side of the ticket; that in the ordinary way of folding the said ticket the words 'Republican ticket,' so printed as aforesaid, were exposed in such manner that the officers of the election, or any other person who might be present and desired to know the ticket which any elector was about to vote, could readily ascertain and know whether a persons was voting the Republican ticket, Democratic, or National ticket; that the tickets used by the Democratic and National parties at said election were printed on soft white papers," &c.

And yet the supreme court held that ticket legal, as containing no distinguishing marks forbidden by this statute. There are but three tickets in comparative controversy in this case—the Republican ticket, the Democratic ticket, and the National or Greenback ticket, and each ticket is printed on different kinds of paper. The National or Greenback ticket is printed on news-paper about two-thirds as heavy as the Democratic ticket, while the Democratic ticket is printed on book-paper about half as heavy as the Republican ticket. Now the question is which shall be the standard, or shall any standard be established? The statute of Indiana does not designate any official to procure or issue the paper for printing tickets upon, but leaves that to the respective political parties.

Now, in the first place, I insist that it is immaterial whether the tickets had been printed on plain white book, news, writing, or plate paper, so that in point of fact the ticket was printed on "plain white paper." But the contestant claims that the paper upon which the Republican ticket was printed was "plate-paper," and therefore not in accordance with the statute, and this he insists notwithstanding there is absolutely no controversy but that the material is paper and that its color is "plain white." Now, I apprehend that this House will not undertake to legislate for the State of Indiana; and yet if the House should hold that the paper upon which the Republican ticket was printed was not on plain white paper, that in effect would be to adopt the kind and quality of paper upon which the Democratic ticket was printed, thereby adopting a technical standard of paper, which the Legislature of Indiana sought to avoid.

The contestant in the prosecution of this case assumed that the paper upon which the Democratic ticket was printed was the correct standard, as the paper upon which that ticket was printed was book-paper; and assuming that he attempted to prove that the paper upon which the Republican ticket was printed was plate-paper and therefore not plain white paper, the burden of proof is upon the contestant; and now for the sake of the argument let us assume the plate-paper is not such paper as contemplated by the statute. Let us therefore examine the proof on the question first as to the particular grade or quality of paper, and see if contestant has made out his case even upon the theory that the material is plate-paper.

The contestant examined nine experts on this subject, and while with one or two exceptions they testify that the material is what is known as Western plate-paper, yet they all, with one single exception, agree that it is paper, and that its color is plain white. The only witness who said it was not plain white in color was Mr. Edward Mill, and he pronounced it a toned paper, "bordering on a buff tint;" but any man with good eyes and common sense would know better than that by looking at the ticket. Here it is, and I invite an inspection of it by all. And now here is his testimony and his reason for saying it was toned paper, &c.

Edward Mill, on cross-examination (page 140), says:

> Q. If a customer were to ask you for plain white paper, would you understand what he meant, unless he designated it as print, book, or plate paper?
> A. No, sir.
> Q. Is not that Republican ticket that you have in your hand printed on paper?
> A. Yes, sir.
> Q. Is not the color plain white?
> A. No, sir; it is what we call toned paper.
> Q. Is not toned paper white?
> A. No, sir.
> Q. What color is toned paper?
> A. Bordering on a buff tint.
> Q. What is the color of the paper upon which that Democratic ticket you have in your hand is printed on?
> A. That is white; dead white.
> Q. Why did you pick up the Republican ticket just now and compare it with the Democratic ticket before you answered the question as to the color of that Democratic ticket?
> A. In order to make a correct answer.

And on re-examination, at the same page of the record, he says:

Q. Can you make plain white paper without the use of bluing?
A. No, sir.
Q. What are your politics?
A. First-class Republican.

That was the only one of the contestant's expert witnesses who testified that the paper was not plain white; and to meet his statement I put on the witness-stand the contestant's principal expert witness, Mr. C. B. Wing, who sold the paper, and he testified on that subject as follows (page 321):

Q. State if there is any indigo in that paper, or bluing?
A. There is not any indigo in it.
Q. What do you call it?
A. Ultramarine blue.
Q. Is there not some of that in it?
A. Yes, sir.
Q. What is it put in there for?
A. If we did not put some bluing in we could not get any color. If it was not for that it would be a regular yellow paper.
Q. What do you put that in for—to make it white?
A. Yes, sir.
Q. Can you tell from looking at that paper whether there has been bluing put in or not?
A. Yes, sir.
Q. You can tell it?
A. It would not get that color if we did not put some coloring in.
Q. What do you mean by saying it would not be that color?
A. It would be a regular buff tint. It is just like you have a shirt washed. If you do not have some bluing in it it will become yellow in time, and that is the reason they put bluing in paper; because it becomes yellow if you do not do that; in time it will turn perfectly yellow like a man's shirt.
Q. State if paper whitened by the use of bluing has a tendency to become yellow by the lapse of time and contact with air?
A. Yes, sir.
Q. Has that ticket the appearance of turning color some?
A. I could not notice it on this ticket. I saw a ticket that I noticed it on.

John Carlow, on cross-examination (pages 26 and 27), says:

Q. What is your politics?
A. I am a Democrat.
Q. How long have you been a Democrat?
A. I can not tell you.
Q. Born that way?
A. Born that way; yes, sir.
Q. Did you have any bet on the result of the Congressional election last fall?
A. I did after election day. The day after the election I bet one-half a box of cigars.
Q. Did you bet on Mr. English?
A. I did.
Q. Before the returns came in?
A. Yes, sir; before they came in.
Q. Is there any difference between this Democratic and National ticket that you have been talking about in the paper?
A. Yes, sir; there is a little difference.
Q. What is the difference?
A. The Democratic ticket is on a little bit better paper than the National ticket.
Q. What kind of paper is that?
A. That is book-paper.
Q. Plain white paper, is it not?
A. Yes, sir.
Q. Now take the Republican ticket and say what is the difference between that and the Democratic ticket.
A. The difference is, one is book-paper and the other is plate-paper.
Q. The Republican ticket is plain white paper?
A. Yes, sir; plain white plate-paper.
Q. And the other is plain white book-paper?
A. Yes, sir.

Enos B. Reed, on cross-examination (page 111), says:

Q. That is paper, then, is it not?
A. Even a blank card is paper.
Q. That Republican ticket is printed on paper?
A. Not in the general acceptation of the phrase.
Q. It is paper, is it not?
A. I presume it is. It may be straw; even paper is made from straw and printed on.
Q. That is paper, is it not?
A. Yes, sir; I suppose it is.
Q. The color of the ticket is plain white?
A. Yes, sir.

C. S. Butterfield, on cross-examination (page 127), says:

Q. It is paper?
A. Western plate-paper.
Q. It is plain white paper?
A. Yes, sir.
Q. Where is your place of business?
A. 36 West Washington street.
Q. Just in stationery, are you?
A. Printing and stationery.

C. B. Wing, being the party who sold the paper to Mr. Hasselman, on cross-examination (pages 131 and 132), says:

Q. Do you know what plain white paper is?
A. I think I could tell a sheet if a man would hand me one.
Q. Is there more than one kind of plain white paper?
A. Yes, sir; there are forty different kinds. I think I could enumerate forty.
Q. If a man would come to you and want to buy plain white paper, would you know what the man wanted without interrogating him?
A. I would ask him what kind of plain white paper he wanted.
Q. What is plain white paper?
A. There are different kinds of that. There is plain white news-paper, plain white book-paper, plain white tub-size, and plain white writing-paper, and I could enumerate many more.
Q. Is that paper upon which the Republican ticket is printed plain white paper?
A. It is plain white plate-paper.
Q. Is not that as equally plain white paper as the book-paper upon which the Democratic ticket is printed?
A. I would call that Democratic ticket white book-paper, and this Republican ticket I would call white plate-paper.
Q. And print paper you would call plain white print paper?
A. I would say white print. I don't know as I would use the word "plain."
Q. If one is plain white paper the other is plain white paper equally.
A. Well, yes; I don't know but it is.
Q. What is it that makes plain white paper; what is plain white paper?
A. You can make plain white paper out of a good many things; you can make it out of wood and rags.
Q. That Republican ticket is printed on paper, is it not?
A. Yes, sir.
Q. And it is plain white, is it not?
A. Yes, sir.
Q. And if the Democratic ticket, which is printed on plain white book-paper, is plain white paper, the Republican ticket, which you say is printed on plain white plate-paper, is equally plain white paper, is it not?
A. I would call it white paper, or white plate-paper.

W. O. De Vay, on cross-examination (page 16), says:

Q. Are you a Democrat?
A. I am.
Q. Is that Republican ticket that you made part of your evidence—is it on paper?
A. It is plate-paper.
Q. Is it card-board, or is it bristol-board, or is it paper?
A. It is plate-paper.
Q. What is the color of that ticket?
A. It is white.
Q. Is it plain white or tinted?
A. It is plain white.

William B. Burford, on cross-examination (pages 22–24), says:

Q. You are a Democrat, I believe, in politics?
A. I am, sir.
Q. If I remember rightly you had no bet on the last election at all as to the result between Mr. English and myself?
A. No, sir; I never bet on elections.
Q. I will hand you the Democratic and National tickets, which have been introduced as a part of the evidence of Mr. De Vay, and I will ask you to state if there is any difference between the kind of paper that these two tickets are printed on?
A. Well, I think there is a slight difference.
Q. I will ask you to state what that difference is.
A. One is a little better grade of book-paper than the other.
Q. Are they both printed on what is known as book-paper?
A. They are.
Q. Is it plain white paper?
A. It is.
Q. I now hand you the Democratic and Republican tickets identified before and ask you to state the difference between those two tickets.
A. One is printed on book-paper and the other is printed on plate-paper.
Q. Are they not both printed on plain white paper?
A. They are, so far as white goes, if you do not qualify.
Q. The only difference being one is what is known as "book" and the other is what is known as "plate" paper?
A. Yes, sir.

Silas T. Bowen (page 36) on cross-examination, says:

Q. State if the material upon which this Republican ticket is printed and upon which the Democratic ticket is printed are not both paper manufactured the same way.
A. I suppose they are.
Q. State if the color of the Republican ticket is not plain white.
A. It would be regarded as plain white.

Edwin L. Hastings (page 37) on cross-examination, says:

Q. Where are you now employed?
A. Mr. William B. Buford's.
Q. The same gentleman who testified here the other day?
A. I do not know.
Q. That Republican ticket that you have been talking about—I will ask you to state if that is paper.
A. Yes, sir.
Q. What is the color of the ticket?
A. White.
Q. Is it plain white?
A. Yes, sir.
Q. Is not that a plain white ticket?
A. Yes, sir; plain white paper.
Q. I will ask you if that is not a printed ticket?
A. Yes, sir.
Q. I will ask you if that ticket is not printed on plain white paper?
A. Yes, sir.
Q. And you have been engaged in the business how long?
A. Thirty-five years.
Q. You have had the handling of all kinds of paper?
A. Yes, sir.
Q. Were you not formerly employed by the Journal Publishing Company?
A. Yes, sir.
Q. And you have an extensive acquaintance with the different qualities and kinds of paper?
A. I think so.
Q. I understand you to say that you have known tickets voted at elections to be printed on paper like that?
A. Yes, sir; I know of one election where they were printed just exactly like this—fully as heavy, I think.
Q. How long ago was that?
A. I do not recollect that.
Q. About how many years?
A. Four or five or six years ago. It seems to me it was the election before this one; I am not sure. I know we printed the ticket and it was printed on heavy paper.

Now let us examine the evidence of the contestee on this subject of the paper, and first let us see what a paper manufacturer has to say:

Henry Salisbury, being first duly sworn, testified (pages 276, 277) as follows:

Q. State your age, name, and residence.
A. Henry Salisbury; age, 63; residence, Indianapolis, Ind.
Q. How long have you resided in Indianapolis?
A. I have been here since 1869.
Q. What business are you engaged in?

A. Paper manufacturing.
Q. What is the name of your firm?
A. The Salisbury and Vinton Paper Company.
Q. Have you been in that business since you have been in this city?
A. Yes, sir.
Q. What business were you in prior to that time?
A. Before I came here I was in the same business.
Q. Where were you engaged in that business?
A. Springfield, Mass.
Q. Engaged in the manufacturing of paper in Springfield, Mass.?
A. Yes, sir; my mill was not there, but I resided there, and did business there.
Q. Were you ever engaged in the business of paper dealing?
A. Yes, sir.
Q. How long were you engaged in that business?
A. Nine years.
Q. What kind of paper did you handle as a dealer?
A. Nearly all grades of paper—fine papers and coarse papers.

* * * * * * *

Q. I hand you a ticket headed "Republican ticket," and marked Exhibit A, to the deposition of C. F. Holliday, and I will ask you to take that ticket and examine it carefully, and state what kind of paper it is printed on, if you can.
A. I should call that a "book" paper.
Q. About what weight would you call that, say 19 by 24, five hundred sheets to the ream?
A. I should think about forty pounds.
Q. About forty pounds—19 by 24?
A. Somewheres about that; I can not tell it exactly.
Q. Take its size, 25 by 38, five hundred sheets to the ream, and how much more would it weigh than that?
A. Nearly twice as much more.
Q. You think about eighty pounds?
A. About eighty pounds.

* * * * * * *

Q. I will ask you to state, when that paper is in sheets 19 by 24 or 25 by 38, what it is known as in the trade?
A. It is known as "book" paper.
Q. What is the color of that paper—I mean those tickets voted in 1882?
A. It is what they call white paper.
Q. Is it, or not, plain white paper?
A. I should say it was plain white paper.

Calvin L. Divine, being first duly sworn, testified (pages 197, 198) as follows:

Q. Your name, age, and residence?
A. C. L. Divine; age, 51; residence, Indianapolis.
Q. What is your occupation?
A. I am a printer.
Q. What particular position do you occupy as a printer?
A. I am superintendent of the Daily Journal.
Q. How long have you been in that position?
A. About ten years.
Q. Are you familiar with the different qualities and grades of paper?
A. Well, yes; somewhat.
Q. Take that ticket headed "Republican ticket," and marked as Exhibit A, to the deposition of Mr. Holliday, and state whether or not you ever saw that ticket, or one similar to it, before.
A. I do not know; I suppose it is the ticket that was voted last fall.
Q. In 1882?
A. Yes, sir.

* * * * * *

Q. What is the color of that ticket?
A. White.
Q. Is it plain white?
A. Plain; it is not calendered.

N. R. Ruckle, being first duly sworn, in his direct examination testified (pages 204 and 205) as follows:

Q. State you name, age, and residence?
A. N. R. Ruckle; age, 45; residence, Indianapolis, Ind.
Q. What business are you engaged in?
A. Printing.
Q. How long have you been engaged in that business?
A. I suppose, altogether, twenty-three or twenty-four years.
Q. What particular position do you hold just now?
A. I am superintendent of the Journal Company.

* * * * * * *

Q. Please examine that Republican ticket voted in this city in November, 1882, and state what material that ticket is printed on, if you know?
A. That is paper.
Q. What is it called?
A. I know what it was sold for by the man who sold it; it is supposed to be a cheap kind of plate-paper—is what it was sold for.
Q. Is it a heavy or light grade of plate-paper?
A. A light grade of plate-paper.
Q. State what that is known as in the trade.
A. That is a pretty hard question for me to answer. A plate-paper ought to be sized a little more on one side than the other. A regular plate-paper, as it comes out of the mill, is sized more on one side than the other. This appears to be sized on both sides about alike. It is about the quality of heavy white book, extra material, sized and calendered both.
Q. State whether that is not plain white paper.
A. It is white paper. I do not know what you call plain white, because every paper in the trade has some name to it, and has some way or other to distinguish it; and if you would ask a man for plain white paper he would not know what you wanted.
Q. Unless you would ask another question?
A. He would ask what you wanted to use it for—a book or something else.
Q. Is it a fact or not that you would not be able to tell what a man wanted if he should come to you and ask simply for plain white paper?
A. If he would ask for plain white paper we would ask him what quality.
Q. Is it or not a fact that print, book, flat, and plate paper is plain white paper if it is not tinted or ruled?
A. We call everything white paper that is not tinted or ruled.

L. G. Dynes, on cross-examination (pages 209 and 210):

Q. There lies before you on the table, just in the order in which Mr. Peelle called your attention to them now, the Republican ticket voted in 1882 by the Republicans, as Mr. Peelle stated, and the ticket headed "Democratic ticket," voted in 1882, as Mr. Peelle stated, and four other tickets, one a National ticket, voted at the Garfield Presidential election, and one of them a Democratic ticket with a flag at the head of it, &c. Do I understand you to say that those are all made on the same kind of material?
A. No, sir; I did not say that.
Q. Did you say that they were all known in the trade as plain white paper?
A. That is the way I know them. That is the way I understand them to be known. If they were all shown to me, as they are, in a lump, I should say they were plain white paper.
Q. Why do you say that?
A. Because they are white, and because they are paper, and because they are not ruled.
Q. Simply because they are white, and simply because they are plain and unruled, and simply because they are paper.
A. And made substantially of the same material.

Robert W. Cathcart, being first duly sworn, in his direct examination testified (pages 290 and 291) as follows:

Q. State your name, age, and residence?
A. Robert W. Cathcart; 40 years; residence, Indianapolis, Ind., for the last three years.
Q. What is your business?
A. The book business.
Q. How long have you been in that business?
A. Since 1856, except during three years in the Army.
Q. Have you been employed or engaged in this city in that time?
A. Yes, sir.
Q. What kind of books or papers do you handle?
A. Well, we handled the first two or three years—I was clerk then; part of that time I have been in business for myself.
Q. Are you familiar with the different qualities of book-paper?
A. Not with all qualities, because I usually handle—when I do handle them—only the cheaper goods. That is, when I was with Merrill, some years ago.
Q. I hand you a ticket, headed "Republican ticket," and marked Exhibit A to the deposition of Mr. Holliday, and I will ask you to examine it carefully and state the kind of paper that that ticket is printed on, if you know.
A. I should say it was a cheap book-paper; we have had what we call a No. 2, that has wood in it; I suppose this is about the same grade of book.
Q. Have you any paper in books in your establishment as heavy or heavier than that?
A. Yes, sir; in the finer grade of books, most all our books are heavier paper; this, I suppose, is used mostly for subscription books.
Q. Have you paper in books in your establishment heavier than that?
A. Yes; I would say most of our Christmas books are heavier than that; but they are finer books—finer stock.
Q. Have you made an examination and examined that paper in connection with books in your establishment?
A. I have examined the weight of it; we have some paper that is almost as heavy as cardboard in our Christmas books and illustrated books; the finer goods are upon heavier paper.
Q. I mean a book in which there is printed matter; not the illustrations.
A. We have both—illustrations and the poem itself; for instance, where they want to make a thick book and only put in one poem.
Q. How much thicker is the paper you have in some of those books than this?
A. It varies a good deal; some is twice as thick as this and some thicker; that is determined by the publisher.
Q. Have you writing-paper in your establishment as heavy as that?
A. Yes; I should think it was quite as heavy as this.
Q. Did you examine some writing-paper to see if it was as heavy as this?
A. Yes, sir; it is what we call 80-pound, but I am not able to say what the weight of this is; but we have what we call our 80-pound cream laid, and it is as heavy, and I should think heavier, than this; it is the finest paper we handle.

W. O. Anderson, being first duly sworn, testified, in his direct examination (pages 292, 293), as follows:

Q. State your name, age, and residence.
A. W. O. Anderson; age, 44; residence, Indianapolis, Ind.
Q. State your business.
A. Wholesale paper business.
Q. Have you any one with you?
A. Yes, sir.
Q. What is the name of the firm?
A. It is the Hubbard & Anderson Paper Company, 127 S. Meridian street.
Q. How long have you been engaged in that business in this city?
A. About five years.
Q. How long have you been engaged in the paper business?
A. Something over twenty years.
Q. How long have you been engaged in the manufacture of paper?
A. Yes, sir; over eight years.
Q. Whereabouts?
A. In Richmond, in this State, and in Columbus, Ohio; also in Clifton.
Q. What grade of paper do you manufacture?
A. We manufactured news-paper principally, what we call "news" and manilas.
Q. Did you manufacture book-paper?
A. I was connected with a mill as book-keeper that manufactured book-paper.
Q. Are you familiar with the different grades of paper?
A. Yes, sir.

* * * * * * *

Q. I now hand you a ticket headed "Republican ticket," and marked Exhibit A to the deposition of Mr. Holliday, and I will ask you to take that ticket and examine it, and state the kind of paper upon which that ticket is printed.
A. I should say it was a medium grade of book-paper.
Q. As to the number?
A. It is what we call No. 2.
Q. What is the weight, probably, per ream of that paper—size 19 by 24 and 25 by 38, respectively?
A. In 19 by 24 I should take it to be about a 40-pound paper, and just about double that in the other size.
Q. You think it would be about an 80-pound paper in 25 by 38?
A. Yes, sir.

John B. Conner, being first duly sworn, testified in his direct examination (page 336) as follows:

Q. State your name, age, and residence.
A. John B. Conner; I am 53 years old; I reside at No. 360 Park avenue, in this city.
Q. How long have you resided in this city?
A. Since 1874.
Q. Did you ever occupy any official position in this city or State?
A. Yes, sir; I have been in the Legislature one session and in the department of statistics two years.
Q. Chief of the bureau of statistics in the State?
A. Yes, sir.
Q. What business are you engaged in now?
A. Newspaper business.
Q. What paper?

A. Indiana Farmer.
Q. An agricultural paper?
A. Yes, sir.
Q. How long have you been connected with that?
A. Ever since 1874, in July.
Q. In your business as chief of the bureau of statistics in this State and in the publication of the Indiana Farmer have you purchased much paper?
A. Yes, sir; considerable.
Q. Are you familiar with the different kinds of papers?
A. Tolerably.
Q. I hand you a ticket, headed "Republican ticket," and marked Exhibit A to the deposition of C. F. Holliday. Take that and examine the paper upon which it is printed and state what kind of paper it is, if you know.
A. Well, that is a heavy and extra-sized quality of No. 2 book-paper, I should say.
Q. Have you ever seen that paper before to-day?
A. I expect I voted it.
Q. Did you attend the Congressional election in this city in 1882?
A. Yes, sir.
Q. Did you see that ticket there?
A. I think that is the ticket.
Q. Did you examine the ticket that day?
A. Yes, sir; a casual examination.
Q. What is your judgment, then, as to the quality of paper; the same as now or different?
A. I thought it was a heavy quality of book-paper.
Q. I hand you now a book entitled "Memorial address on the life and character of James A. Garfield, President of the United States, by James G. Blaine, February 27, 1882." I will ask you to examine the plate in the front part of that, upon which is engraved the picture of General Garfield, and I will ask you to examine that paper and say what kind it is.
A. That quality of paper I never had much to do with or had occasion to use it much. It is about the thickness of plate-paper, and it is not finished so much.
Q. Is not that paper used for lithographic-plate purposes?
A. Usually; although that lithographic plate is not so highly calendered.
Q. Is it or not lithographic plate; and if so, what kind?
A. Yes; lithographic plate. There is a character of paper that is used almost exclusively for that work, but I am not very familiar with that quality of paper.
Q. You are more familiar with the different qualities of book-paper than anything else?
A. Yes, sir.
Q. What is the character of the paper in that book you have in your hand upon which the printed matter appears?
A. It is what printers call book-paper.
Q. Is it a better, inferior, or medium grade, compared with the ticket you have in your hand.
A. I think it is rather better finished than the ticket I have; or, perhaps, I might say, higher calendered.

Samuel Merrill, being first duly sworn, testified in his direct examination (page 333) as follows:

Q. State your name, age, and residence.
A. Samuel Merrill; I am 52 years old, and I reside in Indianapolis, Ind.
Q. What is your business?
A. Bookseller and paper dealer.
Q. How long have you been in that business?
A. More than thirty years.
Q. In this city?
A. Yes, sir.
Q. Do you wholesale or retail, or both?
A. Both.
Q. What is the name of the firm, if you have any partners?
A. Merrill, Meigs & Co. is the name of the firm.
Q. You deal in books as well as stationery?
A. Yes, sir.
Q. Law-books?
A. Yes, sir; all kinds of books I suppose you might say.
Q. Were you in this city at the time of the Congressional election in 1882?
A. Yes, sir.
Q. Did you attend the same?
A. Yes, sir.
Q. What precinct and ward?
A. In the second precinct of the second ward.
Q. I hand you a ticket headed "Republican ticket," and marked Exhibit A to the deposition of Mr. Holliday, and I will ask you to take that ticket and examine it and tell me if you have seen or examined the paper upon which that ticket is printed or similar one before?
A. Well, I have examined a similar ticket to this.
Q. I will ask you to state from your experience in business what kind of paper that ticket is printed on?
A. The ticket is a very dirty ticket; have you a clean one there?
Q. I will take that ticket back and I hand you now a ticket headed "Republican ticket," and ask you to examine that ticket, and I ask you to state what kind of paper that ticket is printed on?
A. I would say that came as near a No. 2 book-paper as anything.
Q. What would you think that paper would weigh, size 22 by 28?
A. Our book-paper comes in different sizes from that.
Q. What size do they come in?
A. We use more book-paper 25 by 38 than anything else.
Q. Size 25 by 38, 480 sheets to the ream?
A. I should think that would be 70 to 75 pounds.
Q. I now hand you ticket headed "Democratic ticket," which is marked as Exhibit S, shown to Mr. Gordon, and I will ask you to state what kind of paper that is?
A. I would call it a very good quality of news.
Q. I will ask you if you have books in stock in your establishment with paper as heavy or heavier than the paper upon which the Republican ticket that I have shown you was printed?
A. Yes, we have as heavy, and we have some heavier. Let me feel that again (witness taking ticket); yes, we have some heavier.

Alfred D. Clarke testified (pages 348–349) on direct examination as follows:

Q. State your name, age, and residence.
A. Alfred D. Clarke; 45 years old; residence, 121 North Mississippi street, Indianapolis.
Q. How long have you lived in Indianapolis?
A. I came here the last time in 1871.
Q. How long have you lived in Indianapolis altogether?
A. I came here in 1857 and left in 1867, and came back in 1871.
Q. What business are you engaged in?
A. I am engaged in the book and stationery business—Bowen, Stewart & Co.
Q. What position do you occupy there?
A. I am head of the retail department.
Q. How long have you been in that business?
A. Twenty-odd years altogether.
Q. Has Mr. Bowen been one of the proprietors of that establishment all the time?
A. Yes, sir.
Q. That is S. T. Bowen?
A. Silas T. Bowen.
Q. You are a Republican, I believe?
A. I am, sir.
Q. Do you handle paper down there in your establishment?
A. We handle papers, but my department is such that I do not have anything to do with paper; at one time I did handle paper very largely, and knew more about it than I do now.
Q. Could you tell a piece of white paper if you saw it—as to what kind of paper it was?
A. I could not as an expert.
Q. I hand you a ticket headed "Republican ticket," and marked Exhibit A to the deposition of Mr. Holliday; and I will ask you to take that ticket and examine the paper upon which it is printed, and tell me from your knowledge and experience in the business what kind of paper that is, if you can.
A. I should consider that paper a book-paper.
Q. What grade of book?
A. An inferior grade of heavy book-paper.
Q. Have you books in stock in your establishment containing paper as heavy or heavier than that?
A. Yes, sir; we have.
Q. What class of books?
A. Two classes of books. We have a class of books made by Houghton, Mifflin & Co.—the Riverside Press—that contains some paper as heavy as this, although a better grade, and we have some books made by subscription men of a similar grade to this, lighter and heavier.
Q. Have you books in stock containing paper as heavy as that that is as fine or better finished?
A. We have a better finish.
Q. What class of books is that?
A. First-class books.
Q. Are they extraordinary books, or books that are kept in stock?
A. No, sir; they are usually kept in stock. They are made by the Riverside Press, by Houghton, Mifflin & Co., and a new edition—the subscription edition of Longfellow—is made on paper like this, but heavier and finer.

W. R. Holloway, being first duly sworn, testified in his redirect examination (pages 353, 354) as follows:

Q. State your age, name, and residence.
A. W. R. Holloway; 46 years old; residence, Indianapolis.
Q. How long have you lived in Indianapolis?
A. Since 1861.
Q. What business are you engaged in?
A. I am president of the Indianapolis Times Company.
Q. Is that a daily paper?
A. Yes.
Q. How long have you been engaged in the newspaper business?
A. Ever since I was 16 years old.
Q. As a printer and as a publisher of a paper?
A. Yes.
Q. Were you ever State printer in this State?
A. Yes.
Q. And had the buying and handling of paper?
A. Yes.
Q. What grades of paper?
A. I have bought all kinds of paper; particularly book and news paper.
* * * * * * *
Q. I hand you a ticket headed "Republican ticket," and marked Exhibit A to the deposition of Mr. Holliday, and I will ask you to state if that is the Republican ticket voted at that precinct that day?
A. Yes. I guess that is.
* * * * * * *
Q. Is that such paper that is known in this city and State as a book-paper? (Objected to as leading.)
A. Yes.
Q. What is the color of that paper upon which the Republican ticket is printed?
A. They are both white paper.
Q. What kind of white paper; plain white?
A. Certainly, it is plain white. There are no water-marks on it, or anything of that kind on it.

J. G. Sexton, being first duly sworn, testified in his direct examination (pages 355 and 356) as follows:

Q. State your name, age, and residence.
A. J. G. Sexton; 85 West Michigan street, Indianapolis, Ind.; age, 30.
Q. What is your business?
A. Practical printer, and do a job-printing business, on the corner of Pennsylvania and Market streets.
Q. Are you engaged with any one?
A. John B. Jaques.
Q. How long have you been in the business?
A. Between four and five years.
Q. Are you familiar with the different grades of paper?
A. Yes, sir; with the different grades of paper used in the job-printing business.
Q. I hand you ticket headed "Republican ticket;" and I will ask you to take that and examine it, and state what kind of paper that ticket is printed on.
A. I would take that to be a heavy grade of No. 2 book-paper; a very good quality of No. 2 book-paper. That is, I mean very heavy weight; a very good grade of No. 2 book-paper.
Q. Is it sized and supercalendered paper?
A. Well, I think not; I should take that to be a sized and calendered paper.
Q. Are you familiar with plate numbers?
A. Well, not as familiar as I am with so-called book-papers.
Q. And from your knowledge of paper you would pronounce that a No. 2 book?
A. No. 2 book-paper, sized and calendered, as distinguished from a sized and supercalendered.

John B. Jaques, being first duly sworn, testified in his direct examination (page 360) as follows:

Q. State your name, age, and residence.
A. John B. Jaques; age 33; residence, 743 North Tennessee street, Indianapolis, Ind.
Q. What are your politics?
A. Well, until the township election of 1882 I was a Democrat. At the township election I voted the Republican ticket, with the exception of Luke Wal-

pool; I voted for him last fall. I voted the Republican ticket, and this spring I voted for all except one candidate.
Q. You were a Democrat?
A. Yes, sir, up to the last national election; including the last national election, I was a Democrat.
Q. You voted the Republican ticket in 1882?
A. Yes, sir.
Q. What is your business?
A. Printer.
Q. Are you in partnership with Mr. Seaton?
A. Yes, sir.
Q. How long have you been in the business?
A. I have been in the printing business for eighteen years.
Q. What kind of business?
A. Book and job printing. I have not been in it for myself that long, but I mean as journeymen, foreman, and proprietor.
Q. Are you familiar with the different grades of paper?
A. Well, mostly with the general run of paper.
Q. I hand you a ticket marked Exhibit No. 1 to the deposition of J. G. Sexton, and I will ask you if you will please take that and examine it and tell me what kind of paper it is?
A. It is calendered paper of some kind. The stock seems to be that which is generally used in book-paper, and it is a sized and calendered paper, or what would be called a No. 2 book.
Q. You would pronounce it a No. 2 book, from your experience in the business?
A. Yes, sir.

Frank H. Smith, being duly sworn, in his direct examination testified as follows (page 372):

Q. State your name, age, and residence.
A. Frank H. Smith; 30 years old; residence, Indianapolis, Ind.
Q. What is your business?
A. Printer.
Q. Are you carrying on business for yourself?
A. Yes, sir.
Q. What is it?
A. Jobbing establishment.
Q. How long have you been in that business?
A. About five years for myself.
Q. Are you familiar with the different grades and qualities of paper?
A. Yes, sir; in general use.
Q. I hand you a ticket headed "Republican ticket," and marked Exhibit A to the deposition of C. F. Holliday, and I will ask you to take that ticket and examine it and state what kind of paper that ticket is printed on?
A. It looks to me like it was a heavy book-paper more than anything else; I thought it might possibly be a light card-board, and that is the reason I lit it.
Q. What kind of paper is it?
A. It is rather peculiar book-paper; different from any we use.
Q. What grade of book-paper would you call it?
A. I would call it No. 2 book-paper. It is very heavy paper, of course; sometimes paper is used a little heavier than that in books, but very seldom that heavy. It resembles plate-paper a little, but it has not got the body to it, and has not got high enough finish for that. That is about the only thing I can make out of it. It does not tear like card-board or anything like that, and it does not burn like it.
Q. Does it tear like plate-paper?
A. No, sir; it is not strong enough for that; it might be made for that; it may be an inferior quality of that, but it looks more to me like book-paper than anything else.

E. W. Halford, being first duly sworn, in his direct examination testified (page 399) as follows:

Q. State your name, age, and residence.
A. E. W. Halford; age, 40; residence, Indianapolis, Ind.
Q. State your business.
A. I am managing editor of the Indianapolis Daily Journal.
Q. That is regarded as the leading Republican paper in the city, is it not?
A. I suppose it may be so taken as one of the leaders.
Q. How long have you been in journalism?
A. About twenty years.
Q. Were you ever in a job-printing establishment?
A. Yes, sir.
Q. How long were you connected with a job-printing establishment?
A. I have been in the printing business ever since I was 13 years old.
Q. Been in the job-printing business?
A. In the job and printing business up until the time I went on the Journal, about twenty years ago.
Q. Are you familiar with and have you handled the different kinds of paper used in book printing?
A. I was at that time; I had charge of a job office for some time.
Q. I hand you a ticket, headed "Republican ticket," and marked Exhibit No. 1 to the deposition of J. G. Sexton; and I will ask you to take that and examine it, and state if you know what kind of paper that ticket is printed upon?
A. I should say that was a heavy book-paper.
Q. What grade of book-paper would you call that?
A. I would hardly know now, because it has been a long time since I handled book-paper. I would not know just what grade.
Q. By number can you tell?
A. I can not tell that.
Q. It is a heavy grade of book-paper?
A. Yes, sir.

And now, Mr. Speaker, in addition to that, I placed the three principal expert witnesses of the contestant on the stand in my own behalf, and let us see what they have to say on this subject; and first let us examine the man who sold the paper.

Mr. C. B. Wing (page 320) on direct examination says:

Q. What kind of paper is that?
A. It is what I would call Western plate-paper.
Q. Are there any book-papers manufactured similar to that plate-paper you spoke of?
A. In my testimony the other day I gave that.
Q. (Question repeated.) Whether or not there are any book-papers made that are similar to that Western plate-paper?
A. My testimony was the other day that we made this paper, if I can recollect right, out of the same stock that we made plate-paper of.
Q. Book-paper, you mean?
A. Yes, sir, book-paper; but we take more pains in making a Western plate sheet than book. It is all made out of the same class of goods, and with the printer it would not make so much difference if the sheet was thin. It don't vary very much; but where it was used by lithographers it would, and for that reason we took the pains with it that we did. That was my testimony the other day.
Q. State if there are book-papers made by Chatfield & Woods as heavy as that or heavier?
A. Yes, sir.
Q. If book-papers are made as heavy as that, I will ask you to state what difference there would be, then, between that paper and the book-paper?
A. Only just a difference of quality; there would be no difference in the weight or make, only that we should take more pains in making the plate.

And here is what Mr. William B. Burford (page 40) says:

Q. Is it calendered on both sides alike?
A. It is intended to be.
Q. I will ask you to state what the difference is between that paper upon which that Republican ticket was printed and book-paper of like weight?
A. I do not believe I could say there was any difference; not if they were of like weight.
Q. That is what I mean, like weight paper.
A. Identically the same weight.
Q. Would there be any difference between a book-paper of the weight of the paper upon which that ticket is printed in the finish?
A. It would depend a good deal upon the class of book-paper you are comparing it with.
Q. Book paper of a weight equal to the paper upon which that Republican ticket was printed; what would be the difference, if any, in the finish?
A. There might be considerable difference and there might not be any. It might be a highly-finished book-paper, equal to that of plate-paper; also, it might be an ordinary finish, which would not be equal to that of plate.
Q. State whether, as a matter of fact, book-paper is finished as highly as the paper upon which that Republican ticket is printed.
A. It is sometimes.

And here is what W. O. DeVay (at pages 374 and 375 of the record) says:

Q. I hand you a ticket headed "Republican ticket" and marked Exhibit No. 1 to the deposition of James C. Yohn, and I will ask you to take that ticket and examine it and state if that is a same kind of paper that you pronounced plate-paper in your examination in behalf of the contestant?
A. It is.
Q. I will ask you to state what difference there is between the paper upon which that Republican ticket is printed and a book-paper of the same weight?
A. Well, there is no difference, the book-paper being made the same weight as this. A book-paper can be made this way, but it would be an extreme weight of book-paper and it has got to be a very hard finish. They could make what they call a No. 2 book that had the finish of that and they could make it the same weight—that is, a No. 2 book-paper. The fact of it being No. 2 book would make it not like this paper. It would lack the finish of this paper, although it would have the weight.
Q. My question was as to the difference between that paper upon which the Republican ticket was printed and a book-paper of like weight in the finish.
A. There would not be any, or if any, but very little. They aim to make this paper, which they call Western plate—they aim to make it finished harder on one side than it is on the other.
Q. Is it or not finished harder upon one side than the other?
A. Very often it is and very often it is not.
Q. The paper upon which that Republican ticket is printed?
A. That paper does not show but very little difference.
Q. Would not that fact be one evidence of it being book-paper?
A. The only way you could get at that would be to find out the size that paper was made. The size would have a good deal to do with whether it was book or plate of the same kind and finish.
Q. Suppose it were size 25 by 38?
A. If it was a size 25 by 38, and weighed sufficient, it might be called book-paper, because that is a book-paper size.
Q. Then I understand you to say that the size of the paper determines whether it is book or plate paper oftentimes?
A. Very often the size and weight.
Q. State whether or not a book-paper, maybe, of the same weight of the paper upon which that Republican ticket is printed is or is not finished on both sides alike?
A. Book-paper?
Q. Yes, sir.
A. Yes, sir; a book-paper, of what we call supercalendered book-paper, has the same finish on one side as it has on the other; both sides are finished alike.
Q. State, now, what difference, if any, there is between the finish on the two sides of the paper upon which that Republican ticket is printed.
A. Very little, if any.
Q. Can you discern any difference in the finish?
Mr. WILSON. You mean that is just what he has in his hand.
Mr. PEELLE. Yes, sir; that is just like all the rest of them.
A. The difference is so little, if any, I would not want to go on record as saying what it is.

By that testomony it will be seen that contestant's principal expert witnesses in the main agree that the material upon which the Republican ticket was printed did not differ materially from book-paper of like weight, and the House will notice in the testimony of Mr. De Vay, above quoted, that he fully corroborates Mr. O. H. Hasselman (who purchased the paper and printed the tickets) when he says (speaking of the difference between so-called Western plate-paper and book-paper) "the only way you could get at that would be to find out the size that paper was made." Mr. Hasselman, contestee's witness, testified that the size was 19 by 24, and that that was the only thing that designated it as plate-paper; and he further says that that size enabled him to print sixteen tickets from each sheet without waste. (Record, pages 427 and 428.)

And now, Mr. Speaker, I have given you the testimony of the expert witnesses on the subject of the paper, and from that you must agree that while the burden of proof is upon the contestant, the contestee has the preponderance of evidence on his side on this subject. But, Mr. Speaker, what does it all illustrate, but the wisdom of the Legislature in avoiding the particular quality of paper upon which the ballots should be printed. I apprehend that this House will not need the aid of expert witnesses to determine this question. The supreme court of California has passed upon this very question in the case of Kirk *vs.* Rhoades (46 Cal., 398), which I will read:

A ballot cast by an elector at an election should not be rejected simply because

it differs from the regulations prescribed in the act in matters over which the elector has no control, such as the size of the ballot, the kind of paper upon which it is printed, or the character of type or leading used in the printing.

But, Mr. Speaker, my colleague [Mr. LOWRY] has taken a novel position on this floor, if I correctly understood him, which was that if this Republican ticket had not been designed to mislead or perpetrate a fraud upon the electors, he then agreed with the gentleman from Vermont [Mr. POLAND] that the tickets would be legal, &c., but if designed for fraud, then the ticket was an illegal one, and to reach the latter conclusion my colleague assumed that the ticket was designed for fraud, and therefore illegal; but I challenge my colleague or any one else on this floor or elsewhere to point to a line of testimony to the effect that the ticket was designed and gotten up for fraudulent purposes.

One witness testified that on the day of the election he expressed the opinion that the ticket was a fraudulent ticket and gotten up for fraudulent purposes; but that was the opinion simply of one man, and he was forced to admit that he did not know of any one who had been misled or in any way deceived on account of the ticket. There is absolutely no proof whatever in the record that these tickets deceived or misled any one. No one was put upon the witness-stand who so testified. The ticket must stand or fall by the statute. It is either a legal ticket or it is an illegal ticket. It matters not what the purpose may have been in the issuance of the ticket, its legality must be measured by the statute alone.

There is no evidence in the record that this ticket was intended to perpetrate a fraud upon any elector, and I assert that there is nowhere in all this record a line of evidence that any fraud was perpetrated by its use. The tickets were voted without objection, received without objection, and counted without objection, and to disfranchise the persons who voted the ticket would be a crime against the ballot-box. But let me read you some of the testimony on this point, so that the House may know what objection was made to the use of this ticket, and as to who was misled or deceived in voting on account of it. I will first read from the testimony of the Democratic precinct election judges; and first—

David Turpie (page 3):

Q. I will ask you to state if you know any one who was misled in voting in consequence of the ticket that was voted for Mr. Peelle at that precinct?
A. No; I do not know of any one who was misled.
Q. State if you know of any one who objected to this ticket for any reason as destroying the secrecy of the ballot at that precinct.
A. No. I could not give the name of any one who did so. I have heard a good deal of comment upon the ticket by outsiders on the election day, and a great deal afterwards as to its character—comment in the way of objections.
Q. You know of no one who objected to it as destroying the secrecy of the ballot?
A. No. I do not recollect any one having objected to it on the election day. Afterwards it was objected to very much, and some of the objectors put it upon that ground.
Q. State if you know of any one who voted this ticket that would have voted differently had it been printed on the same kind of paper that the Democratic ticket was printed on.
A. No; I do not know that I do. I do not think of any one now.

Re-examination by Mr. WILSON:

Q. During the day of the election, and during the hours that the voting was going on, where were you?
A. I was in a small room at the engine-house, in which votes were received through an open window.
Q. You were acting as one of the judges?
A. Yes, sir.
Q. And in that room?
A. Yes, sir. I was a member of the election board, and staid in that room all the time. There was no adjournment from the time the polls opened until they were closed.

Recross-examination by Mr. PEELLE:

Q. State whether or not during that day any one complained to the board about the character of the ticket voted for Mr. Peelle.
A. No one complained to the board about the character of the ticket.

Franklin Landers (page 34):

Q. Did any one come to the window and complain to the board of judges about the character of the Republican ticket?
A. No, sir.
Q. How many Democrats voted there that day?
A. I do not recollect; there was about 100.
Q. And there was no complaint about the character of this ticket, in any way, to the board of judges?
A. No, sir.
Q. What is your politics?
A. I am a Democrat.

W. F. Christian (page 56):

Q. I am not asking you about anything except these Republican tickets. I am asking you if any complaint was made to the board by any one about the character of these Republican tickets?
A. No, sir. No outsider made any complaint. They were all talking about it; the challengers outside.
* * * * * * *
Q. Do you know of any one who was misled or deceived in voting at that precinct on account of the Republican ticket being printed on that kind of paper?
A. No, sir; I believe not, at present.
Q. Do you know of any one who would have voted differently if the Republican ticket had been printed on the same kind of paper that the Democratic ticket was printed on?
A. I don't know that I do.
Q. Were you there when they were counted?
A. Yes, sir.
Q. Did you find Republican tickets that had been folded together and two tickets voted by any one person?
A. I don't think I did last year; I do not remember now.
Q. Then there was no double voting at that precinct?
A. I don't think there was.

John Johnson (page 58):

Q. Was there any complaint made to the board by any one upon the outside as to the character of the Republican tickets?
A. There was some comment upon it.
Q. Was there any complaint?
A. No, sir; I do not think there was.
Q. Do the Democrats have a majority in that precinct?
A. I think they have a small majority.
* * * * * * *
Q. Do you know of any man who voted that day who voted more than one ballot?
A. No, sir; I do not.
Q. You heard of no such thing?
A. I did not hear of anything like that.

James W. Harper (page 65):

Q. Now, as one of the judges of that election, I will ask you to state if any one complained to the board as to the character of the Republican ticket voted at that precinct?
A. I do not think any formal complaint was made to the board, and yet there were frequent remarks made by bystanders, as that the Republican ticket was on heavy pasteboard paper, or like that.
Q. There was no complaint made to the board by which those tickets were sought to be prevented from being voted?
A. There was not the slightest objection made by anybody to receiving those tickets, and so the board received them and counted them.

Jackson Landers (page 70):

Q. I will ask you as a matter of fact if you know of any voter at that precinct who did distinguish the Republican from the Democratic ticket?
A. As a matter of fact I could not say that I did.
Q. Do you know of any one who was misled or deceived in voting at that precinct in consequence of the Republican ticket being on the material it was?
A. My recollection is that we found in the box one ticket of this Republican ticket with the Democratic ticket pasted right over it and voted that way—pasted right over the Republican ticket on the face of it.
Q. That would make the ticket still heavier?
A. Yes, sir.
Q. Do you know who voted that ticket?
A. No, sir.
Q. Do you know of any one that would have voted differently had the Republican ticket been upon the same kind of paper that the Democratic ticket was printed on?
A. I don't.
Q. Was there any complaint made to you, or to the board, I should say, about the character of the Republican ticket on that day?
A. No, sir; not that I remember of.
Q. State if the ballots were all counted there by the board without objection from anywhere.
A. They were all counted except one ballot.
Q. Without objection?
A. Without objection. There was one Democratic ticket thrown out.

W. F. A. Bernhamer, in his cross-examination, testified (page 107) as follows:

Q. You are a Democrat and a Democratic member of the aldermanic board?
A. Yes, sir.
Q. And you were a member of the council as a Democrat?
A. Yes, sir; I have always been a Democrat.
Q. You were one of the judges at that precinct in ward No. 22?
A. I was the Democratic representative of the ward on the board.
Q. Do you know of anybody who was misled or deceived in voting in consequence of the Republican ticket being on the character of paper it was?
A. I can not say that I do.
Q. Do you know of anybody who would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was?
A. I know of no particular instance.
Q. Was there any complaint made to the board by any one about the character of the Republican ticket?
A. I will not be positive on that question. I know that the matter was talked of among the Democratic workers.
Q. You remember of no complaint being made to the board?
A. No, sir.
Q. Were those Republican tickets at your precinct counted without objection or protest?
A. They were counted.

Michael Clune, in his cross-examination, testified (page 168) as follows:

Q. You were Democrat judge on the board that day?
A. Yes, sir.
Q. Was there any complaint made to the board that day by any one, and if so by whom, concerning the Republican ticket?
A. I did not hear any.
Q. Were those Republican tickets counted without objection?
A. They were counted; yes, sir.
Q. Anybody object to it?
A. There was nothing said to the inspector or judge as to their counting the tickets.
Q. That vote that day was an unusually large Democratic majority, wasn't it?
A. Yes, sir; it was unusually large that day in the ward in the whole thing.
Q. The whole Democratic majority in the twenty-fourth ward was unusually large?
A. Yes, sir.
Q. How much larger than usual?
A. That part of it I am not positive.
Q. Was there not one hundred more than it had been at any time before?
(Objected to as incompetent and immaterial.)
A. It was considerable larger, of course. That ward is growing; they will have to have some more wards down there. I believe in the twenty-fifth ward they ought to make three or four out of it the way it is growing.

John Maloney (page 49), and a most willing witness, says:

Q. Was there any complaint made by any one to the board of election there that day about the character of the Republican ticket that was voted?
A. They were all complaining about the quality of the ticket, and it was so much more remarkable than the Democratic ticket; the paper distinguished it.
Q. Was there any complaint made to the board of which you were a member about the character of that ticket?
A. They were complaining there outside.
Q. I am asking about the board. I am not asking about what occurred out-

side. Was there any one came to the board and complained about the character of this Republican ticket?
A. Yes, sir; they said it was not legal.
Q. Give the names.
A. I can not give the names. There were several parties there said that the ticket was not legal.
Q. Give the names of them.
A. I can not give you the names.

Those nine persons were the only Democratic judges examined by the contestant, notwithstanding there was one on each of the eighty precinct election boards in the county. And now here is what the Democratic clerks, who were examined by contestant, say:

Emmett L. Rose (page 42) another very willing witness and a volunteer:

Q. When you was down there as clerk at that precinct did any one come to the window and complain to the judges about the character of the Republican ticket?
A. Oh, there was no complaint, of course; they merely made the assertion.
Q. There was no complaint made to the board about this ticket being wrong in any way?
A. There was a good deal of complaint in so far as assertions.
Q. I am asking you about any complaint to the judges—to the board. Did any Democrat or Republican come to the board and make any complaint about that ticket; and, if so, who was it?
A. I am not positive as to that; I merely say that I heard them speaking about it. Different parties spoke of the ticket in a complaining manner.
Q. Give us the names of the persons you heard speak of that ticket in a complaining way.
A. I could not do it; there was so many there that I could not be positive. If I would tell you now and lay it to any certain man that made a complaint of that kind I would probably be mistaken as to the man.

Albert F. Ayers, on cross-examination (pages 52 and 53), says:

Q. What is your politics?
A. I am a Democrat.
Q. Was your attention at that time called to the difference in the tickets at all?
A. I think not; there was nobody spoke to me at that time.
Q. I will ask you to state whether or not any complaint was made to the election board by any one at the election last November, where you were clerk, as to the character of the Republican ticket?
A. I heard none.
Q. If any had been made to the board would you not have heard it?
A. I think I would; I was inside of the room all the time that the vote was going on, from the time the polls were opened in the morning until 6 o'clock in the evening, and then commenced counting.
Q. Could you distinguish that Democratic ticket from the Republican ticket?
A. You mean could I at that time from where I was?
Q. Yes, sir.
A. No, sir; I don't know that I could from where I was in the room; I could not tell it that far off.
Q. Could you distinguish the Republican ticket from the Democratic ticket two or three paces off, folded?
A. I do not know that I could; not two or three paces off.
Q. Do you know of any one who was deceived or misled in voting that day in consequence of the Republican ticket being printed on that kind of paper?
A. No, sir.
Q. Do you know of any one who would have voted differently if the Republican ticket had been printed on the same kind of paper that the Democratic ticket was printed on.
A. No, sir.

Elihu R. Payne (page 60):

Q. They were both plain white paper, were they not?
A. Yes, sir. One of them was heavier paper than the other. I saw tickets there with a kind of a glazed appearance, I thought.
Q. They were both plain white?
A. They were both plain white.
Q. The Democratic ticket would fly up very nearly as much as the Republican when it was lightly folded?
A. Well, I did not notice them particularly. They all laid out there together.
Q. You did not notice them particularly?
A. No, sir. You take that one thrown down, would fly up; that is, have the largest appearance, larger than the Democratic ticket; but they probably both looked the same.

Charles W. Gorsuch (page 122):

Cross-examination by Mr. PEELLE:

Q. You are a Democrat?
A. Yes, sir.
Q. You acted as clerk in the interest of the Democratic party that day?
A. Yes, sir.
Q. Do you know of anybody who was deceived or misled in voting that day in consequence of the Republican ticket being on the kind of paper it was?
A. Well, I can not call to mind any one now.
Q. Do you know of any one who would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was?
A. I can not say that I do.
Q. Was there any complaint made to the board that day about the character of the Republican ticket?
A. It was talked over there; that is, people would come to the window to vote, and there was one or two made remarks. I can not call them to mind now.
Q. Was there any complaint made to the board?
A. I would not know whether they were making complaints directly to the board or not, but when they were voting there was no less than two said that anybody could tell how they were voting. That was not a complaint direct to the board.
Q. Were those Republican tickets counted at that precinct without objection to the board?
A. Yes, sir.
Q. You have no knowledge about the different qualities of paper?
A. I do not know what you would call that Democratic paper or the Republican paper. I know it is white paper; I don't know the composition of it.
Q. It is plain white?
A. Yes, sir.

Florence Casey (page 149):

Cross-examination by Mr. PEELLE:

Q. You are a Democrat?
A. Yes, sir.
Q. You were the Democratic clerk there?
A. Yes, sir.
Q. You don't know who put those pasters you spoke of in the box?
A. No, sir.
Q. You don't know how they got there?
A. No, sir.
Q. Were those Republican tickets counted without objection?
A. The Republican tickets were all counted; yes, sir.
Q. Without objection?
A. Yes, sir.

Charles Johnson (page 163):

Q. As I understood, you were the Democratic clerk there?
A. Yes, sir.
Q. In the interest of the Democratic party?
A. Always.
Q. Was there any objection made to the board that day about the character of the Republican ticket?
A. I do not know.
Q. Were you there all the time?
A. Yes, sir.
Q. You did not hear any?
A. No, sir.
Q. Was any objection made to the counting of the Republican tickets?
A. No, sir.

Dorman N. Davidson (page 166):

Questions by Mr. PEELLE:

Q. Any complaint made there to the election board that day of which you were a member about the Republican tickets?
A. To the board?
Q. Yes, sir.
A. I do not know of any made to the board.
Q. That is all I am asking you about. Were the tickets counted by the board without objection?
A. All the tickets were counted except two tickets.
Q. Was there any objection to the counting of the Republican tickets because of their being on the kind of paper they were?
A. No, sir.
Q. Two tickets you spoke of not being counted; were they found folded together?
A. They were two tickets folded one inside of the other.
Q. And they were not counted?
A. They were thrown out.
Q. You are a Democrat?
A. Yes, sir.

Questions by Mr. WILSON:

Q. You say those tickets were thrown out?
A. They were not counted there.
Q. Were they Democratic tickets or Republican tickets?
A. Republican tickets.
Q. After throwing out those tickets, how did it leave the poll-book as compared with the number of votes?
A. The tickets corresponded then with the number of names on the poll-book.
Q. In other words, the actual number of tickets counted at the poll and the book corresponded?
A. Yes, sir.
Q. Mr. Peelle asked you whether any complaint was made to the board; were you on that board?
A. Yes, sir; I was one of the clerks.
Q. Where was the board—inside?
A. Yes, sir—inside.
Q. You mean to say when you answered that question that there was no formal complaint tendered to the board?
(Objected to as leading.)
A. I would answer this way: that I heard of no complaint to the board. I do not know that there was none, but I heard none.

Now let us see what the Democratic challengers have to say about this ticket, and how objectionable it was on the day of election.

Ross Clark (page 67):

Q. State if you know of any one who was deceived or misled in voting at that precinct in consequence of the Republican ticket being on the character of paper it was?
A. I do not know that anybody was misled or deceived into voting that ticket.
Q. I will ask you if you know of any one who would have voted differently if the Republican ticket had been printed upon the same character of paper as the Democratic ticket was printed on?
A. No, sir. In answer to that I will say that I do not know any particular person, but I saw the effect of it; that men were afraid to show their tickets, and afraid to let their hands be seen with them—certain men.
Q. How many of that kind were there there?
A. A good many of that kind.
Q. Can you name any one of them?
A. I do not know that I could now. If I had been called on the next day after I might. It has passed out of my mind.

Thomas B. Messick (pages 76 and 77):

Q. Do you know of any man who was misled or deceived in voting that day in consequence of the Republican ticket being on the kind of paper it was?
A. No, sir. I did not hear of any.
Q. Do you know of any man that would have voted differently if the Republican ticket had been printed on the same kind of paper that the Democratic ticket was?
A. Nothing, except as I said a while ago, several colored men had expressed a desire to vote the Democratic ticket.
Q. When did they express that desire?
A. Prior to the election.
Q. To whom?
A. A number of Democrats in the ward.
Q. That was before the day of the election?
A. Yes, sir.
Q. What are the names of those colored men?
A. I can not say now.

Q. Can you give the name of one of them?
A. No, sir.
Q. The only thing is that some days prior to the election some of those men expressed a desire to vote the Democratic ticket?
A. Yes, sir.
Q. And when the time came they voted the Republican ticket?
A. Yes, sir.

Harry O. Thudium (page 82):

Q. You stood at the polls all day?
A. I do not think I left them five minutes all day.
Q. You were challenger there?
A. Part of the time.
Q. Do you know of any one who was deceived or misled in voting in consequence of the Republican ticket being on that kind of paper?
A. I cannot say as to that, because I was right at the chute there, and such exclamations, if there were any made, were made outside.
Q. Do you know of any one who would have voted different if the Republican ticket had been printed on the same kind of paper as the Democratic ticket was printed on?
A. No, sir.

George A. Hardesty, on cross-examination (page 104):

Q. What is your politics?
A. I am a Democrat.
Q. You were challenging in the interest of the Democratic party that day, were you not?
A. Yes, sir.
Q. Do you know of any one who was misled or deceived in voting in consequence of the Republican ticket being on the kind of paper it was?
A. No; I could not give any names of any one; it has been so long that I have almost forgotten about it.
Q. Do you know of any one who would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was on?
A. I do not know that I could mention any one.
Q. You have been challenger before at precincts at elections?
A. Yes, sir.
Q. And frequently stood around the polls?
A. Yes, sir.

Charles M. Cooper, on cross-examination (pages 120 and 121):

Q. You are a Democrat, I believe?
A. Yes, sir.
Q. Did you have any bet on the result of the Congressional election last November?
Mr. WILSON. I do not know that that is necessarily a fair question to ask. The witness is not bound to answer.
Mr. PEELLE. He may use his own judgment about answering that.
The WITNESS. I will refuse to answer that.
Q. I will ask you to state if you know of any one that was misled or deceived in voting at that precinct in consequence of the Republican ticket being printed on the kind of paper it was?
A. I can not give the names of any persons that were deceived on account of this ticket.
Q. Do you know of any one that would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was printed on?
A. Well, there were persons that were deceived by this ticket that would have voted differently if the ticket had been on common paper, but as for giving their names I can not just state now who they were.
Q. Do you know the names of any such?
A. No, sir.

William B. Lewis, on cross-examination (page 124):

Q. You are a Democrat, I believe?
A. Yes, sir.
Q. And you was the challenger there that day, in the interest of the Democratic party?
A. Yes, sir.
Q. And after the polls closed you became a watcher in the interest of the Democratic party?
A Yes, sir.
* * * * * * *
Q. Do you know of anybody who was misled or deceived in voting there on account of the Republican ticket being on the kind of paper it was?
A. No, sir.
Q. Do you know of anybody who would have voted differently if the Republican ticket had been printed upon the same kind of paper that the Democratic ticket was?
A. I can not say that I do.

John Schley, in his cross-examination, testified (page 137) as follows:

Q. What is your politics?
A. A Democrat.
Q. Do you know of any one who was misled or deceived in voting at your precinct in consequence of the Republican ticket being on the kind of paper it was?
A. No, sir; not of my personal knowledge.
Q. Do you know of any one who would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was printed on?
A. No, sir.

John Edwards, in his cross-examination, testified (pages 138, 139) as follows:

Q. What are your politics?
A. I am a Democrat.
Q. What is your occupation?
A. Bill-poster.
Q. You are employed by Mr. English in posting bills for his theater, are you?
A. No, sir; I have not posted a bill for Mr. English since he had his theater.
Q. Do you know of anybody that would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was printed on?
A. No; I do not.

Heram W. Miller, in his cross-examination, testified (page 144) as follows:

Q. What is your politics?
A. Democrat.
Q. Was there any complaint made there on the day of the election to the board in reference to these Republican tickets by any one? And, if so, state who they were.
A. No, sir; I do not think there was.
Q. Were they counted without objection, so far as you know?
A. Yes, sir; they were counted.
Q. Do you know of anybody who would have voted differently if the Republican ticket had been printed on the same kind of paper the Democratic ticket was printed on? And, if so, state who they were.
A. I do not know exactly. I do not believe I do.
Q. You have been standing at the precinct there before, have you not, at election times?
A. No, sir.
Q. Never stood there before?
A. No, sir. The precinct never was there before.
Q. You have been standing there in that township at its precincts before that on election days?
A. Not very much. For four years I was trustee, and, of course, I was on the election board.

I have now given you the testimony of nine Democratic judges, seven Democratic clerks, and nine Democratic challengers, twenty-five witnesses in all, who were examined on behalf of the contestant; and now let us see what some of their other witnesses have to say about the effect of this ticket and how many voters were deceived or misled or did not get to vote as they desired.

The National or Greenback candidate for Congress at the same election, Robert W. Medkirk (page 11), was examined by contestant; and, on cross-examination, here is what he said:

Q. Do you know of any of those tickets having been voted that had another one folded within it?
A. No, sir.
Q. Do you know of any one that was misled in consequence of the quality of this ticket, or the distinguishing mark you refer to—that was misled in voting?
A. I can not say about that. Do I know of any one that was misled about voting?
Q. Yes, sir.
A. I do not know any one.
Q. Do you know of any one who would have voted differently had the ticket been printed upon the same character of paper as the Democratic and National ticket had been printed on?
A. No, sir.
Q. Do you know of any one that complained to the board at your precinct about the character of this ticket?
A. Not to the board; I do not.
Q. State your politics now.
A. I am a National.
Q. Properly known as the Greenback candidate for Congress?
A. Yes, sir.

William P. Fishback, on cross-examination (page 103), says:

Q. Do you know of anybody that was deceived or misled in voting at that election in consequence of the Republican ticket being on the material it was?
A. No, sir.
Q. Do you know of anybody that would have voted differently if that Republican ticket had been printed on the same kind of paper that the Democratic ticket was printed on?
A. No, sir.
Q. Did you know anybody personally or by hearsay that voted two tickets of that Republican ticket?
A. No, sir.

Victor M. Backus, in his cross-examination (page 80), says:

Q. What is your politics?
A. Democrat.
Q. I understood you to say if those tickets were folded closely, as they usually are when voted, it would be difficult to tell one from the other.
A. As you come up to the polls?
Q. Yes, sir.
A. I think it would.
Q. I will ask you, when tickets are folded when voted, if they do not usually fold them pretty close and hold them in their hand pretty close when they vote?
A. Yes, sir; some of them do.
Q. Is it not a general thing that they fold them pretty close?
A. Yes, sir; as a general thing. I have seen some hold them right up open and others pretty close.
* * * * * * *
Q. Do you know of anybody who would have voted differently at that poll on that day if the Republican ticket had been printed on the same kind of paper the Democratic was on?
A. No, sir; I do not.
Q. What is your business?
A. I used to be a carriage-maker.
Q. You were the Democratic watcher there that night?
A. I was appointed that night. I worked at the polls all day, and some one brought an appointment there, and I did not want to go in.
Q. Were you appointed there as the Democratic watcher that night?
A. Yes, sir; I was.
Q. By the Democratic central committee?
A. Yes, sir.
Q. The tickets are plain white, are they not, both of them?
A. Yes, sir; I should think they were.

F. M. Wright (page 134) says:

Q. Do you know of anybody who would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was printed on?
A. I can not say as to that, one way or the other.
Q. Do you know of anybody who was misled or deceived in voting in consequence of the Republican ticket being on the kind of paper it was?
A. No, sir.
Q. You were candidate for prosecuting attorney on the Democratic ticket?
A. Yes, sir.
Q. And when you spoke about going to fifty precincts, you drove around in a buggy, did you?
A. Yes, sir.
Q. Who was with you that day?
A. I don't recollect. I think there must have been several parties at different times. I don't just recollect the names of any one.
Q. And you went to fifty of the fifty-six precincts in the city that day?
A. I think I went to all of them but two or three. I started early in the day.

Moritz Pasner (page 148) who was a watcher, on his cross-examination says:

Q. You are a Democrat?
A. Yes, sir.
Q. You were a Democratic watcher all that night?
A. Yes, sir. That is what they called me up for. I did not want to go; they coaxed me.
Q. Were those tickets counted without objection?
A. I don't know. I believe Mr. Bunts objected to one or two tickets. I can not tell exactly. There was some objection to it.
Q. Tickets that were folded together?
A. No, no. I can not say that.
Q. Were the Republican tickets objected to?
A. There was some objection about it of some kind, or some claim. There was none called.
Q. Was the counting of the Republican tickets there objected to by anybody?
A. No. I believe not.
Q. Did the votes correspond with the tally?
A. I do not know; I can not tell. It is a matter that I never took any attention to, but I am too green in that business; I did not pay any attention and I do not know anything about it.

Now, Mr. Speaker, in addition to that, the contestant examined some thirty or forty witnesses to the effect that the Republican ticket could readily be distinguished in the hands of the voters from the Democratic ticket. Now, admitting that to be true, why then it follows that the Democratic ticket could as readily be distinguished in the hands of the voter from the Republican ticket. There is no advantage, therefore, to one that is not equally advantageous to the other. But, forsooth, says the contestant, the Republicans were in the control of the election boards—that is, in the great majority of election boards in the county the Republicans were in a majority. But suppose the Democrats had been in control, with the tickets as they were, would that have rendered the Democratic ticket a fraudulent one? There is no evidence in the record that either party knew what kind of tickets the other was going to issue. This requires no argument; a mere statement of the case is all that this House will require.

There was no double voting in the county. The Republicans used but the one ticket. The number of names on the poll-list did not materially differ from the number of ballots cast. On this point Mr. Brown, in his examination-in-chief, testified in answer to the question, "Were there more names than tickets on the poll-list," answered, "There were in some instances; not many." Nothing outside of the usual differences in that particular occurred. The contestee in this case unnecessarily examined some fifty or more witnesses on the point that the Republican ticket could not be distinguished from the Democratic ticket when folded and in the hands of the voter. But suppose it could be; no one has complained that he was prevented from voting what the gentleman from Ohio [Mr. CONVERSE] and the gentleman from Indiana [Mr. LOWRY] are pleased to term a secret ballot. The secrecy of the ballot was not intended to protect the candidates for office, but was designed to protect the voter, and if he makes no complaint who else can? The voter has the perfect right to vote an open ticket if he desires to do so, or he may write his ticket entire on any kind of plain white paper he pleases, and no election board would be justified in rejecting a ballot so cast.

Mr. Speaker, I was convinced from the beginning that there was nothing in this ground of contest, and from the various expressions I have heard from members of this House I doubt if I have not unnecessarily occupied the time of the House on this question. And now, Mr. Speaker, unlike the report of the gentleman from Ohio, I have honestly, fairly, and correctly presented this case without malice or intentional unkindness to any one. I find it unnecessary, sir, to indulge in severe criticism, much less abuse. I have no complaint to make of any member on this floor, though I might perhaps justly complain of some outside of this House, who have, under the privileges of the floor, been conspicuous in urging this case to speedy consideration; and in this connection I desire to say that but two members of the subcommittee of five were against me, while but five on the general committee reported this case to the House. In other words, a bare quorum of both the general and the subcommittee only ever acted on this case, and before the final vote is taken in this case I trust I shall have not only a majority of the Committee on Elections with me, but a majority of the House.

And now, Mr. Speaker, in conclusion, permit me to express the hope that at no distant day the election contests that come into this House may be passed upon, at least first, by some tribunal unfettered by partisan bias and prejudice. Of course, under our Constitution, "each House shall be the judge of the elections, returns, and qualifications of its own members," but, sir, this House may under the Constitution provide some inferior tribunal to hear and report upon this class of cases. The House can then confirm or reject such report. Bad precedents have been established by both sides of this House, and each party in turn takes advantage of them. The seats of members on this floor ought to be regarded with more judicial temper and less partisanship. If I should be in the next Congress, which I now expect to be, I shall consider this class of cases as a lawyer and as a man, independent of my party affiliations, let the chips fall where they may.

Mr. Speaker, this House has the power to turn me out and deny to my constituents their expressed choice as to who shall represent them; but, sir, if I am turned out I shall return to my constituents with clean hands and a conscience void of public wrong either to my country or to my constituents; and, sir, that will make me stronger than a seat on this floor can possibly make the contestant in this case. And now, sir, to the impartial, considerate, and wise judgment of this House I submit this case, hoping that the people who have honored me with a seat on this floor may not suffer at your hands. But be your judgment what it may, this contest on my part has been a fair and honest one, and whether I go or stay the burden will be light. True, if I go I shall miss the smiling faces and the genial countenances of the many pleasant acquaintances here formed, but that will be a loss personal to myself, and while my place can readily be supplied by the members of this House, I confess it will be more difficult for me, but I shall enjoy myself somewhat thinking of you.

Contested Election—Wallace vs. McKinley.

SPEECH

OF

HON. AMBROSE A. RANNEY,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 27, 1884.

The House having under consideration the contested-election case of Wallace vs. McKinley—

Mr. RANNEY said:

Mr. SPEAKER: I would fain be relieved from the task of addressing the House in this case, but I have a duty imposed upon me as the author of the minority report which I must discharge. This minority report was necessarily quite voluminous, owing to the numerous issues of law and fact involved and the great detail of evidence.

Having listened attentively to the discussion on the other side, I do not see that any of its essential findings upon issues of law or fact have been successfully assailed. The gentleman from Iowa [Mr. COOK] has, to be sure, discovered two typographical errors, and then boldly asserts on the strength thereof that the report is unfounded in law and fact. The index would have helped him to the right pages, as the names of witnesses were correctly given.

The general aspect of this case, as stated in the report and as revealed in the discussion thus far, appears to be this: Contestee, by the official count, had a plurality of 8. The correction of a manifest error of 10 votes in the footing of one column of figures in the returns from Carroll County (page 46 of the record), and which the State board by oversight omitted to make, would have given him 18 plurality. We add 15 more for votes proved and not counted for contestee. Contestant's counsel at the argument conceded 4; the chairman finds 5; the gentleman from New York [Mr. ADAMS] seems to allow 8. The minority deduct 1 illegal vote, which contestee conceded at the hearing. The other side, not designating them, think more should be deducted. I have besought them in vain to name the votes, so that we might save time in the discussion. Contestee charges that 55 and more illegal votes were cast and counted for contestant. The minority report finds the charge substantiated clearly as to 47 of them, and doubtfully as to 5 more. The chairman has refused to give us the names of those which he finds to be illegal votes. They were promised at this time. But I can not stop for them now, as it will encroach upon my allotted hour.

Contestant claims 23 returned but not counted from Columbiana County, they being returned as cast for other persons. Sixteen are conceded by contestee, not upon the returns, but upon the proofs before the House. Seven of the 23 are not allowed by the minority report because the ballots on their face designate without any ambiguity some other person, and there is no sufficient evidence to control them by showing that they were intended for contestant.

The other side allow them from mere conjecture or surmise. We adopt what seems to us to be the only wise and safe rule, on the approved authorities given in the report, and which I will not stop to read. The law requires the voting to be by ballot. That ballot must disclose the intention of the voter, and when clearly done without ambiguity the designation of the ballot must prevail, certainly if not controlled by extraneous evidence. Contestant claims, and the other side allow him, 4 votes from as many different townships as having been cast for him but not counted, and 11 more votes from Fairfield Township, upon an alleged recount made four months after the election. We do not allow these, for reasons stated in the report in detail, and which I shall consider anon more at length. We find, on stating the account, with all proper debit and credit, as in a ledger account, that contestee was chosen by a majority of 67.

If we allow all the additional votes claimed by contestant and found by the majority, and deduct the illegal votes found by us to have been cast for contestant, contestee has even then a clear and undoubted plurality of 20 and more.

Q. Can you give the name of one of them?
A. No, sir.
Q. The only thing is that some days prior to the election some of those men expressed a desire to vote the Democratic ticket?
A. Yes, sir.
Q. And when the time came they voted the Republican ticket?
A. Yes, sir.

Harry O. Thudium (page 82):

Q. You stood at the polls all day?
A. I do not think I left them five minutes all day.
Q. You were challenger there?
A. Part of the time.
Q. Do you know of any one who was deceived or misled in voting in consequence of the Republican ticket being on that kind of paper?
A. I cannot say as to that, because I was right at the chute there, and such exclamations, if there were any made, were made outside.
Q. Do you know of any one who would have voted different if the Republican ticket had been printed on the same kind of paper as the Democratic ticket was printed on?
A. No, sir.

George A. Hardesty, on cross-examination (page 104):

Q. What is your politics?
A. I am a Democrat.
Q. You were challenging in the interest of the Democratic party that day, were you not?
A. Yes, sir.
Q. Do you know of any one who was misled or deceived in voting in consequence of the Republican ticket being on the kind of paper it was?
A. No; I could not give any names of any one; it has been so long that I have almost forgotten about it.
Q. Do you know of any one who would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was on?
A. I do not know that I could mention any one.
Q. You have been challenger before at precincts at elections?
A. Yes, sir.
Q. And frequently stood around the polls?
A. Yes, sir.

Charles M. Cooper, on cross-examination (pages 120 and 121):

Q. You are a Democrat, I believe?
A. Yes, sir.
Q. Did you have any bet on the result of the Congressional election last November?
Mr. WILSON. I do not know that that is necessarily a fair question to ask. The witness is not bound to answer.
Mr. PEELLE. He may use his own judgment about answering that.
The WITNESS. I will refuse to answer that.
Q. I will ask you to state if you know of any one that was misled or deceived in voting at that precinct in consequence of the Republican ticket being printed on the kind of paper it was?
A. I can not give the names of any persons that were deceived on account of this ticket.
Q. Do you know of any one that would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was printed on?
A. Well, there were persons that were deceived by this ticket that would have voted differently if the ticket had been on common paper, but as for giving their names I can not just state now who they were.
Q. Do you know the names of any such?
A. No, sir.

William B. Lewis, on cross-examination (page 124):

Q. You are a Democrat, I believe?
A. Yes, sir.
Q. And you was the challenger there that day, in the interest of the Democratic party?
A. Yes, sir.
Q. And after the polls closed you became a watcher in the interest of the Democratic party?
A. Yes, sir.

* * * * * * *

Q. Do you know of anybody who was misled or deceived in voting there on account of the Republican ticket being on the kind of paper it was?
A. No, sir.
Q. Do you know of anybody who would have voted differently if the Republican ticket had been printed upon the same kind of paper that the Democratic ticket was?
A. I can not say that I do.

John Schley, in his cross-examination, testified (page 137) as follows:

Q. What is your politics?
A. A Democrat.
Q. Do you know of any one who was misled or deceived in voting at your precinct in consequence of the Republican ticket being on the kind of paper it was?
A. No, sir; not of my personal knowledge.
Q. Do you know of any one who would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was printed on?
A. No, sir.

John Edwards, in his cross-examination, testified (pages 138, 139) as follows:

Q. What are your politics?
A. I am a Democrat.
Q. What is your occupation?
A. Bill-poster.
Q. You are employed by Mr. English in posting bills for his theater, are you?
A. No, sir; I have not posted a bill for Mr. English since he had his theater.
Q. Do you know of anybody that would have voted differently had the Republican ticket been printed on the same kind of paper that the Democratic ticket was printed on?
A. No; I do not.

Heram W. Miller, in his cross-examination, testified (page 144) as follows:

Q. What is your politics?
A. Democrat.
Q. Was there any complaint made there on the day of the election to the board in reference to these Republican tickets by any one? And, if so, state who they were.
A. No, sir; I do not think there was.
Q. Were they counted without objection, so far as you know?
A. Yes, sir; they were counted.
Q. Do you know of anybody who would have voted differently if the Republican ticket had been printed on the same kind of paper the Democratic ticket was printed on? And, if so, state who they were.
A. I do not know exactly. I do not believe I do.
Q. You have been standing at the precinct there before, have you not, at election times?
A. No, sir.
Q. Never stood there before?
A. No, sir. The precinct never was there before.
Q. You have been standing there in that township at its precincts before that on election days?
A. Not very much. For four years I was trustee, and, of course, I was on the election board.

I have now given you the testimony of nine Democratic judges, seven Democratic clerks, and nine Democratic challengers, twenty-five witnesses in all, who were examined on behalf of the contestant; and now let us see what some of their other witnesses have to say about the effect of this ticket and how many voters were deceived or misled or did not get to vote as they desired.

The National or Greenback candidate for Congress at the same election, Robert W. Medkirk (page 11), was examined by contestant; and, on cross-examination, here is what he said:

Q. Do you know of any of those tickets having been voted that had another one folded within it?
A. No, sir.
Q. Do you know of any one that was misled in consequence of the quality of this ticket, or the distinguishing mark you refer to—that was misled in voting?
A. I can not say about that. Do I know of any one that was misled about voting?
Q. Yes, sir.
A. I do not know any one.
Q. Do you know of any one who would have voted differently had the ticket been printed upon the same character of paper as the Democratic and National ticket had been printed on?
A. No, sir.
Q. Do you know of any one that complained to the board at your precinct about the character of this ticket?
A. Not to the board; I do not.
Q. State your politics now.
A. I am a National.
Q. Properly known as the Greenback candidate for Congress?
A. Yes, sir.

William P. Fishback, on cross-examination (page 103), says:

Q. Do you know of anybody that was deceived or misled in voting at that election in consequence of the Republican ticket being on the material it was?
A. No, sir.
Q. Do you know of anybody that would have voted differently if that Republican ticket had been printed on the same kind of paper that the Democratic ticket was printed on?
A. No, sir.
Q. Did you know anybody personally or by hearsay that voted two tickets of that Republican ticket?
A. No, sir.

Victor M. Backus, in his cross-examination (page 80), says:

Q. What is your politics?
A. Democrat.
Q. I understood you to say if those tickets were folded closely, as they usually are when voted, it would be difficult to tell one from the other.
A. As you come up to the polls?
Q. Yes, sir.
A. I think it would.
Q. I will ask you, when tickets are folded when voted, if they do not usually fold them pretty close and hold them in their hand pretty close when they vote?
A. Yes, sir; some of them do.
Q. Is it not a general thing that they fold them pretty close?
A. Yes, sir; as a general thing. I have seen some hold them right up open and others pretty close.

* * * * * * * *

Q. Do you know of anybody who would have voted differently at that poll on that day if the Republican ticket had been printed on the same kind of paper the Democratic was on?
A. No, sir; I do not.
Q. What is your business?
A. I used to be a carriage-maker.
Q. You were the Democratic watcher there that night?
A. I was appointed that night. I worked at the polls all day, and some one brought an appointment there, and I did not want to go in.
Q. Were you appointed there as the Democratic watcher that night?
A. Yes, sir; I was.
Q. By the Democratic central committee?
A. Yes, sir.
Q. The tickets are plain white, are they not, both of them?
A. Yes, sir; I should think they were.

F. M. Wright (page 134) says:

Q. Do you know of anybody who would have voted differently had the Republican ticket been on the same kind of paper that the Democratic ticket was printed on?
A. I can not say as to that, one way or the other.
Q. Do you know of anybody who was misled or deceived in voting in consequence of the Republican ticket being on the kind of paper it was?
A. No, sir.
Q. You were candidate for prosecuting attorney on the Democratic ticket?
A. Yes, sir.
Q. And when you spoke about going to fifty precincts, you drove around in a buggy, did you?
A. Yes, sir.
Q. Who was with you that day?
A. I don't recollect. I think there must have been several parties at different times. I don't just recollect the names of any one.
Q. And you went to fifty of the fifty-six precincts in the city that day?
A. I think I went to all of them but two or three. I started early in the day.

Moritz Pasner (page 148) who was a watcher, on his cross-examination says:

Q. You are a Democrat?
A. Yes, sir.
Q. You were a Democratic watcher all that night?
A. Yes, sir. That is what they called me up for. I did not want to go; they coaxed me.
Q. Were those tickets counted without objection?
A. I don't know. I believe Mr. Bunts objected to one or two tickets. I can not tell exactly. There was some objection to it.
Q. Tickets that were folded together?
A. No, no. I can not say that.
Q. Were the Republican tickets objected to?
A. There was some objection about it of some kind, or some claim. There was none called.
Q. Was the counting of the Republican tickets there objected to by anybody?
A. No. I believe not.
Q. Did the votes correspond with the tally?
A. I do not know; I can not tell. It is a matter that I never took any attention to, but I am too green in that business; I did not pay any attention and I do not know anything about it.

Now, Mr. Speaker, in addition to that, the contestant examined some thirty or forty witnesses to the effect that the Republican ticket could readily be distinguished in the hands of the voters from the Democratic ticket. Now, admitting that to be true, why then it follows that the Democratic ticket could as readily be distinguished in the hands of the voter from the Republican ticket. There is no advantage, therefore, to one that is not equally advantageous to the other. But, forsooth, says the contestant, the Republicans were in the control of the election boards—that is, in the great majority of election boards in the county the Republicans were in a majority. But suppose the Democrats had been in control, with the tickets as they were, would that have rendered the Democratic ticket a fraudulent one? There is no evidence in the record that either party knew what kind of tickets the other was going to issue. This requires no argument; a mere statement of the case is all that this House will require.

There was no double voting in the county. The Republicans used but the one ticket. The number of names on the poll-list did not materially differ from the number of ballots cast. On this point Mr. Brown, in his examination-in-chief, testified in answer to the question, "Were there more names than tickets on the poll-list," answered, "There were in some instances; not many." Nothing outside of the usual differences in that particular occurred. The contestee in this case unnecessarily examined some fifty or more witnesses on the point that the Republican ticket could not be distinguished from the Democratic ticket when folded and in the hands of the voter. But suppose it could be; no one has complained that he was prevented from voting what the gentleman from Ohio [Mr. CONVERSE] and the gentleman from Indiana [Mr. LOWRY] are pleased to term a secret ballot. The secrecy of the ballot was not intended to protect the candidates for office, but was designed to protect the voter, and if he makes no complaint who else can? The voter has the perfect right to vote an open ticket if he desires to do so, or he may write his ticket entire on any kind of plain white paper he pleases, and no election board would be justified in rejecting a ballot so cast.

Mr. Speaker, I was convinced from the beginning that there was nothing in this ground of contest, and from the various expressions I have heard from members of this House I doubt if I have not unnecessarily occupied the time of the House on this question. And now, Mr. Speaker, unlike the report of the gentleman from Ohio, I have honestly, fairly, and correctly presented this case without malice or intentional unkindness to any one. I find it unnecessary, sir, to indulge in severe criticism, much less abuse. I have no complaint to make of any member on this floor, though I might perhaps justly complain of some outside of this House, who have, under the privileges of the floor, been conspicuous in urging this case to speedy consideration; and in this connection I desire to say that but two members of the subcommittee of five were against me, while but five on the general committee reported this case to the House. In other words, a bare quorum of both the general and the subcommittee only ever acted on this case, and before the final vote is taken in this case I trust I shall have not only a majority of the Committee on Elections with me, but a majority of the House.

And now, Mr. Speaker, in conclusion, permit me to express the hope that at no distant day the election contests that come into this House may be passed upon, at least first, by some tribunal unfettered by partisan bias and prejudice. Of course, under our Constitution, "each House shall be the judge of the elections, returns, and qualifications of its own members," but, sir, this House may under the Constitution provide some inferior tribunal to hear and report upon this class of cases. The House can then confirm or reject such report. Bad precedents have been established by both sides of this House, and each party in turn takes advantage of them. The seats of members on this floor ought to be regarded with more judicial temper and less partisanship. If I should be in the next Congress, which I now expect to be, I shall consider this class of cases as a lawyer and as a man, independent of my party affiliations, let the chips fall where they may.

Mr. Speaker, this House has the power to turn me out and deny to my constituents their expressed choice as to who shall represent them; but, sir, if I am turned out I shall return to my constituents with clean hands and a conscience void of public wrong either to my country or to my constituents; and, sir, that will make me stronger than a seat on this floor can possibly make the contestant in this case. And now, sir, to the impartial, considerate, and wise judgment of this House I submit this case, hoping that the people who have honored me with a seat on this floor may not suffer at your hands. But be your judgment what it may, this contest on my part has been a fair and honest one, and whether I go or stay the burden will be light. True, if I go I shall miss the smiling faces and the genial countenances of the many pleasant acquaintances here formed, but that will be a loss personal to myself, and while my place can readily be supplied by the members of this House, I confess it will be more difficult for me, but I shall enjoy myself somewhat thinking of you.

Contested Election—Wallace vs. McKinley.

SPEECH

OF

HON. AMBROSE A. RANNEY,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 27, 1884.

The House having under consideration the contested-election case of Wallace vs. McKinley—

Mr. RANNEY said:

Mr. SPEAKER: I would fain be relieved from the task of addressing the House in this case, but I have a duty imposed upon me as the author of the minority report which I must discharge. This minority report was necessarily quite voluminous, owing to the numerous issues of law and fact involved and the great detail of evidence.

Having listened attentively to the discussion on the other side, I do not see that any of its essential findings upon issues of law or fact have been successfully assailed. The gentleman from Iowa [Mr. COOK] has, to be sure, discovered two typographical errors, and then boldly asserts on the strength thereof that the report is unfounded in law and fact. The index would have helped him to the right pages, as the names of witnesses were correctly given.

The general aspect of this case, as stated in the report and as revealed in the discussion thus far, appears to be this: Contestee, by the official count, had a plurality of 8. The correction of a manifest error of 10 votes in the footing of one column of figures in the returns from Carroll County (page 46 of the record), and which the State board by oversight omitted to make, would have given him 18 plurality. We add 15 more for votes proved and not counted for contestee. Contestant's counsel at the argument conceded 4; the chairman finds 5; the gentleman from New York [Mr. ADAMS] seems to allow 8. The minority deduct 1 illegal vote, which contestee conceded at the hearing. The other side, not designating them, think more should be deducted. I have besought them in vain to name the votes, so that we might save time in the discussion. Contestee charges that 55 and more illegal votes were cast and counted for contestant. The minority report finds the charge substantiated clearly as to 47 of them, and doubtfully as to 5 more. The chairman has refused to give us the names of those which he finds to be illegal votes. They were promised at this time. But I can not stop for them now, as it will encroach upon my allotted hour.

Contestant claims 23 returned but not counted from Columbiana County, they being returned as cast for other persons. Sixteen are conceded by contestee, not upon the returns, but upon the proofs before the House. Seven of the 23 are not allowed by the minority report because the ballots on their face designate without any ambiguity some other person, and there is no sufficient evidence to control them by showing that they were intended for contestant.

The other side allow them from mere conjecture or surmise. We adopt what seems to us to be the only wise and safe rule, on the approved authorities given in the report, and which I will not stop to read. The law requires the voting to be by ballot. That ballot must disclose the intention of the voter, and when clearly done without ambiguity the designation of the ballot must prevail, certainly if not controlled by extraneous evidence. Contestant claims, and the other side allow him, 4 votes from as many different townships as having been cast for him but not counted, and 11 more votes from Fairfield Township, upon an alleged recount made four months after the election. We do not allow these, for reasons stated in the report in detail, and which I shall consider anon more at length. We find, on stating the account, with all proper debit and credit, as in a ledger account, that contestee was chosen by a majority of 67.

If we allow all the additional votes claimed by contestant and found by the majority, and deduct the illegal votes found by us to have been cast for contestant, contestee has even then a clear and undoubted plurality of 20 and more.

In considering the evidence upon controverted issues of fact, the honorable chairman seems to adopt the rule that he will believe Democrats in all cases in preference to Republicans, if in conflict, and that he will believe no Republican at all unless his evidence favors contestant.

The learned chairman has taken a most extraordinary course in his mode of treating this case. He starts with a false assumption, adopts a rule of evidence applicable only to criminal proceedings, requiring proof beyond a reasonable doubt on the part of contestee. It is no wonder that he comes out wrong in the end. I quote from his report:

> Indeed, there can be no doubt that the certificate of election should have been issued to the contestant, and he should have been the occupant of the seat, with its honors and emoluments. Logically, we assign him *nunc pro tunc* his true position in the controversy, and the onus is shifted to his adversary.

He does this on the strength of contestee's concession as to the said 16 votes returned from Columbiana County and not counted by the State canvassers. He fails to notice, or declines to regard, the fact that the concession is made, not on the returns, but by reason of the evidence adduced here, for the purpose of showing what was the intention of the voter, and makes the false assumption that the State canvassers were legally possessed of the same facts. He takes only one concession, disregarding all the others made by both parties at the same time.

Contestant in his brief conceded to contestee 4 votes as proved and not counted for him, 2 illegal votes cast for himself, and 7 more named in the said list of 55 (if found to have been cast for him). The chairman fails to notice and give due weight to the fact that in the abstracts returned in conformity to law from Carroll County there was a manifest error of 10 votes in favor of contestant found in the footing of one column of figures, and which the State board would have been bound to correct if they had discovered it. The explanation of the same before the House, and which the chairman adjudges sufficient, the State board did not have.

If the State board had discovered and corrected this error and allowed 16 out of the said 23 votes in Columbiana County, returned as if cast for some other person, this would have left contestee still with a plurality of 2 votes.

Mr. ADAMS, of New York. How could they have corrected the error, as they were only ministerial officers?

Mr. RANNEY. Easily, and with a perfect right so to do. It was simply an error in addition, which was manifest on the face of the returns. It required the exercise of no judicial functions to do this.

The proper course to pursue was to begin the account of votes with a plurality of 8 in favor of contestee, as the starting-point in the investigation, giving contestee the presumptions which the law entitles him to, and then go through the whole case and get a final balance, instead of striking the balance after the first item of proof and stopping there to seat contestant. This attempt to shift the burden of proof from contestant to contestee is simply absurd. There is neither reason, justice, law, nor logic in it.

When the learned gentleman proceeds so swiftly to condemn the action of the State board, I beg leave to remind him that their action was deliberate and well considered; that it was taken after a full hearing given to the parties interested, with the aid of the attorney-general, now a member of the supreme court commission of Ohio, and with an earnest endeavor to ascertain the extent of their legal authority and what was their duty in the premises. Chalmers's case, as reported to, and decided by, this House has no analogy whatever. In that case the tally-sheet indorsed on the regular return was not required or authorized by law. The body of what did constitute the legal return gave the 1,492 votes in question to James R. Chalmers, and that controlled the unauthorized tally-sheet indorsed thereon which gave the name as J. R. Chambliss. It was manifestly only a clerical error. Here the abstract constituted the return required by law, and by that the State board were bound. In that case the secretary of state acted in defiance of a mandate from the court, and his action was adjudged illegal and held to be void by the courts of his own State. There was clear and manifest fraud. In the present case there is nothing of the kind.

The 23 votes in question now had been counted by the judges of election, and had been returned as votes cast for other persons than the contestant. The names used and as stated in the return did not necessarily, or fairly, designate the contestant as the party intended to be voted for. What was the intention of the voter could only be shown by evidence *aliunde*.

Now, sir, I maintain that the State board of Ohio were only ministerial officers, and could exercise no judicial functions whatever. They did perfectly right. They had no authority to take and hear evidence on this subject. It required judicial functions to determine whether these votes were or were not intended to be cast for contestant. This House has the power to do that. That board had no such power.

The case of Campbell *vs.* Morey, decided by the supreme court of Ohio after the certificate was issued to contestee, does not change or deny the rule contended for, but recognizes and confirms the same. In that case there were returns for Henry L. Morey and for H. L. Morey. Campbell petitioned for a mandamus to prevent the State board from counting them all for Henry L. Morey. He did not allege in his petition that they were different persons, but conceded at the hearing that they were one and the same. The opinion of the court so states expressly, and the mandamus was rightfully refused.

Let there be no mistake about the law in question. It is not a case where the statutes confer upon the State board judicial powers, as is done in some other States. I will refer the House to the authorities cited in the minority report as decisive of the question under consideration:

> The board followed the rule uniformly laid down in the decided cases. (McCrary on Elections, §§ 211, 81, 82, 83; 27 Barb., 77; 25 Ill., 328; 4 Wis., 779: 10 Iowa, 212; 22 Mo., 224. Clark *v.* Board, &c., 126 Mass., 282; 64 Maine, 596; 71 Maine, 371; 59 Ind., 152.)

I will quote at some length from the decision in Clark *vs.* Beard, 126 Mass., 282, although the other cases cited are equally clear and strong on this point:

> Nothing can be clearer than that the counting and ascertaining the majorities and giving certificates of the result are mere ministerial acts. They (the canvassing boards) have no discretion in determining which of the candidates shall be elected. It must be the result of pure, inflexible, mathematical calculation. (Strong, petr, 20 Pick., 484, 492, 498.) They are not made a judicial tribunal, nor authorized to decide upon the validity or the fact of election in any other mode than by an examination of the returns made to them according to law. They are not authorized to hear witnesses or weigh evidence. They have no power to send for persons and papers. Upon the face of the returns the votes cast for L. Clark may possibly indicate a person whose Christian name consists of the letter L., and which may be either Luther, Lewis, or Leonard, or any other name beginning with this initial letter. This is the utmost which can be known from the returns taken by themselves. The inference, however plausible, that the votes cast for L. Clark were intended to be cast for Leonard Clark is left by the returns a matter of conjecture only.

Numerous cases are cited in the opinion in support of the same: 64 Me., 596; 8 Cowen, 102, 106, 107; 5 Denio, 409; 4 Selden, 67; 27 N. Y., 45; 45 N. Y., 772; 1 Doug. (Mich.), 59; 3 Mich., 233; 16 Mich., 283; 23 Mich., 342.

What is said in Campbell *vs.* Morey, about the State board taking cognizance of what is notorious, is a dangerous doctrine, as things which are notorious and in the newspapers are not always true.

Not an authority, not a precedent, has been cited upon the other side adverse to this view.

The precedent of Abbott *vs.* Frost, referred to by the honorable chairman, was one where the irregular or ambiguous ballots were not counted by the judges of election nor by the canvassing board. They were allowed upon the extraneous proofs adduced before this House, the same as the committee have done in the present case as to some of the votes in question.

I do not propose, passing from these general considerations, to deal with the case much in detail. It is deemed to be unnecessary after the full and able discussion which has already occurred, especially on the part of my associate on the committee, the learned member from Iowa [Mr. HEPBURN], the two distinguished gentlemen from Ohio [Mr. E. B. TAYLOR and Mr. HURD], and not forgetting the experienced and fair-minded gentleman from Texas [Mr. MILLS], who, in conjunction with Mr. HURD and the gentleman from Kentucky [Mr. ROBERTSON], is willing to forget party considerations and go only for truth and justice.

I must not fail to notice, however, the fact that the chairman, in his opening speech, dealt mainly with the additional votes claimed by the contestant, as if they were the only issues deserving of any serious treatment at his hands. When he had concluded that examination, in his confident and emphatic way, most of the members on the other side left the House apparently satisfied, and I have not seen many of them here since.

Now, I ask gentlemen to say in all candor whether they would like to have their right to a seat, if seriously contested, determined in this House by the opinion of any one member; that this should go unquestioned and unchallenged, and without personal examination on the part of other members.

In the present case the House has the report of the chairman, with the result of a particular examination by only two of the committee.

An intelligent judgment can not be formed and rendered without attention to the discussion or a personal examination of the case in some way.

If gentlemen will examine they will see that the chairman has dealt with this case, in both his report and in his speech, in a very partial manner.

In striking contrast with this, the minority report states in detail the facts found as to each voter in question, and the requisite authorities of law on which the determination rests, together with the names of each witness on either side, with pages of record where his evidence can be found and examined by each member for himself. I challenge the closest scrutiny of all this, and ask no man to take for granted any mere assertion found in the report or made in the discussion. I would like to sit down with any member upon the other side and calmly and dispassionately verify everything reported. At least I would like to have gentlemen do it themselves, picking out some of the instances and using them as samples, if they will do no more.

In the discussion gentlemen on the other side have singled out a few individual instances and criticised the finding as to them. In each of these instances they have selected votes out of the five which the minority report pronounces doubtful and finally consents to lay aside and leave out of the computation. They have not attacked any of the others, because the position taken as to them is impregnable and does not admit of an open adverse discussion.

The chairman, after dealing in generalities, turned the case over to

the gentleman from New York [Mr. ADAMS] for the details and a more particular treatment, bespeaking for him the attention of the House, and thus apparently indorsing in advance what he had to say, as though they had conferred together and concurred. Now Mr. ADAMS comes to the conclusion and states that he finds that contestant has only a plurality of 13. In making up this he includes for contestant the 11 additional votes claimed in the recount of the poll at Fairfield Township. If we take these out of his account it will leave but 2 plurality. He has not given us the names of the voters in the list of 55 whom he finds to have voted illegally for the contestant. He has, however, stated some which he does not so find and some of the claims of contestee for additional votes which he disallows. In so far as he has found in favor of contestee we may safely assume that he has done so because he could not help it. We need to treat only of what he does not so find.

As to the 4 voters from the infirmary, he allows their votes to contestant. The evidence, without conflict and of an undisputed character, shows that they lived and had their home—their only home—at the infirmary, with an intention to reside there for the rest of their lives. The fact concurs with the intention, as sworn to distinctly and expressly by each of them. They resided in Plain Township, where the infirmary was located, and that was the only place where they had a right to vote. A decision of the supreme court of Ohio in the case of Sturgeon *vs.* Korte (34 Ohio Statutes, 525), is directly in point and conclusive. They went elsewhere and voted because told to do so.

Mr. ADAMS, of New York. They had gone and voted there several times before.

Mr. RANNEY. Yes; so they swear. But any number of prior illegal votes does not make the last vote legal. This is a specimen of the gentleman's logic.

Again there are 5 voters who voted for contestant in the wrong wards of Canton, or in the wrong precinct, and which Mr. ADAMS counts as legal. He does it on the technical ground that the ordinances were not put in evidence, claiming that they were the only competent evidence to show the boundaries. This is an unsound objection. The voters themselves each swear as to their precise location at the time, although they did not then know, as they testify, where the boundaries were. They have learned since, and now swear to the fact that they resided in one ward and voted in another.

Besides this, the surveyor of the city, a Democrat in politics, swears to the exact boundaries, and an official map is put in evidence, which establishes them beyond cavil. They were established about one year before the election in question, in season for the spring election of the same year, and the voters were bound to know them. Whether they did or did not have actual knowledge is of no consequence as a matter of law. It has been so decided in three cases cited and referred to in the report.

As to the competency of oral evidence offered there can be no doubt whatever. Such evidence is competent in homicide cases involving life. The learned gentlemen allow the votes for J. Wales and Jonathan H. Walser, although the evidence discloses persons bearing those surnames. The chairman says these tickets were "fresh from the hands of the voter" when the judges of election counted and allowed them, and that he "will not reverse their judgment." There is not a particle of extraneous evidence to explain these ballots or show the intention of the voter.

When the chairman comes to the ballot with the name of contestee erased, and some unintelligible characters written in pencil under it, looking most like W-a-l. (printed in the record "Walce") and which said ballot the judges of election rejected from the count; and also to the ballot with "H—W. J. McCausland" and the letters R and D, respectively, with figures under the same, indorsed plainly in ink, and which the judges rejected from the count as a marked ballot cast in violation of the statute of Ohio, he seems to have forgotten the principle and rule which he applied in the other cases.

So, too, of the 23 votes returned from Columbiana County. These were also "fresh from the hands of the voters" when the judges of election rejected them

Several MEMBERS. This was quite too fresh.

Mr. RANNEY. The difficulty with the chairman seems to be that the allowance of the votes in one instance made for the contestant, and the rejection of them in the other instances made against him. So he reverses the action of the judges of election in one case and confirms the same in the other, favoring the contestant's claim in each instance. Presumptions are strong when contestee seeks to overcome them, but weak when in the way of contestant! In the case of the ballot with a dubious name on it, he takes the evidence of the Democrat that it was rejected for the want of initials, or a Christian name, as against the evidence of two reputable Republican co-judges, each of whom swears that it was rejected by the concurrence of all three, because they could make nothing out of the characters written in pencil under the erased name of contestee.

If there was ever a marked ballot in violation of the statute of Ohio this McCausland ballot was one of them. The marks which served to distinguish it were plainly written in ink upon the back thereof, and could not fail to be seen by the voter if he intended to comply with the law, using due diligence. It was under his control, for he could easily have gotten another, a clean one. The indorsement was written by one Guess, one of the clerks of the election, as he swears. There was a voter in the precinct who bore the name indorsed, and for aught that appears he cast it.

Now, sir, some statutes not only prohibit the use of such ballots, but go further and declare them void if cast. Others, like the statute of Massachusetts, provide that they shall be counted notwithstanding, if cast. The statute of Ohio simply inhibits them without penalty or further provision. In Lynch *vs.* Chalmers, at the last Congress, I heard distinguished gentlemen argue and vote that a printer's dash on the face of the ballot, used to separate two names, was a distinguishing mark voiding the ballot. At the present session I have read a report of the gentleman from Ohio [Mr. CONVERSE], and seen the House adopt it, in the case of English *vs.* Peelle, holding that an unusual thickness of paper used for the ballot, alone considered, and although it was a regular number of book-paper, and although the statute did not undertake to regulate the matter of weight or thickness, was a distinguishing mark which vitiated the ballot. What will the House who adopted that report say of this ballot? The same majority of the committee, save the chairman, sanctioned the report rejecting the ballots in the Peelle case and adopt this one sanctioning the ballot used here.

As to the 6 votes claimed by the contestee on the strength of the recount of the poll at Butler Township, and which Mr. ADAMS rejects, the recount discloses 2 votes for contestee not counted and 4 other ballots not counted. When the votes were taken from the box on the night of the election day these votes were rejected. They are in evidence here. It appears manifestly that some one had attempted by rubber to obliterate the pencil-mark drawn through the name of contestee, and also the name of contestant which had once been written in pencil under it. It was partly done but the obliteration was not complete, and the paper is left thereby blurred or blackened.

The attempt to do it is apparent from inspection of the ballots, which I hold in my hand, and which any gentleman can see for himself. Each voter who cast such a ballot is called, and he swears that at the time he could find no other ballots, and that he attempted and supposed he had succeeded in rubbing off the pencil marks and the name of contestant, and cast the ballot for contestee, whose name was left standing as printed. It appears that some opponent had thus scratched the regular Republican tickets, and had them ready at the polls in the morning. The regular Republican ticket was exhausted, or had not arrived at the time. Voters who came could not wait, and finding no other tickets, they took the scratched tickets, made the changes stated, and voted them, intending them for contestee. The persons who did this are all called, and the evidence of their intention to vote for contestee is clear and positive. It is not controverted. They identify the ballots satisfactorily in all cases.

That the ballots were kept inviolate until the recount is clearly proved, and the integrity of the recount before the magistrate is without question. How, then, any serious question can be made as to the right of contestee to have the benefit of this recount, and the allowance of 6 more votes on account thereof I fail to see? It is observable and significant of a want of fairness, that in the recounts the gentlemen on the other side avail themselves of them when they favor contestant and reject them when they do not.

This brings me to the recount in the case of the poll of Fairfield Township. Contestant claims, and the other side allow him, 11 additional votes from this township on a recount made before the magistrate four months after the election occurred. The conduct of the majority of the committee in this respect serves to reveal the partisan character of their decision more than anything else perhaps. By the statute of Ohio the ballots were required, after being called off and counted, to be strung on a string, put back into the box, which was to be locked and given to the clerk, the key to be put into the hands of the minority judge of election, and both thus kept for the purposes of any contest which might arise.

At the close of the election at Fairfield the box containing all the ballots cast was locked and delivered into the hands of one Augustine, the township clerk, and the key was delivered to the minority judge, Mr. Carpenter, a Democrat. Instead of taking the box home and putting it in a secure place, Mr. Augustine left the same during the night of the day of election in the room where the election was held. Next morning he took it to his office, a public place, and left it on the desk. During the same day he sent Mr. Carpenter (the custodian of the key) for it, and he brought it to him. It was then put in a clothes-press in the house where they both lived, leading from a spare room, neither being kept locked, and to which any one in the room or house could obtain easy access. The election was on Tuesday. On Friday Mr. Carpenter was seen on the street with the ballot-box, going in a direction not leading to his home.

A witness who saw Carpenter with the box on Friday swears that he had a conversation with him on that day in the presence of one Patterson, in which he asked him what he was doing with the box, and was told in reply that he was going to take it to New Lisbon to have the ballots recounted. Mr. Patterson is not called to contradict this, and it stands unimpeached. Whether the box was so taken to New

Lisbon in fact does not appear save by inference from the facts already stated. Mr. Carpenter and Augustine stood in the relation to each other of father-in-law and son-in-law, and lived in the same house together. Augustine was a Republican in politics, but is shown to have been hostile to contestee, and to have endeavored to get another man, his friend, nominated in his stead. While he swears that he voted for the contestee, it appears uncontradicted, sworn to by three witnesses, that he was hostile to him after his nomination and used his influence against him. Whether he did vote for contestee may well be doubted. When the box was opened before the magistrate 633 ballots only were found in it. The poll-book showed that 638 persons voted, and that is not denied. Five of the original ballots were missing, and the loss of same was unexplained. Contestant concedes this in his brief.

One ballot, with the names of both candidates on it for Congress and shown to have been cast, was also not to be found. Mr. Foster, the Greenback candidate, had 53 votes counted and returned for him, but the recount showed 57 for him. The straight tickets for contestee were, as found, one more than were returned. It appears that within a few days after the election contestant was in company with Mr. Carpenter, in conference about the ballots cast at that poll, and a statement was given in writing which is not produced. It appears that one Halloway, a reputable and competent lawyer, was present during the day, watching the balloting, and at the time of the final count and when the result was announced. He took down a statement of the vote according to the result as found, which is produced and put in evidence in the cross-examination by contestant. By his evidence and the memorandum there were 19 ballots on which no person was voted for as candidate for Congress. When the box is opened at the recount only 7 such are found.

It is apparent that the box had not been kept according to law, but had been exposed, so as to give an ample opportunity to tamper with its contents before the recount. There was a strong temptation to get a few more votes for contestant. Although Carpenter and Augustine swear to having no knowledge that any one had tampered with the box, yet it is perfectly apparent that the contents had in fact been tampered with in the interests of contestant. No explanations whatever of the discrepancies between the original ballots as counted and as found in the box at the recount are given. The 11 additional ballots claimed under the recount for contestant are those where the name of contestee is erased in pencil, and the name Wolac, Ma. Wllc, Mag Wolac, Mage Wolac, is written underneath the same. None of the election officers describe any such ballots from their recollection of the same or what occurred at the election.

The other witnesses describe the ballots not counted as being for Wallace, or Major Wallace, the number of which is stated by a half dozen of witnesses present as being from 2 to 5, not to exceed 4 or 5, including two Greenback tickets folded together and not counted. Carpenter says now 7 to 15, although he swears that in his written statement to Wallace, made directly after election, he said several, and did not then recollect the number and could not now tell what number he did then name in the paper. It appearing that the box had been exposed against the law, and the evidence being direct and clear that the ballots recounted were not the same as the original ballots counted; in fine, the evidence being perfectly satisfactory that there had been an actual tampering with the box subsequent to the election and before the recount, we exclude the same altogether, as insufficient to control the official count and original returns.

In addition to what I have said it ought to be stated that the irregular and imperfect names specified are written by a tolerably good penman, and not, apparently, by an ignoramus who could not spell. In some instances it is written with a black-lead pencil, while the erasure in pencil of contestee's name is of a different color. After the box was opened and the recount made the original ballots and the depositions were sent off at once and all opportunity to examine them further and call witnesses, experts or otherwise, as to them, was absolutely denied contestee and his counsel, although he requested to be allowed such an opportunity by a respectful letter, which is in the record.

There is no evidence independent of the recount sufficient to establish any legal ballots as having been cast for contestant at this township and not counted. The evidence is too indefinite and uncertain as to the facts and the description of the ballot to be allowed to control the official count.

Mr. Carpenter himself, when asked how many votes there were not counted, says: "To the best of my knowledge I think—well, from 7 to 15; I wouldn't be positive." (Ques. 24.) Mr. Hum, another judge of the election, says that the number not counted, according to his impression and his recollection before the opening of the box and the recount, was "from 2 to 7 or 8—along there some place;" that they did not exceed 4. When he saw the box opened and 11 were found he was apparently staggered at the discovery, and not suspecting then that the box had been tampered with, he infers from this that there must have been more than 4. His recollection and uniform statements before the box was opened was that there were not over 4 votes in all not counted.

On the other hand, Holloway, who was watching and heard and saw all that was said and done at the time, swears to 3 or 4. Two other witnesses, Shied and Crook, one a clerk and the other a judge of the election, put them at from 3 to 4 or 5. Among them were 2 Greenback tickets put in by one voter and not counted.

As a specimen of the fairness and care of the honorable chairman, I want to call the attention of the House to what he says in his report about what Augustine swears as to the number of these ballots. He was one of the clerks and Crook another. He says, page 2 of his report: "Augustine, Republican clerk of the election, states that there were 13 or 14 of these uncounted ballots." This is wholly an error and absolutely untrue. The chairman is an honorable man and would not intentionally misstate the facts. Let us turn to the evidence of the witness on this point. Question 5 asks him if he has the means of knowing whether all the votes cast were counted and returned. He says in answer: "I have not the means of knowing, except by information."

Mr. TURNER, of Georgia. What page do you refer to?

Mr. RANNEY. Page 14, question 5.

It appears that he was one of the clerks and kept the tally-sheet. The votes not counted were not called off or put upon the tally, and he did not see or handle them. All he says about them is that he heard some one say in the room that there were 13 or 14 not counted. Being asked to give the name, he says that it was a Mr. Isaiah Fleckinger, and that it was said in the presence and hearing of the officers of the election. He (Fleckinger) is not called and does not appear as a witness. Who he was does not appear, nor what he had to do there.

Mr. ADAMS, of New York. He was one of the clerks.

Mr. RANNEY. No; he was not. Augustine and Mr. Crook were the clerks; Shields, Carpenter, and Hum were the judges. The record so shows.

Now, all the judges and the other clerk swear that they heard no such remark by any one. Neither did some half dozen others of those present, and so situated as to be likely to hear all that was said and see all that was done, hear anything of the kind said, or know of Fleckinger being present. The bystanders who testify on this point included Halloway, Bushong, and Weaver, who could not have failed to hear it if said. The chairman, who has so great a repugnance to hearsay evidence as to how a voter voted, is ready to take, adopt, and follow this hearsay of Augustine, and give it as true, overwhelmingly contradicted and overthrown as it is by a half-dozen other witnesses. The evidence of Augustine on this point is neither competent nor reliable.

What I have said will be seen to overthrow what is relied upon by the other side to make up the alleged 13 plurality for contestant, as found by the gentlemen of the committee on the other side. It is unnecessary to attempt to swell the majority of contestee by going further.

The SPEAKER. The gentleman's time has expired.

Mr. RANNEY. I should like more time, say five minutes.

Mr. LONG. I move my colleague be allowed five minutes more.

There was no objection, and it was ordered accordingly.

I wanted to say something about three voters from the infirmary, whose votes, as is claimed, should be deducted from contestee's poll. Passing by the question as to the legality of their votes, I need only to say that the evidence as to how they voted is that the superintendent was a Republican. He does not appear to have had anything to do with getting these voters to the polls or in voting them. Both parties run wagons and got the voters from the infirmary, but which party got these three, or what the politics of the voters were, does not appear. There is absolutely no evidence on the subject as to how they voted beyond the mere fact that the superintendent of the institution was a Republican. And yet the contestant claims that their votes should be deducted from the poll of contestee, and for aught I know these are among those which the chairman and Mr. ADAMS deduct. The only evidence as to the residence of Mr. Medley, another of the alleged illegal voters for contestee, is that some one had told him that the hotel where his wife lived was in another county. Whether his vote is deducted I do not know.

Both parties in taking their evidence introduced declarations of the voter, not under oath, in several instances at least, as to how he voted.

The gentleman from Iowa [Mr. COOK] contends, as does the majority report, that the declarations of a voter, not under oath, as to the candidate for whom he voted, are not competent evidence. I had intended to deal with this question at some length, but I have now little time left me. It is a question of no special importance in this case, for only 7 votes depend upon that kind of evidence. The chairman claims that there are 10. Lawyers familiar with the common-law rule against hearsay testimony would be likely at first blush to be against the admissibility of such evidence. But an examination of the authorities and precedents shows that such evidence is admissible in election cases. The rule in England has been such for hundreds of years, and obtains in full force to-day, as has been shown conclusively by the distinguished gentleman from Ohio [Mr. HURD]. The current of authorities in America is the same way, although there is some conflict in them. It has become by the most approved authorities the established rule in legislative bodies. In Cessna vs. Myers the report of the committee deals with the subject and makes some criticisms and valuable suggestions, but ends with only a qualification of the English rule.

The committee could not agree, but they did adopt this rule, namely:

That evidence of hearsay declarations of the voter can only be acted upon when the fact that he voted has been shown by evidence *aliunde*, and when the declarations have been clearly proved and are themselves clear and satisfactory.

They proceeded then to follow the rule as thus qualified, and decided the case thereon.

The case of Vallandigham *vs.* Campbell involved the same question, and the rule received a most elaborate treatment at the hands of Mr. LAMAR (now Senator from Mississippi), the same being sustained. The doctrine of this case was examined and approved by the courts of New York in the case of People *vs.* Pease (27 N. Y.), and also in Wisconsin, in case of State *vs.* Olin (23 Wis.) This House followed the same rule in Wigginton *vs.* Pacheco. It remains to be seen whether the other side of the House, which in former days seated Vallandigham and Wigginton under an adoption of this rule, will now reverse the same for the purpose of unseating Mr. McKinley.

A statement found in the majority report in Cook *vs.* Cutts is of no weight. It expresses only the views of the author of that report upon a question which was of no importance in the case, as the same turned on another issue. It is not noticed in the minority report, probably because of no consequence. At best the author of the majority report based his views entirely upon a misconception of the doctrine of Cessna *vs.* Myers, and his mind does not seem to have taken a wider range.

What was said in Lowe *vs.* Wheeler does not militate against the rule. Parties may call a voter, but compelling him to testify if he declines is quite another question. That depends upon the laws of different States. The gentleman from Iowa [Mr. COOK] misunderstands or misstates what is said in the minority report in Cook *vs.* Cutts. Any gentleman who will read that report will find good reasons stated why the witnesses were not believed in that case.

The gentleman from New York [Mr. ADAMS] has alluded to a report drawn by the gentleman from Pennsylvania [Mr. MILLER], but not adopted or made to the House. Before he did that he would have done well to read the report prepared and made at the same time by the gentleman from Indiana [Mr. LOWRY], in which the following occurs, as I see by the report which I hold in my hand. I read from it:

This evidence was much more than mere matter of opinion; it was such as to leave no doubt in our minds; but if matter of opinion, in the language of the committee in the case of Smith *vs.* Shelley (Digest 1880-'82, page 19), "the same comes from men apparently well able to judge, and is not controverted by other evidence." Reference is also made to the following authorities: Wigginton *vs.* Pacheco (Digest 1876-'80, page 15), Cook *vs.* Cutts (Digest 1880-'82, page 249, citing New Jersey cases, in which it was held that "general reputation as to the political character of the voter, and as to the party to which he belonged at the time of the election, has been considered sufficiently demonstrative of the complexion of his vote"), Delano *vs.* Morgan (1868, page 168):

"For whom a vote is given by ballot is a secret known only to the voter himself, and he is never required to disclose it. This fact must, therefore, be often determined upon circumstantial evidence alone. To which political party a voter belonged, whose partisan he had been, whose friends claimed for him the right to vote at the time, what he said of his intention before and his act after voting, are circumstances which each claimant has endeavored to prove, and which the committee have considered in making up their verdict. In this action they are governed by precedent as well as principle. The same rule obtained in the celebrated case of New Jersey, decided in 1840, and known as 'the broad seal' case; and also in Vallandigham *vs.* Campbell, decided in 1858. (See Bartlett's Contested Elections, pages 28 and 233.) If it is not to be inferred from this kind of evidence for whom an illegal vote was cast, it can not, except in a few instances, be ascertained at all. (Smalls *vs.* Tillman, Digest 1880-'82, pages 435, 462; Sloan *vs.* Rawls, Digest 1874, page 150; Lowe *vs.* Wheeler, Digest 1880-'82, page 75.) Where a witness can not be compelled to answer he need not be called." (6 Peters, 352, 367.)

Authorities could be multiplied to sustain the position taken.

There can be no doubt that the rule alluded to is the established rule in legislative bodies, either as one of the exceptions to the general common-law rule, and of which there are many, or as a rule adopted from necessity, to answer the ends of justice. The weight to be given such evidence is another question, and that will depend upon the witnesses and the circumstances under which the declaration or admission is made. This question has received elaborate treatment at the hands of eminent counsel in this case. Although the question is not vital to the pending case, it is of importance as a rule of evidence. Gentlemen after having used the rule to sustain their action in two notable cases are now endeavoring to break it down when it stands in the way of their party interests. There are said to be thirty-three men on that side who voted to unseat Pacheco in Wiggington's case, four of them signing the majority report, and two who voted to seat Vallandigham. The brief of Mr. Ambler and others from Ohio states one of the principles on which the admission of such evidence depends, and I insert an extract from the same:

Upon principle, notwithstanding some expressions of text-writers and judges criticising the admission of that class of testimony, it would seem from necessity receivable as affording substantially the only means of investigating the legality of votes in contested-election cases. As the voter can not be compelled to testify, there is generally no other means of determining the manner of his vote than by proof of his political affiliations and declarations. Should he be willing to testify, the party assailing his vote as illegal should not be required to call him or rely upon his testimony. The party attacking the voter should not be compelled to go to the party whom he has thus made his adversary, and the alleged source of an illegal or corrupt vote, to ascertain the truth in regard to the same.

The brief of Messrs. Shellabarger & Wilson and of Messrs. Hunton & Chandler I will insert in full so far as it pertains to the question in hand, because it covers and exhausts the whole subject and can not be improved upon. It is convincing and conclusive.

It is not contended by contestant's counsel that the declarations of voters are incompetent evidence to show for whom the voter voted. The extent of the objection of contestant to such evidence is that such declarations are not admissible until the voter himself has been called as a witness and has declined to disclose how he voted. The contestant's counsel cited in the argument before the committee numerous cases which held that such declarations are admissible in evidence in a contested-election case, where the party whose vote is questioned has first been subpœnaed and asked how he voted and has declined to answer. The single inquiry, then, in this case is, does the law require a witness to be summoned when the same law which so requires declares that he need not answer when called? All the provisions of the law relating to the subject must be construed together. It would give a look of absurdity to the law if it required a witness to be called, when the same law took away the legal effect of his being called by saying he need not answer.

The very essence of the matter, which the witnesses in this particular case would have been required to disclose had they been summoned, was their own illegal conduct at the polls. It is shown by other evidence that they voted, and that they were not entitled to vote; the only remaining inquiry was for whom they voted. To show this fact other evidence in law fails. This fact is in law deposited in the sole keeping of the voter. The law affirmatively authorizes this secret to be kept by him. It is true he may voluntarily give it up; but a subpœna will not have the legal effect to make him give it up, so that the summons even is barren of consequence. When the law says that a witness need not answer certain matters, does it not in effect and by implication also say that he need not be subpœnaed to answer? When the law shelters a witness from answering certain inquiries it shelters him from the usual methods used to compel him to answer. Are not the declarations of a witness showing for whom he voted just as valuable in law, in a case where no subpœna has been issued for the witness himself, as the same declarations would be if the witness had been required to step on and then off the witness-stand and while there refuse to answer? If you first call the witness, say contestant's counsel, and he refuses to answer, then his declarations are competent. The declarations are of the same character, made at the same time and place, whether the witness who made them be called or not. The calling of the voter does not add to or take from the legal strength of his declarations as to how he voted.

But it is said that the party must produce the best evidence the nature of the case permits. This rule invokes the best evidence the party can legally command. But he can not legally command the testimony of the voter himself, for the law furnishes him no process to exact it, but, on the contrary, says the voter need not testify. The best evidence that the nature of the case permits are the circumstances, among them the declarations of the voter showing how he voted. When this testimony is produced it is the best which the nature of the case permits. The identical ballot cast by the voter is the best evidence to show how he voted. His statements on the stand, if called as a witness, and he chooses to answer, do not import as high legal certainty as the ballot itself. But the law says that no record shall be kept to trace the ballot itself, and therefore the ballot is not available. Contestant says that the next best evidence is the voter. But the law goes further, and not only secludes the ballot from inspection, but says the voter himself need not answer how he voted if called. The first and primary evidence which the law appropriates and which the law will lend its processes to coerce is the circumstances surrounding the ballot questioned, including the declarations of the voter as to how he voted. There are no degrees of competency in this evidence. It is all admissible alike. If there be primary evidence of how the party whose vote is questioned voted, it is the ballot itself. If the ballot is not or can not in law be produced, then other evidence becomes substituted for the ballot. In this substitutionary evidence there are no degrees. (Best's Principles of Evidence, p. 79, note l; Renner *vs.* Bank, 9 Wheaton, 597.)

The ballot is by law required to be in writing or to be printed, and is therefore the best evidence to show for whom the person casting it voted. If the person who cast the vote is called and answers, he gives parol evidence of the contents of the ballot. If his declarations as to how he voted are received, they are no more or less than parol evidence of the contents of his ballot, and there being no degrees in such evidence, the one kind is as admissible as the other. It becomes a matter of weight and not of competency of evidence. The act of subpœnaing the voter would have been of no force, and was therefore not required to be done. This is certainly decided in the case of the United States *vs.* Reyburn (6 Peters, 367). There no foundation whatever was laid for secondary evidence. No notice was given to produce nor subpœna issued for the paper itself, the contents of which was proved, and the court say (speaking of the witness himself) a subpœna to compel his attendance as a witness would have availed nothing, and the law does not require the performance of an act perfectly nugatory. But suppose Chase had been within the reach of a subpœna and had actually attended the court, he could not have been compelled to produce the commission and thereby furnish evidence against himself.

But these declarations in this case are primary evidence. The use made of the declarations of votes is to affect only the ballot of the person whose declarations are received. These declarations disclose the contents of a written or printed ballot. Where one is a party to a contest his admissions or declarations may be proved by the other party to show the contents of a written instrument. (Best's Principles of Evidence, p. 79, note l.)

The confession of the party precisely identified is admissible as primary evidence of the facts recited in the writings, though it is less satisfactory than the writing itself. (1 Greenl. Ev., sec. 96.)

And this evidence is admissible as primary evidence without any notice to produce the writing itself. (1 Greenl. Ev. sec. 96.)

It has been always held that in an election contest the primary right involved is the right of the legal voters to be represented. The candidate has no right to the office for which he is named which does not spring out of the right of the voters to be represented. The first and primary inquiry, then, in such a case, concerns the right of each person to vote who actually did vote. In this case the fact that the parties voted, the contents of whose ballots is sought to be ascertained, is shown by the poll-book. The declarations of the voter are introduced to take his vote off the poll, if from other evidence it is found to be illegal. His declarations affect his own interest in the election adverse to him. The poll becomes diminished one vote by the declarations of the voter, taken with the other testimony in the case. Such evidence has been received and acted upon in contested-election cases in legislative bodies for two hundred years. The following cases support the competency of such testimony:

"The declarations of a voter may be given in evidence to set aside the election; as to diminish the poll, by taking an incompetent vote off, or to prove bribery, &c.; but they are not admissible on a charge against the candidate for bribery. They are admitted to annul votes but not to set aside the election by disqualifying the member on account of his bribery." (Case of Milburne Port, 1 Douglass Election Cases, 67; Case of Ivelchester, 3 Douglass Election Cases, 76; Petersfield case, 3 Douglass Election Cases, 6; Worcester case, 3 Douglass, 129; Shaftsbury case 159.)

In this last case money to the amount of several thousand pounds had been given among the voters in sums of twenty guineas a man. The persons who were intrusted with the disbursement of this money, and who were chiefly the magistrates of the town, fell upon a very singular and very absurd contrivance in hopes of being able to thereby hide through what channel it was conveyed to the electors. A person concealed under a ludicrous and fantastical disguise

and called by the name of Punch was placed in a small apartment, and through a hole in the door delivered out to the voters parcels containing the twenty guineas, upon which they were conducted to another apartment in the same house, where they found a person called Punch's secretary, and signed notes for the value, but which were made payable to an imaginary character to whom they had given the name of Glenbucket. Two of the witnesses called by the counsel for the petitioner swore that they had seen Punch through the hole in the door and they knew him to be one Matthews, an alderman of Shaftsbury, and, as the counsel for the petitioner had endeavored to prove, an agent of the sitting member. On the part of the petitioner's witnesses were called to prove declarations of the voters who at the poll had taken the bribery oath that they had received Punch's money. This was objected to by the counsel on the other side, but the evidence was admitted. (3 McCord, South Carolina Reps., page 223.)

In the case of the State *ex rel.* Hopkins *vs.* Olin (23 Wisconsin, 319) the court in passing upon the admissibility of the declarations of voters, say "the testimony of the witness Du Quin was properly received." He testified that ten witnesses who had been severally sworn, and each of whom declined to answer whether he had voted at the election in question and how he voted, on the ground that the answer might criminate himself; each of them had told him before the trial that he had voted at the election for the removal of the county seat, and that he was a foreigner and had not declared his intention to become a citizen. The objection to this evidence is that it was hearsay. To a certain extent this may be so, but the well-settled and uniform practice is to allow it in contests of this nature.

The People against Pease (27 New York, 45) and authorities there cited. The reason of the rule, or rather of the exception, is that a person who has voted at an election is always considered as a party when the result of the election is in controversy, and on that ground his declarations voluntarily made are admissible. It is considered to be a question between the voter and the party questioning his vote and not merely between the party holding the office and him who claims it.

In perfect accord with the Wisconsin decision is that of the supreme court of California, reported in volume 43, page 237, the case of Miner *vs.* Kidder, in which the court declared that the investigation proposed is one in which the public at large are deeply concerned. It necessarily involves a question of broader import than the mere individual claim of a designated person to enjoy the honors and emoluments of a particular office brought directly in contest. The inquiry must be as to whether or not the popular will in the selection of officers to administer the public affairs has been in a given instance, or is about to be, defeated or thwarted by mistakes happened or frauds concocted. It is therefore not an ordinary adversary proceeding, for, as against this high public interest concerned, there can be no recognized adversary.'

In the Worcester case (3 Douglass Election Cases, 276) it is said the counsel for the sitting members objected in the beginning of the case to the admission of evidence to prove the declarations of voters that they had been bribed. The committee, however, admitted such evidence as against the voters themselves so as to annul their votes, but not as against the sitting members so as to disqualify them.

In Shaftsbury's case (2 Douglass Election Cases, page 308) it appears that on the part of the petitioner witnesses were called to prove declarations of voters who at the poll had taken the bribery oath that they had received Punch's money. This was objected to by the counsel on the other side. They said that this was not legal evidence, for that, if such declarations were proved, still they could not be considered as proving the receipt of money. This would be unjust to suffer what a man had said in conversation and without oath to invalidate what he had sworn. To this it was answered that those cases cited proved too much, for that if the doctrine they contained were to be adopted it would be in the elector's power by committing perjury to preclude all inquiry into the legality of his vote. The evidence was admitted.

Both of the cases above quoted were decided more than one hundred years ago and have established a rule which has been observed by the British Parliament in contested-election cases ever since.

The rule of evidence permitting the declarations of voters to be received to show how they voted has not only prevailed in England for more than one hundred years, but was adopted in Maryland in 1816, and has been followed by the Legislature of that State ever since, and by New Jersey in the year 1840, and is declared by the supreme court of New York in the twenty-seventh volume of the reports of that State, page 51, to be, so far as that court is able to discover, of universal application in all legislative bodies, upon inquiries as to the election of members thereof to affect the qualifications of voters, and to deduct or disallow all votes cast for any candidate by non-qualified voters.

The Vallandigham case, which was fully argued before the House, ought to be held to settle this proposition.

We quote from the report:

"Objection was also taken to the admission in evidence of declarations or admissions by voters, here disputed as illegal, touching their qualifications and the candidate for whom they voted. Some of the declarations objected to, the undersigned are of opinion, were such as are daily received in courts of common law, relating to residence or being part of the *res gestæ;* others they believe to be competent, upon a reasonable application to the usual rules and principles of evidence by analogy and according to their spirit. Neither the committee nor the House is bound by these rules in their letters and strictness, but should proceed upon more liberal principles in the investigation of truth. They regard a contested election not as a mere private litigation, but a great public inquiry, where the real parties are not so much the returned member and the contestant as the voters of the district, and they are content to rest their opinion on this question upon the reasoning and upon the usages and solemn decisions of Parliament and Congress for years past, inasmuch as the distinction claimed to exist between an ordinary forensic court and a legislative assembly is recognized not only in Parliament and Congress, but by the courts themselves, and from a very early period. The admissibility of evidence consisting of the declarations of voters as to any matters concerning their own voting has been settled in the British Parliament repeatedly and uniformly for one hundred and fifty years, and is no longer to be questioned. These decisions are to be found in the numerous volumes of reported election cases and of treatises on the subject. The rule has been recognized also in approved books of law (3 McCord's Reports, 233, note; Phillips's Evidence, with law, and Hill's Notes, 322). It is sometimes treated as an exception to the rule, excluding the hearsay declarations of third persons, but generally it is put upon the ground that in elections contested because of illegal votes being received each voter challenged is a party to the proceeding, and, therefore, whatever he says about his own voting is an admission or confession. In Congress also, while the undersigned find several precedents distinctly adopting or recognizing the rule, they find none where it has been decided the other way, except in Newland *vs.* Graham, 1835–'36. Against this they refer to the following: Contested Elections, 80, 258, 260, 272, 282, 367, 750; the Broad-seal case, 1840, 3 House Reports, No. 541, pages 699 and 749; Farley *vs.* Runk, 1845–'46, and Monroe *vs.* Jackson, 1847–'48.

"The American cases have, indeed, been mainly directed to the question of receiving the declarations of voters. As to the latter, and besides several prior cases, the point was expressly and deliberately decided in the great New Jersey case, in 1840, usually known as the "Broad-seal case," and the evidence was unanimously received, and a large number of votes determined upon it. This precedent has been generally approved ever since, and the undersigned attach more importance to it than usual, because it was unanimous in a highly partisan case, and because of the great ability and distinction of the gentlemen who composed the committee. The same rule of evidence as to declarations of voters, both as to qualification and vote, was deliberately adopted by the Legislature of Maryland in 1816, as also in the Legislatures of other States and courts having a special jurisdiction to try contested elections. As to a number of voters whose declarations are given in evidence, it appears upon the papers and testimony that their attendance as witnesses could not be procured; but it is not necessary in such cases to first call the voter and see if he will claim his privilege of refusing to answer. It was not done in any of the cases decided in the British Parliament. It is not necessary in settlement of cases when the declarations of the parishioner may be given in evidence (1 Greenleaf on Evidence, sec. 175); and the Supreme Court of the United States has expressly decided that where a witness can not be compelled to answer he need not be called." (6 Peters's Reports, 352, 367.)

In the case of the People *vs.* Pease (27 N. Y. at page 51), the doctrine of Vallandigham and Campbell is fully approved, and it is there decided that the voter is a party, and that his declarations are admissible even to prove that he was disqualified. We quote from that case as follows:

"So far as I have been able to discover, the rule is universal in all legislative bodies, upon inquiries as to the election of members thereof, to scrutinize the qualifications of the voters and to deduct or disallow all votes cast for any candidate by non-qualified voters. This rule seems to be well established in such cases, and it is not perceived that any substantial reason can be suggested why a different rule should obtain in a civil suit or proceeding to determine the right of an individual to a particular office. This rule was distinctly recognized and affirmed by the House of Representatives in the election case of Vallandigham and Campbell. (Cong. Globe, vol. 41, p. 2317, and following.) In the extended debate had upon that case all the members conceded that the votes of illegal or non-qualified electors must be deducted or disallowed; and the main point of difference in the discussion was as to the manner of establishing such disqualification. It was contended by some members that it could only be shown by the oath of the voter himself, while others maintained that hearsay evidence of such disqualification was admissible. Numerous precedents are cited at page 2320, fully sanctioning the doctrine that hearsay evidence can be received. At page 2319 a case was cited where, before the election committee of the house of commons, in England, Mr. Maule objected that the declarations of one John Nowlan were not evidence against the sitting member. Mr. Thesiger, since lord chancellor, now Lord Chelmsford, in reply said: 'In the Southampton case it was held evidence may be given of the declaration of a person even after voting, though it may tend to affect him with penal consequences. In the Ripon case the voter had stated to two persons in the months of June and July, 1832, that he had no vote, and that his aunt was tenant of the house; the election took place in the beginning of 1833, and the declarations were held admissible. A voter who has voted for the sitting member is always considered as a party, and it is on that ground that his declarations are admissible. The question is always considered to be between the voter and the party questioning his vote, and not merely between the sitting member and the petitioner.' The committee resolved that the evidence should be received."

It can not be denied that the legislative rule of evidence in cases of this character favors the admission of the declaration of the voter to show how he voted. It will be constantly kept in mind that in this particular case no effort on the part of the contestee is made to commend this evidence to the House for any other purpose than to show how the respective voters, whose declarations are given, voted. It is not introduced to reflect upon the candidate, or to prove that the voter himself was an illegal voter, or that he voted. The fact that he was an illegal voter is established by other evidence; the fact that he voted is also established by other evidence; and the declarations which are here insisted upon as competent disclose how the voter voted, and for this purpose we say they are competent.

As was said in the first part of this last brief, the competency of this evidence is admitted. The only question that divides counsel in this case is not whether this evidence is competent or not, but whether the witness must not first be called whose declarations are given in evidence and asked how he voted.

The Supreme Court has held that where a witness can not be made to answer when called, he need not be called.

There can be no controversy about the fact that the Supreme Court has so decided; for it is said in the case of Vallandigham *vs.* Campbell "that it is not necessary in such case to first call the voter and see if he will claim his privilege of refusing to answer. It was not done in any of the cases decided in the British Parliament. It is not necessary in settlement of cases, when the declarations of the parishioner may be given in evidence. And the Supreme Court has expressly decided that where a witness can not be compelled to answer he need not be called." (6 Pet., 352.)

In the case of Wigginton *vs.* Pacheco (Election Cases, 1876, p. 10), it is said, the Supreme Court of the United States has expressly decided that where a witness can not be compelled to answer he need not be called.

The House of Representatives, in two cases of extensive debate, have interpreted the decision of the Supreme Court in 6 Peters to mean precisely what we claim it means, so that there is no room for any misunderstanding about that rule of evidence. It is determined, not only by the highest judicial authority of the Federal Government, that where a witness can not be compelled to answer when called that he need not be called, but that rule of evidence has been accepted and adopted by this House on several distinct occasions, two of which are cited in this brief.

Now, the committee will observe that the counsel for the contestant in this identical case admits that the declarations of voters as to how they voted are competent, provided the witnesses themselves be first called and refuse to answer. If, then, the Supreme Court of the United States is right, and this House is right in its former decisions upon that subject, that it is not necessary to call a witness whom you can not compel to answer after being called, then the competency of these declarations stand admitted, and there is no further contest between us.

In the Pacheco case, already cited, a vote was taken off the poll by the House of Representatives on the declaration of the voter himself. We submit that the declaration of the voter as to how he voted is the highest evidence which the law makes available to the person questioning his vote, for the following reason: The ballot itself is not accessible; by the processes of law it can not be brought before the committee; there is no method of identifying the ballot of any particular person, so that that ballot when produced will, upon its face, tell for whom it was cast. The law furnishes no means of producing the ballot. The law furnishes no means of producing the voter against his own will. So that the first evidence that is open to the coercive processes of the law in this case is the declaration of the voter himself.

That is the first legal evidence available to the person seeking to learn for whom the voter voted. It does not stand upon the same ground with the proof of the illegality of the vote, nor upon the same ground with the fact that the voter actually did vote, for both these facts may be proved, and in this case have been proved, by other evidence than the declarations of the person who cast the vote. But the fact of how the person casting the ballot voted can not be established by any other means than the voluntary statement of the voter himself. If he were called upon the stand he would be testifying to what the ballot contained, the contents of a written or printed instrument. If his declarations are received they establish the contents of the ballot—nothing more nor less. If it can be argued that this is secondary evidence, then the calling of the voter on the stand is the first degree of secondary evidence; his declarations as to

how he voted are the second degree of secondary evidence. But, as has been shown in this brief, there are no degrees of secondary evidence, and when you get to secondary evidence, if this be held to be such, any degree is competent, and whether you resort to one degree or the other is a matter of indifference so far as the competency of the evidence is concerned, the only difference being in the weight of the evidence. There is no legal escape from these declarations. The committee may arbitrarily say they do not believe them; that in their opinion they are not sufficient in law to establish the fact; but that is the only way to relieve themselves from the effect of the declarations. They are, beyond all doubt, competent.

The case cited by the contestant, from 55 New York, does not hold that the voter may be compelled to testify, though such is intimated in the syllabus of the case. There is nothing of the kind in the decision itself. The only thing there decided was that the voter might be called as a witness. It does not hold that he may be compelled to answer when called, and, indeed, it is not necessary to argue, in the face of the constitutional provisions against compelling a witness to criminate himself, that a witness may be compelled to criminate himself.

It is a waste of time to consider such proposition, and of course it was not so decided.

It is said in the case of Cook *vs.* Cutts (dated February 19, 1883): "As to some of these voters there is no proof whatever that they voted, except hearsay. As to others, there is no proof for whom they voted, except the voters' admissions, which, according to McCrary and the recent case of Cessna *vs.* Myers, is insufficient."

If the committee will consult the case of Cessna *vs.* Myers, it will be found that it bears no such interpretation as is here given to it.

The case of Cook *vs.* Cutts proceeds, however, with the following language:

"In nearly all of them the proof relied on by the contestee consists of some statements of the voter, made in casual conversation to a witness under circumstances making them neither competent nor reliable. But even if the evidence be acceptable as competent and sufficient to prove the facts claimed, in no case would the facts thus established be sufficient to show the vote illegal."

And the committee in that case further say:

"In short, under any rule that may be adopted, applied fairly to both sides, this class of votes will be equal."

So that it appears in the Cook case that the question was of no consequence in determining the result of the contest. If the declarations of voters were receivable, they affected each candidate alike, and made no appreciable difference in the result, and the committee itself claim no higher character for the report in that case than the case of Cessna *vs.* Myers. The authority upon which it rests does not support the result here contended for. In that case the declarations were insisted upon to show other facts than how the voter votes.

In the Pacheco case and the Vallandigham case the question of the competency of the declarations of voters as to how they voted was sharply presented, and the House determined in favor of the competency of such evidence.

It will not be forgotten that it was quite as easy for contestant to call the voters as witnesses, whose declarations against their own ballots have been proved, as it was for contestee to call them. It was held in the Wigginton *vs.* Pacheco case, already cited, that when the party complaining of similar declarations failed to call the voter as a witness whose declarations were in evidence, there arose a presumption that if called such vote would corroborate the declarations. If contestant's theory is correct that these voters were innocent of illegal voting, then the witnesses if called by him would have been glad to answer in his favor. But their illegality is already proved by other evidence than their declarations, and therefore the record shows that they are in a predicament where they need not and probably would not answer if called. The same principle of changing the burdens of proof upon the voter was declared in an English case, as follows:

"In Boston election, M. R. Malcom *vs.* Ingaam, 43; L. J. C. P., 331; 9 L. R. C. P., 601, 31; L. T. N. S., 331 (English case), it is said P. having been accepted by the liberal party in a borough as a candidate at the next election, he afterward distributed among the inhabitants coals. Many of the inhabitants who accepted the coals were voters in the borough and were not objects of charity. The coals were given corruptly. Parliament being soon after dissolved, P. was declared to be returned as member by a majority of votes over M., another candidate. A petition being presented against the return of P., claiming the seat for M., P. was adjudged to be unseated on the ground of bribery. A scrutiny having been held, M. claimed to strike off the poll for P. one vote for every elector who had accepted the coals and had voted at the election, without ascertaining for whom he had in fact voted. The voters were not called to deny that they had received the coals corruptly. Held, that the bribery contemplated in the ballot act was a corrupt bargain made with an elector by or on behalf of the candidate, and under that enactment it was necessary to prove a guilty intent in the vote. Held, also, that a *prima facie* case of corruption had been made out against the voters, which they were bound to displace, and as they were not called to rebut the inference of corruption, one vote for every elector who received the coals and voted at the election must be struck off the poll of P."

McCrary does not declare against the position here taken, although it is admitted that the tendency of his argument is against it. The question which he discusses is whether such declarations are admissible to show that the person voting was not qualified, whether he was an illegal voter. He admits that the English authorities favor admitting such declarations, and says, "perhaps the weight of authorities in this country is the same way." (Section 270, first edition of McCrary.) "Though it can not be denied," he says, "that the tendency in the more recent and, we think, also the better-considered cases is to exclude the evidence as hearsay." He expresses his individual opinion against what he admits to be the weight of authority. In support of his last statement, that "we think the better-considered cases is to exclude this evidence as hearsay," he cites the cases of the State *vs.* Olin (23 Wisconsin, 319), and the Vallandigham case. These cases support the competency of such declarations instead of denying it.

The case of Lowe *vs.* Wheeler (Election Cases Forty-seventh Congress) is cited by the contestant. In that case it was distinctly held that the voters were competent to declare how they voted, if called. The report, says contestee's evidence, does not show for whom many, if any, of the persons claimed to be nonregistered, voted. He has not called the persons themselves, but attempted with little success to prove it by other parties. Contestee, for aught that appears, could have taken the evidence of the witnesses themselves to establish their identity as the persons whose names appeared on the poll-list and to prove for whom they voted. "Of course I do not hold, as a matter of law, that such is the only mode of proof allowable, while generally it is quite satisfactory, as the voter usually best knows and his evidence is direct."

It will be seen that the brief of contestant does not quote correctly what he in that case held, which was that the voter himself was a competent witness, if he choose to answer? This nobody is found to deny. But suppose he does not choose to answer? May his declarations not be received? The case cited does not say that his declarations may not be received. It says, on the contrary, "of course I do not hold, as a matter of law, that such is the only mode by the voter himself of proof allowable." It is not held in that case that the declaration of the voter as to how he voted is incompetent.

The case cited from Illinois by contestant holds that it is the legislative rule to receive such declarations, although that court does not choose to follow the rule for itself. If the cases bear the interpretation which we claim, there is no break in the current of legislative authority in favor of receiving such evidence; and, to repeat, the contestant himself admits that it is competent. A large majority of the decision which he quotes holds that such declarations are competent to show how the voter voted. Mr. McCrary, who is relied upon in the section above quoted, says:

"The English authorities, though not entirely uniform, are generally in favor of admitting such declarations, and perhaps the weight of authority in this country are the same way, though it can not be denied that the tendency in the more recent and, we think, also the better-considered cases is to exclude the evidence as hearsay."

Mr. McCrary admits that the weight of American authority is in favor of receiving these declarations. All that he does claim is that in his opinion there is a tendency, in what he chooses to call better-considered cases, to reject it. So that when the comments of Mr. McCrary are sifted to their ultimate conclusion they concede that the weight of American authority is in favor of the competency of this testimony, and there is only a tendency in some cases not to accept that doctrine. We say that the declarations rest upon the most unchanging foundation of legal certainty; that there can be discovered no legal principle upon which these declarations may be rejected. If the voter himself need not be called, then the declarations of the voter become the next highest evidence of the fact that is under inquiry, and all that the rules of law require is that the best evidence which the nature of the case permits shall be introduced.

Can there be found any better evidence of how the voter voted, if the ballot itself is not accessible, if the witness himself can not be compelled to answer? If a person were being tried in court under the charge of illegal voting, and it had been shown that he had voted, as has been shown in this case, and that he was an illegal voter, as has been shown in this case, would any lawyer have the effrontery to claim that his declaration as to how he voted could be received against himself? If he were to suffer a criminal liability for doing precisely the same act which is here complained of, and he were before a court of criminal jurisdiction to answer for that act, his declarations would be perfectly competent against him. Does he occupy any different place in a contested-election proceeding pending before a court? His ballot is a constituent fact in either case, no matter in what court the proceeding is in progress.

While it is true that the voter himself is neither contestant nor contestee, the rights of contestant and contestee in this case are purely derivative. They are derived from valid votes. The contestant has no individual, or personal, or property rights in the office. His right, if any he has, is purely representative in its nature. The primary right involved in the case is that of the voter. He is, in the essence of the inquiry, a party. The law does not reach the settlement of the rights of the candidates until it has first settled the primary rights of the voters. Each voter asserts his right in casting his ballot. Whether that ballot be valid or not, affects the voter before it can affect the candidate, and as the law presumes, under all methods of its administration, in all kinds of tribunals, that a man will not make an untruthful statement against his own interest, it receives his statement to affect his own interest in all inquiries when that interest becomes at stake. It is a mere sentiment to exalt the candidate above the voter. The law dignifies the voter above the candidate. When the declaration of the voter is received to expose the character of his own vote, and is allowed to have no legal effect beyond that, there can be discovered no legal principle which rejects such evidence, and any attempt to exclude such evidence will operate as a denial in many cases of the only evidence available to prove an essential fact in an election contest. We say, therefore, that when it stands admitted by McCrary that perhaps the weight of authority in this country is, as it is in England, in favor of holding the declarations of voters competent to show how they voted and even to show their qualifications to vote, and when it appears that this is the universal rule, as the New York and Wisconsin supreme courts say, of all legislative bodies, it is difficult to see how the public good, which is the chief legal element in this controversy, will be promoted by relaying the foundations of this subject and opening anew the agitation of the question.

I trust the House will not be led away and induced to believe that the result of the case depends upon the competency of that class of evidence, which has been discussed at length. It is not so. The proof otherwise is plenary as to how all the illegal voters voted, except only 7 or 8 out of the list of 52 found. The conclusion that McKinley was duly elected and is entitled to retain his seat is irresistible, and can not be avoided by men who have examined the case and are disposed to act as judges instead of as partisans. Gentlemen on the other hand who care nothing for principles of law or for evidence when the same stand in the way of their party or personal desires can, and probably will, vote to unseat him. I hope, however, that there are few, if any, of this latter class.

The Tariff.

SPEECH

OF

HON. WILLIAM D. HILL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884.

The House being in Committee of the Whole House on the state of the Union and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. HILL said:

Mr. CHAIRMAN: Before this debate closes I desire to state in as few words as possible my reasons for voting against striking out the enacting clause of this bill. On a former occasion I voted for the motion of my colleague [Mr. CONVERSE] to restore the duty on wool. I did it because I believed that the Forty-seventh Congress had committed a great wrong on the wool-growers of my State by reducing the duty on wool from 50 to 32 per cent. and at the same time increasing the duty on the manufactured article. From the day that I took my seat in this Hall in December I have labored and worked for the passage of the bill restoring the duty on wool.

But, sir, this House refused to pass that bill, and now, having failed

to aid the wool-growers of my district upon the only protected article which they have to sell, I consider it my plain duty to relieve them all I can on more than 2,000 other articles which their necessities compel them to buy. The Morrison bill is not exactly what I would like; but it has one great merit, it reduces taxation, and that alone is sufficient to command my vote. This debate has developed the fact that there is a surplus in the national Treasury of $150,000,000 and the estimates of the Secretary of the Treasury make it $100,000,000 more at the end of each fiscal year. The platform of the Democracy of my State declares that the revenues of the Government should be limited to the necessities thereof economically administered.

With the facts before us it is universally conceded that the revenues are not so limited, nor will this bill so limit the revenues of the Government; but it reduces the revenues $30,000,000 a year, which is a step in the right direction. I shall vote for this bill, sir, because I know that the interest of every stave and hoop factory in my district demands that I should so vote. They are manufacturing their wares now at less than cost price, and their employés and employers alike are suffering from low prices and a limited demand. This bill reduces the duty on sugar 50 per cent., not 20 per cent. The sugar-refiner of the United States when he purchases the raw material is required by the laws of this country to pay a duty on it of 50 per cent.

The sugar-refiner of England, when he purchases the raw material, pays no duty at all in his own country, and is thus enabled to undersell the American manufacturer 50 per cent. The result is that the American is confined to his own country for a market and can not manufacture a pound beyond the necessities of his own country, while the Englishman has the whole world for a market, because, having no duty to pay on his raw material, he can undersell his American competitor. I am in favor of free sugar and free salt. I am opposed to making American laboring men pay tax on the salt they eat in their bread, and nearly 40 per cent. on sugar, which is an article of food and universal consumption.

Now, Mr. Chairman, while this bill does not put sugar on the free-list, it does take off one-half the tax and helps the consumer to that extent. I also desire to relieve my constituents of a little of the taxes they pay on their agricultural implements, the mechanic on his tools, the manufacturer on his machinery, and everybody on their clothing and their blankets. I hear a great deal about protecting the laborer on his wages. Will anybody tell me where and how labor is protected? Is there any duty on labor? Are not our ports open to every laborer in Europe and the whole civilized world who desires to come here and go to work? And are they not coming at the rate of 500,000 a year? Is it not a fact that white men have been driven from the railroads on the Pacific coast and the shoe-shops of Massachusetts, and Chinese laborers employed in their places at greatly reduced wages?

The fact is, Mr, Chairman, the price of labor is regulated by the law of supply and demand, like everything else, and the manufacturers and monopolists of this country always employ a laborer as cheap as they can get him. The present tariff laws of this country were passed in 1861 to maintain the most extensive war the world has ever witnessed. The tariff on every article, all the necessities of life, were raised as high as Congress dared to do it, in some instances so high as to be prohibitory. And yet during these twenty-five years, without any decrease of duty, the wages of laboring men have been reduced time and again to starvation prices. If high duties make high wages, why is it this country has been so frequently afflicted with labor strikes? Why is it that laboring men are nearly all poor? It is because these high duties on sugar, salt, hats, shoes, blankets, clothing, and everything which the laboring man buys to support himself and family rob him every pay-day of the wages which he has earned. Now, sir, if a Republican Congress has reduced the price of wool which grows in my district, I want the Democratic Congress to reduce the price of every article which those wool-growers and all others in my district are compelled to buy.

That is not all, Mr. Chairman. It is a notorious fact, known to me and to many other members of this House, that the gentleman from Illinois [Mr. MORRISON] has privately and publicly stated that if we would not strike out the enacting clause of this bill he would exempt wool from the operations of the bill, and thus give the wool-growers of the whole country an advantage which the Republican Congress had deprived them of. For these reasons, Mr. Chairman, and a thousand others which I have not time to explain, I shall vote against striking out the enacting clause of this bill. After the general debate shall have closed I want the bill to go out of the Committee of the Whole into the House, where every member can offer an amendment. That is the best mode to perfect legislation here. I desire to offer some amendments to this bill myself. Many other members have expressed the same desire, and I do not want to be deprived of that privilege. I make this statement now because it is whispered here that a motion is to be made to strike out the enacting clause of this bill. If the Democratic party has any mission at all, it should be to relieve the people of war taxation, which every public man in this country concedes is not now needed to support the Government. And if no attempt is to be made in that direction, it seems to me it makes but little difference which political party is in power in this country.

The Tariff.

SPEECH

OF

HON. J. HART BREWER.

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884,

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. BREWER, of New Jersey, said:

Mr. CHAIRMAN: I said all that I wish to say on the tariff in my speech in the Forty-seventh Congress, and I could only reiterate the same. But since that time an article have been written upon the tariff which in my judgment surpasses all others for clearness of statement and conclusiveness of argument that have ever been written on that subject. It comes from the pen of the magnetic statesman James G. Blaine, who I hope may be chosen as the standard bearer of the principles he so ably represents.

In his Twenty Years of Congress, volume 1, pages 178–214, he says:

"The slavery question was not the only one which developed into a chronic controversy between certain elements of Northern opinion and certain elements of Southern opinion. A review of the sectional struggle would be incomplete if it did not embrace a narrative of those differences on the tariff which at times led to serious disturbance, and, on one memorable occasion, to an actual threat of resistance to the authority of the Government. The division upon the tariff was never so accurately defined by geographical lines as was the division upon slavery; but the aggressive elements on each side of both questions finally coalesced in the same States, North and South. Massachusetts and South Carolina marched in the vanguard of both controversies; and the States which respectively followed on the tariff issue were, in large part, the same which followed on the slavery question, on both sides of Mason and Dixon's line. Anti-slavery zeal and a tariff for protection went hand in hand in New England, while pro-slavery principles became nearly identical with free trade in the cotton States. If the rule had its exception it was in localities where the strong pressure of special interest was operating, as in the case of the sugar-planter of Louisiana, who was willing to concede generous protection to the cotton-spinner of Lowell if he could thereby secure an equally strong protection, in his own field of enterprise, against the pressing competition of the island of Cuba.

"The general rule, after years of experimental legislation, resolved itself into protection in the one section and free trade in the other. And this was not an unnatural division. Zeal against slavery was necessarily accompanied by an appreciation of the dignity of free labor; and free labor was more generously remunerated under the stimulus of protective laws. The same considerations produced a directly opposite conclusion in the South, where those interested in slave labor could not afford to build up a class of free laborers with high wages and independent opinions. The question was indeed one of the kind not infrequently occurring in the adjustment of public policies where the same cause is continually producing different and apparently contradictory effects when the field of its operation is changed.

"The issues growing out of the subject of the tariff were, however, in many respects entirely distinct from the slavery question. The one involved the highest moral considerations, the other was governed solely by expediency. Whether one man could hold property in another was a question which took deep hold of the consciences of men, and was either right or wrong in itself. But whether the rate of duty upon a foreign import should be increased or lowered was a question to be settled solely by business and financial considerations. Slavery in the United States, as long experience had proved, could be most profitably employed in the cultivation of cotton. The cost of its production, in the judgment of those engaged in it, was increased by the operation of a tariff, whereas its price, being determined by the markets of the world, derived no benefit from protective duties. The clothing of the slave, the harness for the horses and mules, the plows, the rope, the bagging, the iron ties, were all, they contended, increased in price to the planter without any corresponding advance in the market value of the product. In the beginning of the controversy it was expected that the manufacture of cotton would grow up side by side with its production, and that thus the community which produced the fiber would share in the profit of the fabric. During this period the Representatives from the cotton States favored high duties; but as time wore on, and it became evident that slave-labor was not adapted to the factory, and that it was undesirable if not impossible to introduce free white labor with remunerative wages side by side with unpaid slave-labor, the leading minds of the South were turned against the manufacturing interest, and desired to legislate solely in aid of the agricultural interest.

"It was this change in the South that produced the irritating dis-

cussions in Congress—discussions always resulting in sectional bitterness and sometimes threatening the public safety. The tariff question has in fact been more frequently and more elaborately debated than any other issue since the foundation of the Federal Government. The present generation is more familiar with questions relating to slavery, to war, to reconstruction; but as these disappear by permanent adjustment the tariff returns, and is eagerly seized upon by both sides to the controversy. More than any other issue, it represents the enduring and persistent line of division between the two parties which in a generic sense have always existed in the United States—the party of strict construction and the party of liberal construction, the party of State rights and the party of national supremacy, the party of stinted revenue and restricted expenditure, and the party of generous income with its wise application to public improvement; the party, in short, of Jefferson as against the party of Hamilton, the party of Jackson as against that of Clay, the party of Buchanan and Douglas as against that of Lincoln and Seward. Taxes, whether direct or indirect, always interest the mass of mankind, and the differences of the systems by which they shall be levied and collected will always present an absorbing political issue. Public attention may be temporarily engrossed by some exigent subject of controversy, but the tariff alone steadily and persistently recurs for agitation, and for what is termed settlement. Thus far in our history settlement has only been the basis of new agitation, and each successive agitation leads again to new settlement.

"After the experience of nearly a century on the absorbing question of the best mode of levying duties on imports, the divergence of opinion is as wide and as pronounced as when the subject first engaged the attention of the Federal Government. Theories on the side of high duties and theories on the side of low duties are maintained with just as great vigor as in 1789. In no question of a material or financial character has there been so much interest displayed as in this. On a question of sentiment and of sympathy, like that of slavery, feeling is inevitable; but it has been matter of surprise that the adjustment of a scale of duties on importations of foreign merchandise should be accompanied, as it often has been, by displays of excitement often amounting to passion.

"The cause is readily apprehended when it is remembered that the tariff question is always presented as one not merely affecting the general prosperity, but as specifically involving the question of bread to the millions who are intrusted with the suffrage. The industrial classes study the question closely, and in many of the manufacturing establishments of the country the man who is working for day wages will be found as keenly alive to the effect of a change in the protective duty as the stockholder whose dividends are to be affected. Thus capital and labor coalesce in favor of high duties to protect the manufacturer, and, united, they form a political force which has been engaged in an economic battle from the foundation of the Government. Sometimes they have suffered signal defeat, and sometimes they have gained signal victories.

"The landmarks which have been left in a century of discussion and of legislative experiment deserve a brief reference for a better understanding of the subject to-day. Our financial experience has been practically as extended as that of the older nations of Europe. When the Republic was organized political economy as understood in the modern sense was in its elementary stage, and indeed could hardly be called a science. Systems of taxation were everywhere crude and ruthless, and were in large degree fashioned after the Oriental practice of mulcting the man who will pay the most and resist the least. Adam Smith had published his 'Enquiry into the Nature and Causes of the Wealth of Nations' in the year of the Declaration of Independence. Between that time and the formation of the Federal Government his views had exerted no perceptible influence on the financial system of England. British industries were protected by the most stringent enactments of Parliament, and England was the determined enemy not only of free trade but of fair trade. The emancipated Colonies found therefore in the mother country the most resolute foe to their manufacturing and commercial progress. American statesmen exhibited wisdom, moderation, and foresight in overcoming the obstacles to the material prosperity of the new Republic.

"When the administration of Washington was organized in 1789 the Government which he represented did not command a single dollar of revenue. They inherited a mountain of debt from the Revolutionary struggle, they had no credit, and the only representative of value which they controlled was the vast body of public land in the Northwest Territory. But this was unavailable as a resource for present needs, and called for expenditure in the extensive surveys which were a prerequisite to sale and settlement. In addition therefore to every other form of poverty, the new government was burdened in the manner so expressively described as land-poor, which implies the ownership of a large extent of real estate constantly calling for heavy outlay and yielding no revenue. The Federal Government had one crying need, one imperative demand—money!

"An immediate system of taxation was therefore required, and the newly organized Congress lost no time in proceeding to the consideration of ways and means As soon as a quorum of each branch of Congress was found to be present, the House gave its attention to the pressing demand for money. They did not even wait for the inauguration of President Washington, but began nearly a month before that important event to prepare a revenue bill which might at the earliest moment be ready for the executive approval. Duties on imports obviously afforded the readiest resource, and Congress devoted itself with assiduous industry to the consideration of that form of revenue. With the exception of an essential law directing the form of oath to be taken by the Federal officers, the tariff act was the first passed by the new government. It was enacted indeed two months in advance of the law creating a Treasury Department, and providing for a Secretary thereof. The need of money was indeed so urgent that provision was made for raising it by duties on imports before the appointment of a single officer of the Cabinet was authorized. Even a Secretary of State, whose first duty it was to announce the organization of the Government to foreign nations, was not nominated for a full month after the act imposing duties had been passed.

"All the issues involved in the new act were elaborately and intelligently debated. The first Congress contained a large proportion of the men who had just before been engaged in framing the Federal Constitution, and who were therefore fresh from the councils which had carefully considered and accurately measured the force of every provision of that great charter of government. It is therefore a fact of lasting importance that the first tariff law enacted under the Federal Government set forth its object in the most succinct and explicit language. It opened, after the excellent fashion of that day, with a stately preamble, beginning with the emphatic 'whereas,' and declaring that 'it is necessary for the support of Government, for the discharge of the debts of the United States, *and for the encouragement and protection of manufactures*, that duties be laid on imported goods, wares, and merchandise.' Among the men who agreed to that declaration were some of the most eminent in our history. James Madison, then young enough to add junior to his name, was the most conspicuous; and associated with him were Richard Henry Lee, Theodorick Bland, Charles Carroll of Carrollton, Rufus King, George Clymer, Oliver Ellsworth, Elias Boudinot, Fisher Ames, Elbridge Gerry, Roger Sherman, Jonathan Trumbull, Lambert Cadwalader, Thomas Fitzsimmons, the two Muhlenbergs, Thomas Tudor Tucker, Hugh Williamson, Abraham Baldwin, Jeremiah Van Rensselaer, and many other leading men, both from the North and the South.

"It is a circumstance of curious interest that nearly, if not quite, all the arguments used by the supporters and opponents of a protective system were presented at that time and with a directness and ability which have not been surpassed in any subsequent discussion. The 'ad valorem' system of levying duties was maintained against 'specific' rates in almost the same language employed in the discussions of recent years. The 'infant manufactures,' the need of the 'fostering care of the Government' for the promotion of 'home industry,' the advantages derived from 'diversified pursuits,' the competition of 'cheap labor in Europe,' were all rehearsed with a familiarity and ease which implied their previous and constant use in the legislative halls of the different States before the power to levy imposts was remitted to the jurisdiction of Congress. A picture of the industrial condition of the country at that day can be inferred from the tariff bill first passed; and the manufactures that were deemed worthy of encouragement are clearly outlined in the debate. Mr. Clymer, of Pennsylvania, asked for a protective duty on steel, stating that a furnace in Philadelphia 'had produced three hundred tons in two years, and with a little encouragement would supply enough for the consumption of the whole Union.' The Pennsylvania members at the same time strenuously opposed a duty on coal, which they wished to import as cheaply as possible, to aid in the development of their iron ores. The manufacture of glass had been started in Maryland, and the members from that State secured a duty on the foreign article after considerable discussion, and with the significant reservation, in deference to popular habits, that 'black quart-bottles' should be admitted free.

"Mr. Madison opposed a tax on cordage, and 'questioned the propriety of raising the price of any article that entered materially into the structure of vessels,' making in effect the same argument on that subject which has been repeated without improvement so frequently in later years. Indigo and tobacco, two special products of the South, were protected by prohibitory duties, while the raising of cotton was encouraged by a duty of three cents per pound on the imported article. Mr. Burke, of South Carolina, said the culture of cotton was contemplated on a large scale in the South, 'if good seed could be procured.' The manufacture of iron, wool, leather, paper, already in some degree developed, was stimulated by the bill. The fisheries were aided by a bounty on every barrel caught; and the navigation interest received a remarkable encouragement by providing that 'a discount of 10 per cent. on all duties imposed by this act shall be allowed on such goods, wares, and merchandise as shall be imported in vessels built in the United States, and wholly the property of a citizen or citizens thereof.' The bill throughout was an American measure, designed to promote American interests; and as a first step in a wide field of legislation, it was characterized in an eminent degree by wisdom, by moderation, and by a keen insight into the immediate and the distant future of the country. The ability which framed the Constitution was not greater

than that displayed by the first generation of American statesmen who were called to legislate under its generous provisions and its wise restrictions.

"These great statesmen proceeded in the light of facts, which taught them that, though politically separated from the mother country, we were still in many ways dependent upon her in as large a degree as when we were colonies, subject to her will and governed for her advantage. The younger Pitt boasted that he had reconquered the colonies as commercial dependencies, contributing more absolutely and in larger degree to England's prosperity than before the political connection was severed. He treated the States, after the close of the peace of 1783, with a haughty assumption of superiority, if not indeed with contempt—not even condescending to accredit a diplomatic representative to the country, though John Adams was in London as minister plenipotentiary and envoy extraordinary from the United States. English laws of protection under the Pitt administration were steadily framed against the development of manufactures and navigation in America, and the tendency when the Federal Constitution was adopted had been, in the planting States especially, toward a species of commercial dependence which was enabling England to absorb our trade.

"The first tariff act was therefore in a certain sense a second Declaration of Independence; and by a coincidence which could not have been more striking or more significant, it was approved by President Washington on the 4th day of July, 1789. Slow as were the modes of communicating intelligence in those days, this act of Congress did, in a suggestive way, arouse the attention of both continents. The words of the preamble were ominous. The duties levied were exceedingly moderate, scarcely any of them above 15 per cent., the majority not higher than 10. But the beginning was made; and the English manufacturers and carriers saw that the power to levy 10 per cent. could at any time levy a hundred per cent. if the interest of the new government should demand it. The separate States had indeed possessed the power to levy imposts, but they had never exercised it in any comprehensive manner, and had usually adapted the rate of duty to English trade rather than to the protection of manufacturing interests at home. The action of the Federal Government was a new departure, of portentous magnitude, and was so recognized at home and abroad.

"It was not the percentage which aroused and disturbed England. It was the power to levy the duty at all. In his famous speech on American taxation in the House of Commons fifteen years before, Mr. Burke asserted that it was 'not the weight of the duty, but the weight of the preamble which the Americans were unable and unwilling to bear.' The tax actually imposed was not oppressive, but the preamble implied the power to levy upon the Colonies whatever tax the British Government might deem expedient, and this led to resistance and to revolution. The force of the preamble was now turned against Great Britain. She saw that the extent to which the principle of protective duties might be carried was entirely a matter of discretion with the young republic whose people had lately been her subjects and might now become her rivals. The principle of protecting the manufactures and encouraging the navigation of America had been distinctly proclaimed in the first law enacted by the new government, and was thus made in a suggestive and emphatic sense the very corner-stone of the republican edifice which the patriots of the Revolution were aiming to construct.

"The opinions of Mr. Madison as thus shown in the first legislation by Congress are the more significant from the fact that he belonged to the Jeffersonian school, believed in the strictest construction of granted power, was a zealous Republican in the partisan divisions of the day, and was always opposed to the more liberal, or, as he would regard them, the more latitudinarian views of the Federal party. In regard to the protection and encouragement of manufactures there seemed to be no radical difference between parties in the early period of the Government. On that issue, to quote a phrase used on another occasion, 'they were all Federalists and all Republicans.' Mr. Hamilton's celebrated report on manufactures, submitted in answer to a request from the House of Representatives of December, 1790, sustained and elaborated the views on which Congress had already acted, and brought the whole influence of the executive department to the support of a protective tariff. Up to that period no minister of finance among the oldest and most advanced countries of Europe had so ably discussed the principles on which national prosperity was based. The report has long been familiar to students of political economy, and has had, like all Mr. Hamilton's work, a remarkable value and a singular application in the developments of subsequent years.

"Mr. Hamilton sustained the plan of encouraging home manufactures by protective duties, even to the point in some instances of making those 'duties equivalent to prohibition.' He did not contemplate a prohibitive duty as the means of encouraging a manufacture not already domesticated, but declared it 'only fit to be employed when a manufacture has made such a progress, and is in so many hands, as to insure a due competition and an adequate supply on reasonable terms.' This argument did not seem to follow the beaten path which leads to the protection of 'infant manufactures,' but rather aimed to secure the home market for the strong and well-developed enterprises. Mr. Hamilton did not turn back from the consequences which his argument involved. He perceived its logical conclusions and frankly accepted them. He considered 'the monopoly of the domestic market to its own manufacturers as the reigning policy of manufacturing nations,' and declared that 'a similar policy on the part of the United States in every proper instance was dictated by the principles of distributive justice, certainly by the duty of endeavoring to secure to their own citizens a reciprocity of advantages.' He avowed his belief that 'the internal competition which takes place soon does away with everything like monopoly, and by degrees reduces the price of the article to the minimum of a reasonable profit on the capital employed. This accords with the reason of the thing and with experience.' He contended that 'a reduction has in several instances immediately succeeded the establishment of domestic manufacture.' But even if this result should not follow, he maintained that 'in a national view a temporary enhancement of price must always be well compensated by a permanent reduction of it.' The doctrine of protection, even with the enlarged experience of subsequent years, has never been more succinctly or more felicitously stated.

"Objections to the enforcement of the 'protective' principle founded on a lack of constitutional power were summarily dismissed by Mr. Hamilton as 'having no good foundation.' He had been a member of the convention that formed the Constitution, and had given attention beyond any other member to the clauses relating to the collection and appropriation of revenue. He said the 'power to raise money' as embodied in the Constitution 'is plenary and indefinite,' and 'the objects for which it may be appropriated are no less comprehensive than the payment of the public debts, the providing for the common defense and the general welfare.' He gives the widest scope to the phrase 'general welfare,' and declares that 'it is of necessity left to the discretion of the national Legislature to pronounce upon the objects which concern the general welfare, and for which under that description an appropriation of money is requisite and proper.' Mr. Hamilton elaborates his argument on this head with consummate power, and declares that 'the only qualification' to the power of appropriation under the phrase 'general welfare' is that the purpose for which the money is applied shall 'be general, and not local, its operation extending in fact throughout the Union, and not being confined to a particular spot.' The limitations and hypercritical objections to the powers conferred by the Constitution, both in the raising and appropriating of money, originated in large part after the authors of that great charter had passed away, and have been uniformly stimulated by class interests which were not developed when the organic law was enacted.

"Some details of Mr. Hamilton's report are especially interesting in view of the subsequent development of manufacturing enterprises. 'Iron works' he represents as 'greatly increasing in the United States,' and so great is the demand that 'iron furnished before the Revolution at an average of sixty-four dollars per ton' was then sold at 'eighty.' Nails and spikes, made in large part by boys, needed further protection,' as 1,800,000 pounds had been imported the previous year. Iron was wholly made by 'charcoal,' but there were several mines of 'fossil coal' already 'worked in Virginia,' and 'a copious supply of it would be of great value to the iron industry.' Respecting 'cotton' Mr. Hamilton attached far more consideration to its manufacture than to its culture. He distrusted the quality of that grown at home because so far from the equator, and he wished the new factories in Rhode Island and Massachusetts to have the best article at the cheapest possible rate. To this end the repeal of the 3-cent duty on cotton levied the preceding year was 'indispensable.' He argued that 'not being, like hemp, a universal production of the country, cotton affords less assurance of an adequate internal supply.' If the duty levied on glass should not prove sufficient inducement to its manufacture, he would stimulate it 'by a direct bounty.'

"Mr. Hamilton's conceptions of an enlarged plan of 'protection' included not only 'prohibitive duties,' but, when necessary, a system of 'bounties and premiums' in addition. He was earnestly opposed to 'a capitation tax,' and declared such levies as an income tax to be 'unavoidably hurtful to industry.' Indirect taxes were obviously preferred by him wherever they were practicable. Indeed upon any other system of taxation he believed it would prove impossible for the Republic of 1790 to endure the burden imposed upon the public Treasury by the funding of the debt of the Revolution. More promptly than any other financier of that century he saw that ten dollars could be more easily collected by indirect tax than one dollar by direct levy, and that he could thus avoid those burdensome exactions from the people which had proved so onerous in Europe, and which had just aided in precipitating France into bloody revolution.

"Important and radical additions to the revenue system promptly followed Mr. Hamilton's recommendations. From that time onward, for a period of more than twenty years, additional tariff laws were passed by each succeeding Congress modifying and generally increasing the rate of duties first imposed and adding many new articles to the dutiable list. When the war of 1812 was reached a great but temporary change was made in the tariff laws by increasing the entire list of duties 100 per cent., simply doubling the rate in every case. Not content with this sweeping and wholesale increase of duty, the law provided an additional 10 per cent. upon all goods imported in foreign vessels, besides collecting an additional tonnage tax of one dollar and

a half per ton on the vessel. Of course this was war legislation, and the act was to expire within one year after a treaty of peace should be concluded with Great Britain. With the experience of recent days before him, the reader does not need to be reminded that under the stimulus of this extraordinary rate of duties manufactures rapidly developed throughout the country. Importations from England being absolutely stopped by reason of the war and in large part excluded from other countries by high duties, the American market was for the first time left substantially or in large degree to American manufacturers.

"With all the disadvantages which so sudden and so extreme a policy imposed on the people, the progress for the four years of these extravagant and exceptional duties was very rapid and undoubtedly exerted a lasting influence on the industrial interests of the United States. But the policy was not one which commanded general support. Other interests came forward in opposition. New England was radically hostile to high duties, for the reason that they seriously interfered with the shipping and commercial interest in which her people were largely engaged. The natural result, moreover, was a sharp reaction, in which the protective principle suffered. Soon after the treaty of Ghent was signed movements were made for a reduction of duties, and the famous tariff of 1816 was the result.

"In examining the debates on that important act it is worthy of notice that Mr. Clay, from an extreme Western State, was urging a high rate of duties on cotton fabrics, while his chief opponent was Daniel Webster, then a Representative from Massachusetts. An additional and still stranger feature of the debate is found when Mr. Calhoun, co-operating with Mr. Clay, replied to Mr. Webster's free-trade speech in an elaborate defense of the doctrine of protection to our manufactures.

"Mr. Calhoun spoke with enthusiasm and gave an interesting résumé of the condition of the country as affected by the war with Great Britain. He believed that the vital deficiency in our financial condition was the lack of manufactures, and to supply that deficiency he was willing to extend the protecting arm of the Government. 'When our manufactures are grown to a certain perfection, as they soon will be under the fostering care of the Government, we shall no longer experience these evils. The farmer will find a ready market for his surplus products and, what is almost of equal consequence, a certain and cheap supply for all his wants. His prosperity will diffuse itself through every class in the community.' Not satisfied with this unqualified support of the protective system, Mr. Calhoun supplemented it by declaring that 'to give perfection to this state of things it will be necessary to add as soon as possible a system of internal improvements.' Mr. Webster's opposition to protection was based on the fact that it tended to depress commerce and curtail the profits of the carrying trade.

"The tariff of 1816 was termed 'moderately protective,' but even in that form it encountered the opposition of the commercial interests. It was followed in the country by severe depression in all departments of trade, not because the duties were not in themselves sufficiently high, but from the fact that it followed the war tariff, and the change was so great as to produce not only a reaction but a revolution in the financial condition of the country. All forms of industry languished. Bankruptcy was widespread, and the distress between 1817 and 1824 was perhaps deeper and more general than at any other period of our history. There was no immigration of foreigners, and consequently no wealth from that source. There was no market for agricultural products, and the people were therefore unable to indulge in liberal expenditure. Their small savings could be more profitably invested in foreign than in domestic goods, and hence American manufactures received little patronage. The traditions of that period, as given by the generation that lived through it, are sorrowful and depressing. The sacrifice of great landed estates, worth many millions could they have been preserved for the heirs of the next generation, was a common feature in the general distress and desolation. The continuance of this condition of affairs had no small influence on the subsequent division of parties. It naturally led to a change in the financial system, and in 1824 a tariff act was passed materially enlarging the scope of the act of 1816.

"The act of 1824 was avowedly protective in its character, and was adopted through the influence of Mr. Clay, then Speaker of the House of Representatives. His most efficient ally on the floor was Mr. Buchanan, of Pennsylvania, who exerted himself vigorously in aid of the measure. Mr. Webster again appeared in the debate, arguing against the 'obsolete and exploded notion of protection,' and carrying with him nearly the whole vote of Massachusetts in opposition. Mr. Clay was enabled to carry the entire Kentucky delegation for the high protective tariff, and Mr. Calhoun's views having meanwhile undergone a radical change, South Carolina was found to be unanimous in opposition, and cordially co-operating with Massachusetts in support of free trade. The effect of that tariff was undoubtedly favorable to the general prosperity, and during the administration of John Quincy Adams every material interest of the country improved. The result was that the supporters of the protective system, congratulating themselves upon the effect of the work of 1824, proceeded in 1828 to levy still higher duties. They applied the doctrine of protection to the raw materials of the country, the wool, the hemp, and all unmanufactured articles which by any possibility could meet with damaging competition from abroad.

"It was indeed an era of high duties, of which, strange as it may seem to the modern reader, Silas Wright, of New York, and James Buchanan, of Pennsylvania, appeared as the most strenuous defenders, and were personally opposed in debate by John Davis, of Massachusetts, and Peleg Sprague, of Maine. To add to the entanglement of public opinion, Mr. Webster passed over to the side of ultra-protection and voted for the bill, finding himself in company with Martin Van Buren, of New York, and Thomas H. Benton, of Missouri. It was an extraordinary commingling of political elements, in which it is difficult to find a line of partition logically consistent either with geographical or political divisions. Mr. Webster carried with him not more than two or three votes of the Massachusetts delegation. His colleague in the Senate, Nathaniel Silsbee, voted against him, and in the House such personal adherents as Edward Everett and Isaac C. Bates recorded themselves in the negative. There was a great deal of what in modern phrase would be called 'fencing for position' in the votes on this test question of the day. The names of no less than five gentlemen who were afterward Presidents of the United States were recorded in the yeas and nays on the passage of the bill in the two Houses—Mr. Van Buren, General Harrison, John Tyler, in the Senate, and Mr. Polk, and Mr. Buchanan in the House.

"There was a general feeling that the act of 1828 marked a crisis in the history of tariff discussion, and that it would in some way lead to important results in the fate of political parties and political leaders. Mr. Calhoun was this year elected Vice-President of the United States, with General Jackson as President, and Mr. Van Buren was transferrred from the Senate to the State Department as the head of Jackson's Cabinet. When by his address and tact he had turned the mind of the President against Calhoun as his successor, and fully ingratiated himself in executive favor, the quarrel began which is elsewhere detailed at sufficient length. In this controversy, purely personal at the outset, springing from the clashing ambitions of two aspiring men, the tariff of 1828, especially with the vote of Mr. Van Buren in favor of it, was made to play an important part. The quarrel rapidly culminated in Mr. Calhoun's resignation of the Vice-Presidency, his leadership of the nullification contest in South Carolina, and his re-election to the Senate of the United States some time before the expiration of the Vice-Presidential term for which he had been chosen. The result was a reduction of duties, first by the act of July, 1832, and secondly by Mr. Clay's famous compromise act of March 2, 1833, in which it was provided that by a sliding scale all the duties in excess of 20 per cent. should be abolished within a period of ten years. It was this act which for the time calmed excitement in the South, brought Mr. Calhoun and Mr. Clay into kindly relations, and somewhat separated Mr. Webster and Mr. Clay—at least producing one of those periods of estrangement which, throughout their public career, alternated with the cordial friendship they really entertained for each other.

During the operation of this act—which was really an abandonment of the protective principle—the financial crisis of 1837 came upon the country, and a period of distress ensued almost equal to that which preceded the enactment of the tariff of 1824. Many persons, still in active business, recall with something of horror the hardships and privations which were endured throughout the country from 1837 to 1842. The long-continued depression produced the revolution against the Democratic party which ended in the overthrow of Mr. Van Buren and the election of General Harrison as the President of the United States in 1840. The Whig Congress that came into power at the same time proceeded to enact the law popularly known as the tariff of 1842, which was strongly protective in its character, though not so extreme as the act of 1828. The vote in favor of the bill was not exclusively Whig, as some of the Northern Democrats voted for it and some of the Southern Whigs against it. Conspicuous among the former were Mr. Buchanan, of Pennsylvania, and Mr. Wright, of New York, who maintained a consistency with their vote for the tariff of 1828. Conspicuous among Southern Whigs against it were Berrien of Georgia, Clayton of Delaware, Mangum of North Carolina, Merrick of Maryland, and Rives of Virginia The two men who above all others deserve honor for successful management of the bill were George Evans, the brilliant and accomplished Senator from Maine, and Thomas M. T. McKennan, for many years an able, upright, and popular Representative from Pennsylvania. John Quincy Adams, in a public speech delivered in 1843 in the town of Mr. McKennan's residence, ascribed to that gentleman the chief credit of carrying the protective tariff bill through the House of Representatives. The vote showed, as all tariff bills before had, and as all since have shown, that the local interest of the constituency determines in large measure the vote of the Representative; that planting sections grow more and more toward free trade and manufacturing sections more and more toward protection.

"The friends of home industry have always referred with satisfaction to the effect of the tariff of 1842 as an explicit and undeniable proof of the value of protection. It raised the country from a slough of despond to happiness, cheerfulness, confidence. It imparted to all sections a degree of prosperity which they had not known since the repeal of the tariff of 1828. The most suggestive proof of its strength and popularity was found in the contest of 1844 between Mr. Polk and Mr. Clay, when the Democrats in the critical Northern States assumed the advocacy of the tariff of 1842 as loudly as the supporters of Mr. Clay. Other

issues overshadowed the tariff, which was really considered to be settled, and a President and Congress were chosen without any distinct knowledge on the part of their constituents as to what their action might be upon this question. The popular mind had been engrossed with the annexation of Texas and with the dawn of the free-soil excitement; hence protection and free trade were in many States scarcely debated from lack of interest, and in the States where interest prevailed both parties took substantially the same side.

"A deception had, however, been practiced in the manufacturing States of the North, and when the administration of Mr. Polk was installed the friends of protection were startled by the appointment of a determined opponent of the tariff of 1842 as Secretary of the Treasury. Robert J. Walker was a Senator from Mississippi when the act was passed, and was bitterly opposed to it. He was a man of great originality, somewhat speculative in his views, and willing to experiment on questions of revenue to the point of rashness. He was not a believer in the doctrine of protection, was persuaded that protective duties bore unjustly and severely upon the planting section with which he was identified; and he came to his office determined to overthrow the tariff act, which he had been unable to defeat in the Senate. Mr. Walker was excessively ambitious to make his term in the Treasury an era in the history of the country. He had a difficult task before him, one from which a conservative man would have shrunk. The tariff was undoubtedly producing a valuable revenue, and as the administration of Mr. Polk was about to engage in war, revenue was what they most needed. Being about to enter upon a war, every dictate of prudence suggested that aggressive issues should not be multiplied in the country. But Mr. Walker was not Secretary of War or Secretary of State, and he was unwilling to sit quietly down and collect the revenue under a tariff imposed by a Whig Congress against which he had voted, while Buchanan, in directing our foreign relations, and Marcy, in conducting a successful war, would far outstrip him in public observation and in acquiring the elements of popularity adapted to the ambition which all three alike shared.

"Mr. Walker made an elaborate report on the question of revenue, and attacked the tariff of 1842 in a manner which might well be termed savage. He arraigned the manufacturers as enjoying unfair advantages—advantages held, as he endeavored to demonstrate, at the expense and to the detriment of the agriculturist, the mechanic, the merchant, the ship-owner, the sailor, and indeed of almost every industrial class. In reading Mr. Walker's report a third of a century after it was made one might imagine that the supporters of the tariff of 1842 were engaged in a conspiracy to commit fraud, and that the manufacturers who profited by its duties were guilty of some crime against the people. But extreme as were his declarations and difficult as were the obstructions in his path, he was able to carry his point. Mr. Buchanan, the head of the Cabinet, had voted for the tariff of 1842, and Mr. Dallas, the Vice-President, had steadily and ably upheld the doctrine of protection when a member of the Senate. It was the position of Buchanan and Dallas on the tariff that won the October election of 1844 for Francis R. Shunk for governor of Pennsylvania, and thus assured the election of Mr. Polk. The administration of which Buchanan and Dallas were such conspicuous and influential members could not forswear protection and inflict a free-trade tariff on Pennsylvania without apparent dishonor and the abandonment of that State to the Whigs. It was therefore regarded not only as impracticable but as politically impossible.

"It was soon ascertained, however, that Mr. Polk sympathized with Mr. Walker, and Mr. Buchanan was silenced and overridden. The free-trade tariff of 1846 was passed; and Mr. Dallas, who had been nominated because of his record as a protectionist, was subjected to the humiliation of giving his casting vote as Vice-President in favor of a tariff which was execrated in Pennsylvania, and which was honestly believed to be inimical in the highest degree to the interest of the American manufacturer and the American mechanic. The act had no small influence in the overthrow of the Polk administration at the elections for the next ensuing Congress and in the defeat of General Cass for the Presidency in 1848. As Senator from Michigan, General Cass had voted for the bill, influenced thereto by his Southern associates, for whom he always did so much and from whom he always received so little. Pennsylvania was at that time really a Democratic State, but she punished General Cass for his free-trade course by giving her electoral vote to Taylor. If she had given it to Cass he would have been chosen President.

"It was in connection with the tariff agitation of 1846 that Simon Cameron originally obtained his strong hold upon the popular sympathy and support of Pennsylvania. He was a Democrat; had long been confidential adviser to Mr. Buchanan, and had supported Mr. Polk. But he was a believer in the doctrine of protection; and as he had aided in carrying Pennsylvania by declaring himself a friend to the tariff of 1842, he maintained his faith. When the Polk administration was organized, a vacancy was created in the Senate by Mr. Buchanan's appointment as Secretary of State. George W. Woodward was the regular nominee of the Democratic party for the place. But Cameron bolted, and with the aid of Whig votes was chosen Senator. He resisted the passage of the tariff of 1846, stood firmly and consistently for the industrial interests of his State, cultivated an alliance with the Whigs in the Senate, and by their aid thwarted all the attempts of the Polk administration to interfere with his plans and purposes in Pennsylvania. The President endeavored to heal Judge Woodward's wounds by placing him on the bench of the Supreme Court as the successor of the eminent Henry Baldwin. Cameron induced the Whigs to reject him, and then forced the administration to nominate Robert C. Grier, whose appointment was personally acceptable and agreeable to him. In the successful tactics then employed by Cameron may be found the secret of his remarkable career as a party manager in the field in which, for a full half century, he was an active and indefatigable worker.

"The Whig victory of 1848 was not sufficiently decisive to warrant any attempt, even had there been desire, to change the tariff. General Taylor had been elected without subscribing to a platform or pledging himself to a specific measure, and he was therefore in a position to resist and reject appeals of the ordinary partisan character. Moreover the tariff of 1846 was yielding abundant revenue, and the business of the country was in a flourishing condition at the time his administration was organized. Money became very abundant after the year 1849; large enterprises were undertaken, speculation was prevalent, and for a considerable period the prosperity of the country was general and apparently genuine. After 1852 the Democrats had almost undisputed control of the Government, and had gradually become a free-trade party. The principles embodied in the tariff of 1846 seemed for the time to be so entirely vindicated and approved that resistance to it ceased, not only among the people but among the protective economists, and even among the manufacturers to a large extent. So general was this acquiescence that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented Presidential candidates.

"It was not surprising, therefore, that with a plethoric condition of the national Treasury for two or three consecutive years, the Democratic Congress, in the closing session of Pierce's administration, enacted what has since been known as the tariff of 1857. By this law the duties were placed lower than they had been at any time since the war of 1812. The act was well received by the people, and was indeed concurred in by a considerable proportion of the Republican party. The Senate had a large Democratic majority, but in the House three parties divided the responsibility—no one of them having an absolute majority. The Republicans had a plurality and had chosen Mr. Banks Speaker, but the American party held the balance of power in the House and on several of the leading committees. Some prominent Republicans, however, remaining true to their old Whig traditions, opposed the reduction of duties. Mr. Seward voted against it, but his colleague, Mr. Hamilton Fish, voted for it. Mr. Seward represented the protective tendencies of the country districts of New York, and Mr. Fish the free-trade tendencies of the city. Mr. Sumner and Mr. Wilson both voted for it, as did also Senator Allen, of Rhode Island, the direct representative of the manufacturers of that State. Mr. Bell, of New Hampshire, voted for it, while Senators Collamer and Foot, of Vermont, voted against it. Mr. Fessenden did not oppose it, but his colleague, Mr. Nourse, voted against it. The Connecticut Senators, Foster and Toucey, one of each party, supported the measure.

"In the House, the New England Representatives generally voted for the bill, but Mr. Morrill, of Vermont, opposed it. The Pennsylvania delegation, led by James H. Campbell and John Covode, did all in their power to defeat it. The two Washburns, Colfax, and McKee Dunn headed a formidable opposition from the West. Humphrey Marshall and Samuel F. Swope, of Kentucky, were the only Representatives from slave States who voted in the negative; though in the Senate three old and honored Whigs, John Bell of Tennessee, John B. Thompson of Kentucky, and Henry S. Geyer of Missouri, maintained their ancient faith and voted against lowering the duties. It was an extraordinary political combination that brought the Senators from Massachusetts and the Senators from South Carolina, the Representatives from New England and the Representatives from the cotton States, to support the same tariff bill—a combination which had not before occurred since the administration of Monroe. This singular coalition portended one of two results: either an entire and permanent acquiescence in the rule of free trade, or an entire abrogation of that system, and the revival, with renewed strength, of the doctrine of protection. Which it should be was determined by the unfolding of events not then foreseen, and the force of which it required years to measure.

"The one excuse given for urging the passage of the act of 1857 was that under the tariff of 1846 the revenues had become excessive, and the income of the Government must be reduced. But it was soon found to be a most expensive mode of reaching that end. The first and most important result flowing from the new act was a large increase in importations and a very heavy drain in consequence upon the reserved specie of the country to pay the balance, which the reduced shipments of agricultural products failed to meet. In the autumn of 1857, half a year after the passage of the tariff act, a disastrous financial panic swept over the country, prostrating for the time all departments of business in about the same degree. The agricultural, commercial, and manufacturing interests were alike and equally involved. The distress for a time was severe and widespread. The stagnation which ensued

was discouraging and long continued, making the years from 1857 to 1860 extremely dull and dispiriting in business circles throughout the Union. The country was not exhausted and depleted as it was after the panic of 1837, but the business community had no courage; energy was paralyzed, and new enterprises were at a stand-still.

"It soon became evident that this condition of affairs would carry the tariff question once more into the political arena as an active issue between parties. Thus far, the new Republican organization had passively acquiesced in existing laws on this subject; but the general distress caused great bodies of men, as is always the case, to look to the action of the Government for relief. The Republicans found therefore a new ground for attacking the Democracy—holding them responsible for the financial depression, initiating a movement for returning to the principle and practice of protection, and artfully identifying the struggle against slavery with the efforts of the workingmen throughout the North to be freed from injurious competition with the cheapened labor of Europe. This phase of the question was presented with great force in certain States, and the industrial classes, by a sort of instinct of self-preservation as it seemed to them, began to consolidate their votes in favor of the Republican party. They were made to see, by clever and persuasive speakers, that the slave labor of the South and the ill-paid labor of Europe were both hostile to the prosperity of the workingman in the free States of America, and that the Republican party was of necessity his friend, by its opposition to all the forms of labor which stood in the way of his better remuneration and advancement.

"The convention which nominated Mr. Lincoln met when the feeling against free trade was growing and in many States already deep-rooted. A majority of those who composed that convention had inherited their political creed from the Whig party, and were profound believers in the protective teachings of Mr. Clay. But a strong minority came from the radical school of Democrats, and, in joining the Republican party on the anti-slavery issue, had retained their ancient creed on financial and industrial questions. Care was for that reason necessary in the introduction of new issues and the imposition of new tests of party fellowship. The convention therefore avoided the use of the word "protection," and was contented with the moderate declaration that "sound policy requires such an adjustment of imposts as will encourage the development of the industrial interests of the whole country." A more emphatic declaration might have provoked resistance from a minority of the convention, and the friends of protection acted wisely in accepting what was offered with unanimity, rather than continue the struggle for a stronger creed which would have been morally weakened by party division. They saw also that the mere form of expression was not important, so long as the convention was unanimous on what theologians term the "substance of doctrine." It was noted that the vast crowd which attended the convention cheered the tariff resolution as lustily as that which opposed the spread of slavery into free territory. From that hour the Republican party gravitated steadily and rapidly into the position of avowed advocacy of the doctrine of protection. The national ticket which they presented was composed indeed of an original Whig protectionist and an original Democratic free-trader; but the drift of events, as will be seen, carried both alike into the new movement for a protective system.

"A review of the tariff legislation in the period between the war of 1812 and the political revolution of 1860 exhibits some sudden and extraordinary changes on the part of prominent political leaders in their relation to the question. The inconsistency involved is, however, more apparent than real. Perhaps it would be correct to say that the inconsistency was justifiable in the eyes of those who found it necessary to be inconsistent. Mr. Webster was a persistent advocate of free trade so long as Massachusetts was a commercial State. But when, by the operation of laws against the enactment of which he had in vain protested, Massachusetts became a manufacturing State, Mr. Webster naturally and inevitably became a protectionist. Mr. Calhoun began as a protectionist when he hoped for the diffusion and growth of manufactures throughout all sections alike. He became a free-trader when he realized that the destiny of the South was to be purely agricultural, devoted to products whose market was not, in his judgment, to be enlarged by the tariff and whose production was enhanced in cost by its operation. Colonel Benton's change was similar to Mr. Calhoun's, though at a later period, and not so abrupt or so radical. Mr. Van Buren's shifting of position was that of a man eagerly seeking the current of popular opinion, and ready to go with the majority of his party. Of all the great lights but one burned steadily and clearly. Mr. Clay was always a protectionist, and, unlike Mr. Van Buren, he forced his party to go with him. But as a whole the record of tariff legislation, from the very origin of the Government, is the record of enlightened selfishness; and enlightened selfishness is the basis of much that is wisest in legislation.

"It is natural that both sides to the tariff controversy should endeavor to derive support for their principles from the experience of the country. Nor can it be denied that each side can furnish many arguments which apparently sustain its own views and theories. The difficulty in reaching a satisfactory and impartial conclusion arises from the inability or unwillingness of the disputants to agree upon a common basis of fact. If the premises could be candidly stated, there would be no trouble in finding a true conclusion. In the absence of an agreement as to the points established, it is the part of fairness to give a succinct statement of the grounds maintained by the two parties to the prolonged controversy—grounds which have not essentially changed in a century of legislative and popular contention.

"It is maintained by free-traders that under the moderate tariff prevailing from the origin of the Government to the war of 1812 the country was prosperous, and manufactures were developing as rapidly as was desirable or healthful. Protectionists on the other hand aver that the duty levied in 1789 was the first of uniform application throughout all the States, and that, regardless of its percentage, its influence and effect were demonstrably protective; that it was the first barrier erected against the absolute commercial supremacy of England, and that it effectually did its work in establishing the foundation of the American system. In the absence of that tariff, they maintain that England, under the influence of actual free trade, had monopolized our market and controlled our industries. Finally they declare that the free-traders yield the whole case in acknowledging that the first tariff imparted an impetus to manufactures and to commercial independence wholly unknown while the States were under the Articles of Confederation and unable to levy uniform duties on imports.

"The free-traders point to the destructive effect of the war tariff of 1812, which unduly stimulated and then inevitably depressed the country. They assume this to be a pregnant illustration of the truth, otherwise logically deduced by them, as to the reaction sure to follow an artificial stimulus given to any department of trade. The protectionists, declining to defend the war duties as applicable to a normal condition, find in the too sudden dropping of war rates the mistake which precipitated the country into financial trouble. Depression, they say, would naturally have come; but it was hastened and increased by the inconsiderate manner in which the duties were lowered in 1816. From that time onward the protectionists claim that the experience of the country has favored their theories of revenue and financial administration. The country did not revive or prosperity reappear until the protective tariff of 1824 was enacted. The awakening of all branches of industry by that act was further promoted by the tariff of 1828, to which the protectionists point as the perfected wisdom of their school. Mr. Clay publicly asserted that the severest depression he had witnessed in the country was during the seven years preceding the tariff of 1824, and that the highest prosperity was during the seven years following that act.

"The free-traders affirm that the excitement in the South and the sectional resistance to the tariff of 1828 show the impossibility of maintaining high duties. The protectionists reply that such an argument is begging the question, and is simply tantamount to admitting that protection is valuable if it can be upheld. The protectionists point to the fact that their system was not abandoned in 1832 upon a fair consideration of its intrinsic merits, but as a peace-offering to those who were threatening the destruction of the Government if the duties were not lowered. Many protectionists believe that if Mr. Clay had been willing to give to General Jackson the glory of an absolute victory over the Nullifiers of South Carolina the revenue system of the country would have been very different. They think, however, that the temptation to settle the question by compromise instead of permitting Jackson to settle it by force was perhaps too strong to be resisted by one who had so many reasons for opposing and hating the President.

"A more reasonable view held by another school of protectionists is that Mr. Clay did the wisest possible thing in withdrawing the tariff question from a controversy where it was complicated with so many other issues—some of them bitter and personal. He justly feared that the protective principle might be irretrievably injured in the collision thought to be impending. He believed, moreover, that the best protective lesson would be taught by permitting the free-traders to enforce their theories for a season, trusting for permanent triumph to the popular reaction certain to follow. There was nothing in the legislation to show that Mr. Clay or his followers had in any degree abandoned or changed their faith in protective duties or their confidence in the ultimate decision of the public judgment. The protectionists aver that the evils which flowed from the free-trade tariff of 1833, thus forced on the country by extraneous considerations, were incalculably great, and negatively established the value of the tariff of 1828 which had been so unfairly destroyed. They maintain that it broke down the manufacturing interest, led to excessive importations, threw the balance of trade heavily against us, drained us of our specie, and directly led to the financial disasters of 1837 and the years ensuing. They further declare that this distressing situation was not relieved until the protective tariff of 1842 was passed, and that thenceforward, for the four years in which that act was allowed to remain in force, the country enjoyed general prosperity—a prosperity so marked and widespread that the opposing party had not dared to make an issue against the tariff in States where there was large investment in manufacturing.

"The free-traders consider the tariff of 1846 to be a conclusive proof of the beneficial effect of low duties. They challenge a comparison of the years of its operation, between 1846 and 1857, with any other equal period in the history of the country. Manufacturing, they say, was not forced by a hot-house process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a

healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. Commerce, as they point out, made great advances, and our carrying trade grew so rapidly that in ten years from the day the tariff of 1846 was passed our tonnage exceeded the tonnage of England. The free-traders refer with especial emphasis to what they term the symmetrical development of all the great interests of the country under this liberal tariff. Manufactures were not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways and to the foreign market in our own ships.

"Assertions as to the progress of manufactures in the period under discussion are denied by the protectionists. While admitting the general correctness of the free-traders' statements as to the prosperous condition of the country, they call attention to the fact that directly after the enactment of the tariff of 1846 the great famine occurred in Ireland, followed in the ensuing years by short crops in Europe. The prosperity which came to the American agriculturist was therefore from causes beyond the sea and not at home—causes which were transient, indeed almost accidental. Moreover an exceptional condition of affairs existed in the United States in consequence of our large acquisition of territory from Mexico at the close of the war and the subsequent and almost immediate discovery of gold in California. A new and extended field of trade was thus opened in which we had the monopoly, and an enormous surplus of money was speedily created from the products of the rich mines on the Pacific coast. At the same time Europe was in convulsion from the revolutions of 1848, and production was materially hindered over a large part of the continent. This disturbance had scarcely subsided when three leading nations of Europe, England, France, and Russia, engaged in the wasteful and expensive war of the Crimea. This struggle began in 1853 and ended in 1856, and during those years it increased consumption and decreased production abroad, and totally closed the grain-fields of Russia from any competition with the United States.

"The protectionists therefore hold that the boasted prosperity of the country under the tariff of 1846 was abnormal in origin and in character. It depended upon a series of events exceptional at home and even more exceptional abroad, events which by the doctrine of probabilities would not be repeated for centuries. When peace was restored in Europe, when foreign looms and forges were set going with renewed strength, when Russia resumed her export of wheat, and when at home the output of the gold mines suddenly decreased, the country was thrown into distress, followed by a panic and by long years of depression. The protectionists maintain that from 1846 to 1857 the United States would have enjoyed prosperity under any form of tariff, but that the moment the exceptional conditions in Europe and in America came to an end the country was plunged headlong into a disaster from which the conservative force of a protective tariff would in large part have saved it. The protectionists claim moreover that in these averments they are not wise after the fact. They show a constant series of arguments and warnings from leading teachers of their economic school, especially from Horace Greeley and Henry C. Carey, accurately foretelling the disastrous results which occurred at the height of what was assumed to be our solid and enduring prosperity as a nation. These able writers were prophets of adversity, and the inheritors of their faith claim that their predictions were startlingly verified.

"The free-traders, as an answer to this arraignment of their tariff policy, seek to charge responsibility for the financial disasters to the hasty and inconsiderate changes made in the tariff in 1857, for which both parties were in large degree if not indeed equally answerable. The protectionists will not admit the plea, and insist that the cause was totally inadequate to the effect, considering the few months the new tariff had been in operation. They admit that the low scale of duties in the new tariff perhaps may have added to the distress by the very rapid increase of importations which it invited; but they declare that its period of operation was entirely too brief to create a result so decided, if all the elements of disaster had not been in existence and in rapid development at the time the act was passed. The tariff of 1846, therefore, under which there had been a very high degree of prosperity, was in the judgment of the protectionists successfully impeached, and a profound impression in consequence made on the public mind in favor of higher duties.

"The question of the tariff was of especial significance and influence in Pennsylvania. Important in that State, it became important everywhere. Pennsylvania had been continuously and tenaciously held by the Democratic party. In the old political divisions she had followed Jefferson and opposed Adams. In the new divisions she had followed Jackson and opposed Clay. She was Republican as against the Federalists; she was Democratic as against the Whigs. From the election of Jackson in 1828 to the year 1860—a period that measured the lifetime of a generation—she had with very few exceptions sustained the Democratic party. Joseph Ritner was elected governor by the Whigs in 1835 in consequence of Democratic divisions. Harrison, in the political convulsion of 1840, triumphed in the State by the slight majority of three hundred. Taylor received her electoral vote, partly in consequence of dissensions between Cass and Van Buren, and partly in consequence of the free-trade opinions of Cass. In 1854 James Pollock was chosen governor by the sudden uprising and astounding development of the Native-American excitement as organized by the Know-Nothing party. The repeal of the Missouri compromise aided the canvass of Pollock, but that alone would not have loosened the strong moorings of the Pennsylvania Democracy. Mr. Buchanan recovered the State two years afterward, and would have held it firmly in his grasp but for the financial revulsion and the awakened demand for a protective tariff.

"Dissociated from the question of protection, opposition to the extension of slavery was a weak issue in Pennsylvania. This was conclusively shown in the gubernatorial contest of 1857, when David Wilmot, the personal embodiment of Free-soil principles, was the Republican candidate for governor. Besides the general strength of the Territorial issue, Mr. Wilmot had the advantage of all the anti-slavery zeal which was aroused by the announcement of the Dred Scott decision, with the censurable connection therewith of President Buchanan. Thus an angry element was superadded for personal prejudice and effective agitation. Yet Mr. Wilmot was disastrously beaten by the Democratic candidate, Governor Packer, the adverse majority reaching indeed tens of thousands.

"The crushing Republican defeat received in the person of Wilmot occurred on the very eve of the financial distress of 1857. The Democratic canvass had been made while there was yet no suspicion of impending panic and revulsion—made indeed with constant boasts of the general prosperity and with constant ascription of that prosperity to the well-defined and long-continued policy of the Democratic party. From that time the Democratic party became embarrassed in Pennsylvania. With a tariff of their own making, with a President of their own choice, with both branches of Congress and every department of the Government under their control, a serious disaster had come upon the country. The promises of Democratic leaders had failed, their predictions had been falsified, and as a consequence their strength was shattered. The Republicans of Pennsylvania, seeing their advantage, pressed it by renewed and urgent demands for a protective tariff. On the other issues of the party they had been hopelessly beaten, but the moment the hostility to slave labor in the Territories became identified with protected labor in Pennsylvania, the party was inspired with new hopes, received indeed a new life.

"It was this condition of public opinion in Pennsylvania which made the recognition of the protective system so essential in the Chicago platform of 1860. It was to that recognition that Mr. Lincoln in the end owed his election. The memorable victory of Andrew G. Curtin, when he was chosen governor by a majority of 32,000, was largely due to his able and persuasive presentation of the tariff question and to his effective appeals to the laboring men in the coal and iron sections of the State. But for this issue there was in fact no reason why Curtin should have been stronger in 1860 than Wilmot was in 1857. Indeed, but for that issue he must have been weaker. The agitation over the repeal of the Missouri compromise had somewhat subsided with the lapse of years; the free-State victory in Kansas was acknowledged and that angry issue removed; while the Dred Scott decision, failing to arouse popular resentment at the time it was pronounced, could hardly be effective for an aggressive canvass three years later. If Governor Curtin could have presented no other issue to the voters of Pennsylvania, he would undoubtedly have shared the fate which Wilmot met when he had these anti-slavery questions as his only platform. Governor Curtin gave a far greater proportion of his time to the discussion of the tariff and financial issues than to all others combined, and he carried Pennsylvania because a majority of her voters believed that the Democratic party tended to free trade and that the Republican party would espouse and maintain the cause of protection.

"Had the Republicans failed to carry Pennsylvania, there can be no doubt that Mr. Lincoln would have been defeated. An adverse result in Pennsylvania in October would certainly have involved the loss of Indiana in November, besides California and Oregon and the four votes in New Jersey. The crisis of the national campaign was therefore reached in the triumph of Governor Curtin in the State election which preceded by four weeks the direct choice of President. It would be difficult to compute the possible demoralization in the Republican ranks if Pennsylvania had been lost in October. The division among the Democrats was a fruitful source of encouragement and strength to the Republicans, but would probably have disappeared with the positive assurance of success in the national struggle. Whether in the end Douglas or Breckinridge would have been chosen President is matter of speculation, but it is certain that Mr. Lincoln would have been defeated. The October election of Pennsylvania was for so long a period an unerring index to the result of the contest for the Presidency, that a feeling almost akin to superstition was connected with it. Whichever party carried it was sure, in the popular judgment, to elect the President. It foretold the crushing defeat of John Quincy Adams in 1828; it heralded the disaster to Mr. Clay in 1844; it foredoomed General Cass in 1848. The Republicans, having elected their candidate for governor in 1854 by a large majority, confidently expected to carry the State against Mr. Buchanan in 1856.

But the Democratic party prevailed in the October election, and the supporters of Frémont at once recognized the hopelessness of their cause. The triumph of Governor Curtin was the sure precursor of Mr. Lincoln's election, and that very fact added immeasurably to his popular strength in the closing month of the prolonged and exciting struggle.

"In reviewing the agencies therefore which precipitated the political revolution of 1860, large consideration must be given to the influence of the movement for protection. To hundreds of thousands of voters who took part in that memorable contest the tariff was not even mentioned. Indeed this is probably the fact with respect to the majority of those who cast their suffrages for Mr. Lincoln. It is none the less true that these hundreds of thousands of ballots, cast in aid of free territory and as a general defiance to the aggressions of the pro-slavery leaders of the South, would have been utterly ineffectual if the central and critical contest in Pennsylvania had not resulted in a victory for the Republicans in October. The tariff therefore had a controlling influence not only in deciding the contest for political supremacy but in that more momentous struggle which was to involve the fate of the Union. It had obtained a stronger hold on the Republican party than even the leaders of that organization were aware, and it was destined to a larger influence upon popular opinion than the most sagacious could foresee.

"In the foregoing summary of legislation upon the tariff, the terms free trade and protection are used in their ordinary acceptation in this country—not as accurately defining the difference in revenue theories, but as indicating the rival policies which have so long divided political parties. Strictly speaking, there has never been a proposition by any party in the United States for the adoption of free trade. To be entirely free, trade must encounter no obstruction in the way of tax, either upon export or import. In that sense no nation has ever enjoyed free trade. As contradistinguished from the theory of protection, England has realized freedom of trade by taxing only that class of imports which meet no competition in home production, thus excluding all pretense of favor or advantage to any of her domestic industries. England came to this policy after having clogged and embarrassed trade for a long period by the most unreasonable and tyrannical restrictions, ruthlessly enforced, without regard to the interests or even the rights of others. She had more than four hundred acts of Parliament regulating the tax on imports, under the old designations of 'tonnage and poundage,' adjusted, as the phrase indicates, to heavy and light commodities. Beyond these, she had a cumbersome system of laws regulating and in many cases prohibiting the exportation of articles which might teach to other nations the skill by which she had herself so marvelously prospered.

"When by long experiment and persistent effort England had carried her fabrics to perfection; when by the large accumulation of wealth and the force of reserved capital she could command facilities which poorer nations could not rival; when by the talent of her inventors, developed under the stimulus of large reward, she had surpassed all other countries in the magnitude and effectiveness of her machinery, she proclaimed free trade, and persuasively urged it upon all lands with which she had commercial intercourse. Maintaining the most arbitrary and most complicated system of protection so long as her statesmen considered that policy advantageous, she resorted to free trade only when she felt able to invade the domestic markets of other countries and undersell the fabrics produced by struggling artisans who were sustained by weaker capital and by less advanced skill. So long as there was danger that her own marts might be invaded, and the products of her looms and forges undersold at home, she rigidly excluded the competing fabrics and held her own market for her own wares.

"England was, however, neither consistent nor candid in her advocacy and establishment of free trade. She did not apply it to all departments of her enterprise, but only to those in which she felt confident that she could defy competition. Long after the triumph of free trade in manufactures, as proclaimed in 1846, England continued to violate every principle of her own creed in the protection she extended to her navigation interests. She had nothing to fear from the United States in the domain of manufactures, and she therefore asked us to give her the unrestricted benefit of our markets in exchange for a similar privilege which she offered to us in her markets. But on the sea we were steadily gaining upon her, and in 1852-'55 were nearly equal to her in aggregate tonnage. We could build wooden vessels at less cost than England and our ships excelled hers in speed. When steam began to compete with sail she saw her advantage. She could build engines at less cost than we, and when, soon afterward, her ship-builders began to construct the entire steamer of iron, her advantages became evident to the whole world."

"England was not content, however, with the superiority which these circumstances gave to her. She did not wait for her own theory of free trade to work out its legitimate results, but forthwith stimulated the growth of her steam marine by the most enormous bounties ever paid by any nation to any enterprise. To a single line of steamers running alternate weeks from Liverpool to Boston and New York she paid $900,000 annually, and continued to pay at this extravagant rate for at least twenty years. In all channels of trade where steam could be employed she paid lavish subsidies, and literally destroyed fair competition, and created for herself a practical monopoly in the building of iron steamers and a superior share in the ocean traffic of the world. But every step she took in the development of her steam marine by the payment of bounty was in flat contradiction of the creed which she was at the same time advocating in those departments of trade where she could conquer her competitors without bounty.

"With her superiority in navigation attained and made secure through the instrumentality of subsidies, England could afford to withdraw them. Her ships no longer needed them. Thereupon, with a promptness which would be amusing if it did not have so serious a side for America, she proceeded to inveigh through all her organs of public opinion against the discarded and condemned policy of granting subsidies to ocean steamers. Her course in effect is an exact repetition of that in regard to protection of manufactures, but as it is exhibited before a new generation, the inconsistency is not so readily apprehended nor so keenly appreciated as it should be on this side of the Atlantic. Even now there is good reason for believing that many lines of English steamers, in their effort to seize the trade to the exclusion of rivals, are paid such extravagant rates for the carrying of letters as practically to amount to a bounty, thus confirming to the present day (1884) the fact that no nation has ever been so persistently and so jealously protective in her policy as England so long as the stimulus of protection is needed to give her the command of trade. What is true of England is true in greater or less degree of all other European nations. They have each in turn regulated the adoption of free trade by the ratio of their progress toward the point where they could overcome competition. In all those departments of trade where competition could overcome them they have been quick to interpose protective measures for the benefit of their own people.

"The trade policy of the United States at the foundation of the Government had features of enlightened liberality which were unknown in any other country in the world. The new Government was indeed as far in advance of European nations in the proper conception of liberal commerce as it was on questions relating to the character of the African slave-trade. The colonists had experienced the oppression of the English laws which prohibited export from the mother country of the very articles which might advance their material interest and improve their social condition. They now had the opportunity, as citizens of a free Republic, to show the generous breadth of their statesmanship, and they did so by providing in their Constitution that Congress should never possess the power to levy 'a tax or duty on articles exported from any State.'

"At the same time trade was left absolutely free between all the States of the Union, no one of them being permitted to levy any tax on exports or imports beyond what might be necessary for its inspection laws. Still further to enforce this needful provision, the power to regulate commerce between the States was given to the General Government. The effect of these provisions was to insure to the United States a freedom of trade beyond that enjoyed by any other nation. Fifty-five millions of American people (in 1884), over an area nearly as large as the entire continent of Europe, carry on their exchanges by ocean, by lake, by river, by rail without the exactions of the tax-gatherer, without the detention of the custom-house, without even the recognition of State lines. In these great channels the domestic exchanges represent an annual value perhaps twenty-five times as great as the total of exports and imports. It is the enjoyment of free trade and protection at the same time which has contributed to the unexampled development and marvelous prosperity of the United States.

"The essential question which has grown up between political parties in the United States respecting our foreign trade, is whether a duty should be laid upon any import for the direct object of protecting and encouraging the manufacture of the same article at home. The party opposed to this theory does not advocate the admission of the article free, but insists upon such rate of duty as will produce the largest revenue and at the same time afford what is termed 'incidental protection.' The advocates of actual free trade according to the policy of England—taxing only those articles which are not produced at home—are few in number, and are principally confined to doctrinaires. The instincts of the masses of both parties are against them. But the nominal free-trader finds it very difficult to unite the largest revenue from any article with 'incidental protection' to the competing product at home. If the duty be so arranged as to produce the greatest amount of revenue, it must be placed at that point where the foreign article is able to undersell the domestic article and thus command the market to the exclusion of competition. This result goes beyond what the so-called American free-trader intends in practice, but not beyond what he implies in theory.

"The American protectionist does not seek to evade the legitimate results of his theory. He starts with the proposition that whatever is manufactured at home gives work and wages to our own people, and that if the duty is even put so high as to prohibit the import of the foreign article, the competition of home producers will, according to the doctrine of Mr. Hamilton, rapidly reduce the price to the consumer. He gives numerous illustrations of articles which under the influence of home competition have fallen in price below the point at which the foreign article was furnished when there was no protection. The free-trader replies that the fall in price has been still greater in the foreign

market, and the protectionist rejoins that the reduction was made to compete with the American product, and that the former price would probably have been maintained so long as the importer had the monopoly of our market. Thus our protective tariff reduced the price in both countries. This has notably been the result with respect to steel rails, the production of which in America has reached a magnitude surpassing that of England. Meanwhile rails have largely fallen in price to the consumer, the home manufacture has disbursed countless millions of money among American laborers, and has added largely to our industrial independence and to the wealth of the country.

"While many fabrics have fallen to as low a price in the United States as elsewhere, it is not to be denied that articles of clothing and household use, metals and machinery, are on an average higher than in Europe. The difference is due in large degree to the wages paid to labor, and thus the question of reducing the tariff carries with it the very serious problem of a reduction in the pay of the artisan and the operative. This involves so many grave considerations that no party is prepared to advocate it openly. Free-traders do not, and apparently dare not, face the plain truth—which is that the lowest-priced fabric means the lowest-priced labor. On this point protectionists are more frank than their opponents; they realize that it constitutes indeed the most impregnable defense of their school. Free-traders have at times attempted to deny the truth of the statement; but every impartial investigation thus far has conclusively proved that labor is better paid, and the average condition of the laboring man more comfortable, in the United States than in any European country.

"An adjustment of the protective duty to the point which represents the average difference between wages of labor in Europe and in America, will, in the judgment of protectionists, always prove impracticable. The difference can not be regulated by a scale of averages, because it is constantly subject to arbitrary changes. If the duty be adjusted on that basis for any given date, a reduction of wages would at once be enforced abroad, and the American manufacturer would in consequence be driven to the desperate choice of surrendering the home market or reducing the pay of workmen. The theory of protection is not answered, nor can its realization be attained by any such device. Protection, in the perfection of its design as described by Mr. Hamilton, does not invite competition from abroad, but is based on the controlling principle that competition at home will always prevent monopoly on the part of the capitalist, assure good wages to the laborer, and defend the consumer against the evils of extortion.

"An argument much relied upon and strongly presented by the advocates of free trade is the alleged tendency to overproduction of protected articles, followed uniformly by seasons of depression and at certain intervals by financial panic and widespread distress. These results are unhappily too familiar in the United States; but the protectionists deny that the cause is correctly given. They aver, indeed, that a glut of manufactured articles is more frequently seen in England than in the United States, thus proving directly the reverse of the conclusion assumed by the free-traders, and establishing the conservative and restraining power of a protective tariff. The protectionists direct attention to the fact that the first three instances in our history in which financial panic and prolonged depression fell upon the country followed the repeal of protective tariffs and the substitution of mere revenue duties: the depression of 1819–'24, that of 1837–'42, and that of 1857–'61. They direct further attention to the complimentary fact that in each of these cases financial prosperity was regained through the agency of a protective tariff, the operation of which was prompt and beneficent.

"On the other hand, the panic of 1873 and the depression which lasted until 1879 undoubtedly occurred after a protective tariff had been for a long time in operation. Free-traders naturally make much of this circumstance. Protectionists, however, with confidence and with strong array of argument, make answer that the panic of 1873 was due to causes wholly unconnected with revenue systems; that it was the legitimate and the inevitable outgrowth of an exhausting war, a vitiated and redundant currency, and a long period of reckless speculation directly induced by these conditions. They aver that no system of revenue could have prevented the catastrophe. They maintain, however, that by the influence of a protective tariff the crisis was long postponed; that under the reign of free trade it would have promptly followed the return of peace when the country was ill able to endure it. They claim that the influence of protection would have put off the reaction still longer if the rebuilding of Chicago and Boston, after the fires of 1871 and 1872, had not enforced a sudden withdrawal of $250,000,000 of ready money from the ordinary channels of trade to repair the loss which these crushing disasters precipitated.

"The assailants of protection apparently overlook the fact that excessive production is due, both in England and in America, to causes beyond the operation of duties either high or low. No cause is more potent than the prodigious capacity of machinery set in motion by the agency of steam. It is asserted by an intelligent economist that if performed by hand the work done by machinery in Great Britain would require the labor of seven hundred millions of men; a far larger number of adults than inhabit the globe. It is not strange that with this vast enginery the power to produce has a constant tendency to outrun the power to consume. Protectionists find in this a conclusive argument against surrendering the domestic market of the United States to the control of British capitalists, whose power of production has no apparent limit. When the harmonious adjustment of international trade shall ultimately be established by 'the parliament of man' in 'the federation of the world' the power of production and the power of consumption will properly balance each other; but in traversing the long road and enduring the painful process by which that end shall be reached the protectionist claims that his theory of revenue preserves the newer nations from being devoured by the older, and offers to human labor a shield against the exactions of capital."

Rivers and Harbors.

SPEECH

OF

HON. GEORGE W. RAY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. RAY, of New York, said:

Mr. CHAIRMAN: The annual plunder bill of Congress is now before this House for adoption. It is proposed to appropriate twelve and one-half millions of dollars for so-called river and harbor improvements, but the committee has very aptly added to the title of the bill "and for other purposes." What these "other purposes" are the bill does not disclose, but from the general scope and character of these proposed appropriations I conclude that they are simply ways and means of reducing the surplus in the Treasury and promoting the interests of those gentlemen whose districts receive the benefit of the proposed appropriations. I am in favor of liberal appropriations for all necessary work in improving our navigable rivers and all our harbors, but I am opposed to this bill, because it is stingy and inadequate with reference to necessary work and liberal and profligate with regard to mud creeks, mountain brooks, and frog-ponds.

I am in favor of any appropriation that will aid to build up and facilitate internal commerce, but I am unalterably opposed to appropriations of money to be used for purposes having no tendency in this direction and that can only be useful in giving employment to laborers in uselessly blasting rocks, digging gravel, and carting mud.

Debate over this bill has now continued three days, and about two hundred amendments have been offered, and, with two or three immaterial exceptions, each in its turn has been voted down. About two hundred speeches referring to these proposed amendments have been made, and not one has commanded attention or been considered. Every member on this floor is now suspicious that this bill has been cut and dried; that those having pork in the pie are to stand by it in its present shape, each offering a proposed amendment increasing his proposed appropriation as buncombe for the entertainment of his constituents.

It seems to be equally well understood that each and every proposed amendment is to be voted down and that the bill is to become a law. Why this continued debate; why this waste of words; and why this waste of valuable time? I am at a loss to understand, unless it be to give to the bill an air of honesty, and to impress the country with an idea that the bill is being fairly, honestly, and soberly considered. The result is a foregone conclusion. The bill is to pass. Then let the work be done. Let the committee rise, report the bill. "If it were done, 't were well it were done quickly." Let us go about the important business that is claiming the time and attention of this House, and if possible direct the attention of the country to matters that will do us credit, not injury.

Propositions to make concededly needed repairs in the great harbors of the country, at Oswego, N. Y., New York city, and other points where the commerce of the nation is floated, have been voted down, and the appropriations for these points are but about 10 to 20 per cent. of the estimates, while small streams that during the greater part of the season will not float a small fish receive 50 to 75 per cent. of the estimates.

I say it was a great shame to deny the appropriations asked to complete the grand work commenced at Hell Gate, and which, when completed, if it ever is, will repay to this country the outlay a thousandfold.

I know how useless it is to oppose this bill, but at the same time I desire to announce in advance that I shall vote against it, and I desire the record to show one or two of my reasons for this action.

It has been the pretended policy of the Democratic majority of this House to cut down appropriations, and so the Post-Office appropria-

tions are reduced below the actual demands of the service, the diplomatic service is crippled, a navy is denied us, and yet when it comes to an appropriation of millions of dollars to be expended mainly in the alleged improvement of small unheard-of streams that never have and never can float a canoe, except in times of floods, we find the whole House impatient to consummate the act. I for one hesitate not to denounce this bill and the theory upon which it is founded. And I sincerely trust that no Republican will support this bill even though his vote has been bidden for by promise of a piece of the pork.

It is not extravagance to appropriate large sums of money for good purposes—purposes that will benefit the country, build up its commerce, and facilitate internal communication, but it is extravagance, and extravagance of the worst description, to appropriate twelve and one-half millions of the people's money and expend it in alleged improvements upon the two hundred and more small streams named in this bill, so insignificant that they find no place on the ordinary maps of the country, and that they could hardly be discovered by a surveying party.

It is the waste, the squandering of money that the people complain about, not the proper and useful expenditure thereof. This is a great country, with thousands of miles of coast and hundreds of harbors. It required the annual expenditure of large sums of money to keep these harbors in proper condition, and I am ready and willing to give my vote for any bill that properly appropriates money for needed improvements. But I stand here to denounce the policy of this bill which absolutely ignores the needs of our large harbors and scatters the money through the different States to be used on streams that never have floated and that never can float commerce.

It may be defensible on some occasions to do a small wrong in order to accomplish a great good, but it is not defensible to perpetrate a great wrong, a great robbery of the public Treasury, simply to do a small good, if I may be allowed the expression, namely, to obtain at the hands of this Congress a small pittance of the money absolutely needed to keep in repair our great harbors.

If this bill is defeated, as it ought to be, the responsibility should rest on the Democratic party, the father of this indispensable bill. If our harbor and river improvements stop, let that party take the responsibility. And let it be a warning to any party in the future to appropriate money for the wants of the country, and not for the emolument of certain sections or districts.

The Tariff—Taxation to Raise Revenue for the Public Purposes of Government only—Commerce Unobstructed and Agriculture Emancipated.

SPEECH

OF

HON. JAMES H. JONES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884.

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. JONES, of Texas, said:

Mr. CHAIRMAN: In the discussion of the tariff question I can not hope to do much more than declare my opposition to the protective system, and in behalf of my constituents, whose wishes I voice here, insist that Congress shall take one step, though it be a short one, in the direction of tariff reform. That is all that the bill now under consideration proposes to do.

The country has been so long subordinate to the exactions and control of the protective system that a wise and statesmanlike policy suggests that reform from taxation for protection to taxation for revenue should be not by violent change in the system, but by such prudent and cautious reductions that the "business interests" which have grown to unnatural proportions under the unhealthy stimulation of protection should have time to adjust themselves to the new condition and prepare to rely upon legitimate profits and business principles rather than upon the Government to foster and nourish them from the hard-earned and scanty treasures of the toiling multitudes, who have been so patient under the heavy burdens they have borne.

The people have waited already too long for the protected bantlings to become self-sustaining and able to maintain themselves with less assistance from them through protection by the Government. Protective tariffs have been denounced by political economists and "theorists" in all ages as unwise and as obstructive of all the industries of the country which enacted them and finally hurtful to the protected interests themselves. The great leaders of the Democratic party have denounced them as unconstitutional, unwise, and unjust from the time of Thomas Jefferson to the present. But the same school of statesmen in the United States have advocated a tariff for revenue as the best method of taxation to support the Government, insisting that even a revenue tariff would afford sufficient protection to the manufacturing interests of the country. And those who advocated protection in the beginning or early part of the present century, when the duty on imports was comparatively small, less than 20 per cent. ad valorem, insisted that the period of protection would be short and the necessity for it would cease in a few years and the protected interests would be able to compete with all foreign rivals. Mr. Clay, who is so often quoted by the advocates of protection, and whose advocacy of the system was rather to enable the protected industries to pass the trying ordeal of infancy than to give permanent bounties to them, in a speech in favor of the tariff of 1816, said:

> The object of protecting manufactures was that we might eventually get articles of necessity made as cheap at home as they could be imported, and thereby to produce an independence of foreign countries. In three years, he said, we could judge of the ability of our establishments to furnish those articles as cheap as they were obtained from abroad and then could legislate with the lights of experience. He believed that three years would be sufficient to place our manufactures on the desirable footing.

And yet the demand is, after seventy years: "Give! give!" Would that great patriot, statesman, and lover of justice, were he here, advocate the present tariff? The present high tariff was adopted as a necessity; its advocates said, on account of the civil war. Is it a necessity now? The Treasury is burdened with a surplus of money. It is estimated that in addition to the present great surplus there will be at least $50,000,000 per annum in excess of the requirements of the Government.

The President in his message and the Secretary of the Treasury in his report to Congress, representatives of the advocates of protection, declare there is no necessity for continuing the present high tariff, and urge the reduction of the revenue. The Secretary in his report to the Forty-seventh Congress says:

> In view of the large sum that has already been paid by the present generation on the debt, and the heavy taxation that now bears upon the industries and business of the country, it seems just and proper that another generation should meet a portion of the debt, and that burdens now laid upon the country should be lightened.

Again he says in the same report:

> Is it a beneficial exercise of governmental power to raise money by taxation in greater sums than the lawful demands upon the Government require, when these demands are of themselves a heavy burden upon the industry and business of the country?

The President, in his message to the Forty-seventh Congress, in alluding to the tariff, said:

> If a careful revision can not be made at this session, a commission, such as was lately approved by the Senate, and is now recommended by the Secretary of the Treasury, would doubtless lighten the labors of Congress whenever this subject shall be brought to its consideration.

The Tariff Commission, composed of high protectionists, after exhaustive investigation and labor, was constrained to recommend a reductionof the tariff from 20 to 25 per cent. I quote from their report to Congress:

> Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by the mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of a public sentiment and a measure of justice, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties except for the establishment of new industries which more than equalize the conditions of labor and capital with those of foreign competitors can be justified. Excessive duties or those above such standard of equalization are positively injurious to the interests which they are supposed to benefit.
>
> * * * * * * *
>
> If the reduction reaches the amount at which the commission has aimed and if there is any truth in the allegation of the opponents of the present economic system, that a duty on articles such as are produced in this country, whether in manufactures or agriculture, enhances the price to the consumer, not only of what is imported but of the whole domestic production, to an amount of which the duty is the measure, the reduction proposed by the commission would benefit consumers to the extent of hundreds of millions of dollars.

After all these things had been said and done by the defenders and even advocates of protection, after full and exhaustive investigation of the protective tariff then existing and its effect upon the business and prosperity of the country, the Forty-seventh Congress, after an effort by "ways that were dark and methods that were mysterious," adopted to deceive the country into the belief that the tariff was reduced, by accident or mistake reduced taxation less than 1¾ per cent., instead of from 20 to 25 per cent. as recommended by the commission. Will the people be deceived and hoodwinked longer? The Morrison bill proposes to lighten the burdens of the people by reducing the rates of tariff taxation about 20 per cent. But the opposers of the bill say the revenues will be increased by the reduction of duties as proposed in the bill. If this position be correct, and the reduction of duties on imports should induce larger importations and thereby increase the revenue, yet the people, the consumers, will be benefited to the extent of this reduction, estimated by the Tariff Commission to be hundreds of millions, and the additional reduction in the price of goods through the competition that would follow heavier importations. Can the patriot or the statesman object to this result? If it should result from the passage of the bill

under consideration that the revenues would be increased and that the people should be even partially relieved of the burdens that press so heavily upon them, it would be a demonstration of the fact that the opposers of the bill care not for the tired and weary millions of the poor laboring masses, but are anxious to promote the "business interests" of the few, building up and sustaining in a Government that boasts that it was created by the people, for the people, and, unlike any other government, one that rests upon the consent of the governed, an aristocracy of wealth at the expense of the millions from whose labors these parvenues are maintained through unjust, oppressive, and unconstitutional tariff laws.

How long will these oppressions be tolerated? Mr. Clay thought three years of protection would enable the protected industries to furnish as cheap productions as could be furnished from abroad. But seventy years have gone, and the protected industries have increased and developed under the most favorable conditions, but we are told the time has not yet come for the reform movement. Will the revenue not continue to increase and the surplus to be piled up in useless inaction if this bill is defeated or until there is a reduction of the tariff? The Secretary of the Treasury in his report to the present Congress says:

The estimated receipts for the current year from customs are $195,000,000, a reduction of less than $20,000,000. Considering that there has been some depression of business during the past year, it is probable, should business revive, that the revenues from customs under the present law will in succeeding years increase rather than diminish.

* * * * * * *

That by reason of the legislation of the last Congress the repeal of internal-revenue taxes was expected to effect a reduction of about $35,000,000, whereas the aggregate reduction and the augmentation from the receipts from distilled spirits together will be only about $25,000,000 less than the preceding year; altogether the absolute reduction will be actually $30,000,000 less than was contemplated by the legislation of last winter.

The President, the Secretary of the Treasury, the Tariff Commission, and a large majority of the people at the last election asked that the revenues be reduced to the wants of the Government economically administered. The Tariff Commission, whose business it was to thoroughly investigate the interests and industries of the whole country, says in the portion of its report which I have just quoted:

The reduction proposed by the commission would benefit the consumers to the extent of hundreds of millions of dollars and will conduce to the general industrial prosperity, and though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction.

Robert J. Walker, the author of the tariff of 1846, in a letter addressed to the people of the United States on the 30th of November, 1867, contrasting the principles and results of the revenue tariff of 1846 with the present tariff for protection with incidental revenue, said:

A tariff for revenue, as experience has shown, instead of depressing, improves all industrial pursuits, including manufactures, and vastly augments the wealth of the country. Under the tariff of 1846, as shown by the census, our wealth increased from 1850 to 1860 126.45 per cent.; whereas from 1840 to 1850 the increase was only 64 per cent.; from 1830 to 1840, 42 per cent; and from 1820 to 1830, 41 per cent. So also from 1850 to 1860 our agricultural products increased 95 per cent. and our manufactures 87 per cent., being in both cases nearly double any preceding ratio of increase. So also our exports, imports, and revenue nearly tripled in the same period of time, and our domestic trade rose nearly in the same ratio.

We have the evidence of the tariff commissioners, the evidence of Robert J. Walker, second to no financier this country has produced, supported by facts and figures that demonstrate the correctness of his theory, that the protective tariff system is not promotive of the industries of the country, but that a tariff for revenue, "instead of depressing, improves all industrial pursuits, including manufactures, and vastly augments the wealth of the country."

He further states, in the celebrated report he made as Secretary of the Treasury to Congress on the 11th day of December, 1848:

A vast majority of the labor of this country is employed in agriculture, commerce, navigation, and the non-protected pursuits, and if these are depressed their profits are reduced, the wages of those employed in such pursuits fall, many are thrown out of employment, and thus a general fall of wages ensues, and the protected manufacturer eventually obtains labor at a reduced rate. The effect of a protective tariff, in truth, is not to enhance wages, but to depress them, and render capital invested in manufactures more profitable by enhanced prices of the protected fabrics. Wages throughout the whole country become lower than they were before, because the aggregate profits of the capital of the nation engaged in all its industry is diminished. Wages in one branch of industry can not be high when they are low in all others, for wages, like all other commodities, unfortunately will soon find the same level. The aggregate profits of all the labor of the country and not of any particular branch of industry constitute the fund out of which wages are paid, and if that general fund is reduced by diminished profits wages throughout the whole country must eventually fall. If, then, the great mass of labor in this country and of capital is invested in agriculture, commerce, navigation, and such branches of industry as require no protection, and these pursuits are injured by a protective tariff, either by diminishing the market for the surplus raised by those thus employed, reducing the price of what they sell, or compelling them to pay more for what they buy, there must be in time a general fall of wages throughout the country, even though a particular branch of industry may have been rendered more profitable by a protective tariff. This duty, then, instead of a protection is a tax upon the whole industry of the country invested in pursuits requiring no tariff.

* * * * * * *

The protective system is agrarian and a war upon property. It attempts to organize labor and capital by law, adding to the profits of one pursuit by reducing that of another. It is incompatible with the security of capital or labor; for capital is but the accumulation of the gains of labor, and therefore whatever destroys the security or profits of capital results in an equal injury to labor. Besides its injurious effects upon industry it is an arbitrary and despotic power; and if the people should become accustomed to its exercise, looking for legislative support and protection, it would terminate in a struggle for the division and distribution by Congress every year of property, profits, and capital among the favored classes.

The following table of statistics, arranged by Hon. W. M. SPRINGER, of Illinois, fully sustains the Tariff Commission in its report that "the reduction proposed by the commission would benefit consumers to the extent of hundreds of millions of dollars." It shows that while the Government received revenue under the operation of the tariff in 1882 in amount $194,464,758, the people of the United States paid the additional amount of $556,938,637 in incidental taxes, being the increased cost of home products by reason of the tariff, making an aggregate sum of $751,403,395 paid by consumers under the operations of the tariff:

Statement showing the amount of incidental taxes annually imposed on the people of the United States in the increased cost of home products by reason of discriminating duties on imported articles of like character, together with the value of such home products, the amount of wages paid and number of hands employed, and the imports and duties received thereon, for the year 1882.

Articles affected by the tariff.	Merchandise imported during the fiscal year ended June 30, 1882.			Value of home product, census year 1880.	Average number of hands employed. Boys under 16 and girls under 15 counted as one-half a hand.	Total amount in wages during the year.	Estimated rate of increase ad valorem.	Incidental taxes, being the increased cost of home products by reason of the tariff.
	Values.	Duty received.	Average ad valorem rate.

a Planters' product for 1880 was: Sugar, 196,756,200 pounds; molasses, 16,573,273 gallons. b Number and wages of laborers not stated.

But we have no statisticians or experts who can estimate the loss that our agricultural interests have sustained for want of a foreign market for their surplus products, that has been denied them by our protective tariff. Their losses may be estimated to be millions of dollars. With a market in which our surplus agricultural products could be sold for money or exchanged for the products of other countries that our people need and would buy, profits would be realized that we can make no estimate of, but which we may safely say would add greatly to the wealth of the country, and which would certainly stimulate production and thereby lay a broader and firmer foundation upon which all other industries could build. Agriculture is the basis of the prosperity of the country, and has sustained it in all the financial crises through which it has passed, and it should not be forced by tariff legislation to support industries that can not prosper without protection.

The protectionist's theory is that manufactures and agriculture will find sufficient markets at home. How absurd this position is. Over 6,500,000 bales of cotton are produced in the United States annually, in fact more is grown, and only about 1,500,000 bales are manufactured in the United States. The balance, to wit, 5,000,000 bales, finds markets in other countries; this is the surplus. It is estimated that the cereals produced in the United States in 1880 amounted to 2,710,000,000 bushels, and hundreds of thousands of bushels of this crop were sold in foreign

markets for want of a home market. The American hog has been sent to other countries, because there was no home market, in such quantity as to make it necessary for some of the nations of Europe to exclude it by a protective tariff. Our beef is being sent to Europe by the thousand head annually till it is beginning to excite opposition even in Great Britain. Our manufacturers can produce 25 per cent. more than they do if they could get markets for their products; as it is they greatly overproduce and close up for weeks and months at a time.

If it were possible to so equalize production and consumption in the United States as to have no surplus how could the country grow and prosper? Our farmers must make less cotton, cereals, pork, and beef. When they do that they will have nothing to buy the manufactures of the country with. It is a Chinese policy that the civilization and enterprise of America must and will reject. The census report shows that the value of farming implements and machinery in the United States in 1880 was $406,520,055. It is a low estimate to say of this vast sum the farmers are forced by the tariff to pay to the monopolists about $135,000,000 more than they would have to pay if we had a tariff for revenue instead of a protective tariff. The farmer is entirely without protection, but he is forced by tariff laws to aid in protecting the manufacturing classes. Let us not kill the goose that lays the golden egg. Agriculture should be emancipated.

But the advocates of protection and their allies who oppose this bill, even those who admit that the present tariff is illegal, unjust, and oppressive, say: "Do not agitate the question now; the poor workers in the mines, the operatives in the factories, must be better paid than the paupers of Europe, and to do so the present rates must be continued." If the factories can not pay their employés living wages without bounties through tariffs, what law or code of ethics justifies the Government, under the power to collect duties on imports to pay the debts and provide for the common defense and general welfare, in imposing burdens on all the people to enable the manufacturers to pay their laborers wages that will enable them to continue their business? The business interests are not established by the Government and for national benefit. They are the private property of individuals. The profits do not go into the public Treasury, but into the pockets of the private owners.

If the millions that are invested in manufactories are taxed by the States in which they are located, the revenue thus obtained is for the benefit of those States and their local institutions. The other States derive no benefit from the revenue; yet all the people of all the States must share with the manufacturers in paying the workmen whose skill and labor have added such fabulous wealth to individuals and given such influence to their States. Is Texas to contribute to the fund out of which Pennsylvania is to pay her citizens who work in the mines or factories? Each State should provide for its own poor. Each State must protect the lives, limbs, health, comfort, and quiet of its citizens, and it is a flagrant usurpation for Congress to compel the citizens of one State to contribute to the institutions or to the people of another State, that they may be enabled to pay their laborers better wages and thereby promote their business interests. Such a proposition shocks the lover of the just and honored doctrine that the blessings of government should fall equally upon all and that unjust privileges should be given to none.

Once the plea for protection was the infancy of our manufactures. Now that they are hoary with age and strong in their maturity the plea for the continuance of the system is that the laborers should be better paid than the same class of laborers are paid in Europe, and that all the people ought to contribute to this worthy purpose; but the money thus extorted must be paid to the wealthy owner, and he can pay it, if he choose, to his wage laborer. But do the laborers get full and regular wages? Let the thousands who are asking for wages, who are asking for work, answer. If labor is to be protected, why should Congress not compel the manufacturer to give such a percentage of the products of the mines and factories to the workman, that the laborer may have constant employment? If the protective system can be continued for the purpose of dignifying American labor by Congressional action, it seems that Congress might and should by law provide that the wage laborer should receive a fixed percentage of the profits of the protected interest and should have protection against the introduction of foreign pauper labor, and should be further protected against arbitrary reductions of wages and against dismissal from employment at the pleasure of his employer.

If Congress has power to lay duties on imports for the protection of labor engaged in manufactures, it certainly has power and it is the duty of the Government to protect the laborer as before suggested. But all will say that this is a monstrous and outrageous proposition. But is it more monstrous and outrageous to take from the farmer to give to the manufacturer, that he may be able to dignify and ennoble his wage laborer, than it is to compel by law the manufacturer to pay over to his laborer that which he has received from the farmer for that purpose and which he withholds.

Both propositions are monstrous. Labor is dignified only by being left free; man is noble and happy as he is free to exercise his powers and faculties in providing for himself and his dependents in his own chosen methods. Let the farmer sell where he can get the most for his products, let him buy where he can get the cheapest market. Let the wage laborer do the same, and labor and capital will meet upon a level and together move forward in harmony and prosperity, as they did under the wise system of taxation even in this country from 1846 to 1861. Then all interests prospered. There was constant employment for all who wanted employment, at wages that satisfied the laborer in the field, in the mine, in the factory, on the ocean under the flag of his country, and in every vocation, as the tastes or habits of the individual suggested. Our manufactures were healthy and prosperous then, giving constant employment to the employé, with good wages; no shutting up of factories for months till the surplus could be disposed of at arbitrary prices to consumers at home, but the surplus was then taken in American ships to the uttermost parts of the earth and sold or exchanged to strangers and foreigners, and the returns or sales thus made added to the wealth of the capitalist, and he was enabled to carry on his "business interests" with the foreigner's money instead of the money extorted from his neighbor by tariff laws as at present. The protective system is both immoral and unlawful.

The Supreme Court of the United States say in the case of the Loan Association *vs.* Topeka (20 Wallace, page 657) that—

> The power to tax is therefore the strongest, the most pervading of all the powers of the Government, reaching directly or indirectly to all classes of the people. It was said by Chief-Justice Marshall, in the case of McCulloch *vs.* The State of Maryland, that the power to tax is the power to destroy. A striking instance of the truth of the proposition is seen in the fact that the existing tax of 10 per cent. imposed by the United States on the circulation of all other banks than the national banks drove out of existence every State bank of circulation within a year or two after its passage. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there is no implied limitation of the uses for which the power may be exercised.
>
> To lay with one hand the power of the Government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprises and build private fortunes is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms.
>
> Nor is it taxation. A "tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by government for the use of the nation or state." "Taxes are burdens or charges imposed by the legislature upon persons or property to raise money for public purposes."
>
> Coulter, J., in Northern Liberties *vs.* Saint John's Church, says, very forcibly, "I think the common mind has everywhere taken in the understanding that taxes are a public imposition, levied by authority of the government for the purpose of carrying on the government in all its machinery and operations; that they are imposed for a public purpose."

We need not refer to the decision of the Supreme Court of the United States or of any other country to determine that it is immoral or even legal robbery to take from one man to give another, or to enable one man or a class of men to exact of another man or class of men more for what they have to sell than the same article is worth in other markets, that he is prevented from buying in by tariff law.

The question recurs, are the "business interests" prosecuted for the benefit of the laborer, to elevate him in the scale of being, to put him upon a higher plane here, than the laborer in the same kind of business occupies in Europe, or are they prosecuted for the benefit of and to increase the wealth of the individuals whose capital is invested? The answer is easy. It is to advance the interest of the individuals whose capital is invested in the protected business, whether the wage laborer is benefited or not. If the other industries of the country are taxed to build up or protect the special interest, it is robbery under the forms of law according to the decision just quoted from. If the common laborer, the farmer, or artisan can not explain why the protective system is wrong as the political economist or the theorist can, he can look back to other periods in the history of our own Government not far distant, when we had a tariff for revenue and not for protection, and he can see a contented, prosperous, and happy people; he then beheld a nation of freemen—yes, American freemen, each man a nobleman—in generous rivalry with his neighbor, each hoping and bravely laboring for improvement, encouraged by inviting prospects. He saw Americans in every clime reaping honors and wealth in all countries and among all peoples, protected by a country whose flag was respected everywhere. Wherever commerce was carried Americans went in their ships to trade and increase their wealth. He now beholds the country as it is. He visits the factories; they are shut up a part of the time. The miners are on a strike; the farmers are without a market for their surplus; there is a great deal of wealth, but it is owned by a few, who have been enriched by the protection which the Government has given them. They are in palaces and enjoy luxuries, while the poor in the country or in the centers of population, in the towns and cities, numbering thousands and millions, are homeless, without employment, vainly seeking work, dispirited, even meditating crime in their despair. "Our seamen are all dead and their ships are rotten."

These are the fruits of protection. We have a protective tariff now. But then—that is, when he beheld our country prosperous and our people happy and contented—we had a tariff for revenue. He can not tell you why these changes have been made; but he will state as a fact that under a Democratic tariff for revenue from 1846 to 1861 the country was prosperous, all the industries, even wool-growing, manufactures of woolen and cotton goods, mining, manufacture of iron and steel, as well as agriculture, were thriving, with a large foreign trade carried on largely in American ships, and better than all, the people, including the laborer, were happy and contented. He will contrast that time with its attendant blessings with the present with its attendant horrors and woes, and he will say it is a fact that the country has been dominated by the op-

ponents of Democratic policies since 1861, and they have substituted the tariff for revenue with a tariff for protection.

The Democracy propose, by the bill known as the Morrison bill, partial relief to the people. But the advocates of the present protective tariff, the cause of so many of our woes, even some who claim to be Democrats, say, "No, not now." This bill may be defeated. Truth is not always popular, but the brave and true Democracy will not be discouraged. They will go to the people with their banners flying, and their motto will be, "Equal rights to all; unjust and unconstitutional privileges to none." And who can doubt the result in November next? Truth will prevail and Democracy will be triumphant. Then war tariffs and all the oppressions of the war will disappear from the land, and peace, with its natural and just methods, will fill our borders again, bringing contentment and rest to the people, and all will feel and realize that America is again the land of the free and the home of the brave. To accomplish these grand objects is the mission of the Democratic party.

Jurisdiction of Circuit Courts.

SPEECH

OF

HON. HORATIO BISBEE, JR.,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1884,

On the bill (H. R. 1578) to amend sections 1, 2, 3, and 10 of an act to determine the jurisdiction of the circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes, approved March 3, 1875.

Mr. BISBEE said:

Mr. SPEAKER: I desire to state some objections to the passage of this bill. The object of the bill is to take from the Federal judiciary a large portion of the jurisdiction conferred upon it by existing law, and determine its power and authority. Such being its object, it ought to secure the attention of the House and receive careful consideration.

I do not suppose that either the people or political parties of this country will ever cease to differ as to the true boundary line between State and national power, especially with respect to the judicial departments of the respective Governments; but I think we all should be able to agree to confer, and when conferred not to curtail, the judicial power which beyond all controversy is within the authority of Congress to grant. The Constitution commands that "all legislative power herein granted shall be vested in a Congress of the United States;" that "the executive power shall be vested in a President of the United States of America," and that "the judicial power shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish."

I contend that each of these three great departments of government should be so organized that either may exercise any power which the Constitution contemplated should be vested in it whenever an emergency for its exercise arises. I do not believe that Congress has any right, if it could, permanently to deprive itself of any of its authority; nor do I believe that it has any more right to attempt to withhold from the President any authority which is given him by the Constitution, nor from the judiciary any power which that instrument commands shall be conferred upon it. But this is just what the bill under discussion proposes to do. Without reading existing statutes or the bill itself, I will, before proceeding further, state in what respects this bill proposes to amend the existing law.

The bill as reported from the Judiciary Committee, in the first place, prohibits the circuit court from taking jurisdiction in any suit of a civil nature at common law or in equity between citizens of different States where the amount in controversy, exclusive of interest and costs, is not more than $2,000, the limitation being now $500, exclusive of costs.

Second. It provides that no suit shall be maintained between citizens of different States, except in the case where one of the parties—plaintiff or defendant—is a resident of the district where the suit is brought. The language of this part of the bill is: "Where the controversy is between citizens of different States, suit shall be brought only in the district of the residence of either the plaintiff or the defendant." Under existing law a citizen of one State may sue a citizen of any other State in any State in the Union.

Third. The bill takes away the right of removal from the State courts, with one unimportant exception, in all cases, except where the application for removal is made by a non-resident defendant.

Fourth. It provides that a corporation created under the laws of one State and doing business in another State can neither sue nor be sued in such other State.

Fifth. That an assignee can not maintain a suit upon any contract unless a suit could have been maintained thereon if no assignment had been made, except upon bills of exchange, and it repeals entirely section 640 of the Revised Statutes. These, briefly stated, are the principal features of the bill.

It will be observed at a glance by any one at all familiar with the jurisdiction of the Federal courts that the bill excludes from these courts a very large class of citizens, who can now resort to them, if they prefer them to the State courts, and who do resort to them.

Before discussing the provisions of the bill in detail I will state what I have to say as to the duty of Congress with respect to this very important subject of the judicial power of the National Government.

No one denies that the Constitution authorizes all the jurisdiction conferred by the act of March 3, 1875, a part of which this bill proposes to take away. I do not understand that the friends of the bill pretend that any power conferred upon the courts by the act of March 3, 1875, is not authorized by the Constitution.

It is not sought by this measure to curtail any judicial power of the National Government on the ground that any of the rights or sovereign powers of the States have been invaded. The most extreme State-rights or State-sovereignty advocate does not assert this as a justification of the proposed legislation; and this discussion is relieved of any controversy over any question of actual conflict between State and national power.

The advocates of the bill contend that as a matter of expediency and sound policy the Federal Government should not exercise in its judicial department certain jurisdiction and authority which it is conceded has been constitutionally conferred upon it.

And, Mr. Speaker, this raises for consideration the question whether it is discretionary with Congress, with its political majority shifting from one side to the other of its Chambers, resulting from the state of public opinion on other subjects, to grant to or withhold from the Federal courts authority or jurisdiction which the Constitution directs shall be conferred upon them. I deny that this matter has been left to the discretion of Congress in the broad sense which the proposition assumes. The preamble of the Constitution recites one of its objects was to establish justice. To do this it was provided that its judicial power should extend to controversies between citizens of different States and that all judicial power shall be vested in one Supreme Court and such other inferior courts as may be necessary.

I assume what no one will deny, that it was the duty of Congress to create such inferior courts. And for what purpose were they created? Certainly for the purpose of exercising judicial authority. What authority was it contemplated they should have? Unquestionably that authority which Congress was directed to confer by the Constitution. Now the question presented is whether Congress may at its discretion grant to the courts a part and withhold a part of the power which the organic and supreme law ordains shall be vested in such courts. I believe it is contrary to the correct theory of our Government to hold that Congress may take from the judicial department any of its jurisdiction over suits between citizens of different States which it has once conferred in obedience to constitutional provisions. I maintain that no part of the judicial authority of a great government like ours should lie dormant, beyond the reach of the citizen to invoke if he desires to do so. The Constitution was framed and adopted for the benefit of the minority as well as the majority at all periods of its existence.

The promise and assurance were given to all the people who ratified it through their agents that with respect to certain controversies each citizen should have an impartial tribunal, beyond the reach of local prejudice or local influence, to which at all times he could appeal for justice and for redress of his wrongs. It is true that the circuit and district courts can exercise no jurisdiction not conferred by an act of Congress, and that the statute and Constitution must concur in vesting them with authority. And it is, therefore, true that Congress has arbitrary power to withhold a part or all the jurisdiction which it is its duty to confer. But it is purely an arbitrary power. It might have refused to create any inferior courts at all, but it would have been a refusal to obey the Constitution. Will it be contended that Congress may abolish the circuit and district courts? It certainly has just as much right to abolish them as it has to withhold their rightful jurisdiction after they have been created. And if we can withhold a part we can all authority, and leave such courts without any functions whatever to perform—a mere skeleton of judicial department, without vitality or force.

Mr. Speaker, it can not be that such is the character of the Government under which the people of this country are living.

Nor are we without judicial authority upon this subject. In the case of Martin *vs.* Hunter (1 Wheaton, 304) the Supreme Court discussed article 3 of the Constitution. Delivering the unanimous opinion of the court, Justice Story said:

Let this article be carefully weighed and considered. The language of the article throughout is manifestly designed to be mandatory upon the Legislature. Its obligatory force is so imperative that Congress could not without a violation of its duty have refused to carry it into operation.

"The judicial power of the United States shall be vested [not may be vested] in one Supreme Court, and in such inferior courts as Congress may from time to time ordain and establish." * * *

The judicial power must therefore be vested in some court by Congress; and to suppose that it was not an obligation binding on them, but might at their

pleasure be omitted or declined, is to suppose that under the sanction of the Constitution they might defeat the Constitution itself. A construction that would lead to such a result can not be sound. * * *

If, then, it is a duty of Congress to vest the judicial power of the United States, it is a duty to vest the whole judicial power. The language if imperative as to one part is imperative as to all. If it were otherwise, this anomaly would exist: that Congress might successively refuse to vest the jurisdiction in any one class of cases enumerated in the Constitution and thereby defeat the jurisdiction as to all; for the Constitution has not singled out any class on which Congress are bound to act in preference to others. * * * It would seem therefore to follow that Congress are bound to create some inferior courts in which to vest all that jurisdiction which under the Constitution is exclusively vested in the United States and of which the Supreme Court can not take original cognizance. They might establish one or more inferior courts; they might parcel out the jurisdiction among such courts from time to time at their own pleasure. But the whole judicial power of the United States should be at all times vested either in an original or appellate form in some courts created under its authority.

Such were the views of our Supreme Court when John Marshall, the great expounder of the Constitution, was Chief-Justice, who concurred in the opinion from which I have read. Such was the judgment of the distinguished jurist whose statue we have recently erected and unveiled upon the grounds of this Capitol with imposing ceremonies.

I know it is claimed that the Supreme Court has held that Congress is not bound to vest in the courts all the jurisdiction that it can under the Constitution. The cases of McIntire *vs.* Wood (7 Cranch), Kimball *vs.* United States (12 Peters), Coy *vs.* Custis (3 Howard), and Turner, administrator, *vs.* The Bank of North America (4 Dallas) are sometimes referred to as sustaining this view. I have examined all these cases carefully, and there is nothing in any of them to sustain the conclusion that the Supreme Court has given its sanction to the doctrine that Congress may rightfully withhold from the Federal courts any jurisdiction that belongs to them. I have found no decision in conflict with the views of the court in 1 Wheaton, from which I have quoted, where the court declared that it was the plain duty of Congress to grant to the courts all the power that the Constitution contemplated should be granted to them. In 4 Dallas Reports, on page 10, is a note containing *obiter dictum* of Justice Chase, in which the latter is reported to have said:

> Congress is not bound, and it would perhaps be inexpedient, to enlarge the jurisdiction of the Federal courts to every subject in every form which the Constitution might warrant.

This language was not a part of the opinion of the court, which was delivered by Chief-Justice Ellsworth. This language of Justice Chase which I have quoted has been inadvertently referred to in some subsequent cases as if it were the opinion of the court. By referring to the report of the case itself it will be found that the court in its opinion did not discuss this question at all, and it was decided seventeen years before the opinion of Justice Story in 1 Wheaton was rendered.

Mr. Speaker, the Forty-third Congress, by passing the act of March 3, 1875, discharged its obligations to the people, and clothed the inferior Federal courts with very important and valuable jurisdiction, which prior to that time Congress had never conferred. This act of 1875, I am informed, was drafted by the late Senator Carpenter, of Wisconsin, whom we all know as a distinguished constitutional lawyer, but who never adopted so liberal a construction as other prominent statesmen have. This act was designed to distribute to the Federal courts all the jurisdiction which it was thought would ever be useful to the citizens, or which it would be necessary for them to invoke for the protection of their rights. Under it the circuit court has cognizance of all suits of a civil nature at common law or in equity where the matter in dispute exceeds, exclusive of costs, the sum or value of $500, and between citizens of different States without any other limitation.

The first material amendment proposed by the pending bill is to exclude from these courts all cases which do not involve over $2,000, exclusive of interest and costs. Two thousand dollars, exclusive of interest, is substituted in the place of $500, exclusive of costs, in the present law.

This amendment ought not to be adopted. It is an unwise and unjust discrimination against a large class of the people, who would not willingly surrender the right they now enjoy of seeking justice in the Federal tribunals.

The theory was, and is now, that in controversies between citizens of different States the Federal court would be beyond the reach of any undue influence that a citizen of a State might exert in his own State courts in a contest with a non-resident. I think the history of the country for the last ninety-five years has satisfactorily established that this feature of our judicial system is founded in the highest wisdom, and was essential to the speedy and impartial administration of justice between citizens of different States. And this is no reflection upon the judges of the State courts. Human nature is such that judges holding commissions from local authorities, surrounded by their neighbors and friends, with whom they are in constant social and business intercourse, are unconsciously affected by local influences, however independent and upright they may intend to be and ordinarily are.

This being so, why should dealers, traders, merchants, comprising a very large class of business men, whose transactions are small compared with those of greater wealth and powerful corporations, be excluded from this important tribunal?

It is not to be denied, it is a fact known to us all, that in a large majority of cases transactions between merchants and traders in different States involve less than $2,000. Merchants in our cities, towns, and settlements throughout the country who purchase to retail would be excluded from the Federal court, and their creditors also, under this limitation to $2,000. Men of moderate means whose transactions are numerous but not large in amount, though as large to them as $1,000,000 would be to a large capitalist or a wealthy corporation, would be driven entirely from the Federal tribunals. I repeat, it is creating a court for the capitalists and discriminating against a most worthy and useful class of people. It is wholly unnecessary, a tendency in the wrong direction, and against the interests of the great mass of people from whom the Government collects a great portion of its revenues and upon whom it must depend for its defense in time of war or public danger.

I can understand why the debtor class, more especially the dishonest debtor, should desire this section to become a law. It would enable them to vex and annoy their creditors by protracting litigation in the State courts.

The creditor compelled to bring his suit in the State court in all cases of claims for less than $2,000 would be taken by his debtor from the court of original jurisdiction through all the intermediate courts to the highest appellate court of the State, thus protracting litigation two or three years, even on frivolous grounds, at the end of which time probably a judgment would be unavailing; whereas in such a suit in the Federal court of original jurisdiction the judgment would be final in most cases when the amount in controversy is $5,000 or less. Therefore, if the object and purpose of this part of the bill is to aid debtors to delay and hinder creditors from collecting their claims, it is well calculated to accomplish the end in view. Such is its natural and reasonable effect, whatever may be the object and purpose of the bill, and I think it will be agreed on all hands that it is sound public policy to discourage litigation, and that legislation exclusively in the interest of the debtor class to the prejudice of the creditor class has nothing to recommend it.

Now, the only argument advanced in support of this amendment of the law is that it will diminish business in Federal courts. My answer to this argument is that the National Government is not a pauper, but is amply able to support all the national courts that may be necessary for the speedy trial of all cases that can come before them under the statutes as they now exist. The remedy for this objection, if it has any weight, would be more courts and not less jurisdiction for those already established.

The amendment in question would not diminish the labors of the Supreme Court, for the judgment of the circuit court is now final with few exceptions in all cases involving $5,000 or less. And the circuit courts, as a rule, are not more overburdened with business than are the State courts.

I come now to the second material change in the statute proposed by the bill. By the act of March 3, 1875, jurisdiction is conferred upon the circuit court in all cases of controversies between citizens of different States, without any other limitation as to the residence of either party to the suit

To illustrate: Under the present law a citizen of New York may sue a citizen of Pennsylvania in the Federal court in Virginia, if found there and service obtained on him, or if he voluntarily appears. The amendment proposed now is to restrict the jurisdiction over controversies between citizens of different States to cases where one of the parties, plaintiff or defendant, is a citizen of the State in which the suit is brought; so that a citizen of New York, if this bill should become a law, must sue a citizen of Pennsylvania either in the State of Pennsylvania or in the State of New York. If the law remains as it is, a citizen of New York can sue a citizen of any other State where he can be found and service made.

I am in favor of the law as it is, because by it the largest jurisdiction is given to the national court which under the Constitution Congress can grant.

Now, there is no sound reason for confining suits between citizens of different States to the States in which one of the parties resides, as it was under the judiciary act of 1789. It is true that such was the case from 1789 to 1875. But the fact that Congress neglected or failed to do its duty for eighty-six years and withheld from the courts their legitimate jurisdiction is no reason, after finally obeying the Constitution, to again violate its duty and abolish the power of the Federal courts which was granted to them in 1875. Let us leave the judicial branch of our Government in possession of all the authority which the supreme law commanded Congress to confer; and let the citizens of every State have the right to resort to it, if he chooses to, which the Constitution assured him he should have.

Gentlemen who support this bill say that it is terribly inconvenient and a great hardship for a citizen of Texas to be sued by a citizen of New York in the State of Ohio or the State of Georgia. But why is this more objectionable in the Federal than in the State courts? There is no restriction upon the right to sue in the State courts. A citizen of New York can now sue a citizen of Texas in the State courts of Ohio or Georgia. Is it any more inconvenient to be sued away from home in a Federal than in a State tribunal? There is no foundation in rea-

son for the distinction. I believe the friends of this bill, or at least many of them, seek to confine the power of the Federal courts to their narrowest limits because of the prejudice that exists in many parts of the country against the exercise of their rightful constitutional powers. This prejudice, instead of being encouraged by legislation, should be crushed out by the use of all the means that Congress can command. It is quite time that the national courts should not be looked upon as foreign tribunals in any part of the country; and we can not remove this hostility by yielding to it. This is not one of the cases where familiarity breeds contempt, but where reconciliation to a thing comes from familiarity with it.

We ought by our legislation to impress upon the people of this country that the citizen of each State is a citizen of the United States, and that the judicial as well as the executive arm of the Government can extend to every part of our territory to administer justice in all cases within the limits of the Constitution.

RIGHT OF REMOVAL.

Upon the subject of removal of causes from the State to the national courts I desire to remark that the pending bill confines such right of removal to the narrowest possible limits. The suit must involve $2,000 or upward; one of the parties, plaintiff or defendant, must be a resident of the State and district where the suit is brought; and the party applying to remove the cause must be the defendant and a non-resident of the State where the suit is pending.

Under the second section of the bill, even where the right of a party depends upon the correct construction of the Constitution, law, or treaty only, a defendant or defendants can remove the cause to the national courts. The theory of the bill is that a plaintiff shall not have the right of removal, because by suing in a State court he has elected his forum and he should be bound by his election. Even though it should appear after suit brought that the plaintiff's rights depend upon the correct construction of the Constitution, law, or treaty he must be held in the State court, and if the decision is adverse take his case to the highest court of the State, and from the latter by writ of error or appeal to the Supreme Court of the United States. This is the only way in such a case the plaintiff can obtain a hearing in the Federal courts.

There is one exception in the bill to the right of removal by a non-resident defendant. The latter part of section 2 provides that either the plaintiff or defendant may remove at any time before trial when it shall be made to appear to the satisfaction of the State court "that from prejudice or local influence he will not be able to obtain justice in such State court."

The effect of this provision of the bill is to make the removal of the cause dependent upon the discretion of the State judge. The party must present his petition and affidavits to the State court, and upon their inspection that court, in the exercise of his discretion, whether it is a long or a short discretion, determines whether from local influence or prejudice he can obtain justice in the State court. This is a power and a responsibility which it is unwise to repose in the State court. It is not an easy task for a party to spread upon paper before the court all the facts and circumstances that induce in his mind the belief that he can not obtain justice. But if the facts within his knowledge cause a well-grounded belief in his mind that he can not obtain justice in the State court, upon filing his affidavit to that effect his cause should be removed. And such has been the statute heretofore in all cases where prejudice or local influence is alleged as a cause of removal. Upon filing the proper affidavit the cause by the present law is thereby removed without further proceedings in the State court.

Making the jurisdiction of the national courts depend upon the discretion of the State courts in the matter of local prejudice and influence is entirely a novel feature in our judicial system, and this discretion of the State court is not reviewable in the Federal tribunal. Its exercise under the terms of the bill is final.

I think the law as it stands now is more satisfactory, as it enables either party to remove in all cases of controversies between citizens of different States. The theory of compelling the plaintiff to proceed in the State court after he has brought his suit there, without the right of removal, except within the discretion of the State court, upon affidavit of prejudice or local influence, is a very plausible one. But circumstances may arise or facts come to the knowledge of the plaintiff after suit is instituted which may make it very desirable that the trial should be had in the Federal court. Besides, the plaintiff may be so situated that he can obtain service in the State court at a time when he could not in the Federal court, and prompt action may be necessary to obtain a lien by attachment or prevent the bar of the statute of limitations. I think the statute of 1875 is unobjectionable, that there is no substantial evil to be remedied by its amendment, and that it should remain unchanged.

This bill also imposes a limitation to suits upon contracts by assignees. The eleventh section of the judiciary act of 1789 provided that neither the circuit nor district court "should have cognizance of any suit to recover the contents of any promissory note or other chose in action, in favor of any assignee, unless a suit might have been prosecuted in such court to recover said contents if no assignment had been made, except in cases of foreign bills of exchange." The act of March 3, 1875, enlarged this exception to "cases of promissory notes negotiable by the law-merchant and bills of exchange."

The pending bill excludes suits by assignees upon promissory notes and restricts the exception to "bills of exchange," instead of "foreign bills of exchange," as provided in the act of 1789; so that the present bill authorizes a suit by an assignee upon all "bills of exchange," whether the assignor could maintain a suit thereon or not, but takes away altogether the right to sue by an assignee of a promissory note which was conferred by the act of 1875.

This amendment is urged to prevent parties suing upon promissory notes under a colorable assignment for the purpose of resorting to the Federal courts. The objection to this amendment of the existing law is not so weighty as it is to other portions of the bill. But while it may prevent the transfer of promissory notes not *bona fide* for value to enable the owner to have the benefit of the Federal jurisdiction, on the other hand it will exclude from such jurisdiction holders of negotiable paper acquired *bona fide* in the usual course of business, who under the provisions of the Constitution are entitled to sue in the Federal courts. I do not believe any great evil is suffered by suits on promissory notes held under a colorable assignment, and that such evil is less than the wrong that would be done to *bona fide* holders of negotiable paper who have the right to litigate their controversies in the national courts by excluding them therefrom. I do not believe we should exclude citizens from the national tribunals, which they have an undoubted right to resort to, in order to exclude other parties who hold negotiable paper acquired by a colorable assignment for the purpose of obtaining jurisdiction.

The next provision of the bill to which I ask the attention of the House reads as follows:

> That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, either at common law or in equity, between a corporation created or organized by or under the laws of any State and a citizen of any State in which such corporation at the time the cause of action accrued may have been carrying on any business authorized by the law creating it, except in cases arising under the patent or copyright laws, and in like cases in which said courts are authorized by this act to take original cognizance of suits between citizens of the same State; nor shall any such suit between such a corporation and a citizen or citizens of a State in which it may be doing business be removed to any circuit court of the United States, except in like cases in which such removal is authorized by the foregoing provision in suits between citizens of the same States.

The intention of this amendment of the present law is to confine certain litigation to which a corporation is a party to a State tribunal. If a corporation is doing business in a State other than that under whose laws it was created and organized, it can neither sue nor be sued in a Federal court.

The penalty of doing business outside of the State whose laws give the corporation existence is to limit jurisdiction over all controversies between it and a citizen of a State in which it is doing business to such State tribunals and compel the corporation to be satisfied with such justice as such State courts may deem proper. For example, if a corporation organized under the laws of New York is doing business in New Jersey and a suit arises out of any transactions in New Jersey, it must be brought in a State court, and the Federal court is prohibited from exercising jurisdiction in such case. The effect of this amendment is to abrogate or annul a constitutional provision.

It is the settled law of the land now, and has been for many years, that a corporation is a citizen of that State under whose laws it was created within the meaning of the word "citizens" as used in section 2, article 3, of the Constitution. That section of the Constitution confers jurisdiction on the Federal courts of cases "between citizens of different States."

Now, this section of the bill under discussion proposes to make a discrimination which the Constitution does not make, and to declare that if the citizen is a corporation deriving its existence from the laws of Virginia and doing business in the State of Tennessee, it shall be excluded from the Federal tribunals in all cases of controversy between it and citizens of Tennessee.

Now, has Congress power to make this distinction? Can we say that a certain class of citizens of a State shall neither sue nor be sued by a citizen of another State in the Federal courts?

If we can prohibit one class of citizens from resorting to the Federal judiciary when they have a controversy with a citizen of another State, where is our power to end? Why may we not with just as much reason make a distinction on the ground of nationality, and prohibit all Irish, German, or Russian born citizens from suing in the nation's courts in case he is doing business in a State other than the one where he resides?

I deny that Congress has power to pass a law of this character. When the Constitution declared that the judicial power of the United States shall extend to controversies between "citizens of different States," it was not intended nor contemplated that Congress should have power to discriminate and say that certain citizens should be exempt from the protection of the Constitution.

A few years ago some of the States, among them Wisconsin, attempted to impose upon corporations of other States a penalty for doing business within their limits. Wisconsin provided by law that before a corporation of another State should be permitted to do business within

her limits it should sign a written stipulation that in case it was sued in a Wisconsin court the corporation should not remove the case to the Federal court. The Supreme Court held such a law unconstitutional in the first case brought before it involving that question. That court decided that a State could not coerce a corporation of another State to surrender its constitutional right of litigation in the Federal tribunal by exacting a promise that it should not do so as a condition of transacting business within such State.

This part of the bill which I am now discussing is designed to accomplish what the Supreme Court decided a State by its legislation could not accomplish.

We are asked to arbitrarily prohibit a corporation from suing or being sued upon contracts made in a State other than that under whose laws it was created. What we are asked to do is, in effect, to say to a corporation, if you desire to do business in any other State than that where you were created you shall not do so except upon the condition of surrendering your constitutional right to bring a suit or of being sued in a Federal tribunal.

I submit Congress does not possess the power to impose such a condition upon an artificial person any more than upon a natural person.

It is contrary to the spirit, letter, and policy of the Constitution, and if Congress had such power its exercise would accomplish no beneficial purpose.

In the case of Insurance Company *vs.* Morse (20 Wall., 455), the case I have alluded to, in which the State court of Wisconsin denied the right of removal, the Supreme Court said:

> A corporation has the same right to the protection of the laws as a natural citizen, and the same right to appeal to all the courts of the country. The rights of an individual are not superior in this respect to that of a corporation. * * * The Constitution of the United States secures to citizens of another State than that in which suit is brought an absolute right to remove their causes into the Federal court upon compliance with the terms of the act of 1789. The statute of Wisconsin is an obstruction to this right, is repugnant to the Constitution of the United States and the laws in pursuance thereof, and is illegal and void.

Now, the bill under discussion in terms prohibits the circuit courts from taking jurisdiction in the cases I have mentioned, and is as plainly repugnant to the Constitution as was the statute of Wisconsin. That State attempted and this bill seeks to abrogate that part of the Constitution which extends the judicial power to controversies between citizens of different States.

The States may impose such terms upon corporations of other States asking the privilege of doing business within their limits as may be deemed necessary for the protection of their citizens, providing, however, that such terms and conditions do not restrict the right to resort to the Federal courts.

There is another objection to the passage of this bill. The act of 1875, which defines the power and fixes the jurisdiction of the inferior courts, has been in operation nearly ten years. The controversies over questions of jurisdiction, both original and that acquired by removal from the State courts, which will always arise over every new statute, have in a large measure been settled.

Litigants and attorneys know with reasonable certainty what causes, the subjects-matter, and parties over which these courts have jurisdiction. The rights of parties and the practice has become settled, and it is for the interest of the people and of the Government that these should not be disturbed and unsettled by new legislation. There is no demand on the part of the people for this measure; they infinitely prefer a stable and permanent system of laws, and not the confusion and uncertainty that to a more or less degree spring from new enactments.

The great need of remedial legislation is with respect to the Supreme Court. Its dockets are burdened with twelve hundred cases, requiring from three to four years to dispose of them. So long does it require to obtain a judgment of the Supreme Court, that the delay itself is frequently a failure of justice and financial ruin to litigants. But this bill contains no proposition to expedite the business before the Supreme Court or to relieve that court of judicial labor which we all know it can not perform. Where an evil exists and a remedy is demanded, as admitted by all, the Judiciary Committee have as yet proposed none whatever, probably for the reason that bills which have been introduced and referred to that committee touching the Supreme Court and looking to its relief and the relief of suitors before it require the appointment of additional judges. The presumption that such new judges would entertain political views differing from those of the majority of the present House of Representatives prevents any legislation providing for their appointment.

Manifestly there is no hope of relieving the Supreme Court until both the Executive and Congress in both branches shall concur in political sentiment.

I repeat that the grounds upon which the passage of this bill is chiefly advocated, to wit, to relieve the circuit courts of judicial labor, are entitled to no weight whatever.

To the extent that the friends of this measure propose to diminish the number of causes before the Federal courts, to that extent the number of causes would be increased in the State courts. The latter are now as much overburdened with business as the former in all the more populous States, and the expense and cost of maintaining the Federal courts and of doing the business therein is felt less by the tax-payers of the country than is the cost of maintaining the State courts, which are supported by direct taxation of the people.

This Government is amply able to provide for its judicial department. The ability, integrity, and stability of the judiciary are justly regarded as the sheet-anchor of our hopes and the great bulwark of American liberty. Our Supreme Court consists of nine judges; there are nine circuit and fifty-six district judges, and their annual salaries amount to the small sum of $348,000; and to contend that the conceded constitutional powers of this great co-ordinate department of the Federal Government should be curtailed or limited, on the pretense that the people are unable or unwilling to pay the cost of maintaining all the courts necessary to transact all the business that may come before them under existing laws, is unworthy of an American Congress.

Rivers and Harbors.

SPEECH

OF

HON. LEWIS BEACH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. BEACH said:

Mr. CHAIRMAN: I do not know that I fully understand the powers of the committee which has reported this bill. It is a new committee, created for the first time in this Congress. The matters which it has investigated have heretofore been considered by the Committee on Commerce.

Before proceeding to criticise the action of the committee it may be well to ascertain, if we can, its exact powers. The rules of the House say there shall be referred to the Committee on Rivers and Harbors all subjects relating "to the improvement of rivers and harbors." There are three questions involved in such a reference. First, what is a river, and what a harbor? Second, what rivers and harbors should be improved? Third, what should be the nature and extent of the improvement?

Mr. Chairman, I do not care to complicate this discussion with the constitutional question involved in all appropriations of this character. I am willing to give the committee the benefit of the doubt so far as the constitutional power is concerned; but I do propose to hold it to the strict letter of the rule under which it assumes to act. When the rule confines the committee to appropriations "for the improvement of rivers and harbors," I can not consent to vote for a bill filled with appropriations for the improvement of creeks and steamboat landings. A creek is certainly not a river, and a steamboat landing is not a harbor. The committee has been very much mixed in this matter. Webster defines a river to be "a large stream of water flowing in a channel on land toward the ocean, a lake, or another river," and he defines a harbor as "a refuge for ships, a port or haven;" and a haven as "a bay, recess, or inlet of the sea, or the mouth of a river, which affords good anchorage and a safe station for ships."

Tested by these definitions how many of the items in this bill are proper subjects for appropriation of the public moneys? Look at the long list of so-called rivers which have been provided for. Who, outside of the Committee on Rivers and Harbors and the member in whose district the river may lie, ever heard of them before? When a boy at school I was pretty well "up" in my geography and I have not forgotten much that I then learned. I feel quite confident that a large number of the rivers mentioned in this bill were not laid down on the atlas of thirty years ago.

Here is a list I have taken at random from the bill:

The Maurice River, the Choptank River, the Wicomico River, the Mattaponi River, the Guyandotte River, the Buckhannon River, the Edisto River, the Salkehatchie River, the Waccamaw River, the Wateree River, the Altamaha River, the Oconee River, the Caloosahatchie River, the Choctawhatchie River, the Conecuh River, the Withlacoochee River, the Warrior River, the Noxubee River, the Pascagoula River, the Tallahatchee River, the Yallabusha River, the Cane River, the Calcasieu River, the Tangipahoa River, the Tensas River, the Big Hatchee River, the Caney Fork River, the Hiawassee River, the Tradewater River, the Mokelumne River, the Chehalis River, the Cowlitz River, the Skageit River, the Nootsack River, the Snohomish River, the Snoqualmie River, and the Stielquamish River.

Mr. Chairman, I have given thirty-seven names, and each is provided for in the bill with a neat appropriation. The committee has called them all rivers. Whether they are or not I do not know. I never heard of them before, and I do not believe there are ten out of the three

hundred and twenty-five members on this floor who have ever heard of them until now.

It may be interesting to retrace the steps by which these insignificant streams find their way into the river and harbor bills. The action of the committee is founded to a large extent upon the estimates prepared by the engineers, who make a preliminary survey of the proposed improvement. The engineers are set in motion by the Congressman in whose district the stream lies. The Congressman is pushed on by the local Columbus who has discovered the stream and wants to float his logs to a distant saw-mill or get his produce to market.

The committee this year has not abided by the recommendations of the Chief of Engineers. It has traveled outside of the Book of Estimates, and upon its own responsibility reported appropriations to the amount of $628,100 for improvements which have not been recommended by the usual authorities. I have not had time to separate the items which go to make up this $628,100; but I have no hesitation in saying that this bill should be recommitted with instructions to strike out every one of them.

The committee has very carefully avoided the use of the word "creek" in its bill. We look in vain for "Cheesequake Creek," the little rill that brought down such a river of indignation on the river and harbor bill of the last Congress. It has disappeared, but numerous streams of like volume have taken its place bearing the more lofty and dignified title of "rivers."

If we look closer into this bill we find that the committee has taken good care of all the inlets and bayous with which some of the States are studded. "Steele's Bayou" and "Loggy Bayou" and all the other little bayous are well provided for. The marshes are also not forgotten. "Romerly Marsh" is to be improved at an expense of $10,000. The report does not say whether it is to get rid of the mosquitoes or encourage the culture of bullfrogs. We are left in doubt upon this point. All that we know for certain is the tax-payers are to be relieved of $10,000 for the purpose of improving "Romerly Marsh."

Now, Mr. Chairman, let us look at the harbors. I can not undertake to go through the long catalogue of harbors provided for in the bill, and show up, as I might, the great folly of appropriating money for many of them.

I may be permitted, however, by way of illustration, to call attention to a couple of items on page 5 of the bill. They read:

> Improving harbor at Rondout, N. Y.; continuing improvement, $1,000.
> Improving harbor at Saugerties, N. Y., $5,000.

Mr. Chairman, I live but a short distance from Rondout and Saugerties, on the Hudson River, and may be presumed to know something about them. I must confess that I felt some little local pride—but probably not so much as my distinguished colleague who represents the Ulster district—in finding Rondout and Saugerties dignified with the title of "harbors." I never supposed they had come up even to the standard of "landings," as we call them along the river. The only ships you will find there are barges, canal-boats, and mud-scows, which the Committee on Rivers and Harbors has, through ignorance of nautical matters probably, mistaken for ships clipped of their wings.

Rondout is located on a creek of the same name, which empties into the Hudson River. Considerable business is done on the creek in brick, bluestone, and hydraulic cement. The Delaware and Hudson Canal also reaches tide water at this point. During the last year the canal carried 214,738 tons of miscellaneous freight and 1,224,917 tons of coal. The great problem with Rondout was how to get this commerce out of the creek over the shoals and flats on the westerly side of the river into the deep water on the easterly side. Let me see if I can make myself better understood. The channel of the Hudson which is followed by all vessels sailing up and down is on the east side, and the water is ample there for all purposes of navigation. But the river at this point is quite wide and spreads out into shoals on the west side. Before the cement and brick makers and the coal-carriers could get their merchandise into the river proper a channel had to be prepared from the mouth of the creek through the shoals. And this is what they asked the General Government to do; and the General Government set to work to do it several years since, and the project is now about complete. It has cost nearly $100,000. And all for the benefit of the Delaware and Hudson Canal Company, a few manufacturers, and a towboat line.

Mr. Chairman, I myself am interested in the manufacture of cement at this point, and while I feel deeply grateful to the Government for all it has done to cheapen transportation for me, yet I can not vote for this appropriation. Nor would I have voted for any that have preceded it had I been here. I do not believe that Congress has the right to take the money of the many and use it for the benefit of the few.

A short distance above Rondout, on the same side of the Hudson, we find another creek, known as "Esopus Creek." It is quite shallow, and its entrance so obstructed by flats and shoals as to render it impossible for any but local pilots to enter it, and these only with the aid of steam. Jetties have been partly built at the entrance, but have produced no noticeable improvement so far as I have heard.

The village of Saugerties is built upon the northern bank of this creek, about half a mile above its mouth, and has a considerable manufacturing interest. Conscious of what the Government has done for its near neighbor, Rondout, similarly circumstanced in all respects, it now appeals for aid, and the Committee on Rivers and Harbors inserts in its bill an appropriation of $5,000 for "improving harbor at Saugerties."

And it does this of its own motion, without any recommendation from the Chief of Engineers. It does not appear from the report of the Chief of Engineers that any survey has ever been made, nor has the necessity of the improvement been inquired into nor any estimate made of the ultimate cost of the project. The committee must have been thoroughly overcome with the arguments in favor of "Saugerties Harbor" to have overlooked those preliminary matters which are a prerequisite to an appropriation of this character. When we remember Webster's definition of a harbor—that it is a place of "refuge for ships on the sea"—we can afford to laugh, as the good people of Rondout and Saugerties no doubt will when they hear that a committee of Congress has dignified the mouths of the Rondout and Esopus Creeks with the high-sounding title of "harbors."

But, Mr. Chairman, I do not oppose this bill on the sole ground that it carries needless appropriations for diminutive streams and insignificant harbors. There is another feature in the bill which deserves severe rebuke. I refer to the provision which makes an appropriation of $300,000 with which to begin the construction of the Hennepin Canal. I would like to inquire where the committee gets its power to report back this appropriation. Under the rules, as I have before observed, the jurisdiction of the committee is confined to subjects relating to the "improvement of river and harbors." This would give them no power to inaugurate a system of canal-building. And yet they have done it in face of the fact that a bill was already before the House for the same purpose—a bill of which I will come presently to speak.

Mr. Chairman, I have studied this canal question somewhat and thought on it more, and I possess some facts which I desire to bring to the attention of the committee.

From the last census reports it appears that there has been built 4,468 miles of canals, at an estimated cost of $214,041,802. Of these, 1,953 miles are now abandoned, and a large portion of the remaining 2,515 miles are not paying expenses. All the canals in the New England States are abandoned for commercial purposes. The Middlesex Canal was perhaps the most successful up to the time of the construction of the Boston and Lowell Railroad in 1835, and it paid expenses and a dividend of about 6 per cent. for a number of years.

The Oxford and Cumberland Canal in Maine, costing a moderate amount, did a fair business previous to the construction of the Portland and Ogdensburg Railroad.

The Blackstone Canal in Massachusetts and Rhode Island, passing through a rich region of country abounding in manufactories, was built in the best manner, but was never profitable.

The Farmington and Hampshire and Hampden Canals sunk $1,089,425.10.

In New York State three hundred and fifty-six miles of lateral canals, costing $10,235,314, have been abandoned; in Pennsylvania four hundred and seventy-seven miles are abandoned, costing $12,745,780; in Ohio two hundred and five miles, costing $3,000,000, have been abandoned. Indiana, with the aid of her creditors, constructed three hundred and seventy-nine miles of canals in 1851, costing $6,325,262, all of which were abandoned.

As I have before said, 1,953 miles of canals, which cost $44,013,166 to construct, have been abandoned. In some instances railroads have utilized the bed of the canals; in others railroads have been built parallel to them, and stolen their business away.

Of the canals not yet abandoned very few are paying expenses, and some of them contemplate laying down rails and using the locomotive for hauling their freights. This is the case with the Delaware and Hudson Canal, which connects the coal-fields of Pennsylvania with tide water at Rondout on the Hudson River. This canal is the only one in the State of New York which is operated by a private corporation. All the others are owned by the State. The Delaware and Hudson Canal has done a paying business from the time of its opening down to the present day; and yet they are now about to convert it into a railroad, for the simple reason that they can haul their coal cheaper by rail than they can by water. The history of the Illinois and Michigan Canal will furnish a fair illustration of the degeneracy of canals in general and of the mode in particular by which it is proposed to foist all these unprofitable investments upon the General Government. That canal connects Chicago with La Salle, Ill., on the Illinois River, and is about one hundred miles long. It was built in 1848, and at the time of its construction was a favorite route between Chicago and Saint Louis for travelers. I remember passing over it myself in 1852 in a packet-boat.

From the time of its opening down to 1870 it did a very good business, the annual tolls nearly doubling the gross expenses. But in that year the expenses were $108,695 and the tolls only $149,635. The canal was sick and something had to be done. As a remedy the State built a lock at Henry, at a cost of about $400,000. Under this stimulant the canal revived and enjoyed its old-time prosperity down to 1877, when it again languished and became financially *in extremis;* for during that year the expenses ($110,018) far outran the tolls ($96,913). The doctor was again called in and prescribed another lock. The lock was built at Copperas Creek at a further expense of over $400,000 to the

State. The General Government assisted in the building of this lock, but I am unable to give the amount contributed. It was then thought that the canal was all right again. But the doctors were mistaken. They had made a wrong diagnosis, or the medicine was inefficient. The canal grew worse and has been growing worse ever since, as will appear from the table I give of outgo and income for the last few years:

Years.	Gross expenses.	Tolls.
1878	$82,839	$84,330
1879	97,701	89,064
1880	125,601	92,296
1881	108,223	85,130
1882	105,412	85,947

I have not the figures for 1883. In 1882, the State of Illinois, having concluded that the canal could not be made the source of any further profit, hit upon the happy idea of making a present of it, locks, dams, and all, to the United States. The General Assembly passed the necessary law and it was submitted to the people for their ratification. The people were like Barkis, "willing," and now comes my genial friend CULLEN, of Illinois, with his little bill asking us to accept the valuable gift. If we will only take it and spend a few millions in enlarging it we will make money out of it. In addition to enlarging the canal it is proposed to have the Government spend about twenty millions more in improving the navigation of the Illinois River.

Mr. Chairman, you must not suppose that Illinois is the only State that is willing to display its generosity in the matter of giving away canals. I find from a bill introduced here by my colleague of the Saratoga Springs district that the great State of New York, my own State, is willing to have her Erie Canal enlarged and repaired by the General Government to the amount of $1,000,000 a year for the next ten years, or $10,000,000 in all. The offer is not quite as generous as the one made by Illinois, but in substance it amounts to about the same thing, It is an effort to turn off on the United States what is no longer of any profit to the State. Now, I would like to say a few words here about the Erie Canal which I would not dare say at home. The State of New York, like Ephraim, "is wedded to its idols," and the Erie Canal is one of them. It is heresy, and heresy of the vilest kind, for one to breathe a word against the Erie Canal within the confines of the Empire State.

I am willing to admit that the Erie Canal has been a factor, most important factor, in bringing about the commercial supremacy which the city of New York enjoys to-day. But I assert that the day of its usefulness has gone by. Neither enlargement nor abolition of tolls can prevent its inevitable doom. It must go the way of all other canals, and its duration is only a matter of time. At the time of its construction, it will be remembered, there were no railroads in existence. As the West became populated the problem was how to get the breadstuffs and provisions of the Western and Northwestern States to the seaboard for export. The favored route, and I might say almost the only route twenty-five years ago, was by way of the lakes, the Erie Canal, and the Hudson River. This was an all-water route.

In 1858, the period of which I am speaking, the relative tonnage of the Erie Canal and the two great east and west trunk lines was as follows: Erie Canal, 1,496,687 tons; New York Central, 925,604 tons; Erie Railroad, 816,964 tons.

The railroads at once entered upon an active competition for carrying the products of the West. The result is shown in the following figures, taken for the year 1883: Erie Canal, 3,587,102 tons; New York Central, 10,892,440 tons, and Erie Railroad, 13,610,623 tons. In corroboration of these figures it appears from the last annual report of Mr. Nimmo, Chief of the Bureau of Statistics, that during the year 1882 about 80.2 per cent. of the total receipts of grain at Atlantic seaports was by rail, and only 19.8 per cent. by lake, canal, and Hudson River.

Having now considered the vast gains made by the railways over the water ways in matter of freights let us take a glance at the cost of transportation, for that in fact is the most important question both to the farmer and the country. Our large export trade in breadstuffs has been owing to our internal lines of transportation. Other countries, like Russia, Australia, and India, have lands as suitable for the growth of wheat as we have, but they have not been utilized for want of communication with the seaboard. Now that they are building railroads to the interior we find their grain coming into active competition with ours in the markets of the world. The cheapness with which the Western farmer can lay his products at the seaboard is a question which concerns not only him but the whole country, for upon it will depend the volume of our foreign commerce. Under the favorable conditions of the last fifteen years our foreign commerce has much more than doubled. The total value of the exports of merchandise from the United States increased from $281,952,899 during the year ended June 30, 1868, to $823,839,402 during the year ended June 30, 1883; and the value of the imports of merchandise into the United States increased during the same period from $357,436,440 to $723,180,914.

But I am straying from the point I wished to make. I want to show the difference between water charges and rail charges. Upon this point Mr. Nimmo has prepared a table, which I shall ask leave to print, showing the average freight charges for the last fifteen years of carrying a bushel of wheat from Chicago to New York by each of the three routes, to wit, by lake and canal, by lake and rail, and by all rail.

Average freight charges per bushel for the transportation of wheat from Chicago to New York during the years 1868 *to November* 1, 1883, *inclusive.*

Calendar years.	Average rate per bushel.		
	By lake and canal.*	By lake and rail.	By all rail.
	Cents.	*Cents.*	*Cents.*
1868	25.3	29.0	42.6
1869	24.1	25.0	35.1
1870	17.5	22.0	33.3
1871	21.6	25.0	31.0
1872	26.6	28.0	33.5
1873	19.2	26.9	33.2
1874	14.2	16.9	28.7
1875	11.4	14.6	24.1
1876	9.7	11.8	16.5
1877	7.5	15.8	20.3
1878	10.1	11.4	17.7
1879	13.0	13.3	17.3
1880	13.2	15.7	19.7
1881	8.6	10.4	14.4
1882	8.7	10.9	14.6
1883, January 1 to November 1	9.16	12.0	16.1

* Including Buffalo transfer charges and tolls.

From this table it appears that the water route has reduced its charges from 25 cents and a fraction per bushel in 1868 to 8 cents and a fraction in 1882; and during the same period the rail route has come down from 42 cents and a fraction to 14 cents and a fraction. The rate of reduction is about one-third in both routes.

It is commonly contended that the water ways act as a check upon the charges made by the railways, but is this true? Why is it that the reduction of charges in the water ways has kept even pace with that in the railways? What is it that has forced the lake and canal charges down from 25 cents a bushel to 8 cents a bushel? Is it not the result of the sharp competition carried on by the railways? It is, Mr. Chairman, a battle between the railways and the water ways for supremacy, and the facts and figures I have quoted show that the railways will win in the end under the conditions of which I now desire to speak.

I undertake to say that when railroads are honestly built and economically operated they will be able to carry cheaper than the rivers or the canals. It is well known that most of our railroads are built through the intervention of what is called "construction companies;" and it is equally well known that the favored few who compose these companies amass large fortunes. This is one way in which the nominal cost of construction far exceeds the actual cost. It must be remembered that the capital stock is issued to the extent of the nominal cost. Another way of enlarging the capital stock is by consolidation with some other road, whereby the new road is capitalized at a sum far in excess of its actual value. And then we must remember that all railroads are built in the most extravagant manner and the cost is largely increased by the high duty which has prevailed upon rails. When we come to build our railroads the same as we would our private carriage roads and get a dollar of material and work for every dollar expended, then we will have solved the great question of "freight rates" which so agitates the people.

I think I can illustrate my argument by reference to a proposition which has been made in relation to the Erie Canal. It has been estimated that a four-track railroad, equal in all respects to the New York Central, could be built on the bed of that canal for $15,000,000.

The New York Central is capitalized at $144,114,776, and the Erie at $160,552,538. Now it requires no argument to show that a road which cost $15,000,000 can carry freights much cheaper than one which cost $160,000,000. The one expects to earn dividends on $15,000,000, and the other on $160,000,000.

Instead, therefore, of turning the Erie Canal off on the General Government, as my distinguished colleague proposes in his little bill, I think the State of New York had better put it up at auction to the highest bidder, subject to such restrictions as to freight charges as the public interests may require.

I take great pleasure, Mr. Chairman, in finding the views I have long entertained upon this subject approved by Silas Seymour, recently State engineer of the State of New York. In his report for the fiscal year ending September 30, 1883, he gives a table, an analysis of which shows the following results:

1. That the average tonnage during the period of twenty-one years from 1862 to 1882, inclusive, was 5,600,682, or only 174,948 less than the tonnage of 1883.
2. That during seven consecutive years from 1868 to 1874, inclusive, the average tonnage was 6,255,100, or 479,470 tons more than in 1883.
3. That during the single year of 1872 the tonnage was 6,673,370, or 897,740 tons more than in 1883.
4. That the yearly tonnage has not been materially affected during the past

twenty-two years, either by the rates of toll imposed or the amount annually collected, or even by the entire abatement of tolls, as in 1882.

He sums up by saying:

From the above showing the conclusion seems to be inevitable that the experiment of endeavoring to materially increase the tonnage of the canals by the abolition of tolls has thus far proved to be an entire failure.

In his report Mr. Seymour submits some further facts upon this question which are worthy of wide circulation. They are entitled to great weight, because he has always been a strong advocate of the canals and is now reluctantly compelled by the great logic of events to change his opinions.

I shall ask the indulgence of the committee while I quote quite largely. He says:

In my last annual report on the canals of the State it was shown that at the date of their first inception there were no railroads in existence in the country; and that even as late as 1835, when the first decisive steps were taken toward the enlargement of the Erie Canal, there were only one hundred miles of completed railroad in the State; and that there was no immediate prospect of the completion of any through lines between tide water and the lakes that would be liable to compete successfully with the State canals.

It was also shown that the enlargement was undertaken and completed upon the theory, as demonstrated by the best engineering experts in the country, that the canals were and always would be far cheaper and more reliable than railroads for purposes of inland transportation.

The following extract from my last annual report on canals will show the rapid increase of railroad mileage in the State up to and since the completion of the enlargement, and also some of the other causes and influences which have had a tendency to limit the tonnage of the canals, and thus disappoint to a great extent the expectations of the people of the State as to their ability to compete successfully with other routes and means of transit for the great bulk of the carrying trade between tide water and the Western lakes:

"In 1862, the date of the completion of the enlargement, there were 2,710 miles of completed railroad in the State, and there were two through lines, the New York Central and the New York and Erie, that had become direct and powerful competitors of the Erie Canal for the traffic between the Western lakes and tide water.

"Through lines had also been constructed in other States which offered an active competition for the same traffic to the canal and railroad lines through the State of New York.

"In 1882 we find that there are not less than 6,600 miles of completed railroad in the State, and that the two great trunk lines above referred to have added largely to their carrying capacity, the Erie by doubling its track, and the Central by quadrupling its track, thus practically increasing its tonnage capacity to a maximum, and reducing its cost of transportation to a minimum.

"Lines have also been straightened, grades reduced, wooden bridges replaced by iron, heavy T rails substituted for straps, and finally steel rails substituted for iron, thus rendering the roadway proper as perfect as possible; while at the same time locomotive engines have been more than quadrupled in power and rolling-stock has been supplied with all modern improvements; all of which has had the effect to reduce the cost of transportation on comparatively level railroads to a minimum not exceeding a half cent per ton per mile.

"Many other lines of railway have also been constructed between the Western lakes and Mississippi Valley and the Atlantic seaboard, and all of these great trunk lines have absorbed and consolidated with lateral lines and lines extending farther westward to such an extent that their influence is felt and their power acknowledged to the most remote bounds of improvement and civilization.

"Improvements in the navigation of the Mississippi River and the enlargement of the canals through Canada have also rendered these great and comparatively natural water routes most formidable competitors for this great and constantly increasing through traffic.

"It should also be considered that the canals can be navigated only about seven months in the year; that the time of their opening and closing is always very uncertain; that their navigation is constantly subjected to detentions occasioned by the want of an adequate supply of water, together with breakages and other unavoidable accidents; and that the time required for boats to pass between the lakes and tide water is about five times that required upon the railroads.

"While on the other hand freight may be shipped by railroad every day in the year and delivered at its destination with the utmost regularity and at prices generally but very little if any greater and in many cases much less than those charged upon the canals."

In view, therefore, of the foregoing facts and considerations, it becomes a question of the greatest importance to the tax-payers throughout the State as to what is to be the ultimate destiny of the canals.

It has become clearly demonstrated that they can not compete successfully with railroads as a means of transport; and it is quite evident that their tonnage is more largely dependent upon the law of supply and demand than it is upon the question as to whether or not it is subjected to the payment of tolls.

It is claimed by many that it is of the most vital interest to the tax-paying people of the entire State that the canals should be maintained at any cost and under any and all circumstances, for the purpose of regulating the charges for transport on competing lines of railway, and thus preventing the diversion of a large amount of through tonnage and traffic from our great commercial emporium.

As bearing directly upon this view of the question I take the liberty of making the following quotation from my last annual report on the railroads of the State:

"Another important factor in the success of railroads, and one which has, perhaps, contributed more largely than any other to the diversion of business from our State canals, is the tendency which has been manifested in later years by the leading railroad interests of the country to either absorb or consolidate with connecting lines to such an extent as to control the business at points far beyond the reach of any influence which the State could bring to bear in favor of its diversion to the canals.

"It may also be remarked that this excessive desire on the part of leading railroad interests for absorption, consolidation, and extension has probably done more than anything else during the past few years toward increasing railway mileage throughout the country, and at the same time developing the resources of remote districts that would otherwise have remained comparatively isolated from railroad influences. All of which may be attributed to a determination on the part of the managers of each of the great through trunk lines to extend their power and influence beyond the reach of the others, and thus secure the lion's share of the through business.

"The construction of the Union and Central Pacific Railroads was due largely to these considerations; and the rapid construction of several other Pacific roads which are now in progress through the United States and Canada would probably have never been undertaken but for the powerful rival railroad interests that either underlie or stand ready to furnish the means necessary to complete them. And it would appear that no less an obstacle than the broad Pacific itself would be able to prevent these rival combinations from extending their influence and control at least so far around the globe as to enable them to reach the opposite shores of the Atlantic Ocean.

"Whatever may be the ultimate result of this state of things to the parties most interested, who furnish the enormous amount of capital required to carry forward these great rival enterprises, there can be no doubt that it is exceedingly beneficial to the country at large, and particularly so to the great commercial metropolis of our own State.

"Every new route that is opened and every additional mile of railroad that is constructed aid materially in developing the wealth and resources of the country through which they pass. And while the city of New York continues to be the great focal point toward which, as compared with other Atlantic cities by far the greater number of these trunk lines converge, her prosperity will increase and her commercial supremacy be assured for all time.

"It is claimed by many, and it was so represented during the last election, when the question of the 'free canal amendment' to the constitution was pending before the people of the State, that the commercial prosperity of the city of New York depended very largely, if not entirely, upon the volume of tonnage transported over the Erie Canal during the season of navigation.

"While admitting the great benefits that have resulted, and will continue to result, both to the city and the State at large from her unrivaled system of canals, and without questioning the soundness of the policy recently adopted by the Legislature and the people in making them free from tolls and supporting them by direct taxation, it is difficult to comprehend why both the city and the State are not benefited to a far greater extent by the trunk lines of railway whose termini are at the harbor of New York, and the most of which pass through the State, while their western limits, branches, and controlling influences extend through all portions of the great valleys of the Mississippi and the Western lakes, and thence even across the Rocky Mountains to the Pacific Ocean.

"The total tonnage over the Erie canal during the year ending September 30, 1882, was only 3,694,364 tons, while that over the New York Central and Hudson River Railroad was 11,330,393 tons, and that over the New York, Lake Erie, and Western Railway was 11,895,238 tons.

"Therefore, without taking into account the 'Pennsylvania Railroad,' which has been in operation to Jersey City for several years; also the 'New York, Lackawanna and Western' which has just been completed as a through line, together with the 'New York, West Shore and Buffalo,' which will soon be completed, all of which terminate virtually in the city of New York, there seems to be no just ground for fears with reference to the future of our great commercial metropolis."

If the foregoing views are well founded, there would appear to be no valid reason or excuse for taxing, indiscriminately, the people of the entire State for questionable benefits that are enjoyed by only a small fraction of the tax-paying population, while the greater benefits, if any, are secured by the large mass of Western producers and Eastern jobbers.

It would therefore seem to be a wise policy for the people of the State at the earliest day practicable to so further amend the constitution as to enable the Legislature, at its discretion, either to reimpose tolls to a sufficient extent to keep the canals in repair, or to lease them upon the best terms attainable to responsible parties who will agree to operate and keep them in repair, or to sell them outright, together with all the State property connected with them, to the highest bidder.

The last-named alternative would, in the light of past experience, appear to be the wisest of the three, for the reason that Pennsylvania, Ohio, and other States have found it for their interest to dispose of their canals, and thus reimburse their treasuries to some extent for the capital invested in them; and there can be no doubt that the canals of this State can readily be sold for a sufficient amount to liquidate the entire canal debt of the State, and thus relieve the people from the burden of any further taxation on that account.

In any event, it may be safely assumed that canals, as a successful and necessary means of transport, have outlived their usefulness; and also that as between railroads and canals, when considered with reference to their relative merits, as affording a means for rapid and economical transport, it must be regarded as a foregone and inevitabe conclusion that the canals must go.

In view of this vast array of facts, is it not folly—ay, madness—to think of building more canals? Their day, like that of the stage-coach, is gone. They have done good service in the past, no doubt, but their usefulness has departed. In less than twenty years there will not be a canal in operation in this country. They are doomed.

Mr. Chairman, the $300,000 appropriation which this bill carries for beginning the Hennepin Canal is but the entering-wedge, and before we drive it home by our votes we had better take a full, square view of the whole subject.

In the first place let us take an inventory of the canals already built and operated by the Government.

The Des Moines Rapids Canal was opened in 1877, and since that time there has been expended in operating it the sum of $277,262.96. The original cost is given me by the Chief of Engineers at $4,372,824.27. The Louisville and Portland Canal has cost the Government $2,611,022, and the expenses of operating it last year amounted to $61,333.14. The amount required to operate and maintain it for the current year is estimated by the Chief of Engineers at $77,740, and for next year $128,540. The Muscle Shoals Canal, on the Tennessee River, has cost $2,321,850.

The canal around the Cascades of Columbia River, Oregon, has had expended upon it up to June 30, 1883, $725,715.93. It is estimated that $1,655,397.31 will be required to complete the project, and $500,000 are asked for the next year to continue the improvement.

The Saint Clair Flats Ship-Canal, Michigan, has thus far cost for construction $606,885.09, and the expense of operating it last year was $5,668.87.

The Saint Mary's Falls Canal, Michigan, has cost $2,330,945.34; expenses of operating it last year were $35,509.70, and the sum required to operate it next year is estimated at $35,000.

Now, Mr. Chairman, if we tabulate these figures, we find that the Government has thus far invested about $13,000,000 in these canals, and is committed to a policy of completing them at a cost of several millions more and to an annual outlay of hundreds upon hundreds of thousands of dollars for maintaining and operating them. We had better pause and consider before we take upon our hands any more of this unproductive property.

And now is the time to stop. A redundant Treasury attracts all kinds of schemers and jobbers, and if we examine our files we will find the canal-builders already around casting their eyes wistfully upon that surplus for whose reduction the genial member from Colorado has contended so vigorously.

Among the bills for the construction of new canals you will find one introduced by my distinguished friend Mr. HOBLITZELL, of Maryland, to provide for the construction of the Maryland and Delaware Free Ship-Canal, as a means of military and naval defense and for commercial purposes. The building of this canal is intended to connect the waters of the Chesapeake and Delaware Bays. The bill appropriates $1,000,000. This, of course, is not the full cost. It is simply to start with—the entering-wedge. The entire cost will depend upon the route which may be selected. The engineers have surveyed and reported upon three different routes. The Back Creek route is estimated to cost $7,605,471.39; the Sassafras route will cost $11,409,909.81; and the Choptank route, $18,184,766.39. The expense of building is not the only thing we must take into consideration. When built the canal must be maintained and operated, and it is estimated that the annual outlay for this purpose will be—for the Sassafras route, $111,080; Back Creek, $123,580; and the Choptank, $114,950.

Then there is the bill introduced by Mr. MURPHY, of Iowa, to provide for the construction of the Michigan and Mississippi River Canal. This is what is commonly known as the "Hennepin Canal," and is identical with the one mentioned in the pending bill. The location and merits of the canal are described in the report of the committee as follows:

> This bill provides for the construction of a canal seventy-five miles in length, by the General Government, from the Illinois River, at or near Hennepin, to the Mississippi River, at Rock Island, in the State of Illinois, with a feeder or branch canal thirty-seven miles in length from Dixon, on Rock River, to the summit level of said canal; and your committee, after a most careful consideration of the subject, are of the opinion that such a canal should be constructed; for the construction of this contemplated canal from the Mississippi River to the great lakes would give a free water way from Saint Paul to the Atlantic seaboard at New York city, and would lessen transportation charges much more than sufficient to justify the expenditure thereby involved.

In this case also there were three several routes surveyed by the engineers. Mr. MURPHY'S bill declares in favor of what is known as the Rock Island route, and appropriates $1,000,000 to start on. The ultimate cost is one of those things which can not be foretold with precision. The engineers estimate it at $6,672,890.67, and they put down the annual cost of maintenance and ordinary repairs at $94,820.

This Hennepin Canal project was defeated in the last Congress. The Republicans could not swallow it. I know the Democrats will not. It is not likely that the bill will reach consideration, but the whole project can be consigned to the tomb of the Capulets by striking out the $300,000 appropriation when we come to read the pending bill by sections.

Mr. Chairman, a review of this bill would be quite imperfect without some allusion to the Mississippi River. We have already at this session appropriated $1,000,000 for that river, and now we are asked to give $2,400,000 more. The estimates of the engineers call for $7,741,000, and the committee felicitates itself upon having cut them down to $2,400,000. But would not the committee have conferred more honor upon itself had it gone deeper into this question and inquired whether any appropriation whatever was needed? This is a very grave question, Mr. Chairman; one that can not be fairly discussed in the present temperament of the people of the Mississippi Valley, but one which we will have to face ere long. It is believed by many, and among them some of the best engineers in the country, that the millions upon millions we have spent on that river have been absolutely wasted.

Whenever the improvement of the Mississippi River is spoken of I am reminded of a stream which flows through the farm upon which I live. Ordinarily it is a gentle, well-behaved brook, but there are times when, overtaken by freshets and fed by mountain torrents, it swells into a tumultuous river, leaving its bed and depositing stones and gravel in large quantities upon the adjacent meadows, and carrying destruction to fields and crops. For twenty years I have fought this stream to keep it to its place. I have walled the banks with stones; I have cribbed them; I have riprapped; I have tried everything that engineering skill could suggest, and yet that brook, when swollen by unusual rains, would break through the barriers as through rushes. After twenty years of fruitless struggle, in which I have spent hundreds, possibly thousands, of dollars I have wisely concluded to let that stream have its own way. And this is what you have got to do with the Mississippi. You can not control it, and all the money you appropriate might as well be "in the deep bosom of the ocean buried." And, Mr. Chairman, I fail to find any good reason why we should try to control it. I am of opinion that its importance as a highway of commerce is vastly overrated.

I am confirmed in this opinion by an unpublished letter of Mr. Nimmo, the Chief of the Bureau of Statistics. He says:

> The relative tonnage of merchandise moved east across the Mississippi River over railroad bridges, and of merchandise moved south, reaching Saint Louis by river, during the year 1878, was as follows: Moved east by rail, 3,554,838 tons; moved south by river, 174,065 tons. It appears, therefore, that the tonnage moved east by rail was more than twenty times the tonnage moved south by river. Even at Saint Louis the total tonnage to and from the East by rail during the year 1882 amounted to 4,141,835 tons, as against 914,505 tons moved to and from the South by river. In point of value the traffic of the railroads was proportionally much greater.

He furthermore says:

> Upon the basis of value of traffic, the Louisville and Nashville Railroad is to-day a much more important highway of commerce than the Mississippi River between Saint Louis and the Gulf.

I fear, Mr. Chairman, that the Mississippi River is fated like the canals. In the future, sooner or later, railroads will parallel it in their course to the Gulf and steal away the commerce which has floated on its muddy waters. In conclusion, let me say that this bill, like all its predecessors, has apparently been cunningly constructed by the Committee on Rivers and Harbors with a view to catch votes. Every State, I believe, from the Atlantic to the Pacific and from the lakes to the Gulf, is to have a slice of this thirteen-million cut on the Treasury. The bait is very tempting, and it requires some little courage to decline it. But we ought to remember, and I trust that the Democratic side of this House will remember, that many of us owe our seats here to-day to the great popular indignation which followed the passage of a bill similar in all respects except amount to the pending one by the Forty-seventh Congress. That bill was so shamefully bad that even a Republican President had to veto it. It was passed, however, over the veto, as many Republicans and a few Democrats now remember to their sorrow.

Mr. Chairman, I do not want to put myself on record as against all appropriations for the improvement of rivers and harbors. There are some rivers, no doubt, and many harbors justly entitled to national recognition, and I would cheerfully vote for liberal appropriations to improve them; but I can not give my assent to a bill like the one under consideration, which squanders the people's money in needless extravagance upon steamboat landings called "harbors" and upon diminutive streams called "rivers" and in redeeming marshes and building canals and reservoirs. We have had enough of this business in the past, and it is time that a Democratic Congress should put an end to it.

The Tariff.

Labor should be protected and the highest price paid therefor.

Diversified industries promote good wages and make a people free and independent.

SPEECH

OF

HON. WILLIAM H. CALKINS,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 6, 1884,

On the bill (H. R. 5893) to reduce import duties.

Mr. CALKINS said:

Mr. CHAIRMAN: The honorable chairman of the Ways and Means Committee launched his tariff speech on the sea of public opinion with this motto flying at the mast-head:

> Of all the false pretenses with which protection mocks its victims, the assumption that labor is helped or protected by taxing its earnings is the flimsiest.

The misfortune between the text and the logic of his speech is that the latter is an entire departure from the sentiment contained in the former. In his speech it is attempted to be maintained that a protective tariff is a tax upon the labor of this country without corresponding benefits. If this be true, all persons having the interest of the laboring classes at heart should readily assent to the doctrine of free trade, because capital will always take care of itself; but labor must be fostered in order to give it equality with capital.

If labor, therefore, will be benefited by admitting duty-free the manufactured products of foreign countries, we ought not to hesitate to adopt it. If you threaten capital it withdraws itself from the line of attack and seeks safer channels of investment. The capitalist can live and enjoy life without being compelled to toil. The laborer who has nothing to sell but his day's work must have a market, else he will perish; these truths are self-evident, and it follows as a necessary sequence that if laws are so framed that capital is driven out of great manufacturing enterprises and compelled to seek other and safer investments, the market for labor is reduced in exact ratio to the number of manufactories closed and the labor which was employed to carry on that business.

If legislation should compel all the manufacturing establishments in this country to suspend operations and close their workshops, 3,000,000 of laborers would be compelled to seek other employment in order to maintain themselves and support their families. Not only would the laborers themselves be thrown out of employment, but the families dependent upon them for daily bread would be the recipients of the suffer-

ing which would result from such a state of things. It devolves upon the advocates of free trade to show conclusively that the adoption of their theories would not affect the manufacturing interests of the country; or, if it did, what avenues of escape from suffering and starvation the wage classes would have.

Under the present system we know the condition of things. We know that the country is prosperous and happy, and the laborer is receiving the largest remuneration for his work that is paid in the world. Before entering upon an entire change of this system there should be no mistake that the wage classes would not be injured. The advocates of this change are assuming a fearful responsibility unless they can show to a moral certainty that the laborers would be benefited and not injured by the proposed change. No one disputes that sudden commercial panics first strike the laboring classes. They are the first to receive notice of dismissal and the last to obtain the benefit of good times. Any policy, therefore, which threatens a change should be carefully investigated and the benefits proposed thereby indisputably proven in order to prevent calamities so great as the destruction of the labor system of this country.

There are three divisions of opinion on the subject of the tariff. One is absolute free trade, and is based upon a sentiment well expressed in a plausible sentence often repeated by the free-traders, namely: "Buy where you can buy cheapest; sell where you can get most." As an expression of sentiment this is certainly captivating, but as a practical question it is a snare and a delusion. To illustrate it: Labor is a commodity in the market. The largest class of our citizens have nothing to sell save their day's work. If you apply this to labor (as you must if a free-trader) it would be entirely proper for every manufacturing concern in this country to employ the Chinese coolies to perform the manual labor necessary in running their establishments, because this labor can be bought cheaper than the labor of our own citizens. A Chinese laborer will perform at least three-fourths as much work in a day as one of our laboring men, and he will work for one-third as much. His cheap diet, consisting of "rice and rats," costs him a small sum, and enables him to subsist in seeming satisfaction upon brutal and coarse diet, which should bring the blush of shame to the face of any man who would desire to see our wage classes brought into competition with him. But if you adopt the free-traders' theory you must open the doors of this country to that labor.

To carry out this theory it must not be confined to the manufacturing establishments by any means. The laundry, the barber-shop, the hotel waiters, the culinary department, and the messengers' places would all be rapidly filled by this class of cheap labor, to the exclusion of our own citizens. Any person familiar with the Pacific coast and the importation of these laborers there will readily and willingly testify to the practical results of their presence. In the next place, this would not only operate against the labor of our country but it would be a direct benefit to the capitalists and manufacturers. By employing this labor he would make enormous profits and successfully defy competition with the world. This I agree would produce cheap fabrics and cheap food, and would be a practical realization of the Utopian idea that free trade brings cheap living. But mark the result: having deprived our laboring classes of the opportunity to labor, how would it benefit him to have cheap food and cheap clothing if he had no money to purchase either? If he could buy a year's provision for a dollar and a year's clothing for $2 how would he be benefited if he did not have $3 to purchase them with?

By this cheapening process you deprive him of the means of earning the $3. He could better afford to pay a thousand dollars for his necessities if you give him the power to earn $1,500 by a wise system of protection. It may be summed up in one sentence: if you cheapen living in this way you have "promised bread and given a stone." As was aptly said not long ago, the reasons seem to be in favor of free trade, but the practical experience is all against it. This becomes apparent by comparison. If our laborers were in the same brutalized condition that the Chinese coolies are, and were willing to subsist and live as they do, there would then be no need to protect them against the invasion of that sort of labor. The Chinese would not come, and if they did come competition would soon starve them out. I have used this one instance by way of illustration; and it holds good in all others.

The second theory advanced is that of incidental protection to manufacturing interests, for the purpose of benefiting the wage classes. That means simply the laying of duties upon competitive articles of manufacture in cases where this country and other countries manufacture similar goods, so that foreign goods may be laid down in the markets of this country in direct competition with what we produce. So long as we remain one of the family of nations and there remains a higher scale of wages in favor of our laborers we must either close the gap between the price we pay and the price paid in other countries by legislation or reduce the price that we pay for labor to the common level paid by other countries. It is true that the free-trader immediately replies that incidental protection is incidental robbery. I do not, however, agree that incidental protection to competitive articles in favor of home manufacture robs anybody. The theory of economics upon which I stand comes up to this standard, namely: that of protecting the wages paid in this country and keeping them up to their highest standard, incidentally discriminating by legislation in favor of American manufacturers.

The reason for this is based upon actual experience. Raw materials for the manufacture of almost every species of articles can be had and produced in this country as cheaply as in any other. This being so, the only gap which exists in the cost of the manufactured article between this and other countries is in the price paid for labor. The machinery used is the product of labor. If it be true, then, that free trade will lessen the price of the imported article, and that our manufacturers can not compete with foreign manufacturers because foreign labor is cheaper than ours, and that transportation does not increase the price of the foreign product to a degree equal to the cost of it in this country by reason of the scale of wages we pay, it follows as certain as night follows day that our manufacturing interests must succumb to foreign competition unless we discriminate by our tariff legislation in their favor. By thus discriminating it affords an unequaled opportunity for labor, diversifies our industries, and makes this country self-sustaining and able to compete with all the combined nations of the earth.

If we destroy these industries, we become dependent upon foreign markets and create foreign monopolies the most odious in the world.

Allow me for a moment to depart from this line of thought, or connect with it the American idea of social and political economy. The supreme thought upon which the destiny of this nation rests is that education and labor for all time to come must go hand and hand together. Wherever a settlement was made of the early colonies the educational institution was planted coexistent therewith. All of the early settlers were laborers; they brought no aggregate wealth with them, but came with their bare hands and brave hearts to subdue a wilderness and people a continent.

Education generally diffused among the people is necessary for the maintenance of free institutions. It is true that in the Southern States of this country the institution of slavery choked and obliterated a sentiment which in the early times was universal among all the Colonies. In the free States of the North it was nurtured and cultivated, so that now the free school and school-house reach every neighborhood and place the means of education within the reach of all the people. In the older States of the North a permanent school fund, with a munificent income, has been accumulated and invested for the support of the public schools.

In some of the Western States this fund is stupendous and colossal, and in passing through them one is continually surprised by the numberless school-houses that adorn the hills and the valleys, where the mind of the youth of the country is taught the useful branches of literature at the public expense. President Garfield truly said that our "sovereign was the people, and that it was necessary that the sovereign should be intelligent." In order to afford an opportunity for the acquirement of sufficient knowledge, the facilities for public education should be broadened and strengthened. I allude to this for the purpose of illustrating the American idea that labor is noble, and that to lessen the arduous task of toil and make the rulers intelligent and fit to govern they should be educated, and that to foster and encourage and protect the men and women who labor and toil should be one of the first duties of those whom the people delegate to act for them.

The common voice may well ask of its public servant, "What have you done to lessen and alleviate the toiling millions of the Republic; what have you done to ennoble labor and place within the easy grasp of all the means to obtain a living?" The crazy enthusiast of free trade will hardly find that his sovereign will answer, "Well done, thou good and faithful servant!" when he is compelled to admit that he has debased them to the common standard of pauper nations and turned 3,000,000 of operatives and their families out of doors without means of support or opportunity to procure work.

The third theory advanced is that of absolute protection to those competitive articles manufactured at home; that is to say, it is claimed the tariff should be so adjusted and the duties on these articles should be laid so high that it would prevent the foreign manufacturer from bringing any of his manufactured articles into our markets for sale. The theory advanced is that it would encourage the home capitalist to invest his money in every sort of manufacturing enterprise, because of the gains and profits he would realize from such investment, and the certainty of the exclusion of foreign competition, and in this way would more certainly divide the people into two great classes, namely: that of consumers and producers; that in turn competition would regulate prices according to the law of supply and demand, bring them down to a level with the cheapest produced articles of similar character of other nations, keep the prices of the wage class up, make a home market for every bushel of grain produced, and utilize all the raw and other material used in the manufacture of goods. In other words, it would operate as a self-adjusting appliance between the producers and consumers, so that enough would be produced on the one hand to supply operatives in the manufacturing districts, and just a sufficient number of operatives would remain engaged in that work to consume the products of the farm and field; the home market would be maintained and manufactured articles sold at corresponding prices. The only difficulty that I see with this theory is that it would strongly tend to overproduction and to stagnation in business, and would shut us out largely from the

markets of the world and allow others to reap the gains and benefits of foreign markets, while we might, under a tariff law with incidental protection, at least divide with other nations.

Be this as it may, I should much prefer the most stringent protective laws than to see the theory of free trade prevail in this country. As between the two extremes, I believe that the high protective tariff would be much more advantageous to the people.

A most untenable position, it seems to me, has recently been taken by distinguished citizens and statesmen in this country which I must not allow to pass unnoticed. A comparison was recently made between foreign nations and the different States of the Union so far as intercommercial relations exist. It was claimed, I believe, that the free, untrammeled trade between the States of the Union was an argument in favor of the theory that like effect would be produced were the laws similar between foreign nations. This is a fallacious argument for one reason if for no other. The inhabitants of the different States of this Union are, for all practical purposes, upon the same plane; all are governed by similar laws. Free institutions, freedom of thought, and free education exist in all the States of the Union, and all have a common purpose and a common destiny.

Can it be said that the laboring classes of England, Ireland, Germany, Russia, Italy, and Spain are upon the same level, and the equals of the laboring classes of this country? Can it be said that the aims and destinies of the people of those countries and this are precisely the same? Can it be said that the same social relations exist, or that the interests of the laboring classes in Europe are protected equally with the interests of the laboring classes of this country? If for no other reason, manhood suffrage and equality before the law raise one above the other. Illustrations can be used as arguments only when precisely similar relations or conditions exist; and where they are resorted to as arguments a supposable case must be put, for if the case is not a supposable one, the deduction sought to be drawn is a fallacy.

Some of the free-trade theorists assume in argument that because there is a tax of 60 per cent. on a given article, therefore the consumer pays the full value of the article with the tax added. The argument is wrong because the premise is wrong. There is no tax upon anything produced in this country except whisky and tobacco. These are the only articles produced in this country upon which the consumer pays a direct tax, but it is argued that because the foreign product is taxed that therefore the manufacturer in this country adds a sum equal to the tax to the value of the article which he produces and collects it from the consumer. This theory is not borne out by the facts.

It is true that if an American citizen desires to purchase a foreign article which is taxed 60 per cent. he must pay the value of the article with the tax added; but not so with the home-manufactured article. To illustrate it, before we produced plate-glass in this country it cost the American consumer one-third more than the same sort of plate-glass now costs him, although there is a tax upon it on an average of 45 per cent. This is true with reference to the textile fabrics. The price of ordinary clothing in this country is quite as cheap to-day as it was under the famous Robert J. Walker free-trade law of 1842.

Any intelligent man may verify this statement by an examination of the schedule prices of that day and this. The difference in value is chiefly with the finer qualities of cloth. The idea that a man pays $6 tax when he buys $10 worth of clothing is so fallacious that it needs no refutation.

One word on the subject of raw material. In discussing this question I shall not refer to the ores in the mountains, the coal in the earth, or the timber in the tree, but to that class of articles commonly denominated raw material, which require some labor to produce. As a familiar illustration I will take wool. Much has been said about the protection of the wool interests of this country, and a few facts plainly stated, it seems to me, disposes of the entire question. There are three principal grades of wool. The coarse, the intermediary, and the superfine. I assert as a fact that this country produces all of the three classes.

In Australia and the South American countries flocks of sheep can be raised and cared for at little expense. Their wool-clip is in direct competition with ours. The sheep in those countries are pastured and kept upon land that is comparatively valueless. The cost of transportation of that wool here is a mere bagatelle. Now, the question resolves itself into this: shall our farmers abolish all sheep from their farms and depend entirely upon the foreign market for wool, or shall we protect the American farm and thus save the flocks to American husbandry? Any American farmer will tell you that he can not afford to keep a flock of sheep through a cold winter in the States of Ohio, Pennsylvania, Kansas, Indiana, Michigan, Illinois, and Nebraska and feed them grain and pasture them upon land worth on an average $40 an acre in competition with the flocks of sheep in a climate with comparatively no winter and upon land worth 1 cent an acre. For my part, I shall never hesitate to afford protection to the flock-masters and farmers of this country when called upon to do so. I do not care to see the flocks of sheep disappear and become eliminated from the industries of the farms of the great West.

Wool, viewed as a raw material, is comparatively inexpensive. Take for example the number of pounds ordinarily woven into a coat. In its raw state it is inexpensive, but when prepared for wear its cost has been doubled and quadrupled several times.

Let me follow it through the various courses of handiwork before it reaches the back of the wearer. The fleece of wool is sheared, washed, picked, carded, spun, prepared for the loom, woven, finished, transferred to the shelves of the merchant, cut, sewed, and fashioned to the limbs of the wearer, and when completed represents more than 95 per cent. of labor. In America this labor is paid for at the highest price paid anywhere in the world for like services, and the free-trader seems to be vexed beyond endurance because his handsome form may not be attired in this piece of furniture at the starvation wages paid to European workmen. My sympathy is all for the American laborer, for I believe that one who will not first provide "for his own household is worse than an infidel."

The distinguished chairman of the Ways and Means Committee of this House asserts that the revenues may be reduced $50,000,000, and that it becomes the duty of this Congress to take this burden from the shoulders of the people. If there be a surplus of $50,000,000, I fully agree with the distinguished chairman that it becomes our duty to reduce taxation. I do not agree that his horizontal bill will accomplish that purpose.

In many instances, if the bill shall be passed as presented, an increase of revenue will take place. In so far as it reduces the manufacturing establishments of this country an influx of foreign products to meet the demand will increase the revenues to a degree in excess of the proposed reduction all along the line. He will not accomplish by his proposed horizontal plan a reduction of revenue. His plan simply means a reduction all along the line until he gets to that point, through a series of years, where free trade is brought about.

If the honorable chairman of the Committee on Ways and Means was in favor of a reduction pure and simple, it could easily be accomplished. Take the articles of sugar and molasses. The importation of these articles yielded to the Government a revenue last year of $46,000,000 in round numbers. It would be the simplest thing in the world to bring in a bill putting them upon the free-list and accomplishing just what he says is desirable. This would reach the largest number of people. The table of every workingman in this country would be relieved from a tax which he daily pays to the Government. It would also illustrate the theory advanced by the free-traders that their idea would not interfere with the industries of this country. It would touch only one spot in the United States, and while Louisiana might not like to be the frightful example by which free-traders could prove their notions to an anxious and long-suffering people, it would afford a splendid opportunity for this Congress to prove themselves honest and sincere in their assertions. It would also reduce taxation to just about the point the distinguished chairman thinks should be done.

But the fact is, Mr. Chairman, that the revenues of this country, according to the President of the United States, will not be in excess of the demand made upon them for a few years to come. The Mexican soldiers are about to be pensioned by this Congress. This will add fifteen or twenty million dollars to the annual outlay. A bill ought to pass equalizing the bounties of all the soldiers of the late war. This would make an annual burden of fifty or sixty million dollars more for the next two or three years. The arrears of pay to pensioners should be extended, together with pensions to prisoners of war, and this would make a further outlay of $20,000,000 for the next five years. The female nurses in the late war should be paid, and these expenditures, with the other incidentals in a growing nation, will more than absorb the revenues which are now provided by law.

In the face of all this our distinguished Democratic friends propose, as they say, to reduce the revenues $50,000,000 a year on the tariff bill, and the other wing of the Democratic party propose a further reduction by wiping out the tax upon whisky and tobacco, amounting to $90,000,000 more. It is apparent that the people of this country must interpose and stop the disastrous consequences which would follow from these threats.

The Republican party is the one party that can be trusted with the wise reduction of taxation and a just administration of the affairs of the nation.

Since the war it has relieved the people from time to time of the onerous burdens which they so willingly bore and which was fastened upon the nation by Democratic folly. It has kept abreast with the thought and progress of the times. It has responded to the voice of the people. It has entered upon civil-service reform. It has dealt the only blow to Mormonism and polygamous marriages which has ever been given to that iniquitous institution. It has restricted the emigration of the hordes of Chinese coolies into this country, that they might not destroy the wages of our citizens. It has granted munificent pensions to the sufferers in the recent war. It has built up the manufacturing and commercial industries of the country beyond the wildest dream of the enthusiast. It has settled and peopled the Territories of the West and made them magnificent States in the great sisterhood. It has protected American citizenship wherever one of its citizens has seen fit to wander. It has restored the country to a coin basis, and placed the credit of our nation higher than the most favored nations of the world, and it must alone be looked to to take care of the national revenues, protect labor and home industries, foster schools, and preserve the autonomy between labor and capital; circumscribe and limit the power of the railroad corporations, deal with the question of interstate commerce, and bring about such results as will redound to the nation's honor and glory in the future as it has in the past.

Jurisdiction of the Circuit Courts of the United States.

SPEECH

OF

HON. SAMUEL W. MOULTON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1884,

On the bill (H. R. 1578) to amend sections 1, 2, 3, and 10 of an act to determine the jurisdiction of the circuit courts of the United States and to regulate the removal of causes from the State courts, and for other purposes, approved March 3, 1879.

Mr. MOULTON said:

Mr. SPEAKER: The bill under consideration was reported from the Judiciary Committee after very careful consideration, and its passage recommended.

The judicial powers of the United States are prescribed in the third article of the Constitution. These powers have received judicial construction by a great many decisions of the Supreme Court of the United States, and the extent of these powers is well understood.

The first act of Congress creating Federal courts and prescribing their jurisdiction was the judiciary act of 1789.

Those opposed to this bill contend that Congress should confer upon these courts all the jurisdiction possible and as to every subject-matter and person under the powers of the Constitution.

Those who support this bill take the ground that it would be unwise and detrimental to the interest of the people for Congress to adopt the policy contended for by the opponents of the bill.

Circuit courts of the United States are created by acts of Congress, and we hold that it is within the powers of Congress to withhold, limit, or extend the jurisdiction of these courts under the Constitution as the interest of the people may require. And this may be determined by past experience, as well as the present condition and wants of the country.

By reference to the judiciary act of 1789 it will be seen that only a very small part of the subject embraced in the judicial powers of the United States under the Constitution was conferred on the circuit courts. The largest part of those powers was withheld from the Federal courts, and for the best interest of the people, and left to the jurisdiction of the State courts, where it remained without complaint for almost a century, every citizen finding in these courts full and ample remedies for all wrongs and invasion of rights of every kind.

During the war of the rebellion and the legislation on the reconstruction measures Congress unhappily passed various and sundry acts, notably in 1866, 1867, and in 1875, greatly enlarging the powers and jurisdiction of the circuit courts, and as I think to the great injury of the people.

The object of this bill is to repeal some of the vicious legislation from 1866 to 1875, and to restore the judiciary act of 1789 as far as may be practicable. The increase of this jurisdiction evidently grew out of the then anomalous condition of the country and was largely influenced by the passions and prejudices of the times. Up to that time there had been no demand or attempt to increase the jurisdiction of the Federal courts; but at that time and since the theory and practice of the party in power was to concentrate as much power as possible in the executive and judicial departments of the Government, and by consequence lessen the jurisdiction of the State courts and the powers and rights of the States.

I understand my colleague upon the committee, Mr. BISBEE, to take the ground that it is the duty of Congress to vest the whole judicial power under the Constitution and as to all subjects in the Federal courts, and not to do so is a disregard of the constitutional requirements. This is a very serious question.

I think it ought to be assumed that the fathers who made the Constitution, and many of them in the Congress of 1789 when the judiciary act was passed, had as full a comprehension of the construction and obligation of that instrument as the present generation. The makers of the Constitution did not think that they were violating any of its obligations when they framed the act of 1789, withholding from the jurisdiction of the courts a large part of conceded power. The question with them was, what is for the best interest of the people?

But this whole question of jurisdiction has been repeatedly decided by the courts. I refer to a few only of the many cases upon this point. The substance of these cases is stated in Turner, administrator, *vs.* Bank of North America (4 Dallas, page 10) in these words:

> Congress is not bound, and it would perhaps be inexpedient, to enlarge the jurisdiction of the Federal courts to every subject in every form which the Constitution might warrant. (See also McIntire *vs.* Wood, 7 Cranch; Kimball *vs.* United States, 12 Peters; Coy *vs.* Carter, 3 Howard.)

In the case of Sheldon *et al.* *vs.* Sill, 8 Howard, 441, the court used these words:

> The only question which it will be necessary to notice in this case is whether the circuit court had jurisdiction. Sill, the complainant below, a citizen of New York, filed his bill in the circuit court of the United States for Michigan against Sheldon, claiming to recover the amount of a bond and mortgage which had been assigned to him by Hastings, the president of the Bank of Michigan. Sheldon in his answer, among other things, pleaded that the bond and mortgage in controversy, having been originally given by a citizen of Michigan to another citizen of the same State, and the complainant being assignee of them, the circuit court had no jurisdiction. The eleventh section of the judiciary act, which defines the jurisdiction of the circuit courts, restrains them from taking "cognizance of any suit to recover the contents of any promissory note or other chose in action in favor of an assignee, unless a suit might have been prosecuted in such court to recover the contents if no assignment had been made, except in cases of foreign bills of exchange." The third article of the Constitution declares that "the judicial power of the United States shall be vested in one Supreme Court and such inferior courts as the Congress may from time to time ordain and establish." The second section of the same article enumerates the cases and controversies of which the judicial power shall have cognizance, and among others it specifies "controversies between citizens of different States." It has been alleged that this restriction of the judiciary act with regard to assignees of choses in action is in conflict with this provision of the Constitution and therefore void. It must be admitted that if the Constitution had ordained and established the inferior courts and distributed to them their respective powers they could not be restricted or divested by Congress; but as it has made no such distribution, one of two consequences must result—either that each inferior court created by Congress must exercise all the judicial powers not given to the Supreme Court, or that Congress, having the power to establish the courts, must define their respective jurisdictions.
>
> The first of these inferences has never been asserted, and could not be defended with any show of reason; and if not, the latter would seem to follow as a necessary consequence; and it would seem to follow also that, having a right to prescribe, Congress may withhold from any court of its creation jurisdiction of any of the enumerated controversies. Courts created by statute can have no jurisdiction but such as the statute confers. No one of them can assert a just claim to jurisdiction exclusively conferred on another or withheld from all. The Constitution has defined the limits of the judicial power of the United States, but has not prescribed how much of it shall be exercised by the circuit court; consequently the statute which does prescribe the limits of their jurisdiction can not be in conflict with the Constitution unless it confers powers not enumerated therein. Such has been the doctrine held by this court since its first establishment. To enumerate all the cases in which it has been either directly advanced or tacitly assumed would be tedious and unnecessary. In the case of Turner *vs.* Bank of North America (4 Dallas, 10), it was contended, as in this case, that as it was a controversy between citizens of different States the Constitution gave the plaintiff a right to sue in the circuit court, notwithstanding he was as assignee within the restriction of the eleventh section of the judiciary act. But the court said: "The political truth is that the disposal of the judicial power (except in a few specified instances) belongs to Congress; and Congress is not bound to enlarge the jurisdiction of the Federal courts to every subject in every form which the Constitution might warrant." This decision was made in 1799. Since that time the same doctrine has been frequently asserted by this court, as may be seen in McIntire *vs.* Wood, 7 Cranch, 506; Kendall *vs.* United States, 12 Peters, 616; Cary *vs.* Curtis, 3 Howard, 245.

I read as an additional authority on this subject from the case of Cary *vs.* Curtis (3 Howard, 245), as follows:

> Secondly, in the doctrine so often ruled in this court, that the judicial power of the United States, although it had its origin in the Constitution, is (except in enumerated instances, applicable exclusively to this court) dependent for its distribution and organization and for the modes of its exercise entirely upon the action of Congress, who possess the sole power of creating the tribunals (inferior to the Supreme Court) for the exercise of the judicial power, and of investing them with jurisdiction, either limited, concurrent, or exclusive, and of withholding jurisdiction from them in the exact degrees and character which to Congress may seem proper for the public good. To deny this position would be to elevate the judicial over the legislative branch of the Government and to give to the former powers limited by its own discretion merely. It follows, then, that the courts created by statute must look to the statute as the warrant for their authority; certainly they can not go beyond the statute and assert an authority with which they may not be invested by it, or which may be clearly denied to them. This argument is in no wise impaired by admitting that the judicial power shall extend to all cases arising under the Constitution and laws of the United States. Perfectly consistent with such an admission is the truth that the organization of the judicial power, the definition and distribution of the subjects of jurisdiction in the Federal tribunals, and the modes of their action and authority have been, and of right must be, the work of the Legislature. The existence of the judicial act itself, with its several supplements, furnishes proof unanswerable on this point. The courts of the United States are all limited in their nature and constitution, and have not the powers inherent in courts existing by prescription or by the common law.

Mr. Speaker, the Constitution provides that—

> The judicial power shall extend to all cases, at law and in equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States; between a State and citizens of another State; between citizens of different States; between citizens of the same States claiming lands under grants of different States, and between a State, or the citizens thereof and foreign states, citizens, or subjects.

The following is a summary of the provisions of the bill:

1. To raise the sum necessary to give original jurisdiction to the circuit court to above $2,000 (section 1).

2. To give the right of removal to non-resident defendants only, and where the sum involved is above $2,000, except that in citizenship cases the plaintiff or defendant may remove at any time before trial upon affidavit of prejudice (sections 2 and 3).

3. To require the defendant removing to do so when first called upon to plead, and not merely before or at the trial term, and before trial as now, except in citizenship cases, as noted before (sections 2 and 3).

4. To take away the right of a corporation to sue in a United States court a citizen of a State in which it is carrying on business or to be sued by such citizen in such court or to remove such a suit to such court (section 3).

5. To require citizenship suits to be brought in the district of the plaintiff or defendant; that no one shall be arrested in one district for trial in another in a civil action; that original process shall run only

in the district of the defendant's residence or where he is found when process is served; except citizenship cases as above (section 1.)

6. That interest shall be excluded in ascertaining the sum involved (section 1).

7. That no assignee of commercial paper (except foreign bills) can sue when the assignor could not (section 1).

I read a part of the report of the committee, which fully shows the material changes that this bill makes in the present law, with some of the reasons that have induced the committee to recommend its passage:

The first change proposed is to increase the minimum jurisdiction of the circuit courts from $500 to $2,000. It will be remembered that the present minimum jurisdiction was fixed by the law of 1789. It is believed, in view of the growth of business in the country, and the increase of population from 4,000,000, the number at the time the act of 1789 was passed, to 50,000,000, that the minimum jurisdiction of the circuit courts ought not to be less than $2,000.

In almost all the States of the Union the circuit courts are overloaded with business. By increasing the minimum from $500 to $2,000 the United States courts will be relieved of a large amount of business which can be as satisfactorily disposed of by the State courts as by the circuit courts of the United States, and with more dispatch and less cost to litigants.

The next amendment proposed to the existing statute is to take away from the circuit courts of the United States jurisdiction of causes in favor of assignees of promissory notes and bills of exchange, unless a suit might have been maintained thereon if no assignment had been made. This change restores the law as it existed from 1789 to 1875. It is believed that a large proportion of the business which goes into the circuit courts at the instance of assignees of promissory notes and domestic bills of exchange is the result of collusion between the original payee or holder and the assignee. This fruitful source of fraud on the jurisdiction of the courts, and unnecessary annoyance and expense which the makers of such instruments are subjected to, ought to be removed.

The next change proposed is to restrict the right to remove a cause from the State to the Federal court to the defendant. As the law now provides, either plaintiff or defendant may remove a cause. This was an innovation on the law as it existed from 1789 until the passage of the act of 1875.

In the opinion of the committee, it is believed to be just and proper to require the plaintiff to abide his selection of a forum. If he elects to sue in a State court when he might have brought his suit in a Federal court, there would seem to be, ordinarily, no good reason to allow him to remove the cause. Experience in the practice under the act of 1875 has shown that such a privilege is often used by plaintiffs to obtain unfair concessions and compromises from defendants who are unable to meet the expenses incident to litigation to the Federal courts remote from their homes.

The committee, however, believe that when a plaintiff makes affidavit that from prejudice or local influence he believes that he will not be able to obtain justice in the State court he should have the right to remove the cause to the Federal court. The bill secures that right to a plaintiff.

The next material change is to take from the circuit courts jurisdiction of any suit of a civil nature between a corporation and a citizen of any State in which such corporation at the time the cause of action accrued may have been carrying on any business authorized by the law creating it, except in cases arising under the copyright or patent laws, and in like cases in which said courts are authorized by the act to take original cognizance of suits between citizens of the same State, nor shall any such suit between a corporation and a citizen or citizens of a State in which it may be doing business be removed into any circuit court of the United States, except in like cases in which such removal is authorized by the foregoing provisions in suits between citizens of the same State.

Corporations created or organized by the laws of any State are authorized to sue a citizen or citizens of any other State in the Federal court, or when in like cases they may be sued in a State court to remove the cause into a Federal court. This privilege or right rests on the assumption that a corporation created or organized under the law of a State is a citizen of such State for all judicial purposes, and therefore, when suing or being sued in any other State, may avail itself of the rights which appertain to citizens of different States in respect to like suits. The committee recognize the fact that the Supreme Court has decided such to be the status of a corporation, and without questioning the soundness of the ajudication, about which there is a divided opinion, see no good reason in longer permitting the exercise of such jurisdiction by the circuit courts. On the other hand, the exercise of such jurisdiction by the circuit courts has given rise to much unnecessary expense and grave disadvantages to the citizens of States where corporations may be carrying on business. A corporation which leaves the State of its domicil and sets up its business in another State ought to be regarded for all judicial purposes as a citizen of such State, and should not be permitted to enjoy or exercise privileges not accorded to a citizen of such a State.

Again, there are corporations created under the laws of Congress.

There has been no judicial ascertainment of the domicil of such corporations, but under existing law such corporations are permitted to sue in the Federal courts, and when sued in a State court are authorized under section 640, Revised Statutes, to remove the cause to the circuit court of the United States. The change in the law proposed embraces all such corporations, as well as corporations created or organized under the laws of a State.

That the passage of this bill will be of great advantage to the people and injure no one I think there can be no doubt; it deprives no person of his just rights, and removes great hardships that exist under the present law.

Under the present condition of things the circuit courts of the United States are wholly unable to properly try the cases which come before them, and their inability amounts to a practical denial of justice. If this bill becomes a law the cases before the circuit courts will be lessened at least one-third. I have no doubt that it will also lessen at least 25 per cent. the causes which under the present system reach the Supreme Court. There are 1,200 cases on the docket of that court, and it takes about four years to reach a case for argument after it is filed there. This certainly would be of great advantage to the people.

From the time a case is commenced in the circuit court until final adjudication in the Supreme Court six, eight, or ten years may elapse. This is a substantial denial of justice.

If the State courts were restored to their rightful powers the Federal courts could discharge all the duties that rightfully devolve upon them, and this is the proper mode of relieving them.

There is one provision of this bill which, it seems to me, must address itself directly to the common sense and justice of every person who has practiced law in these courts, as a means of relieving the Federal courts of a very considerable amount of business which finally reaches the Supreme Court. I refer to those cases where jurisdiction is obtained by reason of assignments. Fictitious assignments is a regular business with reference to certain classes of securities, notes for fraudulent patents and among certain parties, to enable them to sue in the Federal courts, as this tends to prevent defenses by poor debtors. The old law as it stood prior to 1875 provided that if A gave his note to B in the same State, under no circumstances, by assignment or otherwise, could that note be sued in the Federal courts. To-day the law is that, although the note be made between parties in Illinois, the payee may assign the note to a citizen of Indiana and that assignee may bring suit at once in the Federal courts. And I am informed that over one-third of all the cases that reach the circuit courts in the Western States arise from permitting such assignees to sue, and by collusion between parties. This operates unjustly, and especially so as against the maker of the note or bonds. I am heartily in favor of that provision of the bill which proposes to correct this practice. It is a very important provision and ought to pass this House. It injures no one and will operate principally for the benefit of all honest people.

The bill also contains the following important provision:

That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, either at common law or in equity, between a corporation created or organized by or under the laws of any State and a citizen of any State in which such corporation at the time the cause of action accrued may have been carrying on any business authorized by the law creating it, except in cases arising under the patent or copyright laws, and in like cases in which said courts are authorized by this act to take original cognizance of suits between citizens of the same State; nor shall any such suit between such a corporation and a citizen or citizens of a State in which it may be doing business be removed to any circuit court of the United States, except in like cases in which such removal is authorized by the foregoing provision in suits between citizens of the same States.

The effect of this proposition is that a corporation created in one State and doing business in another State shall have no more rights and privileges than the citizens of the latter State.

Now, to amplify this so we can see the operation of this provision:

A corporation is created in Massachusetts, and an agency is established in Illinois, it may be a fire and marine or life insurance company, or something of that kind. Under the law as it stands to-day such a corporation may bring the smallest suit against a citizen and drag him two or three hundred miles from home. It is done in this way: These insurance companies have notes against parties in all parts of the State. They claim that there is a default in the payment of a note of $50. They file their declaration in the Federal court, alleging in the *ad damnum* $500. When such a suit is brought in a circuit court of the United States, it is a great hardship upon the defendant, residing, it may be, in Cairo, Ill., to go to Springfield, a distance of two hundred and fifty miles, to attend court. The expenses for himself and his attorney would be more than double the amount for which he is sued.

If this provision of the bill is adopted the citizen will be protected against present injustice. This provision will not operate to the injury of the foreign corporation.

If a corporation is permitted to come into a State and enjoy under its laws protection for its property and rights, why should it not be content with the enjoyment of all the rights of the citizens of the State, but no more? If the corporation has occasion to sue the citizen let him do it in the county where that citizen resides. The courts are always open, and there is no justice or reason why the citizen at the caprice of a corporation should be compelled to go hundreds of miles from home at great inconvenience and expense.

This practice is giving all the advantage to the foreign corporation and at the expense of the citizen.

But it is said in answer to these obvious reasons for this bill that a citizen from another State or a foreign corporation can not have justice done them in the State courts, on account of prejudice, partiality, ignorance, or corruption of the State judiciary. This is all mere pretense, and amounts to nothing but a plea for the concentration of judicial power in the Federal courts.

The encroachment of the Federal upon the jurisdiction of the State courts within the past twenty years has threatened their extinction. Every act of Congress that has touched the subject during that time has lessened the State and increased the Federal power. And I may say that the general tendency of all Federal legislation has been toward the centralization of power in the hands of the Government, so that the rights of the people and the States are jeopardized.

There is a theory that is attempted to be maintained by those who favor centralization of Federal power, that the Federal courts are the safeguards of the rights of the people; that in these courts alone the ultimate rights and liberties of the citizen can be maintained. This theory is a great mistake and its prevalence tends to many evils. Among others it lessens respect for State courts, State rights, and State protection.

At the organization of the Government the powers of the Federal judiciary were very limited, as I have shown, and carefully confined within the provisions of the Constitution, and the rights of the State courts were zealously protected.

One of the strongest objections urged against the adoption of the

Federal Constitution was that the Federal judiciary might absorb and destroy the powers of the State courts.

The encroachments upon the jurisdiction of the State courts should be checked, unless the State courts have failed to answer the end designed at the organization of our system of government. If they have proved a failure, let us amend the Constitution and abolish them as useless and expensive appendages to our system. I think there can be no doubt that the supreme courts of the several States are equal in every respect, if not superior, to the circuit and district courts of the United States. This comparison may be made as to integrity, legal learning, and the impartial discharge of their general duties, and the State courts certainly will not suffer by such comparison. The incapacity and want of integrity of Federal judges has often been charged, and with truth. But charges of this kind have seldom been made against State judges.

Besides, a large majority of the Federal judges are taken from the bench of the States, and all of them from either the bench or bar of the States. There is no other place from which to fill the Federal judiciary but the States. Judge David Davis was taken from the circuit bench of my State and transferred directly to the Supreme Court of the United States. He took a high position as a learned jurist from the very first.

Certainly it can not be contended that the United States judiciary contains all the legal learning, integrity, wisdom, and all that goes to constitute an able judiciary.

The history of the State courts is a full refutation of the claim set up by those who desire the increase of Federal power that the Federal circuit and district judges are superior to the State judiciary.

The State courts, if they err at all, err on the side favoring the rights and liberties of the citizen. And the tendency of the Federal court decisions is on the side favorable to Federal power.

It is admitted that the State judiciary may pass upon and decide the great question of life, liberty, and of property as between citizens of the State, but the opponents of this bill say that the State judiciary are so ignorant and prejudiced that when a non-resident is a party they are incapable of doing justice to him and can not be trusted. This is a senseless and unjust charge against the State judiciary. The charge is not supported by fact and is wholly untrue.

The claim that is made for the Federal judiciary and its increased jurisdiction implies distrust, ignorance, and dishonesty on the part of the State judiciary. The judiciary of the State is composed of the very best men for learning, integrity, and character that can be found. There is hardly an exception. The right of a non-resident person or corporation can be as well maintained in the State courts as in the Federal. From 1789 to 1875 thousands of cases where non-residents were parties were tried in the State courts and no complaint of injustice was ever made or thought of.

Let us, to show the injustice and absurdity of the doctrine of removal of causes from State to Federal courts, as contended for, take the case of a domestic corporation that is sued in its own State. Now, is it possible to suppose that because a non-resident happens to own a few hundred dollars of stock in the corporation (of which the judge is presumably ignorant) the State judge can not fairly and justly try the case, and that such a case under such circumstances must be removed to the Federal court on the application of such a stockholder. Upon what grounds can you assume that the Federal judge is less prejudiced, ignorant, or dishonest than the State judge? Even the Federal judge may be more prejudiced and ignorant than the State judge, and not unfrequently is, as many of us have had good reason to know. Appointments to the Federal bench are made too often for political and partisan considerations rather than for judicial qualification, and it is within the memory of us all that judges to the highest tribunal have been appointed for the purpose of producing a particular decision.

Again, consider the assumption of the Federal judges of jurisdiction to enjoin State and municipal taxes, especially where corporations are interested, and hold them illegally assessed or unconstitutional when the highest State court has held them valid and constitutional.

This is a monstrous assumption of power and never should have been exercised by the Federal courts. And yet at one time the circuit and Federal courts in the State of Illinois had over three millions of such taxes enjoined at the instance of corporations, and by reason of it over one-half of this sum was lost to the State and municipalities. Is it possible that the State and municipalities should be compelled to go to these inferior Federal tribunals and beg to be permitted to exercise their unquestionable power to provide the revenue absolutely necessary to maintain their very existence?

The assumption of such a power from such a source is subversive of our Government, and if sanctioned or submitted to, every State is absolutely dependent on the will of the circuit and district courts within its borders. Nothing could be more monstrously absurd and dangerous.

If this doctrine that a railroad corporation, non-resident stockholder of a domestic corporation, can enjoin the collection of the revenues of a State, then it may be by a little stretch of power that the existence of the State governments may be wholly destroyed. And this is not an improbable result when we look at the vast encroachment of the Federal judiciary within the last quarter of a century. It is but a short step from the present assumption of power to the ultimate end—the claim of all judicial power.

Thomas Jefferson, in 1820, thirty-one years after the Government had been put into operation, in a letter to Mr. Ritchie, said:

> The judiciary of the United States is the subtle corps of sappers and miners constantly working underground to undermine the foundaton of our confederated fabric. They are construing our Constitution from a co-ordination of a general and special government to a supreme one alone. * * * A judiciary independent of a king or executive alone is a good thing; but independence of the will of the nation is a solecism, at least in a republican government.

Our institutions and liberties if destroyed will probably be the result of judicial decisions lessening the power of the State courts and the inherent rights of the people and centralizing power in the possession of the few.

To-day Judge Drummond, of Illinois, by reason of his office of Federal judge, is superintendent and has control of more miles of railroad than any man in the world.

The creditors of railroads ought to have some voice in the distribution of assets and ought to find remedies to control this matter in the State courts.

The recent decision of the Supreme Court in regard to the legal-tender act has given the whole country a just cause for alarm. This decision has been received with great dissatisfaction by the bar and the people all over the country, and is another strong instance of the tendency of Federal courts toward centralization of power, and affords grounds for realization of the fears of Jefferson so cogently expressed sixty-five years ago.

Without delaying the House longer I wish to say, Mr. Speaker, that there is a great demand for the passage of this bill, and we can do no greater service to the people and in defense of the rights of the States than by the prompt action of this Congress in making this bill the law of the land.

Rivers and Harbors.

SPEECH

OF

HON. HENRY G. BURLEIGH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. BURLEIGH said:

Mr. CHAIRMAN: I notice in the RECORD of June 10 the speech of my colleague from New York, Hon. LEWIS BEACH, which appears to be in favor of railroads and in opposition to all water ways and all harbors. He states that Illinois is the only State that is willing to display generosity in the matter of giving away canals, and, referring to the Erie Canal bill now before the House, he says that the State of New York is wedded to the Erie Canal, and that it would be heresy to breathe one word against it within the confines of the Empire State.

I will inform the House and the honorable gentleman that the people of the Empire State are wedded to the Erie Canal not only because it has been one of the chief resources of its commercial greatness, uniting as it does the great Western lakes with the Hudson River, but because it is the only system of transportation in the State that does not discriminate against the citizens of its State. Not only the Republican party but the Democratic party are in favor of this great water way.

When the constitutional amendment to make the canals free was submitted to the people the vote thereon was 486,105 in favor thereof and 163,151 in opposition.

One of the strongest arguments in favor of the canal is in his statement that in the year 1881 the freight per bushel from Chicago to New York by lake and canal was 8.6 cents, by all rail 14.4 cents per bushel; in 1882 by lake and canal 8.7 cents per bushel, by all rail it was 14.6 cents per bushel; in 1883 by lake and canal 9.16 cents per bushel, by all rail 16.1 cents per bushel; showing the cost to be something like 40 per cent. less from Chicago to New York by water than by rail.

In the face of this he is willing to sell the Erie Canal to some corporation and build thereon a four-track railway at an estimated cost of $15,000,000. He states that the New York Central Railroad is capitalized at $144,000,000. I would like to ask the gentleman, were the last remaining check against railroad monopolies taken away from the people, namely, the Erie Canal, how long it would be before his new railroad would be capitalized at $200,000,000?

When the New York Central road received its charter it was with the express condition that it should pay into the treasury of the State of New York the amount of tolls charged by the canals, as the road runs parallel with it. But the power of corporations soon found a way to relieve it from this charge. It is always potential in legislative bodies. I will inform the gentleman that it will be a long time before the peo-

ple of his State will be willing to have the Erie Canal, which unites the great Western lakes with the Hudson River, and the Champlain Canal, which unites all the Canadian rivers and lakes with the commercial emporium of New York, sold out under the hammer to some railroad corporation, even if the gentleman himself should be one of the incorporators.

The Erie Canal has paid into the treasury of the State of New York over and above the cost of its construction and all its improvements $35,000,000. He gives as his reference to canal authorities Mr. Silas Seymour. I will state that he is no authority on canals and is not recognized as authority. He does not even live on a canal nor has any sympathy with canals. But I will state that there is a gentleman in the State of New York, whom I would have supposed my colleague would have given as authority, namely, Hon. Horatio Seymour, who is a friend of the canals and knows their value to the people of the State of New York, and whose voice will always be heard in their behalf. The gentleman laughingly refers to the sums of $1,000 to improve the Rondout Harbor and $5,000 for the harbor at Saugerties, and states as follows:

I must confess that I felt some little local pride, but probably not so much as my distinguished colleague [Mr. BAGLEY], who represents the Ulster district, in finding Rondout and Saugerties dignified with the title of "harbors." I never supposed they had come up even to the standard of "landings," as we call them along the river. The only ships you will find there are barges, canal-boats, and mud-scows, which the Committee on Rivers and Harbors has, through ignorance of nautical matters probably, mistaken for ships clipped of their wings.

I will inform the gentleman that the commerce of the Hudson River is 20,000,000 of tons during the eight months of navigation; that it is all done by the barges and canal-boats, mainly owned by the men who navigate them, and employing 20,000 men, and during the winter when the Hudson River is frozen over these harbors furnish a safe refuge for a large number of boats and barges which float this vast tonnage during the summer season, and which are mostly owned by poor, hard-working, and industrious men, and I should have thought it would have been the last thing the gentleman would have referred to.

The gentleman is in error when he states that there was no recommendation from the Chief Engineer. A survey was made by order of General Newton, and the committee had before it his recommendation of their usefulness and utility. Over 1,000,000 tons of coal are transported from the city of Newburg, in the gentleman's own district, on these same insignificant barges and canal-boats which he so sneeringly refers to.

I believe it is the duty of this Government to make appropriations for the improvement of all the great water ways and harbors that are national in their character, and no State in the Union is more interested in this improvement than the State of New York. Let the improvement be in whatever State it may so long as it is national in its character.

Plenty of votes could be found in 1864 when one railroad had been built uniting the Atlantic and Pacific Oceans to give away forty or fifty million acres of the public domain which belonged to the American people to the Northern Pacific Railroad corporation. Then why begrudge a small amount each year to improve and protect the water ways of the people, which are their own, to be used free forever?

Legislative, Executive, and Judicial Appropriation Bill.

SPEECH

OF

HON. PHILIP B. THOMPSON, JR.,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7069) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1885, and for other purposes—

Mr. THOMPSON said:

Mr. CHAIRMAN: I consented to the limitation of time as proposed by the gentleman from Indiana because I do not desire to delay the House in the passage of this bill. At the same time I think the large interests involved are entitled to due consideration—that we ought to take sufficient time to consider them thoroughly.

The amendment which I intend to offer I send to the desk, that it may be read and become a part of the record.

The Clerk read as follows:

At the end of line 840, page 35, insert:

"That after June 30, 1884, the internal-revenue districts and custom-duties districts, as they now exist in each State and Territory of the United States and the District of Columbia, are hereby consolidated in each of said States and Territories and said District into one district for all purposes of Federal taxation, which new district shall be called and known by the name of such State, Territory, and District of Columbia, and be coextensive with the limits thereof.

"SEC. 2. That the office of Commissioner of Customs is hereby abolished, and the officers known as collectors of internal revenue and collectors of customs are abolished; and the President shall appoint, by and with the advice and consent of the Senate, one collector of taxes for each new district, who shall discharge all the duties imposed by law upon the several internal-revenue collectors and custom-duty collectors in the several districts now existing and which under this consolidation form the new district, and such other duties as may be imposed by law upon him.

"SEC. 3. That the President shall, by notice duly given, establish one port of entry in each district, and shall designate the point at which the collector in said district shall keep his office; and the collectors are authorized to subdivide their States and Territories into subordinate districts, which subdivisions they shall report to the Secretary of the Treasury; and if he approves the same, he shall so declare and give public notice of the boundaries of the subordinate districts, and designate points at which taxes may be collected under the internal-revenue laws, and ports of entry in said subordinate districts at which deputy collectors may be stationed to receive duties and other moneys, to enter and clear vessels, and perform such services in relation to the customs, navigation, and internal-revenue laws as the Secretary may deem necessary: *Provided, however*, That no subordinate district shall be established, or port of entry designated or maintained, in which the amount of taxes collected does not exceed the costs of collection.

"SEC. 4. That deputy collectors, inspectors, weighers, appraisers, clerks, and other subordinate officers shall be appointed in the manner now provided by law.

"SEC. 5. That each collector shall execute a bond to the United States as is now provided by section 2619 of the Revised Statutes; and the Secretary of the Treasury may increase the penalty of the bonds, and where not already fixed may prescribe the same. Each collector shall receive an annual salary, to be fixed and graduated upon the basis now provided by law for collectors of internal revenue. Deputy collectors shall execute like bonds as collectors, in such penalty as the Secretary of the Treasury may prescribe, who shall also fix their compensation.

"SEC. 6. That the Commissioner of Internal Revenue shall hereafter be known as the commissioner of taxes, and, in addition to his present duties, shall discharge all the duties now imposed by law upon the Commissioner of Customs, and shall superintend the collection of all taxes collectible under the internal-revenue system and customs-duties system of the United States.

"SEC. 7. That the President is authorized to discontinue the services and abolish the offices of surveyors and appraisers of customs in all districts abolished by this consolidation, and shall designate places of deposit for the records and files pertaining to those collection districts which have been abolished by this act.

"SEC. 8. That the salaries provided for officers in this act shall be in lieu of all salaries, fees, commissions, and storage heretofore allowed to collectors and surveyors of customs; and all laws or parts of laws authorizing the allowance to collectors and surveyors of customs of salaries, fees, commissions, storage, and perquisites, of whatsoever name and nature, are hereby repealed; and all fees collectible by law shall be accounted for and paid into the Treasury as moneys belonging to the United States; and the Secretary of the Treasury is hereby authorized to provide for the collection of such fees by the use of stamps, under such regulations as he may prescribe."

Mr. THOMPSON. Mr. Chairman, it will be seen from the scope of this amendment that it is, as I indicated, a consolidation of the entire collection and internal-revenue districts, so that each State shall have one collector, who shall collect, account for, and be responsible for all the Federal taxation in that State. I propose, as I have stated, to offer this amendment at the proper time.

A good many strictures have been indulged in by the gentleman from Illinois [Mr. CANNON] as to the manner in which this subject has been brought to the attention of the House. He claimed that members had not had sufficient notice; that in view of the grave importance of the question at least one week's notice of such a proposition ought to have been given.

Mr. CANNON. My friend does not want to misrepresent me?

Mr. THOMPSON. Not at all.

Mr. CANNON. I stated that this subject is being considered by a subcommittee of the Committee on Appropriations, which has not yet reported; that the proposition ought to be considered and fully prepared in committee before being presented to the House.

Mr. THOMPSON. Now, I must enter my protest against the Committee on Appropriations, of which the gentleman from Illinois is a member, absorbing all the functions not only of every other committee of this House but even of the House itself. It would appear that, according to the gentleman's view, we should not be allowed to consider any proposition in Committee of the Whole until it has passed under the consideration of some subcommittee of the Committee on Appropriations. While such consideration may enlighten the gentleman from Illinois, I can not see how it can enlighten the House upon this question. The subject-matter of this amendment as now presented to the House has been pending here for more than two months The recommendations of the Secretary of the Treasury on this question have been as much before every member of this House as before the members of the Committee on Appropriations. There is another committee of the House charged more directly with the administration of this branch of the Government than the Appropriations Committee, which really has no jurisdiction over it. When the Committee on Appropriations undertakes to exercise jurisdiction of this matter to the exclusion of the other committees of the House, it is an assumption upon the part of that committee not warranted by sound legislative or parliamentary principles or the rules established for the government of the House.

The honorable gentleman from Pennsylvania the chairman of the Committee on Appropriations [Mr. RANDALL] says that this legislation is proper and right. He says that he has had it under consideration for some time and, so far as he is concerned, is prepared to act upon it. The gentleman from Illinois, I understand, is prepared to act upon it; if not, he ought to be, because the recommendations of the Secretary of the Treasury have been before him for some two years.

This general proposition to reduce internal-revenue collectors again brought to the attention of the House has been opposed by the gentleman from Illinois heretofore. The same controversy arose when I proposed last year to reduce the collection districts. He then announced solemnly the same reasons in opposition as he does now. If he will take is speech made on that occasion, or rather his two or three speeches—because he spoke several times—he will find in them, almost *verbatim*, the same objections as those which he has made this morning. Yet the President, through the instrumentality of the Secretary of the Treasury, reduced those collection districts from one hundred and twenty-six to eighty-two in spite of the objections of the gentleman from Illinois, then contending as he does now that if we dared to strike one of these officers down the revenues of the country would be endangered.

The gentleman then referred to my State just as he has done to-day. I knew he was going to point to Kentucky and claim that distilleries are running illicitly there. I was prepared for that. When this question was presented before, he intimidated and alarmed the House out of doing what it was inclined to do. When I proposed the reduction of these collection districts to forty-three he alarmed the House by stating that if the reduction should be made Kentucky distillers would refuse to pay their taxes and there would not be sufficient money to supply the Government. Yet the President himself followed the bare suggestion made in this House, and, in spite of the arguments, objections, and fears of the gentleman, reduced the collection districts from one hundred and twenty-six to eighty-two; and, as I find from the report of the Secretary of the Treasury, not one dollar of revenue was lost.

Why, there have been only forty-three illicit distilleries in Kentucky last year, and only one lone man arrested in the whole State. Where did they come from? Just as I told him they would, they come from the tenth district, up in the mountains. They were nothing in the world but little fruit-brandy distilleries, which would not make, the whole of them put together, as much as five hundred gallons of brandy. All those forty-three illicit distilleries in Kentucky, I will venture to say, are up in the tenth district and not one in the district I represent. The seventh district, which I was then in, has not a single illicit distillery running in it.

But let me make a correction there. There were only forty-three in the whole State of Kentucky, and of those there were only twenty-nine up in the mountain district, or the fruit-brandy district, where these little fruit-brandy distilleries are run almost *ad libitum*, because the officers who were sent up there, as the gentleman from Illinois said, to watch them and prevent the manufacture of this whisky, get their part of what is turned out in these little distilleries. I recollect when I was traveling around there I used sometimes to meet some of these distillers, and I asked one of them how he complied with the law which required them to make returns twice a month, and he said: "I do not pay any. I do not have to pay taxes. The inspector we now have does not begin to collect until I get thirteen gallons ahead, and I never intend to get that much ahead." [Laughter.] And he never did pay any taxes. That is about the way they run these little matters up there in the tenth district. They do not pay, and they do not intend to pay; and there is no use in keeping up this large corps of officials for the purpose of collecting this insignificant amount of taxes.

I know the gentleman has referred to the fact that prosecutions have diminished all over the country. Why have they diminished all over the country? It is because you have ameliorated the execution of the law so far as it was hard, cruel, unnatural to these men. The time was when any of these men were liable to be arrested on any and every sort of pretext any officer could get up against him, not that he wanted to execute justice on him or get him to pay the taxes due, but that there might be opportunity to rob and plunder him out of his money and compel the Government to help pay for that very robbery and plunder of an innocent party; it is because you have ameliorated the execution of the law in that respect that you have had this better condition of things in reference to the collection of this revenue. As soon as you ameliorated the law you had no trouble with the distillers, not even in the fruit and brandy district of my friend JOHN WHITE [laughter]; that is, in the tenth district of the State of Kentucky, where, out of forty-three illicit distilleries in the State of Kentucky last year, there were only twenty-nine; that is, there were twenty-nine which were prosecuted, but they only caught one man. [Laughter and applause.]

I say to the gentleman upon that subject, and to the gentleman from Massachusetts [Mr. DAVIS] who objected to the reduction of these customs collection districts, that the Secretary of the Treasury has recommended that out of the nine districts in Massachusetts five should be lopped off. Perhaps that is the reason why my friend finds so much trouble in agreeing with the recommendation of the Secretary of the Treasury. Those five districts in Massachusetts may be very useful to him at election times. If they are lopped off, I do not know whether it reaches a port in his immediate neighborhood, but I might almost conjecture that it does, and give that as the reason why we now find him urging an objection here to any action in favor of dispensing with any of these superfluous offices in any of these districts, as it may be the means of cutting off an officer who may be friendly to him at election times. For one, I can not see any good reason why there should be objection to consolidating these districts, thereby helping to get rid of a portion of electioneering machinery which is potential only for evil.

My friend from Chicago also objects to it. He says your taxes can not be collected. Chicago is a large port, and collects $4,000,000 of taxes. The Government collection officials here could reach it by letter in less than twenty-four hours and by telegraph at a moment's notice. Provision could be made for stamps and all other necessary means for the collection of the Government revenues. We would thus not only get rid of this cumbersome machinery and unnecessary expense to the Government, but we would be able to reduce these officials and secure thereby an economical administration of the Government. We could rectify some of the things of which the people justly complain, and we could relieve the country of the dictation of internal-revenue officials in reference to conventions and the dictation of these officers on election day. Some of you will find it all out when you get to Chicago. [Laughter.] Some of you who are for Blaine will find how it happens down in the South there are so many delegates for the President. It is because the internal-revenue districts are still kept up down there, and the coterie of office-holders who are now there do not favor the best man for the nomination but set him aside, and through their instrumentality make it possible that not the best but the worst nomination may take place. [Laughter and applause.]

In a word, it seems to me, Mr. Chairman, as if these revenue collectors, with their districts, under the internal-revenue system, in Illinois, from one of which $13,000,000 are collected, could be dropped. Why should you continue all those districts for the collection of the internal-revenue taxes, as well as for customs duties? Why should not the whole $20,000,000 be collected by one set of officers at Chicago, with its great network of railroads running in all directions, and when the unnecessary office-holders are maintained expressly for no other purpose, possibly, than to run conventions, dictate nominations, and bulldoze elections. [Laughter and applause.]

Mr. REESE. Some of the Georgia delegation, on their way to Chicago, passed through here yesterday, and one of them informed me that there were eighteen out of the twenty-four for Arthur for the reason that they got their bread and meat up here.

Mr. THOMPSON. Yes; and that is but a fair sample of what occurs all over the country. I want to see as many of these office-holders eliminated from our service as possible. I want to see a true civil-service reform inaugurated in this respect. I want to wipe out as many of them as possible. The people are ripe to get rid of them. They demand of the Democratic party when they come to enact laws that they shall enact them in such a way as shall cut down this unnecessary horde of office-holders. They demand that we shall free them from this constant interference with elections. And they are not as particular as some gentlemen here seem to be whether that legislation be upon one bill or another. All they ask is that what is done shall be done quickly and thoroughly; and we do not answer the demands of our constituents and the best interests of the country if we fail to do it.

We have it in our power to do it. We were sent here to do it. We have nothing else on hand now except to do it. I hope the party will stand up here and be at least united in one thing, and that is economy in expenditures by a discharge of these Federal office-holders or reduction of them to a minimum.

Mr. Chairman, I have been drawn into this discussion more than I had intended. I would not have had much to say if it had not been that my State was attacked by the gentleman from Illinois, who has charged our people with being "moonshiners," when in point of fact we have fewer moonshiners than any other State in the Union, not even excepting Illinois. The difference between us is that they are shrewd enough and sharp enough to keep out of the way of the law and not get caught, while our poor fellows are always taken. They do not know how to play the rascal and evade the law as my friend's constituents seem to do. They are not sufficiently educated in rascality for that; and I hope that the educational bill will be passed to enable them to learn something upon the subject. [Laughter.] It will be beneficial, if not useful.

But, Mr. Chairman, I may not get the House to agree to changes so radical as those I have proposed in regard to the collection districts. If not, I will propose a reduction of internal-revenue collectors to forty-three and customs districts to sixty-nine, as recommended by the Secretary of the Treasury.

The customs part will read in this way. The Clerk will please read it for me.

The Clerk read as follows:

That the President is hereby authorized and directed to consolidate and reorganize the customs collection districts of the United States, on or before the 1st day of October, 1884, so that the same shall not exceed in number sixty-nine.

And the President shall fix the boundaries of such reorganized districts and designate ports of entry therein, and shall also, from time to time, designate ports in each of such districts at which deputy collectors may be stationed to receive duties and other moneys, enter and clear vessels, and perform such other services in relation to the customs and navigation laws as he may deem necessary; and he shall give notice of the boundaries and designations of such reorganized customs districts, and said ports when so designated shall have all the privileges of ports of entry and delivery.

And the President is authorized and directed to discontinue the services and abolish the offices of such collectors, surveyors, and appraisers as may be necessary to conform to the number of collection districts herein provided for, and to designate places of deposit for the records and files pertaining to those collection districts which may be abolished pursuant to the provisions of this act.

Sections 2648 and 3687 of the Revised Statutes of the United States, together with all laws or parts of laws authorizing the allowance to collectors and surveyors of customs of salaries, fees, commissions, storage, and perquisites, of whatsoever name and nature, are hereby repealed, to take effect on the 1st day of July, 1885; and all fees collectible by law shall thereafter be accounted for and paid into the Treasury as money belonging to the United States; and the Secretary of the Treasury is hereby authorized to provide for the collection of such fees by the use of stamps, under such regulations as he may prescribe.

And it shall be the duty of the Secretary of the Treasury to include in the regular Book of Estimates for the fiscal year ending June 30, 1886, and each fiscal year thereafter, estimates specifying in detail the number and class of officers and employés of every grade and nature, with the rate of compensation to each, that may in his judgment be necessary to properly conduct the business of collecting the revenue at each port of entry in the United States, together with an estimate of the amounts required for contingent expenses at each of said ports, and for such additional expenses of the service as can not be otherwise specifically provided for: *Provided*, Nothing in this act shall prevent the shipment of merchandise to ports of delivery heretofore established by law.

Mr. THOMPSON. I know this is a great question, worthy of prolonged consideration, but our duty demands present action on this bill for fear the opportunity may pass.

Postpone, says the gentleman from New York [Mr. HISCOCK]; deal with this subject on the sundry civil bill. No, sir; we can not wait. "Now is the accepted time." "The day of reckoning has come." The least I will propose and the least the country will accept is what in substance the Committee on Appropriations have had before them and read at the Clerk's desk at the request of the gentleman from Pennsylvania [Mr. RANDALL]. The maps filed with the report of the Secretary of the Treasury illustrate forcibly the necessity of this reduction. I made a table with great labor and care in 1882 showing the rottenness and corruption of this system. It is printed with some remarks I then made. Away with these pauper districts. If the Government was run on "business principles" instead of "party necessity" this could not stand an hour. For my part I am sick of this wasteful and lavish expenditure of public money not to collect; the taxes, but to debauch public sentiment by maintaining a horde of sinecure officers and furnish plunder for Republican campaign committees.

A single line in this bill compelling the customs collectors to discharge in their respective districts the duties of the internal-revenue collectors would save millions of money; but I will not insist now if the House is not willing or is unprepared to go to that extent.

A few words on the amendment relating to storekeepers and gaugers. The report of the Commissioner of Internal Revenue for last year shows 1,096 grain distilleries in operation during the year. Of this number 439 mashed less than 5 bushels per day; 178 less than 10 bushels per day, or 617 in all which mashed less than 10 bushels per day. Each of these distilleries had not less than one storekeeper or storekeeper and gauger. There were 123 more of these distilleries out of this 1,096 above named which mashed less than 20 bushels per day. To run these small distilleries and less than 400 of larger capacity the Commissioner of Internal Revenue employed 725 storekeepers and 1,130 storekeepers and gaugers, besides 852 gaugers for distilleries of all kinds. As the storekeepers and gaugers combined, namely, 1,130, are used at small distilleries, we find nearly an average of two officers stationed at each small distillery where none in point of fact is required.

This takes no notice of the multiplication of these officers indulged in by collectors of internal revenue when party necessity in hot contested elections or control of party conventions require more henchmen for the administration to floor an opponent or control an election. They are, under the regulations of the Treasury, assigned every sixty days from one distillery to another. The collector will frequently have two or three times the number in commission unassigned, "waiting orders." They will work sixty days and lay off sixty or one hundred and twenty, and thus two, and if necessary three, men are made dependent upon a distillery of less capacity than five bushels per day for their daily bread at the Government crib. They seek ambitious young men of influential families, and having once induced them into Republican employ, sap the foundations of a political antagonist who unexpectedly finds influences paralyzed which once sustained honesty in the Government and the Democratic party at the polls. Thus the very offices established by the law to sustain good government are by maladministration and party necessity made engines of oppression and enemies of liberty, law, and order.

The collector's office is the hot bed of party corruption, a reeking cesspool of political iniquity, promoting venality in politics and debauching public sentiment in his district. Every one in actual service and all "waiting orders" are under the directions of the collector, a compact body, to hold the fort for the grand old party. They spend their time in electioneering, bringing to bear all the corrupt methods which their own venality suggests to them may be effective with others; and furnished with funds exacted by the party lash from other unfortunate office-holders, they overthrow and thwart the will of the honest voter by bribery, intimidation, and corruption at the polls.

The sixth district of North Carolina furnishes and has furnished for years the most notable instance of these wrongs. There was in operation during the year at various times two hundred and sixty-nine distilleries of less capacity than five bushels in this district and six more over that and less than ten, and only three of greater than ten bushels' capacity, making two hundred and seventy-eight in all. There were thirty-six gaugers and two hundred and twenty-five storekeepers and gaugers in this district last year at the time the report was made up to the 30th day of June, at which date most distilleries are closed. It must not be forgotten that last year did not witness an election of members of Congress nor President, and multiplication was not invoked, at least the report does not show it. Yet the report made to the Senate a few years ago does exhibit these corrupt practices in all their cold-blooded iniquity.

The report does not show how many were employed during the year in that district or in commission there during the year. This is studiously kept from the public. It shows the large surplus, but fails to locate them. The special report of Senator VANCE (Miscellaneous Document No. 116, Senate, Forty-seventh Congress, first session) gives some idea of the rottenness of this district. It shows (page 557) that for the fiscal year 1882 the Secretary approved allowances for twenty-two deputy collectors for a year in which no greater amount of whisky was made than usual, which was a large increase in the regular force, making more than four times as many as were employed in 1875, when no election was on hand; that in 1880, a Presidential year, in addition to a similar increase of the regular force not quite so large, there were special allowances to one hundred more special deputies, making eleven times the number of special deputies used in 1881 (page 561). This speaks volumes when you remember these deputies have little or nothing to do, and that the great whisky-producing districts of Kentucky have only here and there a stamp deputy, frequently not more than three or four in an entire district, and the time of these is but half employed. During the Presidential year of 1880 three hundred and thirty-three storekeepers and storekeepers and gaugers were employed in said district, all at $4 per day, which is about eighty more than were employed in the year 1881, the greatest whisky-producing year this country has ever witnessed. This takes no account of the gaugers.

Now, Mr. Chairman, if this amendment is adopted there will be a necessity for not more than three regular storekeepers in this district, for we have only three distilleries of greater capacity than twenty bushels, and probably, in the discretion of the Commissioner, only one. A few special warehouses may require a few more, but their number will be limited. Only 10,230 gallons of whisky were warehoused in that district during the fiscal year from June, 1880, to June, 1881. These officers, besides being a standing menace to the liberty of the people and constant danger to free elections, are a direct insult to honest men, whose integrity is impeached by governmental espionage in affairs of such small moment. A storekeeper at a large distillery in the multitude of employés is unnoticed, and the functions of his office is an aid rather than a hinderance to the distiller, and experience has shown some necessity in great cities for such officers.

But what a spectacle to see a Federal officer clad in the official garb of a great republic, at a salary of $1,300 a year, watch a distiller grind, scald, and cook three bushels of meal per day for a week, and then watch the barrel of whisky produced for three years, at which time it has cost the Government $4,000, and all leaked out, and the distiller, having divided in the mean time the pay with the storekeeper, leaks away. For the way it operated a few years ago in the upper part of the eighth Kentucky collection district I refer to a table presented by Hon. JAMES B. BECK with his speech on the extension of the bonded bill in the Senate during the Forty-seventh Congress.

Now, what an exhibit is there made! Can not we all, with one voice, agree to cut down these useless office-holders? Let them go to work at some honest calling. We will have better service, fewer scandals, and fairer elections.

The distiller does not want them; he wants freedom. We have tried to save him from the persecutions of these men. They think they draw their pay and must make a show of doing something. They set up all sorts of iniquitous indictments for fear they will be dispensed with. No distillery can run if held to a strict compliance with the law and regulations. Years after these little technical violations have occurred, from spite, envy, jealousy of neighbors, and frequently political oppression, through information given by these officers, prosecutions have been set on foot, in nine cases out of ten ending in an acquittal, but always in bankruptcy to the man arrested and dragged away from his home, family, and friends to a distant city for trial. We passed an act the other day limiting these prosecutions to two years. If now we can draw off and take away these unnecessary officers our people may enjoy comparative quiet from Federal interference. I will ask the Clerk to read my amendment.

The Clerk read as follows:

Add, after the words "sixty-four thousand dollars," in line 850:

"That the Secretary of the Treasury shall exempt all distilleries which mash ten bushels of grain or less per day from the operation of the provisions of title 35 of the Revised Statutes, relating to the manufacture of spirits, except as to the payment of the tax; and said distilleries shall be run and operated without storekeepers; and said Secretary may exempt any distillery, or all distilleries, which mash twenty-five bushels of grain per day from the operations of said title relating to the manufacture of spirits, except as to the payment of the tax, and any distillery so exempted shall be run as fruit distilleries are now operated: *Provided*, That special warehouses may be established by the Secretary of the

Treasury, in which he may cause to be deposited the product of any number of said distilleries, to be designated by him by his order, and in which any of said distillers may deposit his product, and when so deposited shall be subject to all the laws and regulations as to bonds, tax, removal, and otherwise as is now provided by law for other warehouses: *And provided further*, That storekeepers, or storekeepers and gaugers, who are assigned to distilleries whose registered capacity is twenty-five bushels or less, shall receive $2 per day for their services; and no collector in any district shall recommend, nor shall there be appointed or commissioned, more deputy collectors, storekeepers, storekeepers and gaugers, gaugers and inspectors, or other officers, or allow to remain in commission more of any of said officers at any one time than are actually engaged in performing duty at the time, and are indispensably necessary for the performance of said duty."

Mr. THOMPSON. These amendments, Mr. Chairman, are in substance what I propose. I am satisfied they are just to the people and economical in their effect; that the revenue will be safely collected. Frauds will be weeded out of elections and will not creep into the service. I hope they will meet the approbation of the House, as I am satisfied they will the approval of the people.

Rivers and Harbors.

SPEECH

OF

HON. HORATIO BISBEE, JR.,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

On the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. BISBEE said:

Mr. CHAIRMAN: The State of Florida is so largely and vitally interested in the improvement of the navigation of her rivers and harbors that I need not apologize for discussing this bill. I do not suppose it is within the range of possibilities for any committee to frame a river and harbor bill that would not meet with opposition from some quarter. This bill is not subject to criticism to the same degree as other bills on this subject which have of late years been passed by Congress. The committee have refused any appropriation for one hundred and five items for which estimates have been made by the board of engineers; and also refused appropriations for one hundred and twenty-nine items which were in the bill of August 2, 1882, and have included in this bill appropriations for fourteen new works, for which no estimate had previously been made.

And I think the committee should be commended for its courage and firmness in the line of limiting appropriations to really worthy national objects.

River and harbor bills have heretofore been opposed and most criticised for allowing public money to small and insignificant streams having little or no commerce and no water at all in dry weather, or not enough to float a "push-boat." It is apparent from reading this bill that the committee have made progress in removing this objection, and to any one not fully informed upon the details of commerce in the various localities of the country it would seem that still further improvement could be made in this direction. I do not believe the taxpayers object to giving all the money that is needed to complete the great public works of the country, from which, beyond all doubt, decided and substantial benefits will accrue to the people in the way of cheapening transportation, whereby the value of what the producing classes have to sell is increased and what they have to purchase is diminished in price. There is no ground whatever upon which to oppose the giving of public money to such objects.

I desire to state first what the committee have done, as appears from the bill under discussion and their report accompanying it, and then to point out wherein, from my view of this subject, the committee have failed to perform its full duty. The bill carries appropriations for two hundred and forty-two items or objects. Without reading them, I desire to have printed with my remarks tables giving the names of the most important objects and the amount of money given to each according to the report:

FOR MISSISSIPPI RIVER.

The largest appropriation in the bill is for the Mississippi River. The committee have appropriated to that river, from its mouth to its source, $2,400,000. This amount includes $60,000 for the reservoirs at its headwaters. An itemization of this aggregate sum is as follows:

Reservoirs at headwaters	$60,000
From Saint Paul to Des Moines Rapids, including harbors	250,000
Des Moines Rapids	50,000
From Des Moines Rapids to mouth of Illinois River, including harbors	200,000
From mouth of Illinois River to mouth of Ohio River, including harbors	500,000
From mouth of Ohio River to head of the passes, including harbors	1,250,000
Removing snags, wrecks, and other obstructions	75,000
Total	2,400,000

OTHER LARGE RIVERS.

In addition to the Mississippi, other great rivers in the country receive the following amounts:

Missouri River	$690,000
Ohio River	600,000
Tennessee River, including Muscle Shoals	350,000
Columbia River	265,000
Potomac River	250,000
Kentucky River	250,000
Great Kanawha River	200,000
Delaware River	200,000
Fox and Wisconsin Rivers	125,000
Arkansas River	110,500
Illinois River	100,000
Detroit River	100,000
Cape Fear River	80,000
James River	75,000
Providence River	60,000
Red River	75,000
Total for above sixteen rivers	3,530,500
Adding this total to Mississippi River, will give a grand total of	5,930,500
Hay Lake Channel, Michigan $125,000	
Channel through bar in Saint John's River, Florida 150,000	275,000
Seventeen rivers and two channels	6,205,500

FOR SMALLER RIVERS.

There are in the present bill recommendations for other rivers as follows:

21 at $5,000 each	$105,000
9 at $10,000 each	90,000
5 at $15,000 each	75,000
25 between $20,000 and $50,000	818,000
5 at $50,000	250,000
65 rivers, for which total amount recommended is	1,338,000

FOR HARBORS, AS DISTINCT FROM RIVERS.

The following are the leading appropriations for harbors:

New York Harbor (Hell Gate)	$300,000
Galveston Harbor	250,000
Charleston Harbor	250,000
Mobile Harbor	200,000
Baltimore Harbor	200,000
Sabine Pass, Texas	150,000
Oakland Harbor, California	139,600
Cleveland	100,000
Chicago	100,000
Aransas Pass, Texas	100,000
Sandy Bay, Massachusetts	100,000
Total for eleven harbors	1,889,600

The following harbors receive from $50,000 to $85,000:

Milwaukee, Wis	$85,000
Sand Beach Lake, Michigan	75,000
Buffalo	75,000
Cumberland Sound, Georgia and Florida	75,000
Humboldt, Cal	62,000
Oswego	55,000
Erie	50,000
Pensacola	50,000
Michigan City	50,000
Grand Haven	50,000
Wilmington, Cal	50,000
Eleven harbors, total amount	677,000

The total amount recommended by the bill for all purposes is $12,319,100.

Excluding the sums allowed for the Ohio, Missouri, and Mississippi Rivers, the following shows the amount each State receives for works within its limits, as near as I can arrive at from a hurried examination, though in some instances where a river flows through or partially through more than one State the appropriation for it can not be divided between such States, and is charged entirely to one of the States:

AMOUNT TO EACH STATE AND TERRITORY.

New York	$616,000
Illinois	610,000
Kentucky	556,000
Texas	485,000
Michigan	461,000
Wisconsin	430,000
Tennessee	379,000
Florida	371,000
West Virginia	298,500
South Carolina	296,000
Georgia	291,000
California	323,000
Ohio	259,500
Alabama	257,000
Arkansas	297,500
Maryland	233,000
New Jersey	215,000
Massachusetts	211,500
Connecticut	139,500
North Carolina	110,000
Rhode Island	135,000
Pennsylvania	110,000
Delaware	102,000
Virginia	162,500
Louisiana	137,600
Indiana	90,000
Iowa	65,000
Mississippi	47,000
Maine	70,000
New Hampshire	36,500
Oregon	27,000
Nevada	25,000
Vermont	5,000
Missouri	5,000
Minnesota	10,000
Washington, D. C	250,000
Washington Territory	14,000
Montana Territory	20,000

The State of Florida, which I in part represent, receives $371,000, distributed as follows:

Inproving entrance to Cumberland Sound (Fernandina Bar): Continuing improvement, $75,000.
Improving Appalachicola Bay: Continuing improvement, $10,000.
Improving harbor at Pensacola: Continuing improvement, $50,000.
Improving harbor at Cedar Keys: Continuing improvement, $5,000.
Improving harbor at Tampa Bay: Continuing improvement, $20,000.
Improving Appalachicola River: Continuing improvement, $1,000.
Improving Caloosahatchee River, $5,000.
Improving Choctawhatchee River, Florida and Alabama, $15,000.
Improving Conecuh and Escambia Rivers, Florida and Alabama, $12,000.
Improving Little Escambia River, $3,000.
Improving the channel over the bar at the mouth of the Saint John's River, $150,000.
Improving the Upper Saint John's River, $5,000.
Improving Suwanee River, $5,000.
Improving Volusia Bar, $2,000.
Improving Withlacoochee River, $3,000.

There are but seven States that receive a larger sum than the State of Florida, and in view of this fact, and of the fact that Florida is one of the smallest States in point of population and taxable property, it may be said that her members of Congress should be satisfied with the treatment she has received by the Committee on Rivers and Harbors. It may be said also, in consideration of the fact that of the $371,000 given to the entire State the district which I have the honor to represent receives $227,000, or over a quarter of a million of dollars, I and my constituents ought to be abundantly satisfied.

I appreciate fully the difficulties and embarrassments with which a Committee on Rivers and Harbors have to deal. The rivalries and contentions before the committee are as numerous as the objects for which appropriations are urged. I understand that delegations of citizens appear here from all portions of the country to urge the claims of their respective localities, and that members of Congress are persistent in their demands for liberal appropriations for their own districts. The committee must consider and finally act upon all these conflicting interests, rendering their duties perplexing and arduous.

The fundamental objection to this bill is the result of obeying a kind of unwritten law that the total amount of money appropriated by it must not exceed a certain sum.

This unwritten law seems to be mandatory upon the committee, and controls their action and the action of Congress, as it has prior Congresses. In no other department of the Government or branch of the public service does this rule apply. Upon every other appropriation bill, whether for War, Navy, Post-Office, legislative, sundry civil, or deficiency, neither the committee nor Congress undertakes to limit at the threshold of its preparation the amount of money which shall be appropriated. On the contrary, our custom and practice is to appropriate sufficient money to enable all branches of the service to discharge all obligations of the Government, advance the public interests, and promote the general welfare, whether it is more or less than a given amount. There may be a difference of opinion as to what sum will be sufficient for a given purpose, but whatever sum is deemed necessary by the majority is given without fear of serious reproach or condemnation by the people. But when it comes to preparing a river and harbor bill, when it comes to appropriating money to increase our commercial facilities by removing the obstacles and dangers of navigation of the great water ways of the country, a different rule prevails. Then this unwritten law, this fear of public criticism, if a certain limit is exceeded, hangs like a sword over the heads of the committee and other members, and we all become paralyzed. Though perfectly satisfied that $18,000,000 are absolutely needed and can be profitably expended for the next fiscal year, we dare not appropriate more than $12,000,000. Though perfectly convinced that true economy requires that the larger sum ought to be appropriated, we persist in giving the less. Though every motive for the public good and every business principle demands that when a new public work is commenced money sufficient to keep the work of the contractor continuous, until it is completed, should be appropriated, Congress, fearing public sentiment, has not the courage to make the appropriation. I do not understand that there is now any one who seriously contends that Congress has not the constitutional power to raise money by taxation to be used to deepen the harbors and rivers whose waters flow into the high seas. The national Republican convention, in 1880, in its declaration of principles, used these words: "We esteem it the duty of Congress to develop and improve our water courses and harbors."

General Garfield, in his letter of acceptance, said:

Fortunately for the interests of commerce, there is no longer any formidable opposition to appropriations for the improvement of our harbors and great navigable rivers, provided that the expenditures for that purpose are strictly limited to works of national importance.

By these and other declarations on this subject the Republican party is committed to the policy of internal improvements. While I am not aware that the Democratic party has ever in any national convention distinctly spoken in favor of such a policy, many of its representatives and public men are its earnest advocates.

What I object to is the principle, or rather the want of any sound principle upon which river and harbor bills are framed. The fear of criticism and condemnation by the press of certain sections of country I believe is more potent than it should be. Sections of country whose navigable water have been improved and whose commerce has been built up by aid from the Federal Treasury oppose appropriations now for other portions of the country for the selfish reason that they are no longer suffering for want of aid. The people living in the older and more densely settled portions of the Union, whose commercial interests have been fostered and placed upon a solid basis by the aid of the Federal Government, have no right to object to like aid for other portions of the country where it is now needed. Such opposition should not be yielded to, but firmly resisted.

I do not believe in yielding to a public sentiment when that sentiment is founded in error, and conclusively shown to be in error.

We ought to do what is clearly for our country's welfare and take the risk of obtaining the approval of our constituents when it is afterward explained to them. I believe the tax-payers will not condemn this Legislature for appropriating their money for any national work of internal improvement which manifestly is in the interest of commerce and of the great producing classes of the country. Therefore I want to see the Committee on Rivers and Harbors and Congress act with more courage on this subject.

I doubt if the people of this country understand fully that a small appropriation in a river and harbor bill for an important public work in process of construction is the worst sort of extravagance. In many cases small appropriations are a sheer and wanton waste of public money, when if the appropriations were larger there would be little or no waste or loss. I will explain what I mean. No money can be appropriated for a river or harbor until it has been surveyed by the Government engineers, a plan of improvement recommended, and an estimate of total cost made by those officers. Whether or not the navigation of any of the water ways can be improved, we take, and ordinarily are bound by, the judgment of the board of engineers.

The local engineer who makes the survey states in his report the amount of money which in his opinion can be profitably and economically expended each year. Congress of late years has been in the habit of appropriating from one-third to one-half of the sum the engineer recommends. The result is that the contractor who expends the money, under the direction of the engineer, has exhausted the appropriation months before another appropriation is available; labor upon the construction of the work is suspended for several months each year, and the work goes to pieces or is badly damaged by the action of the elements during the time that the engineer is waiting for another appropriation. In this way millions of public money is annually lost without any benefit, whereas if sufficient money was given each year to keep the construction of the work going on continuously until completed the greater portion of that which is lost by damage to the works in the manner I have stated would be saved. This is especially true where jetties are being constructed to obtain deeper water over the bars at the mouths of rivers.

The mouth of Saint John's River, Florida, may be taken to illustrate the point I make. When the jetties have reached a certain height and length, and before the new and proposed channel has been created and established, there necessarily is a transition state of the water until the new channel has been established. The jetties, while not sufficiently high to create the proposed channel, are high enough to obstruct the natural ebb and flow of the water through its usual or natural channel, and causes the water to flow over the top of the jetties with such force as to cause a current at the bottom and along the sides of the jetties, which, unless checked, will undermine them and cause them to sink. Now, it is perfectly obvious to the mind of every one that at this stage of the work there should be money enough on hand to enable the contractor to rapidly extend the length and height of the jetties and stop the useless scour caused by the violent flow of water over their top.

Instead of this, work has been suspended for months every year since the construction of jetties was commenced, the contractor and engineer absent, and the work abandoned to damage or partial destruction.

For the improvement of the bar at the mouth of Saint John's River the aggregate appropriations heretofore made are $375,000, and at least one-third of that amount has been substantially lost for want of sufficient money to keep the contractor or engineer upon the ground and the work on the jetties continuous. The engineers in their last annual report (1883), referring to this work, say:

The scouring current along the sides of the jetties observed during the preceding year had greatly increased in strength, especially on the south side of the work. At several points the underscour caused considerable settlement of the jetty on the main line as well as on the shore branch.

* * * * * * *

The works thus far executed have as yet neither the requisite height nor length to create an improved ship-channel across the bar. * * * There appears to be no doubt that the work will be left in a precarious condition when the balance of the last appropriation is expended under the existing contract.

The balance of the last appropriation was exhausted last December, and since then the works have been in that "precarious condition" of which the engineer's report speaks, and great damage has resulted in consequence.

The bill under discussion gives to this work $150,000, the same amount appropriated in 1882. The amount is wholly insufficient. The engineer in his last report says: "The amount that can be profitably expended in fiscal year ending June 30, 1885, $600,000." The project

of improving this bar from a low-water depth of six or seven feet to fifteen feet at low water, giving twenty-one feet at high water, was estimated by the engineers at a cost of $1,306,409. But if the practice is continued of making small appropriations each year, resulting as it necessarily must in suspension of work each year and consequent damage annually, as I have stated, it is safe to say that $2,000,000 will be expended before the construction of the jetties is completed, and the growth of a large portion of the State is in the mean time obstructed and retarded. The man who would partially construct a building, lay the foundation and erect the frame, and then abandon it to wind and storm until it was damaged to the extent of one-third or one-half its cost before resuming work would be deemed a fit subject for a lunatic asylum. Yet this is precisely what Congress has been doing for years, and it is time this pernicious and extravagant practice was abandoned.

Every principle of economy and every consideration of public interest requires that when a public work has been undertaken it should be pushed to completion as rapidly as possible, and this is especially true in localities where the people are suffering for better commercial facilities as are the inhabitants of the banks of the Saint John's River and tributaries and along the lines of railroads whose termini are on this river.

The increased insurance over that of other ports on the Atlantic coast by reason of the low water on the Saint John's Bar is about three-fourths of 1 per cent., and freight is increased 50 cents per ton, making an annual burden to the commerce of the city of Jacksonville, including the loss by the delay of vessels at the bar, of over $500,000 which the commerce of other Atlantic coast cities do not have to bear. Notwithstanding this burden and these discouragements, the country through which the Saint John's River runs, under the stimulus given and hope inspired by the commencement of this work at the mouth of the river three years ago, has rapidly developed.

The assessed value of property in the counties bordering on the Saint John's River, namely, Duval, Saint John's, Clay, Putnam, Volusia, Orange, and Brevard, has increased nearly 100 per cent. since 1880, and the population in the same counties about 25 per cent. in the last two years. There are now seventy-four steamboats, with a registered tonnage of 8,168 tons, employed upon the Saint John's River in carrying freight and passengers; a greater tonnage, it is believed, than is employed exclusively in local inland traffic upon any other river that empties into the Atlantic Ocean south of the Hudson.

As evidence of the growth of the eastern part of the State of Florida for the last three years and of its assured prosperity in the future, and consequently of the necessity of pushing the public works at the mouth of the Saint John's River to completion at an early day, I desire to have printed in this connection a portion of a memorial with a table of statistics to the present Congress, prepared by a "committee on statistics" composed of some of the most intelligent and prominent business men of the city of Jacksonville and vicinity.

Table of statistics.

Description of commerce, &c.	1880.	1881.	1882.	1883.
SAINT JOHN'S BAR COMMERCE.				
Estimated values of vessels and cargoes arriving and departing	$33,696,101	$38,176,459	$38,270,000	No report.
Upon this amount the increased insurance over that of neighboring ports, caused by the risks of this bar, was three-fourths per cent., or	252,720	286,323	287,025	No report.
The increased freight charges, from same cause, 50 cents per ton, or	161,696	174,622	175,000	No report.
The loss by delays, caused by bad condition of bar, 960 days	No report.	No report	33,600	No report.
The loss of vessels on the bar	20,000		18,500	No report.
Annual burden on the commerce of Jacksonville, which the completion of the improvement of the bar would save	434,416	460,945	514,125	
Feet of sawed lumber shipped	44,719,255	58,837,451	68,041,548	48,510,498
SAINT JOHN'S RIVER COMMERCE.				
Number of steamboats engaged, passenger and freight				74
Tonnage of steamboats engaged, passenger and freight				*8,168
Estimated value				$2,042,000
TRIBUTARY TO SAINT JOHN'S RIVER COMMERCE.†				
From coast States to Jacksonville, for consumption and distribution, tons	28,972	36,005	53,305	No report.
To coast States from Jacksonville, miscellaneous, tons	13,958	17,662	23,676	No report.
To coast States from Jacksonville, fruits, and vegetables, crates	217,685	215,617	316,800	No report.
To coast States from Jacksonville, cotton, bales	26,946	37,440	27,477	No report.
From coast States to Jacksonville, passengers, number	7,744	14,214	27,735	No report.
To coast States from Jacksonville, passengers, number	6,488	11,455	23,184	No report.
Estimated value inward freights	No report.	No report.	6,663,100	No report.
Estimated value outward freights	No report.	No report.	5,081,415	No report.
MISCELLANEOUS.				
Number miles railroads in operation tributary to Saint John's River commerce	303		446	865
Number acres land sold at United States land office at Gainesville (excluding commuted homesteads and other entries)	6,448.32	37,278.28	140,163.45	320,658.05

* This is a greater steamboat tonnage than there was by the last census report of ocean and inland in any Atlantic State south of Maryland except Georgia, and more than is engaged in purely inland local traffic upon any river south of the Hudson. It represents an increase since 1880 of 128 per cent., and by trips both ways a weekly tonnage employed of over 35,000 tons.

†The Saint John's River for 115 miles is from one to seven miles in width, is navigable for large steamers 230 miles and for a smaller class 335 miles, has 450 miles of navigable water and 865 miles railroad tributaries, with 122 miles under construction, being an increase of 185 per cent. since 1880.

The yearly loss to commerce by not having a good harbor of refuge in this river, estimated by underwriters' agent, is $100,000.

The assessed value of property in the counties of Duval, Saint John's, Clay, Putnam, Volusia, Marion, and Orange, which border on the river, has increased since 1880 89 per cent.

Acreage under cultivation in same counties has increased since 1880 35 per cent.

Population in same counties has increased since 1881 22 per cent.

MEMORIAL.

To the Committee on Rivers and Harbors
of the House of Representatives of the United States:

Your memorialists, a committee appointed on behalf of the people of Florida, respectfully ask your consideration of the following facts, showing the necessity for the continuance of the improvement of the entrance to the Saint John's River.

The value of vessels and cargoes arriving at and departing from the port of Jacksonville in 1882 amounted to $38,270,000. Upon this amount the increased insurance over that of neighboring ports caused by the risks of commerce crossing the bar was three-fourths per cent. or $287,025. The increased freight charges averaged 50 cents per ton, or $175,000. The loss by delays at the bar caused by its condition amounted to nine hundred and sixty days, or $33,600, and the losses on the bar to $18,500, making an annual burden on the commerce of Jacksonville, which the completion of the improvement of the bar would save, of $514,125.

The steamboat tonnage, inland and local, upon the Saint John's River now actively and prosperously engaged in its freight and passenger traffic, consists of seventy-four steamboats, of 8,168 tons (registered), representing a value of $2,042,000. This is a greater steamboat tonnage than there was by the last census reports, of ocean and inland, in any State south of Maryland on the Atlantic coast, with the exception of Georgia, and more, as appears by same reports, than was then in service for purely local inland traffic upon any river on the Atlantic Coast south of the Hudson. It represents an employed tonnage by trips both ways of over 35,000 tons weekly, and is an increase since 1880 of 128 per cent.

The freights brought to Jacksonville from Atlantic coast States by railroads for consumption and distribution during 1882 amounted to 53,305 tons, of an estimated value of $6,663,100, an increase of 84 per cent. over 1880. The outward-bound freight from the same city brought down the Saint John's River and by railroad through this State for shipment to coast-line States amounted to 42,000 tons, or $5,081,415 value. The number of passengers brought into Florida by railroad from coast-line States during the same year was 27,735, and carried outward to similar points 23,184, an increase over 1880 of 258 per cent., none of which freight or travel crossed the Saint John's Bar.

In the present condition of the Saint John's Bar there can be no foreign commerce over it. With over 55,000,000 feet of sawed lumber leaving during the year the shipments are restricted to coastwise ports; while cotton and other products must leave by rail lines to seek shipment abroad from ports in other States.

In the counties bordering the Saint John's River, namely, Duval, Saint John's, Clay, Putnam, Volusia, Marion, and Orange, the assessed value of property has increased 89 per cent. and the acreage under cultivation 35 per cent. since 1880. In the same counties the population has increased over 22 per cent. during the last two years.

The railroad lines tributary to the Saint John's River lying within the State of Florida have 865 miles in operation and 122 miles under construction. They have increased 185 per cent. since 1880.

The United States land office at Gainesville shows the following sales at private entry (excluding commuted homestead and other entries): 1880, 6,448.32 acres; 1881, 37,278.28 acres; 1882, 140,163.45 acres; 1883, 320,658.05 acres.

Your memorialists would direct your attention to the fact that the Saint John's River is one of the longest and widest on the Atlantic coast in the United States. For one hundred and fifteen miles from its entrance the width is from one to seven miles. It is navigable for large steamers two hundred and thirty miles, and for a smaller class four hundred and thirty-five miles; has four hundred and fifty miles water tributaries navigable for steamboats, and eight hundred and sixty-five miles of railroad feeders already in operation.

The improvement by the jetties already begun, as the report of General Gillmore, the engineer in charge, shows, is an assured success. The need of a harbor of refuge and a naval depot in the Saint John's River has been recognized, and the improvement deemed one of national as well as local importance.

For these reasons your memorialists pray that a liberal appropriation be recommended for the immediate continuance and completion of the improvements already begun.

Other counties lying west of the Saint John's River, indeed all the eastern and southern portion of the State, has increased in wealth and population in nearly the same ratio as have the counties mentioned in the above memorial.

In fact, the assessed valuation of the property of the State of Florida has nearly or quite doubled since 1880; increasing from $30,000,000 to about $60,000,000. It will be seen from this memorial of citizens that the Saint John's River and navigable tributaries have about nine hundred miles of navigable waters and eight hundred and sixty-five miles of railroad feeders with their eastern terminus on the Saint John's River, and there are more railroads in process of construction. The solicitude of the prosperous people located upon the banks of these waters and upon the lines of these railroads, receiving large accessions every year, can be well understood and appreciated when it is remembered that their nearest outlet to the high seas is over the Saint John's Bar, and that the price of what they sell in markets outside of the State is largely increased and of what they consume not produced within its limits materially diminished by the high rate of insurance and freight and detention of vessels caused by the condition of the bar at the mouth of this river.

While I do not wish to take this occasion to advertise the State of Florida, I do desire to correct a very erroneous impression.

Very many people in this country seem to know but little of the State of Florida, except such information as they have acquired by reading the history of the Florida Indian wars.

The reports of military officers speak of pursuing the redmen into the swamps and everglades to which they fled to avoid engagements with our troops, and the dimensions and character of these resorts of the Indians were doubtless very largely exaggerated, and the impression was naturally left upon the mind of the reader that Florida consisted in the main of swamps and everglades.

This impression of Florida is very erroneous and does great injustice to the State. The truth is, the quantity of waste land and absolutely worthless land is not large. Much of the swamp and overflowed land is of a most valuable character, some of it having a heavy growth of timber and valuable wood, and but little that is not susceptible of drainage.

Like all new countries, the least fertile has been first settled and cultivated, because it could be brought under cultivation at less cost than that requiring drainage and the heavily timbered. The day is not far distant when with a more dense population large areas of land which twenty-five years ago were abandoned to alligators and other reptiles, and which would not have been taken as a gift, will be the most valuable and most productive in the State.

It must not be forgotten in estimating the resources of Florida that the variety of her products are probably greater than those of any other State in the Union. The cultivation of the orange, lemon, lime, guava, pine-apple, and cocoa-nut has been demonstrated to be profitable, and in the production of these tropical and semi-tropical fruits none of the other States can ever be her rival. The character of their climate, which neither art nor science can change, forbids all rivalry in this field of profitable and attractive industry. For these products there is but one Florida in the United States. And for a winter home for the invalid, pleasure-seekers, or those who need rest from business pursuits no other portion of our country can offer equal inducements. And this class of our citizens, numbering from 40,000 to 50,000, who annually visit the State is interested in the improvement of water transportation and in rapid transit.

Another growing city upon the Atlantic coast is the city of Fernandina. At the mouth of the Saint Mary's River, which is the boundary line between the States of Georgia and Florida, the Government has commenced another public work by the construction of jetties to obtain a deep-sea channel. This improvement is known in the report of the engineers as the Cumberland Sound improvement. Before this work was commenced the low-water depth on the bar was from eleven to thirteen feet, with an increase of six feet at high water. The project of constructing jetties here contemplates, when completed, "a low-water channel not less than twenty to twenty-one feet," and the cost of the work was estimated at $2,071,023. This plan was adopted in 1879, and prior to the present Congress $180,000 have been appropriated and expended.

The bill under consideration gives $75,000 to this work for the fiscal year ending June 30, 1885, while the engineers report that $600,000 could be profitably expended. My remarks upon the necessity of sufficient appropriations to continue work upon public improvements without interruption until completed applies to this harbor, though in less degree than at the Saint John's Bar.

The damage to the work during suspension of operation is less at the former than at the latter point, according to the report of the engineer in charge of both. Referring to the Cumberland Sound improvement, this officer says in his report for 1883: "The works are, on the whole, in a satisfactory condition;" while he speaks of that at the Saint John's Bar as being "for some time past, and is still, in a critical condition." While I believe the deepening this bar at Cumberland Sound as proposed is of the utmost importance, and will be of incalculable value to the commerce of the State in future years, there is no substantial impediment to the present volume of commerce seeking egress or ingress over this bar. There is rarely any actual detention of vessels departing or arriving caused by insufficient water, while at the mouth of the Saint John's River a whole fleet of a dozen or more vessels are detained for days, and even weeks, waiting for better weather and higher water in the channel.

For these reasons I have at various times urged upon the attention of the Committee on Rivers and Harbors that there was an actual and pressing necessity of immediate large appropriation for the Saint John's Bar, and that if it was the policy of the committee not to give sufficient money to push both improvements to completion as rapidly as continuous work thereon would accomplish it, that the preference should be given to the Saint John's Bar. There should be given largest measure of relief where there is the greatest suffering.

Where two patients require the attention of medical skill the humane physician will endeavor to first relieve the one that is suffering the most acute pain.

In conclusion I desire to call attention to the fact that the Atlantic and Gulf coast of Florida is over 1,000 miles in extent; her rivers and harbors, requiring aid from the Federal Government in the future, are numerous, and that all the people of Florida, irrespective of party, must, to advance their own interests, be in favor of a liberal river and harbor bill at each recurring session of Congress. Florida's Atlantic seacoast is nearly one-fourth of the entire coast from the most northern point of Maine to the southern point of Florida. The people of the latter State are pressing for large expenditures from the Federal Treasury for only two important public works on her eastern coast. By referring to the appendix I submit, and which I ask to have printed for information, it will be seen that each State north of Florida has received and is receiving Federal aid for a much larger number of objects of improvement, and that the demand made on the part of Florida for the improvement of her two most important Atlantic seaports is not unreasonable and should be complied with without delay. I did not prepare this appendix, but am assured that it is substantially accurate.

APPENDIX.

WHY SHOULD THERE NOT BE APPROPRIATIONS FOR TWO HARBORS ON THE ATLANTIC COAST OF FLORIDA AT THE SAME TIME?

There is no reason why there should not be appropriations for the improvement of two of our Atlantic harbors at the same time; and in view of what is being done for other parts of the Atlantic coast, it can not be considered that Florida indulges undue expectation in hoping that the provision for these two harbors will be liberal.

This State has a longer extent of shore line on the Atlantic coast than any other State, and has fewer harbors appropriated for in the river and harbor bill than any other State.

Florida has nearly one-fourth of the whole Atlantic coast line, measuring from the north boundary of Maine to the southern point of the coast. Only two harbor improvements (Cumberland Sound entrance and Saint John's River) are in progress on her Atlantic border, against one hundred and fifty-one on the other three-fourths of the shore line.

A table showing the Atlantic continental shore line, excluding islands, bays, &c., except Massachusetts Bay, in each State, as furnished by the United States Census Bureau in 1850, with the number of harbor improvements now progressing in each, and their proportion to mileage, is as follows:

States.	Shore line.	Number of harbor improvements in progress.	Proportion as to miles of coast.
	Miles.		
Maine	278	11	1 to 25
New Hampshire	18	3	1 to 3
Massachusetts	286	11	1 to 26
Rhode Island	45	6	1 to 7
Vermont		3	
Connecticut	104	10	1 to 10
New York		15	
New Jersey	120	14	1 to 8
Pennsylvania		8	
Delaware	23	8	1 to 3
Maryland	33	16	1 to 2
Virginia	116	20	1 to 6
North Carolina	320	14	1 to 78
South Carolina	220	7	1 to 31
Georgia	128	5	1 to 25
Florida	472	2	1 to 236

It is observable that about one-half the whole number of improvements in progress are within the States near the seat of Government, comprising 292 miles of the shore line out of the 2,163 of total coast line. The two extremes of the line are not so well served. The New England States lying north of New York, with a shore line of 733 miles, have forty-four objects of improvement in progress; and the States south of Virginia, with a shore line of 1,140 miles, have twenty-eight objects of improvement.

The two States immediately adjacent to the seat of Government, with a shore line of 149 miles, have thirty-six objects of improvement in progress, or, with less than one-fourteenth of the coast line, they have nearly one-fourth of the objects of improvement in progress.

The State which is most remote from the seat of Government fares worst. Florida, which has 472 miles of the Atlantic shore line, has only two objects of improvement in progress, or one for each 236 miles.

That the data upon which the foregoing is based may be scanned, we give a table of details.

Harbors on Atlantic coast for improvement of which appropriations were made by the last Congress.

Maine.—Calais Harbor, Lubec Channel, Jonesport Harbor, Belfast Harbor, Rockland Harbor, Richmond Harbor, Cathance River, Bath Harbor, Portland Harbor, Richmond Island Harbor, Kennebunk River.

New Hampshire.—Lamprey River to New Market Harbor, Exeter River to Exeter Harbor, Portsmouth Harbor.

Massachusetts.—Newburyport Harbor, Merrimac River, Boston Harbor, Scituate Harbor, Plymouth Harbor, Provincetown Harbor, Hyannis Harbor, Nantucket Harbor, Wood's Holl Harbor, Wareham Harbor, Taunton River.

Connecticut.—Connecticut River, Stonington Harbor, New London Harbor, Thames River, New Haven Harbor, Milford Harbor, Housatonic River, Bridgeport Harbor, Southport Harbor.

Rhode Island.—Pawtucket River, Providence River to Providence Harbor, Potowomut River, Newport Harbor, Block Island Harbor, Little Narragansett Bay.

New York.—Port Jefferson Harbor, Hudson River, New York Harbor, Harlem River, Flushing Bay Harbor, Gowanus Bay Harbor, Newtown Creek, East Chester Creek, Echo Harbor, New Rochelle Harbor, Port Chester Harbor, Canarsie Bay, Sheepshead Bay, Plattsburg Harbor, Sumpawamus Inlet.

New Jersey.—South Cheesequakes Creek, Passaic River, Elizabethport Harbor, Shrewsbury River, Rahway River, Elizabeth River, Woodbridge Creek, Manasquan River, Raritan Bay, Matawan Creek, Cohansie Creek, Salem River, Rancocas River.

Pennsylvania.—Delaware River, Schuylkill River, Marcus Hook Harbor, Chester Harbor, New Castle Harbor, Chester Creek, Susquehanna River, Port Warden's Line.

Delaware.—Wilmington River, Broadkiln River, Mispillion Creek, Duck Creek, Saint Jones River, Delaware Bay, Delaware Breakwater Harbor, Broad Creek.

Maryland.—Susquehanna River, Northeast River, Elk River, Chester River, Queenstown Harbor, Patapsco River, Annapolis Harbor, Choptank River, Secretary Creek, Cambridge Harbor, Treadhaven Creek, Deal's Island Passage, Wicomico River, Breton Bay, Pocomoke River, Saint Jerome's Creek, Baltimore.

Virginia.—Onancock Harbor, James River, Appomattox River, Shenandoah River, Neabsco Creek, Nomini Creek, Rappahannock River, Totuske River, Urbanna Creek, Mattaponi River, Pamunky River, York River, Chickahominy River, Staunton River, Norfolk Harbor, Archer's Hope River, Pagan Creek, Blackwater River, Nottoway River, North Landing River.

North Carolina.—Cape Fear River, Dan River, French Broad River, Roanoke River, Currituck Sound, Scuppernong River, Pamlico and Tar Rivers, Neuse River, Trout River, Contentny Creek, Beaufort Harbor, Lellington River, Town Creek, Yadkin River.

South Carolina.—Great Pedee River, Waccamaw River, Santee River, Wateree River, Charleston Harbor, Ashley River, Wappoo Cut.

Georgia.—Savannah Harbor, Savannah River, Saint Augustine Creek, Altamaha River, Brunswick Harbor.

Florida.—Entrance to Cumberland Sound, Saint John's River.

Rivers and Harbors.

SPEECH

OF

HON. ANDREW J. CALDWELL,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. CALDWELL said:

Mr. CHAIRMAN: I have not risen for the purpose of opposing this bill or criticising the action of the committee, but to call attention to what I believe to be an oversight with reference to the Cumberland River, in the State of Tennessee. The committee, it is true, were unable to do entire and exact justice in the premises, arising from the fact that the report which was ordered to be made by the War Department in the fall of last year was detained in the office of the engineer in charge of the Muscle Shoals improvement and the Cumberland River, Major King, at Chattanooga. It was submitted to him by Assistant Engineer Turrill, who made the survey and estimates November 21, 1883, and was not transmitted to Congress until March 15, 1884. I myself made repeated applications at the office of the Chief of Engineers in order to get that information before the committee, but it was only a short time before they reported this bill, and on the day I had the honor to appear before them, that they ever saw the recommendation made as to the new system proposed under act of Congress of August 2, 1882.

The committee have recommended seventeen new works of improvement of the water courses of the Mississippi Valley. The Cumberland River ranks with the foremost of the third-class rivers.

The appropriation recommended by the committee is not one-third of the amount required. The chairman of the committee has stated in reference to some appropriations they have reported three-fourths of what was recommended, while in others they have appropriated from $5,000 to $50,000. You will perceive this appropriation for the Cumberland is a mere bagatelle. Indeed it is little more than throwing the money away. I therefore propose to offer an amendment to increase the amount to $100,000, which will build the first lock of the proposed system and increase the depth of water above it. It will commence the new system which has been demonstrated will open a bright future for the river.

The improvement of this river was commenced by the Government on July 3, 1832, when there was an appropriation made of $30,000. From that time up to July 7, 1838, the appropriations made from time to time amounted to $155,000, of which sum $154,480.08 were expended on the river, the balance of $519.92 being carried to the surplus fund in 1848. From 1838 to 1871 no appropriations were made. Again, $30,000 was appropriated March 3, 1871, and from that time to 1881 the aggregate was $466,000. The engineer's report for 1883 states as follows:

A survey of the Cumberland was authorized by Congress in 1870, and a resurvey of that part of the river embracing Smith's Shoals in 1875. Upon these surveys was based the present project for improvement. A survey of the Falls of the Cumberland was made in 1879 and a reconnaissance of the upper Cumberland in 1880.

The Cumberland has been divided in the different river and harbor acts into a number of sections.

The obstructions to be overcome are of a similar nature on the different sections, and consist of rock-reefs, gravel-bars, snags, bowlders, and overhanging trees, and on that part of the river above the Jellico mainly fish-traps and mill-dams.

The method of improvement consists of blasting out a channel through the rock-reefs, removing gravel-bars and bowlders, and building riprap dams where a contraction of the water way is necessary to secure additional depth; and also the removing of snags and overhanging trees.

The improvement of the river by the construction of locks and dams, which is the only method by which a low-water navigation can be recovered either below or above Nashville, especially for very light-draught boats, has been the project, which is only designed to give such additional depth to the channel as will prolong the season of navigation.

There are now twenty-one steamboats engaged in navigation on this river, having an average registered tonnage of one hundred and eighty-three tons; their individual capacities ranging from one hundred to five hundred tons. These boats run between Nashville and various points on the Cumberland, Ohio, and Mississippi Rivers.

The Cumberland is navigable for all these steamboats for six months in the year from Nashville to the mouth of the river, and from six to eight months for boats drawing three feet and less; and the entire year for boats of sixteen inches draught.

Above Nashville the river is navigable to Point Burnside (the Cincinnati Southern Railway crossing), a distance of three hundred and fifty miles, for from four to six months for steamers of three feet draught, and from two to three months for larger boats. From Nashville to Burksville, three hundred and twenty miles above, the Cumberland is navigable from five to seven months for steamers of three feet draught, and from three to five months for larger boats. From Nashville to Carthage, one hundred and twenty miles above, the river is navigable from six to eight months for steamers of thirty inches draught, and from four to five months for larger boats. The work done on the Cumberland, although not completed, has already had the effect of extending the duration of the navigable period both above and below Nashville.

It is estimated that the following shipments were made on the Cumberland during the past year, namely: Grain, 3,000,000 bushels; tobacco, 14,000 hogsheads; potatoes, 3,000 bushels; iron, 20,000 tons; hogs and cattle, 10,500 head; eggs, 100,000 dozen; lumber (partly rafted), 160,000,000 feet; general merchandise not estimated; passengers carried, 125,000.

BELOW NASHVILLE.

Work on this section was resumed in September and continued until January, when operations were suspended on account of the high water. Work was carried on at the following places, and the condition of the work at the different points as stated below:

At Harper's Shoals, nine-tenths completed; at Checkered-House Shoals, nine-tenths completed; at Elk Creek Shoals, completed; at mouth of river, one-half completed.

In addition to the work at the points above mentioned operations with a snag-boat were carried on during the months of October and November between Nashville and the mouth of the river. The following are the quantities of work done during the year: Rock placed in dams, 3,397 cubic yards; rock excavated from channel, 78 cubic yards; gravel excavated from channel, 1,550 cubic yards; snags removed, 938; old wrecks removed, 2; brush-dam built at the mouth of the river, 740 cubic feet.

The work done on the shoals above mentioned effected an increase in the depth of water at low stages of from six to nine inches.

The work was in local charge of Assistant Engineer C. A. Terrill, with an average force of fifty men.

The funds available and the appropriation herein estimated for can be profitably expended in continuing work upon the shoals below Nashville in accordance with the present plan.

BELOW NASHVILLE.

The original estimate of cost of improving Cumberland River below Nashville was $248,872; amount appropriated, $235,000; amount expended, $229,731.74.

MONEY STATEMENT.

Amount appropriated by act passed August 2, 1882	$15,000 00
July 1, 1883, amount expended during fiscal year, exclusive of outstanding liabilities July 1, 1882	9,545 99
July 1, 1883, outstanding liabilities	185 75
July 1, 1883, amount available	5,268 26
Amount (estimated) required for completion of existing project	13,821 00
Amount that can be profitably expended next year	13,821 00

ABOVE NASHVILLE.

Work on the river from Nashville to the foot of Smith's Island was resumed in September and carried on to the close of the fiscal year. The work of building dams was, however, suspended during the winter months on account of high water. Operations were confined principally to the following obstructions: Old pier removed at Nashville, one-tenth completed; Upper Nashville Island, completed; Priestley's Shoals, completed; Donaldson's horse-ford, one-half completed; Lindsey's Island, three-fifths completed; Belote's Bar, completed; Whitley's Rock Island, completed; Wellman's Bar, seven-eighths completed; Walton's Shoals, completed.

In addition to the work done at the obstructions above mentioned operations with a snag-boat were carried on during a part of the low-water season between Point Burnside and Albany Landing, eighty miles, and Hartsville and Nashville, a distance of one hundred miles.

Under the provision of the appropriation act of August 2, 1882, a survey of this part of the Cumberland River is now in progress, with a view to ascertaining the cost of placing locks and dams on the Cumberland River from Nashville to the Cincinnati Southern Railroad in Kentucky.

The original estimate of cost of improvements from Nashville to foot of Smith's Shoals was	$213,764 00
Amount appropriated	162,000 00
Amount expended	169,611 77
Amount that can be profitably expended in fiscal year ending June 30, 1884	51,764 00

By act of March 3, 1881, a survey was directed to be made "to ascertain the practicability and cost of a canal, with locks and dams, from the head to the foot of Smith's Shoals. The report of February 15, 1882, says:

A strict construction of the act authorizing the survey calls for a "canal with locks and dams;" but such a canal would be enormously expensive if not impracticable, and would be entirely unnecessary, since the locks and dams would give sufficient depth to the river itself.

The river bed is in a gorge from three hundred to five hundred feet deep, which leaves no room for a canal, and at the same time renders it unnecessary, since it is possible to raise the water-level by means of dams to any desired height without overflowing the surrounding country. The estimate has therefore been made for locks and dams, using the river itself as a canal.

The language of the act also limits the survey to "Smith's Shoals," but as the principal object of the proposed improvement appears to be to enable coal mines in the vicinity of Rock Castle River to boat their coal to Nashville, it is evident that the river from the present head of navigation at Point Burnside to the mouth of Rock Castle River should be put in as good navigable condition as Smith's Shoals proper, in order that the improvement may fully accomplish its object. I will, therefore, add an estimate of the cost of extending the improvement as suggested.

There is no doubt as to the practicability of building the locks and dams so as to give any desired depth of water at all points on Smith's Shoals.

The estimated cost is:

The dam at the head of Mill Shoal could probably be built of substantial masonry for	$240,000
And four locks, of 16 feet lift and 55 by 140 feet in the chamber, at $80,000 each, would cost	320,000
Total	560,000

This is the estimate for improving the river "from the head to the foot of Smith's Shoals," but in order to make this improvement available it would be necessary to build—

An additional dam about 25 feet high, and three more locks at or near Shadowen Shoal, the cost of which dam would be	$75,000
And that of the three locks, at $80,000	240,000
Making	315,000
Which, added to the foregoing estimate	560,000
Make a total of	875,000

as the cost of the entire improvement.

* * * * * * *

The advantages of this plan of improvement would be:

1. It would give absolutely safe and reliable navigation for rafts and coal-boats at all seasons of the year and all stages of the water from Rock Castle River to the present head of navigation at Point Burnside.

2. It would allow steamboats to ascend, as well as provide for descending navigation.

3. The improvement would be permament.

On the other hand it should be stated:

1. That even if Congress should make liberal appropriation for the work, say $300,000 for the first year, it would take at least four years to complete the work, during which time no advantage would result to navigation; while at the rate such appropriations are usually made, a much longer time would elapse before the improvement would become available.

2. That the present system of dams appears to give good satisfaction as far as tested, and it is probable that if the coal-mines will make full use of the boating tides, and perhaps make some slight modifications in their temporary barges, they can now market all the coal they can mine, not only safely, but profitably.

3. So far as rafts and loose saw-logs are concerned, it is quite likely that the present arrangement is as good if not better than the locks and dams would be.

4. From the head of the Great Falls to the head of Smith's Shoals the Cumberland River falls three hundred and twenty-four feet, and is so badly obstructed by bowlders that it can never be made navigable for steamboats at any reasonable cost; it is not therefore probable that the improvement, even if completed as herein estimated for, would ever be extended to the upper Cumberland.

In view of these considerations, I would respectfully recommend that the present system of dams be tried for at least one year longer before undertaking the more radical system of improvement.

The act of August 2, 1882, ordered a survey from Nashville to Smith's Shoals, to ascertain the cost and advisability of instituting slackwater navigation by means of locks and dams. It was made by Assistant Engineer C. A. Turrill, of Nashville, in the year 1883. He says of the proposed improvement by locks and dams:

In considering whether it is practicable to improve the upper Cumberland by means of locks and dams, the favorable features to be noticed are, first, permanency of banks and beds.

* * * * * * *

Bed-rock in the river is horizontal in stratification, and in some shoals is almost at the surface at low water, presenting a favorable place for saving expense in lock masonry.

* * * * * * *

Uniformity of fall for any distance greater than ten miles may be mentioned as another favorable feature. Although the fall at low water is principally concentrated at the shoals, leaving long and comparatively level pools, yet taking the amount of fall which could be overcome by one lock of moderate lift, say 10 feet—and this fall is always found distributed in about the same length of river—the rate of fall for the entire length of survey, 327.8 miles, is 222.9 feet, or 8 inches per mile. The change of slope as affected by the slackwater will thus be reduced to a minimum by equally distributing the dam over the entire distance. By this means, also, each lock and dam will benefit its proportionate section of river in extending navigation.

Uniform width of the river may be also mentioned. It varies from 305 feet at low water above the State line to 400 feet below the State line. This causes a generally uniform height of rises, owing to equal cross-sections.

Materials for the construction of substantial locks and dams are abundant. Suitable stone can no doubt be found within less than half a mile of any location. Supplies can be purchased during the boating season, when they can be delivered at the work by steamer.

* * * * * * *

The work which has been already done to improve the upper Cumberland can be made to assist materially in the introduction of the slackwater system. The jetties or training-dams heretofore built will assist in confining the water to a limited channel, and especially in the heads of pools will contribute toward the canalization of the river.

In commenting on this river the engineer, Major King, says as to the former plan of improvement, for which Assistant Engineer Turrill, as we have just seen, recommends the slackwater system (Executive Document 129, page 3):

This river has heretofore been improved by means of wing-dams and channel excavation, with a view to securing an increased depth of channel at medium stages of the river, but without attempting to secure a navigable depth at extreme low water, and while greatly facilitating navigation, it is evident that such a system of improvement is but a partial removal of the difficulty.

It will thus be seen that all the former work and all the previous outlay of moneys have failed to effect anything more than a partial removal of the difficulties of navigation.

Major King then gives a brief résumé of the new project and its estimated cost, as follows:—

The proposed system of improvement by locks and dams will require twenty-three locks, with lifts varying from 6.5 to 11.8 feet at low water, with side walls sufficiently high in each location to permit boats to pass the locks until the water is high enough to allow them to pass over the dams. As it will require from 20 to 25 feet rise to enable boats to pass over the dams safely, it will be seen from the foregoing table that on an average the locks will be used about eleven months in the year, and during one month the boats will have to pass over the dams.

It is proposed to build the locks of solid masonry and found them upon the rock. They should be about 60 feet wide and 250 feet between miter-sills, though perhaps smaller dimensions would answer the purpose.

There will be a dam required at each lock from 260 to 500 feet long, and these should be made of stone and timber, with secure foundations. Each dam will back the water to the next lock above, a distance of from 8 to 19 miles, and give a depth of 5 feet on the lower miter-sill.

The questions suggested in the letter of instructions may be answered as follows, taking them in their order:

1. There is no doubt as to the practicability of the work. A very similar, but more difficult work, on account of bad foundations, has been successfully tested on the Kentucky River, below Frankfort.

2. The probable cost from Nashville to the Kentucky line, as estimated by Mr. Turrill, is	$1,987,536
3. The probable cost from Kentucky line to the Cincinnati Southern Railroad he estimates at	1,215,386
Making a total of	3,202,922
4. The cost of locking and damming Smith's Shoals, as estimated in my report of February 15, 1882, is	875,000
Which, added to the foregoing, makes	4,077,922
The cost of operating the thirty locks, including seven at Smith's Shoals, will be about $1,200 per annum each, or $36,000, which, capitalized at 3 per cent., makes	1,200,000
Making the entire expenditures involved in the project	5,277,922

If undertaken, the work should be begun at Nashville and extended up the river, so that the improvement can be utilized as fast as it is completed. This will benefit commerce, even on the upper river, more than to begin at two or more places, because the upper end of the improved river will always be the base from which boats can safely undertake hasty trips to the upper waters of the Cumberland and its tributaries on short tides in summer. Any attempt to improve intermediate sections would not only add greatly to the cost of the work, but would delay its completion, and the detached locks and dams would be of no use until connected with the completed work below.

This able officer then discusses the question as to whether it is necessary to undertake the new plan at the estimated cost, and prudently weighs every consideration he deems proper to bring to the attention of the Government, whose interests he is evidently conscientiously endeavoring to protect and promote. The best and least expensive plan for the improvement of the river is of course what is desired. The old plan, having been tested by experience, has failed to effect the object. Now, is it advisable to introduce the slackwater system, or may there not be a cheaper and more practicable plan? Certainly we should hesitate to throw away all the work previously done if it can be avoided. But there is no necessity for that, for, as shown, the "work already done will materially assist in the introduction of the slackwater system."

Major King says:

As to whether this "improvement is proper to be made," it may be remarked that some more radical improvement of the Cumberland is evidently demanded by the interests of commerce; and if the necessary depth of water can not be obtained without locks and dams, the expenditure of $5,000,000 for building them may be justified. But before deciding this point it is proper to inquire whether the same amount of money, or even a much smaller sum, may not provide a sufficient depth of water for all commercial purposes. It must also be borne in mind that the system of locks, even if completed in the most substantial manner, would not be an unmixed blessing, since they would at all times cause some delay, and accidents might occasionally stop navigation altogether for several days at a time; but at all times when the river is above, say, fifteen feet at Nashville, navigation would be better without locks than with them. When the river at Nashville is above ten feet, or about four months in each year, there is probably sufficient water for all purposes of navigation, so that the locks may be considered as desirable only eight months in the year, or two-thirds of the time, while during the other third they would not only cause delay and expense for working, but would be practically unnecessary.

This officer is certainly not subject to the criticism sometimes heard in debate, that his estimates and recommendations are recklessly made

and without due circumspection. He certainly here is weighing the proposed advice he shall give with due regard to all interests—the convenience of navigation, its possible effect upon the use of the river as a highway for commerce, as well as its soundness from an engineering standpoint. If he can give us the river free from difficulties cheaper by any other plan than the proposed plan of thirty locks and five millions of expense, he desires to do so. And he says:

As the average fall is only 8 inches per mile, there would be no trouble about rapid currents if the slope could be made tolerably uniform, and the important question would be to get a sufficient depth of water. To determine whether this is practicable the low-water discharge of the river was measured at three points, with the following results, namely:

1. Above the Kentucky and Tennessee State line, 850 cubic feet per second.
2. Above the mouth of Caney Fork, 1,100 cubic feet per second.
3. Near Nashville, 1,325 cubic feet per second.

By computation it is found that if the river at low water were confined in a channel 80 feet wide at bottom and with side slopes of 45° at the shoal places, and the slope regulated by jetties or wing-dams, these quantities of water will be sufficient to give a depth of 5 feet, 6 feet, and 7 feet at the points just mentioned.

In other words, there will be plenty of water if the width and slope are properly regulated, and this can be done by a suitable arrangement of brush and stone dams, so disposed as to narrow the channel at low water and cause the gravel to scour to the proper depth at the shoals and form deposits in the deep places, where it will not only be out of the way, but will assist in backing the water upon the shoal places.

To those not familiar with the subject it might appear that this would simply be a continuation of the improvement on the present plan, and to a certain extent it would be; but it should be remembered that the existing project has cost only $277,000 for the entire improvement from Nashville to the head of Smith's Shoals, or less than one-nineteenth of what it is now proposed to apply to the same portion of the river.

It is thus evident that the engineer is of the opinion that this river can be improved for much less cost and to better purpose than to adopt the lock-and-dam system entire and canalize the river; that is to say, by a combination of the wing-dam and channel-excavation plan, with the locks and dams. Wherever the last judgment of the constructing engineer in charge may determine that the old plan can be helped by the new there he proposes to adopt it; but wherever economy and the needs of navigation can best be subserved by the adhering to the old plan to do so he says:

In order to compare the lock-and-dam system with the jetty system, which, by the way, is something like the original problem of improving the mouth of the Mississippi River, minus most of its difficult and experimental features, Mr. Turrill was directed to make an estimate of the cost of improving the worst or most difficult and the most favorable sections of the river by jetties, with the following results:

Worst section: With locks, $180,951; without locks, $268,700.

Best section: With locks, $168,008; without locks, $121,300.

The cost with locks includes the cost of operating, capitalized, as in the general estimate, and the figures show that in the worst section the locks would be about $88,000 cheaper, while in the best section they would cost also $46,700 more than the jetties.

It should also be taken into account that the building of jetties will not interfere at any time with the free navigation of the river, while the dams can not be built without entirely stopping navigation for longer or shorter periods, according to the stage of water, floods, weather, appropriations, and other circumstances under which they are built.

In some cases it will evidently be better to build locks, while in others jetties will be more advantageous.

In conclusion, this report, which is thus seen to be well considered and eminently worthy of attention, says:

I would, therefore, respectfully recommend that, if this improvement is undertaken by Congress, the following provisions be made:

1. That the appropriation be made without geographical limit, other than that it shall be applied to the "improvement of the Cumberland River above Nashville."
2. That, in order to conduct the work on business principles, the first appropriation should be enough to complete at least three locks and dams next above Nashville, say $400,000.
3. That the law shall simply specify the depth of navigable channel to be secured, leaving it to the Secretary of War to adopt the plan of improvement best adapted to the physical conditions of each section of the river. A depth of four feet, at ordinary low water, say eleven months in a year, would probably be sufficient for all purposes of navigation.

The final discretion is thus left with the Secretary of War to adopt the plan of improvement that is best adapted to secure the best results. Instead of thirty locks it will doubtless prove true that when Congress shall have concluded to go to work in earnest to improve this river, and cease throwing the public money away by parsimonious appropriations that result in failure, the navigation of this important stream will be secured on the plan that science and experience may adopt as most certainly the best to promote that object. Now, the question further is whether this river is one that comes within the definition of streams upon which the Government may under the Constitution justly undertake the work of improving.

Waiving the fact that since 1832, for fifty-two years, the Government has so considered it and recognized this river as a part of the great "inland sea" of the Mississippi and its tributaries that Mr. Calhoun, the strict constructionist, considered clearly of such national importance as to justify the Government in improving, it is of easy demonstration that this river does not belong to the class that is without "the legal definition of the word 'navigable' as defined by the Supreme Court of the United States;" appropriations for which have given cause for much criticism in the past.

It must certainly be conceded that appropriations for rivers and harbors should be restricted to waters over which the courts of the United States have admiralty jurisdiction. And the test of that jurisdiction is the definition of the words "navigable waters." Navigable waters at the common law meant where the tide ebbs and flows. Waring *et al. vs.* Clark, in 5 Howard, is the first case involving the question, and the authorities since hold the jurisdiction to extend to all waters navigable for vessels employed in commerce of twenty tons or upward, whether fresh or salt, or whether the tide ebbs and flows therein or not, when such waters open a communication with other States, whether they lie in one or several States. This doctrine is confirmed in many cases, notably in Genesee Chief *vs.* Fitzhugh (12 Howard), where Chief-Justice Taney delivered a clear and masterly opinion.

In 11 Wallace, 411, the court says:

(1.) A river is a navigable water of the United States when it forms, by itself or by its connection with other waters, a continuous highway, over which commerce is or may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water.

And—

(2.) If a river is not of itself a highway for commerce with other States or foreign countries, or does not form such highway by its connection with other waters, and is only navigable between different places within the State, then it is not a navigable water of the United States, but only a navigable water of the State.

Tried by these rules, is this river an object for national improvement? It is navigable for a distance of six hundred and thirty-four miles from its mouth in the Ohio River to the falls and for over two hundred miles above them. It traverses the States of Kentucky and Tennessee. On it is situated the towns of Dover, Clarksville, and Nashville, and scattered along the upper valley are Carthage, Hartsville, Celina, and Burksville. From the falls to the head of Smith's Shoals is thirty-eight miles. Burnsides at the foot of the shoals, at the crossing of the Cincinnati Southern Railroad, is three hundred and fifty miles above the city of Nashville, and from Nashville to the mouth of the Cumberland is one hundred and ninety-two miles. The census of 1880 shows the value of the farm products of the twenty-five counties through which it runs in Tennessee and Kentucky to be over $20,000,000; they contain a population of over a million of souls.

The "Nashville district" within a period of eleven years, commencing June 30, 1872, paid the General Government in internal revenue and customs $6,773,264.75. Numerous steamboats carry freight and passengers through the entire river to the head of navigation the greater portion of every year. Three boats, each of four hundred and fifty tons burden, and seven smaller ones ply the season through in the river above Nashville. During the boating season of 1882–'83 there was carried above Nashville alone, of corn, 1,600,000 bushels; wheat, 300,000 bushels; tobacco, 6,000 hogsheads; potatoes, 35,000 barrels; eggs, 80,000 dozen; hogs, 5,000 head; cattle, 2,400 head; lumber, 1,000,000 feet; passengers, 20,000.

From Nashville to the mouth the freights are many times larger; but I will confine my argument to the trade of the portion of the river for which I seek by the amendment I shall offer at the proper time to increase the appropriation from twenty to one hundred thousand dollars.

With reliable navigation secured by the improvements contemplated the business of the two States of Kentucky and Tennessee would be quadrupled in a few years.

But it is not these things alone, important as they are, that commends this work to Congress.

This river is the natural channel through which the commerce of the country would be increased by the addition of millions of feet of the most valuable lumber left on the continent. Walnut, yellow poplar, white hickory, blue and black ash, red maple, linden, and cherry, as yet untouched for the needs of man, abound.

Professor John R. Proctor, director of the Kentucky geological survey, in his report, 1880, says:

On the slopes of Pine Mountain, to the west, and Cumberland Mountain, to the east, are the timbers usually found on the conglomerate sandstone: hemlock and pitch-pine, yellow pine, and chestnut-oak are very abundant, and of the best quality. Except the clearings in the valleys the timbers of this region remain almost untouched. The difficulty of running logs over the Falls of the Cumberland and Smith's Shoals have been the cause of preservation of this magnificent timber region. According to the best estimate I can make, at least 90 per cent. of this area is yet covered with primitive forest growth.

But it is not the lumber interests that are the chief arguments for the improvement of this river, although in the year 1882 1,700 rafts were brought down to Nashville and beyond and sold for half a million of dollars.

The mineral wealth that lies locked up in this region, if opened up to the interstate commerce of the Union, would cheapen the cost of fuel, of iron, and of steel, and add to the comfort and prosperity of the whole country. In the counties of Wayne, Clinton, and Cumberland, Kentucky and on the banks of the river in Putnam, Jackson, Overton, and Clay Counties, Tennessee, is an immense coal-oil field, that in the opinion of experts will prove invaluable if developed by cheap transportation. The field of coal through which this river flows is stated by Professor Safford, geologist of the State of Tennessee, to extend from a point above Smith's Shoals for fifty miles to the east, over a hundred miles to the northeast, and forty miles to the south. It is as extensive as the coal-field of Pittsburgh. In the counties of Alleghany, Westmoreland, Washington, and Fayette, Pennsylvania, there were produced in 1880 the amount of 11,006,031 tons of coal. This coal, on account

of its fine quality, runs the fires of Pittsburgh, and is sold along the Mississippi Valley.

Professor Proctor, in his report of January 1, 1882, says:

It was discovered that there was just beyond the State line, on the divide between the waters of Powell's River and the waters of the Cumberland, a coal suitable for the production of coke of a superior quality. The importance of such a coal in determining the development of manufacturing in the Ohio Valley is very great. The entire region between Pennsylvania and Colorado is supplied with coke from the Connellsville region, Pennsylvania, and the Quinnemont region, West Virginia. This coal was found and traced over a wide area on the headwaters of the Cumberland, Kentucky, and Big Sandy Rivers, above drainage, and averaging seven to eight feet thick.

These coals, opened by a few weeks' exploration, were analyzed and compared with the best coals of Pennsylvania. They are identical, and as a coking coal it is destined to prove the most valuable coal-bed in America.

The increase of trade, the development of the resources of the two great Commonwealths of Kentucky and Tennessee, depend largely upon the river being opened to commerce, and its effect, it is apparent, would be general, and would dispense public benefits and promote the welfare of the whole country.

It will certainly compare favorably in national importance with the improvement of any river of its class in the Union. It is of similar importance to the Tennessee, for which the State of Alabama gets by this bill $350,000. It is of at least double the importance of the Kentucky River, which gets $250,000. I do not desire to institute invidious comparisons, however, but let the Cumberland River stand on its own merits. Tried by any standard of criticism, whether laid down by courts of law or by a just comparison with other rivers, the necessity and justification for this appropriation asserts itself. It comes fully up to the standard required under the Constitution as interpreted by the Supreme Court. It is a highway over which commerce is carried to other States. By its connections with other waters its navigation becomes a part of that of the great Mississippi Valley. Its waters are navigable, public, not private waters, and yet it is cut off with a pitiful sum, scarcely equal to those given to some insignificant streams, fishing waters, where the landed proprietor owns each bank and his domain extends to the middle of the stream, *ad filum fluminis*, and he hath his common of piscary therein. I hope the House will at the proper time relieve this great improvement from the manifest injustice and neglect that would be done it by cutting it off with this small appropriation.

Brooklyn Public Building Site.

SPEECH

OF

HON. DARWIN R. JAMES,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1884.

On the following resolutions, reported from the Committee on Public Buildings and grounds:

"*Resolved*, That the charges of corrupt or collusive action on the part of the Secretary of the Treasury or of some of his subordinates in connection with the selection and purchase of a site for a Federal building in the city of Brooklyn have not been sustained.

"*Resolved*, That the Committee on Public Buildings and Grounds be discharged from the further consideration of the matters referred to them in this regard."

Mr. JAMES said:

Mr. SPEAKER: The honorable member from South Carolina [Mr. DIBBLE], while concurring with the report of the committee which exonerates the officials of the Treasury Department from any collusion or evil purpose, questions as a matter of law the authority of the Secretary of the Treasury, under the three provisions of law which have been made, to expend so great a sum for a site. Not being a lawyer myself, I have asked the opinion of gentlemen in whose legal ability I have confidence whether the criticism of the honorable gentleman is correct. I am assured that it is not. The first act was that of July 12, 1882, and limits the cost of site and building to $800,000.

The second act was that of August 7, 1882, and is in the following words:

To enable the Secretary of the Treasury to purchase a site and to commence the erection thereon of a building for the uses of the Government in the city of Brooklyn, N. Y., as provided by law, $300,000.

Under that act undoubtedly the Secretary of the Treasury would have been obliged to retain some portion of the $300,000 appropriated to commence the erection of the building. He would have had to purchase a site and still reserve from the $300,000 such sum as would have made an appreciable commencement of a building upon the site obtained. It is to be assumed that afterward Congress saw that $300,000 was not sufficient to purchase a site and commence a building, because in the following session, by act of August 7, 1882, they appropriated as follows:

For post-office at Brooklyn, N. Y.: For continuation, $200,000.

When the act speaks of the continuation of the post-office at Brooklyn, N. Y., it must have meant for the continuation of the authorized action of the Secretary under the act of July 12, 1882, and of the whole and of every part of that action, and was tantamount to an appropriation of $500,000 for the purpose expressed in the act of July 12, 1882. Now, what was that purpose? That purpose was to purchase a site and to commence the erection thereon of a building. Well, then, was not $500,000 by the effect of these two acts appropriated for that purpose; that is, to purchase a site and to commence the erection of a building? If $400,000 was needed for a site, and no more was expended, then there was $100,000 to commence a building. Surely $100,000 is sufficient to make an appreciable commencement of the building.

So that, as I am assured by gentlemen learned in the law, and as my own common sense indicates to me, the Secretary of the Treasury did not exceed his authority under these two acts by assuming that the sum of $500,000 was appropriated for the purpose named in the first act, that of July 12, 1882. And so, assuming he had the right also to ascertain or to determine how much would be needed to make a real commencement of the building and to use whatever was over that sum for the purchase of a site, in my opinion, thus formed, the criticism of the honorable gentleman from South Carolina is not well founded.

Mr. Speaker, the question of the selection of a site for a public building at Brooklyn, N. Y., has occupied the attention of this House to some extent this session because of charges of collusion between the sellers of certain pieces of real estate and officers of the Government, whereby an exorbitant price was to be paid for an undesirable piece of property.

These charges were made in writing, are general in character, and were not made by residents of Brooklyn, but originated in this city, and were worked up in the lobby of this House; they were never entitled to the consideration which they received, in fact were entitled to no consideration whatever, and in my judgment never would have received any except that a reputable daily paper or two, notably the New York Journal of Commerce, thinking there must be some truth in the reiterated charges, called upon Congress in a leading editorial to investigate. This editorial was sent to members of the House, and resulted in the drafting of a resolution providing for an investigation.

These charges were all traceable to this city, where there seemed to be a headquarters from which scurrilous articles were sent to journals in New York charging collusion and fraud, and in several instances mentioning the names of Congressmen who were said to be aiders and abettors of the thieves. These charges were outrageous and slanderous in character, were entirely unjustifiable, being void of truth, were put forth by selfish and disappointed persons for selfish ends, and the names of upright and honorable men were held up to the gaze of the public as those of thieves and rogues. Not only were corruption and collusion charged in these newspaper articles, but other articles of a different character got into the journals, giving a political turn to the matter, so that the "fraud in the purchase of the site for the public building at Brooklyn" became a matter of national political importance. It affords a remarkable illustration of what a few unscrupulous persons can accomplish when they diligently set themselves about it. Having access to certain public journals they use them to traduce honorable men, creating a public sentiment against them and the work in which they are engaged, and they even force upon this House of Representatives an investigation of a Government transaction which was absolutely honest and entered upon after deliberate and careful consideration.

In my remarks upon this floor on April 18, when the question of the appointment of a committee to investigate was under consideration, I said: "So far as the purchase of the site for the public building at Brooklyn is concerned I have no reason to doubt that every transaction in connection with it has been upright and honest." To show that my words were founded upon reason I quote from the report of the Committee on Public Buildings and Grounds as published in the RECORD on page 5376:

Every opportunity was offered for the introduction of evidence to sustain the charges, and we unhesitatingly report that there has not been produced before us a scintilla of evidence which in the slightest degree reflects upon the integrity of the Secretary of the Treasury, upon the Supervising Architect, or any other officer of the Government. We therefore recommend the passage of the following:

"*Resolved*, That the charges of corrupt or collusive action on the part of the Secretary of the Treasury or of some of his subordinates in connection with the selection and purchase of a site for a Federal building in the city of Brooklyn have not been sustained."

This finding of the committee disposes of the charge of collusion and fraud—a charge which, as I have already said, never should have been made, for which there was never an occasion, but, having been made, should never have been considered, because it was not made by responsible parties. The matter of the desirability of the site or the price agreed to be paid for the same are subjects which were not reported upon by the committee, although evidence was taken under these heads, for the reason that the resolution under which the committee acted did not require it. The House, therefore, on June 5, recommitted the report, with instructions to investigate these matters, and especially the purchase of the plot from William A. Husted. As to the desirability of the site selected, there is of course a diversity of opinion; both at the first and second hearings before the committee abundant evidence was forthcoming for and against the choice. Some of the most conscientious and careful citizens testified on either side of the question. My

own choice was for the selection of some other site. The other members of the House from Brooklyn preferred another site, the one known as the Dutch church site. Secretary Folger preferred the Boerum place site, which he himself looked at.

The commissioners appointed by the honorable Secretary selected as their choice the corner of Washington street and Myrtle avenue; the citizens who gave consideration to the subject generally accepted the decision of the commission, although there were many who were locally prejudiced in favor of other sites. The mass of the people, as well as the Brooklyn Congressmen, were agreed in this, that the building should be near the City Hall. The question of a suitable place for the Federal building was under consideration as early as 1868, when a commission was appointed to select one. For about sixteen years this matter has been more or less under discussion. Sites which were offered to the commission at that time, desirable sites fronting on the City Hall square, have in several cases been built upon with substantial edifices and have long been out of the market. There were left, however, three sites which could be purchased or had by condemnation, any one of which would have been acceptable to a large number of people. The Dutch church property could have been purchased for $275,000. This, with the Court-street front, would have furnished a site which would have satisfied many, but the Court-street front could not have been purchased at less than about $350,000, if it could have been purchased at any price. It might have been condemned, but it is doubtful if it could thereby have been acquired at a lower price. The Secretary construed the law literally—that he could only acquire the property through purchase. I consider that the price of this site was $625,000.

The Boerum Place site, preferred by the Secretary and recommended by Supervising Architect Hill, in all probability would have cost over $800,000; it contained several plots which the owners did not offer and did not wish to sell at any price. On this plot is the Long Island Savings Bank building, for which $140,000 is demanded. The other site alluded to is the one at the corner of Washington street and Myrtle avenue, the one selected by the commission. This site could have been purchased at $600,000 at the time the commission selected it, as the parties advocating its selection had options for nearly all the plots, the figures aggregating about $600,000. At this present time it is doubtful if the property could be purchased at even $850,000.

It will thus be seen that the Secretary was shut up to two courses, either to do nothing, or to accept a site not so desirable as those mentioned, as the cost of any one of them would have consumed the larger part of the appropriation for site and building. The Secretary decided to wait, but the citizens of Brooklyn were urging action and pressing him to come to some decision. As early as January 9 the Brooklyn members of Congress called in a body upon him and insisted upon something being done. At this interview it was arranged that Supervising Architect Bell and myself should visit Brooklyn to examine the various sites mentioned, as well as other sites, and to make report. The visit was made on January 18. Various sites in addition to those which were generally discussed were looked at. The Johnson street site was not considered on that day, although it was incidentally noticed in passing.

On the following day Mr. Bell examined it alone somewhat carefully, I having returned to Washington the previous night. Nothing definite resulted from the visit except the confirmation of the Secretary in the opinion that the most desirable sites were unattainable, and the securing diagrams of various plots, together with their assessed valuations. The Johnson-street property was offered to the Secretary about February 1 by Mr. Leonard Moody, a responsible real-estate dealer, at the sum of $450,000, and on February 9 the Supervising Architect made a written report to the Secretary recommending it as a suitable site. This property is situated one block north of the site selected by the commission, and is about two hundred feet from the present post-office. The plot is one hundred and ninety-seven feet on Washington and Adams streets, and two hundred and thirty-five feet on Johnson street. It is on the highest ground in that part of the city, and one block from the City Hall plaza. Washington street is the direct street to and from the bridge, and is destined to become a great thoroughfare. The New York post-office and United States court-rooms are but a short distance from the New York bridge landing, about as near as the Johnson-street site is to the Brooklyn bridge landing.

Washington street has seen many changes. Not many years ago it was the place of residence of the wealthy; then the tide of fashion set in another direction, and the property gradually sunk to a low price. Within a few years it has been purchased by far-seeing individuals, who held it for an advance, which was sure to come, as it was to be the outlet to the bridge. I refer to this fact as a reason for the diversity of views as to valuations on the Washington street lots. The price at which it was offered seemed excessive, but the testimony of the witnesses examined shows that no other plot of the same size within the same distance of the City Hall and equally desirable could have been purchased at as low a figure. The purchase was managed with much ability. The Secretary gave an order as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., February 16, 1884.

SIR: I have decided to select as a site for the public building to be erected in your city the property offered by you at $450,000, consisting of one hundred and ninety-seven feet on Washington street, two hundred and thirty-five feet on Johnson street, and one hundred and ninety-seven feet on Adams street.

In approving this location it is upon the unqualified condition that the Government shall receive a clear and perfect title to the property described at a price not to exceed in any event the amount named above.

Very respectfully,

CHARLES J. FOLGER, *Secretary.*

Mr. LEONARD MOODY,
Real-Estate Agent, Brooklyn, N. Y.

Mr. Moody secured the assistance of Mr. Herman Liebmann, a partner in one of the most reputable business firms in Brooklyn, to enable him to carry the proposition through, as he (Moody) was not strong enough financially to undertake so large an operation. The Liebmanns, for there are two of them (brothers), occupy a large retail store running through from Fulton to Washington streets, and own about half of the block, the southerly half of which was offered to the Government. It will be seen that if the sale could be effected the adjoining property of the Liebmanns would be greatly benefited; it was for this reason that they consented to purchase the lots, some thirteen in number, and turn them over to Moody. Mr. Liebmann proceeded quietly to buy, the sellers knowing nothing about the purpose for which he was buying; but, unfortunately for him, before all the lots had been taken and before certain leases had been gotten rid of, it got into the public journals that the property was being acquired for the Government, the result of which was that prices rapidly advanced.

At this juncture Mr. Liebmann would have withdrawn had he not already purchased so many lots that he was forced to carry through what he had undertaken, and the result was that he paid $501,082.50 for what the Government was to pay $450,000. Meantime he has been losing in interest, at 6 per cent., $75 per day, while this examination progressed, besides being subjected to many other expenses and annoyances, not the least of which was that of being published in the papers as a thief and scoundrel.

The following is an extract from the report of the Committee on Public Buildings and Grounds, as published in the RECORD on page 5376.

Hermann Liebmann (or Liebmann Bros.) being the owner of a portion of the property selected, and also the owner of a large amount of other property in the same block which would be greatly enhanced in value by the erection of the post-office, &c., in that locality, Mr. Moody had recourse to him to assist in securing the different lots in the proposed site.

Mr. Liebmann's connection with the matter gave color to the charge that the purchasing agent of the Government was one of the largest owners of the land to be bought. But there is no evidence to indicate that any officer of the Government had any correspondence or communication with, or even knowledge of the existence of, Mr. Liebmann at that time.

It might have been possible, under the arrangement between Messrs. Moody and Liebmann, for Mr. Liebmann to have speculated upon the Government by securing the property desired at a less sum than the limit authorized. And he himself admits that when he undertook the transaction he expected that the entire purchase would not exceed $425,000. But his expectations were not realized; and he swears that the actual cost to him was $501,000 for the property which the Government is to get, if the sale is consummated, for $450,000.

In suggesting the possibility referred to it is fair to say that there is no evidence that there was any design upon the part of Messrs. Liebmann and Moody to exact from the Government any more than the actual cost to them of the property, even if it had been secured for a sum below the limit imposed by the Secretary, except in so far as relates to the piece of property within the selected plot, which was owned by Liebmann before the site was determined. That piece had cost him $40,000, and he intended putting it in to the Government for $50,000, if that piece with the other purchases should not exceed the limit of $450,000.

It is also fair to say that there is no evidence of any improper motive upon the part of Mr. Moody in securing the co-operation of Mr. Liebmann to effect the entire purchase. The Government would not buy a portion of the ground unless all could be secured. There were thirteen different owners to be negotiated with. Mr. Liebmann was a man of means, and had sufficient interest in adjacent property to induce him to take upon himself the burden of the entire purchase.

I have no question but that, had it been known that the purchase was being made for the Government, the cost would have reached $600,000. One lot, 22 by 100 feet, on Washington street, was purchased by Mr. Liebmann from a Mrs. Titus for $30,000, on which 10 per cent. was paid and an agreement duly signed. When it became known that the lot was to go to the Government Mrs. Titus tendered the 10 per cent. and the agreement and stated that she had sold under a misapprehension, that the property was worth more, and that she would not execute the deed. A suit is now in court to compel compliance with the contract, but meantime the secretary has relieved Mr. Moody from conveying it and the corresponding lot on Adams street, so that the Government plot will be 175 by 235 feet, and the total cost will be $408,500. The public building is to be used for the general post-office, for the United States district court, and for the office of the collector of internal revenue. On February 9 the Supervising Architect filed his report with the Secretary, recommending the purchase of the Johnson street site. On February 16 the Secretary sent the order to Mr. Moody to purchase it. During the week intervening the pressure on the Secretary to purchase other sites was intensified, and at one time he had nearly concluded to purchase the Dutch church property without the Court street front. Presuming that I knew the president of the board of trustees, he requested that I write asking that he communicate with him direct as to price and terms, which was done.

Against this plan the Supervising Architect filed written objections. The size of this plot is 145 feet on Jerolamon street, running through to Livingston street 310 feet; on this street the frontage is 140 feet. After taking off 40 feet on each side for an open space, as the law requires, the plot left would have been very unsuitable. With high walls on either side at a distance of only 40 feet, the light would have been

shut out from the lower story; it would have afforded insufficient accommodation, particularly for the United States courts and attendant offices. The business is so large that two court-rooms, two jury-rooms, and other extra rooms are required; besides, the architect would have no opportunity for architectural display in planning the edifice. The city of Brooklyn is growing with astonishing rapidity; its population is 700,000, and in a very few years, at its present rate of increase it will reach 1,000,000 inhabitants. Probably no other city in the United States is making more rapid progress. It should have a public building commensurate with its importance. If any mistake has been made, it is perhaps that a much larger sum was not available under the law for the site, so that the Secretary could have selected such a one as would have entirely satisfied himself, and in so doing he would beyond doubt have satisfied the larger part of the citizens.

The Johnson street site is the best attainable with the means at his disposal, and is desirable because of its proximity to the City Hall and other city and county offices, its accessibility to New York by way of the bridge and Fulton ferry, its close proximity to Wall street ferry, across which and the bridge the attorneys from New York pass in going to and from New York to practice in the United States courts, and finally its accessibility to the multitude who have business at the office of the collector of internal revenue. It is within one block of the business center, upon a street which must in the nature of things become the great avenue from Brooklyn to New York. The business at the post-office is undoubtedly the most important to the general public, although under the existing system of collecting and delivering of letters by carriers it is not visited so much as it otherwise would be except for purchase of stamps, money-orders, &c. I append a report of the postmaster for the year 1883.

The business at the United States courts is very large in some branches of law, notably admiralty suits, one-fifth of all that are brought to court in the United States being tried in Brooklyn. I append statistics from the annual reports of the Attorney-General. The internal-revenue office located here is one of the largest and best managed districts in the country, and was visited in the month of May by 11,000 people for the transaction of business; its receipts aggregate three millions per annum.

It may not be improper for me to state that I have had no personal interest in the selection of any particular site. My action has been guided by reasons which seemed to me wise at the time. The honorable Secretary himself drew my attention to the Johnson-street site. I objected to considering it, and advised the selection of the property at corner of Adams, Willoughby, and Pearl streets. He then requested me to ascertain its cost. This I did, and it was found to be about $650,000. It was then, after having exhausted every desirable site near the City Hall, and when the Secretary had decided to take the Dutch church property alone, without the Court-street front, that I held it to be far preferable to buy the Johnson-street property and advocated its purchase.

The post-office—Annual report of Postmaster McLeer for 1883—Larger cash receipts than in 1882—Increase in money-order transactions also.

The following report of the Brooklyn post-office for the year 1883 has just been completed:

AMOUNT OF JUDGMENTS IN ADMIRALTY CASES.

For the year ending June 30, 1883:	
New York city	$11,975 86
Brooklyn	30,960 78
For the year ending June 30, 1882:	
New York city	36,165 87
Brooklyn	36,821 75
For the year ending June 30, 1881:	
New York city	58,327 42
Brooklyn	39,789 33
For the year ending June 30, 1880:	
New York city	$21,906 05
Brooklyn	55,142 84

The total number of admiralty suits commenced for the four years, 1880, '81, '82, '83, in the cities of Boston, Philadelphia, Baltimore, New York city, and Brooklyn, was 4,256.

Of these more than one-third (1,454) were in the United States court at Brooklyn; and one-fifth of all the admiralty business in the United States is done in Brooklyn.

The following is the resolution as adopted June 5, and the report of the second subcommittee of investigation, with the resolutions adopted June 19, 1884:

Resolved, That the report of the Committee on Public Buildings and Grounds on the Brooklyn post-office site be recommitted, and that said committee be instructed to reopen the investigation with open doors, and inquire into the value of the site proposed to be purchased by the Secretary of the Treasury as to its actual market value on the 16th day of February, 1884, and whether the improvements on said site were included in the proposed purchase or were to be removed by the parties making the sale to the Government; also to inquire whether the site selected is a suitable one and the sum proposed to be paid therefor reasonable, and, if not, what site would be more suitable and the cost thereof, and whether the citizens of Brooklyn, N. Y., had any voice in the selection of the proposed site; also to particularly inquire regarding the value of the property owned by one William A. Husted, which is a part of this proposed site, which property is assessed on the map of the assessor's office of the city of Brooklyn, N. Y., at $29,900, for which the Secretary of the Treasury, it is alleged, proposes to pay $185,500; and that said committee be further instructed to send a subcommittee of three of its members to Brooklyn, N. Y., to inquire into all the facts, and be empowered to summon witnesses to testify as to matters herein stated, and to send for persons and papers, and to conduct such examination with open doors, and in such way as in their opinion will secure a fair and impartial inquiry, and to make their report within ten days for consideration; and that the expenses of such investigation, not to exceed the sum of $300, shall be paid out of the contingent fund of the House and be immediately available; and the Secretary of the Treasury is hereby requested to suspend further negotiation for the purchase of the proposed site pending the investigation and until the action of the House upon the report of the committee.

"The resolution adopted by the House on yesterday touching said subject is hereby rescinded."

In pursuance of the authority and in compliance with the instructions thus given, a subcommittee repaired to the city of Brooklyn, where they held open sessions in the presence of a number of citizens, besides counsel for those in favor of as well as for those opposed to the site chosen.

We called before us all the late owners of the different parcels of ground embraced in the proposed site, including those who held leases, and all of the attorneys and agents who had any part in the various negotiations, except one of the owners in fee of one lot, who is an aged lady, Mrs. ——, residing in New Jersey, and whose attorney has died since the execution of the contract, and the owner of one leasehold, Mr. Wahl, who has gone to Europe; and we were confirmed in the statement made in our former report, that in every case the actual amount was paid as stated by Messrs. Liebmann and Moody, except in the purchase of Mr. Husted's property, in which case an agreement was made that the deed of that property should be deposited in escrow, the consideration money to be paid upon the consummation of the purchase by the Government.

Although neither Mrs. —— nor her attorney was before us, we had the check for the full consideration, payable to the lady's order, by her indorsed, deposited, charged in Liebmann's bank account, and duly canceled; and we had the same evidence of payment in the case of Mr. Wahl, with the additional direct evidence of the attorney who saw the check delivered. In every instance the grantors and assignors of leases swore that there was no agreement or understanding by which the consideration was in any way to differ from that named in the written contracts. And all swore that there was no agreement or understanding by which, directly or indirectly, any one was to receive any portion of the consideration named as rebate, commission, or in any other way, except in some cases a broker's commission of 1 per cent. was to be paid.

In Husted's case there was the same emphatic testimony to refute any supposition of a secret agreement to alter or modify the written contract.

There is conclusive evidence that in two or three cases Mr. Liebmann was obliged to pay extortionate prices in order to secure the plot free from incumbrances and leaseholds. But the Government is not the victim, and is not required to pay any portion of these excessive charges. Mr. Liebmann is to convey to the Government a clear and perfect title at the price named, and he must lose the amount paid by him in excess of the limit imposed by the Secretary of the Treasury.

So that the committee reaffirm the statement contained in their former report as to the honesty and good faith of the entire transactions between the officers of the Government and those with whom they dealt.

The additional subjects which the committee were instructed to investigate are:

1. The actual market value of the site chosen on February 16, 1884.
2. Whether the improvements on the said site were included in the purchase or were to be removed by the parties making the sale.
3. Whether the site selected is a suitable one and the sum proposed to be paid therefor reasonable.
4. If the site is not suitable, and the price unreasonable, what site would be more suitable, and the cost thereof.
5. Whether the citizens of Brooklyn had any voice in the selection of the proposed site.
6. The value of the Husted property.

I.

We found it extremely difficult to ascertain the actual market value of the site chosen on February 16, A. D. 1884. One of the boundaries of the property is Washington street, which leads from the City-Hall square to the bridge connecting Brooklyn with New York. This has not hitherto been a business street, but the opening of the bridge has made it a considerable thoroughfare, and has caused the impression that this street will become a great avenue of trade and travel. It is supposed to be in a transition state. Whether because the owners were unwilling to sell or investors unwilling to buy, there had been no sales recently made which could be considered as standards of value.

The testimony upon this point varies so much as to be of but little aid in reaching a correct judgment. The estimates range from $150,000 to $450,000. The average would be about $300,000. And this, your committee think, would be a fair price under ordinary circumstances, taking each lot separately and aggregating the value of all. But in order to secure a plot of this size promptly, and prevent exorbitant demands of those who would realize their power to compel compliance or thwart the project, a liberal advance should be allowed upon estimates made without reference to the purposes and the necessities of the occasion.

While we think the price agreed upon is high, we are not prepared to say that it was exorbitant under all the attending circumstances. We do not believe the entire property could have been bought for a less sum at the time and for the purpose named. This in part answers the third subject committed to us.

II.

The improvements upon the property are covered by the sale, and will belong to the Government if the purchase is consummated. It is estimated that these structures will net the Government from $10,000 to $15,000.

III and IV.

It was agreed between those advocating and those opposing the site selected that the number of witnesses upon either side should be limited to ten. Subsequently another opponent of the chosen site appeared and was permitted to call five witnesses upon this point. Hence while but ten were heard in favor fifteen were heard in opposition to the site. Seven of the witnesses pronounced the site a good and suitable one, some of them saying it was "very suitable," "eminently suitable." One called it a "fair choice," and one had "no special objection to it," and one said it was "as good as any off the square." Nine witnesses declared the site to be unsuitable, some saying it is "very unsuitable," "very objectionable," "inconvenient and obscure." All of the adverse witnesses and some of those friendly to the site preferred other locations; but there was a wide disagreement as to which site should be chosen. Nine prefer the Dutch church property, seven the Myrtle avenue site, six the Mechanics' Bank, and four Flatbush avenue. The conflicting testimony of witnesses equally credible and equally prominent in Brooklyn renders the question very embarrassing.

The committee examined the site referred to, and concur in the belief that while the site is suitable for the purposes contemplated there are others far more suitable. But having already expressed our views upon the market value of the site, we do not know that we are called upon to report upon the alternative proposition set forth in the fourth subject of investigation. But, desirous of giving all possible information to the House upon the subject, we report that either the Dutch church property, with the Court street front, the Myrtle avenue property, or the Mechanics' Bank property would be preferable to the location chosen, namely, on Washington, Johnson, and Adams streets.

The Dutch church property alone can be bought for about $260,000. But, reserving an area of forty feet on either side, as required by law, there could be a frontage of only fifty-nine feet eight inches for the building, and this location would place the Federal building between the stately municipal building on one side and the rear of a row of business houses on the other. But the committee believe that this site would be an eligible one if the width of the lot as above stated should be considered sufficient for the erection of a building which would be adequate for the present and rapidly growing wants of Brooklyn. To purchase these business houses and add the area to the Dutch church property would make an admirable location; but the cost would exceed $500,000. Neither of the other sites designated as preferable to the one chosen (on Washington street) could be purchased for as low a price, and probably not for a sum largely in excess of $500,000.

V.

The committee in their former report stated all the information they had then obtained as to the efforts made to ascertain the wishes of the people of Brooklyn in respect to the site for their Federal building, namely, the appointment of a commission, which held public sessions, inviting offers of property and the views of the people. This occurred in the summer of 1883. Subsequent to that there does not appear to have been any special effort made to learn the wishes of the people. And as to the suitableness of the site finally chosen there is no evidence that the Secretary consulted with any citizen of Brooklyn other than one of its Representatives, Hon. D. R. JAMES.

VI.

The last point we were instructed to inquire into was the value of the Husted property. Upon this, as upon the other questions of value, there is a wide difference of opinion. The estimates range from $85,000 to $150,000. A fair average

would put this property, standing alone, at about $100,000. Inasmuch as it has a frontage on each of three streets, and was absolutely necessary for the completion of the plot, the owner was in the position to insist upon an excessive price. This property sold by itself, without reference to the acquiring of a large plot for a public use, would not have brought much more than half the price agreed to be paid for it.

Having fully reported upon the different subjects we were charged to investigate, we submit the matter to the House for such action as may be deemed proper. But we recommend the adoption of the following:

Resolved, That the charges of corrupt or collusive action on the part of the Secretary of the Treasury or of some of his subordinates in connection with the selection and purchase of a site for a Federal building in the city of Brooklyn have not been sustained.

Resolved, That the Committee on Public Buildings and Grounds be discharged from further consideration of the matters referred to them in this regard.

Rivers and Harbors.

SPEECH
OF
HON. D. H. SUMNER,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 12, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. SUMNER said:

Mr. CHAIRMAN: The measure under consideration, the river and harbor bill, always provokes a good deal of discussion in Congress before its passage, and generally a large amount of criticism by the people after its passage. A river and harbor bill is not a general appropriation bill, but is, on the other hand, a special appropriation bill. Its passage is not at all necessary in order to provide for the general and necessary expenses of the Government. Its justification always depends upon whether it is within the policy of the Government to make such internal improvements as are necessary for the maintenance of general internal and external commerce. This always has been and still is the controlling question.

Congress has the constitutional power "to regulate commerce with foreign nations and among the several States." Under the first clause of this provision of the Constitution Congress has the control of external commerce, about which there is generally very little question. Under the second clause Congress has the control of internal commerce. Perhaps the best definition of internal commerce under this provision of the Constitution is that it is interstate commerce; that is, commerce that is carried on by, between, or through two or more States. In other words, it must be of a general and not of a local character. To improve or render available for use all such natural water ways as are needed for the establishment and maintenance of such commercial facilities as will enable the whole people to engage in commerce with foreign nations and the people of each State to engage in commerce with the people of any or all of the other States is clearly within the power of Congress.

The nature of the constitutional limitations on Congress is right the reverse of those upon the States. The General Government is prohibited from taking jurisdiction of such matters as are only of a local nature, and the States are prohibited from assuming jurisdiction of such matters as are of a national character. Such is the theory of our Government. It is what has given us our dual system—the State governments for all local matters and the Federal Government for all general affairs.

From the best information I have been able to obtain, I am led to believe that about one-half of the items for which appropriations are provided in this bill are local, and not general, in their character. By this I mean that they will benefit some one town, city, or locality, and can not be used in the line of general commerce. This I hold will be taking from the general fund provided by the whole people through a system of national taxation for general purposes and applying the same for the advantage of only a few persons, comparatively speaking, located at the place for which this special legislation is asked. Such schemes generally lighten the burdens of the particular locality, and in many cases make a few men rich, without appearing to add very much to the burdens of the masses of the people, and on this account sometimes go through almost unheeded. But this is no excuse for legislation that benefits the few at the expense of the many.

Because of this and other features of the bill I feel it to be my duty to vote against it. We are not allowed the privilege of voting for each separate appropriation, although they range from tens of thousands to hundreds of thousands of dollars, making in the aggregate an expenditure of more than twelve millions of the public moneys. For one, I feel like opposing this vicious system that compels a man to vote for many things that are not approved by his judgment, and are not within the provisions of the Constitution, in order to secure just and necessary legislation.

It will be observed that the power to make internal improvements of this character extends only to improving and rendering available those natural water ways which can be advantageously used in general commerce. In violation of this principle, it is proposed by what is called the "Hennepin Canal" clause of this bill to construct an artificial water way about one hundred miles in length, at an estimated cost of about $7,000,000, but which will in all probability require at least $15,000,000 before fully completed. In opening the discussion upon this bill it was said by those friendly to this provision that we must "remember the wonderful progress of the railroad system, upon whose exactions this is intended to be a check."

This, sir, to my mind is a very strange proposition. We are treated to an eloquent denunciation of what is assumed to be a railroad monopoly of the transportation business of the country, and then told that this bill is an intended antidote for their alleged exactions. This is an assumption that railroads are the enemies of the people, that the cost of transportation is increased by them, and that Government aid must be invoked for the revival of a system of transportation that is now practically only a matter of history. The only injury ever suffered by the people of this country on account of the railroads has been through the Government aid extended to them by grants of the public lands. When that policy was adopted the same men and the same classes of men that now demand Government aid for a system of water transportation with which to fight the railroads were equally loud in demanding land grants for the railroads when that was thought to be the shortest road to speculative riches. The men and corporations most to be feared by the people on account of their monopolistic tendencies are those who seek and obtain Government aid for what are practically private enterprises, under the false and delusive plea that they will be for the benefit of the people. Every act by which Congress extends its aid, so called, to individuals, to corporations, or to localities is in violation of the principles upon which our Government was founded. Dependence upon government belongs to those countries where the sovereign power is held to exist of right in the king and not to be inherent in and derived from the people.

Those persons who believed in Government aid for private enterprises shouted themselves hoarse in favor of land grants to railroad companies. Now, the injustice of such a legislative policy is fully appreciated, and the masses of the people are imperative in their demands for the righting of this great wrong so far as there is an opportunity for doing so upon principles of justice and equity. It is estimated that a hundred millionaires were created by that land-grabbing legislation, and that a million of the working people have thereby been deprived of the opportunity of obtaining desirable homes under the pre-emption and homestead laws. While the principle of all such legislation is wrong and its effects injurious, it would be much less reprehensible if it accomplished the proposed end. But that is very seldom the case. This is clearly demonstrated by our experience with these same railroad land grants. They were given upon the express condition that the roads should be completed within a given time, which was intended to be, and generally was, at a much earlier period than they would have been had their completion been delayed until warranted by the business arising from the natural growth and development of the country.

But the conditions were not fulfilled. The roads were not built according to the terms of the grants. Not even large Government subsidies could induce business men to violate the well-established laws of business. None of these land-grant railroads were built until the companies believed they could be run and operated at a profit. Undoubtedly they would have been constructed and put into operation just as soon without Government aid. In fact, it is claimed by many, and I believe it capable of demonstration, that this legislation practically put all these lands out of the reach of actual settlers, and in that way greatly retarded the growth and development of the country. Thus the intended object of the legislation was defeated by the very means with which it was expected to be accomplished. The results of class legislation are always the same. The principle is wrong. It matters not whether it is for the building of railroads, the construction of canals, or the advancement of any other special interest, it is sure to enrich the favored few at the expense of the masses of the people.

The best and most salutary period of all governments, no matter what the form, has been that which gave to the people the maximum of liberty consistent with the rights of person and property, with the minimum of restraint consistent with the peace and good order of society. When this point is passed and the number and power of the laws are multiplied, the burdens of the people are increased and the liberty of the citizen is absorbed into the power of the Government. Then special legislation is invoked for the benefit of privileged classes, great fortunes are accumulated by reason of such legislation, aristocracy is established upon the basis of wealth, and then popular government loses all its leading features and retains only the form and name. What was once a Government of the people, by the people, and for the people becomes a strong centralized power, and the citizen becomes a mere subject. It is just such legislation as is proposed by this bill that brings

about such results. It calls for large appropriations. Heavy taxation is necessary to meet them. The earnings of the workingman are no longer under his own control. The results of labor are divided into two funds: one for the mere subsistence of the laborer, and the other for the profits of the capitalist employer.

The laborer, who is the original producer of all wealth, is held in abject poverty, while the capitalist, who is a mere middleman and never thinks of earning anything except by handling the earnings of others, lives in luxury and rules the world. Just so long as the revenues of the Government are raised by a system of tariff taxation that increases the cost of the necessaries of life from 50 to 100 per cent., just so long will the workingmen pay not only the greater part of the legitimate expenses of the Government, but also all the special appropriations, no matter what class or classes they benefit.

When we come to consider that we are burdened with a public debt of more than $1,500,000,000, upon which we pay annually more than $70,000,000 interest, and that we are called upon for an annual appropriation of more than $60,000,000 for pensions over and above the ordinary expenses of the Government, which will not be less than $130,000,000 each year, it seems to me to be not only a constitutional but a high economic duty for us to raise our voices and cast our votes for "economy in the public expenditures, that labor may be lightly burdened."

The Count of the Electoral Vote.

SPEECH

OF

HON. JAMES O. BROADHEAD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 21, 1884,

On the bill (S. 25) to fix the day for the meeting of the electors of President and Vice-President, and to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, and also the substitute bill reported by the House committee.

Mr. BROADHEAD said:

Mr. SPEAKER: There are two propositions before the House on the subject of the Presidential count—one the plan recommended and adopted by the Senate, the other the plan proposed by the committee of this House as a substitute for the Senate plan.

The first—that is the plan proposed by the Senate—provides, that upon the day fixed for making the Presidential count, the two Houses shall assemble in the Hall of the House of Representatives in presence of each other. The President of the Senate shall be the presiding officer; he shall open the certificates; two tellers shall be appointed by each House, who shall read the certificates and make a list of the votes. Upon the reading of the certificates, he shall call for objections. If objections are made, the Senate shall withdraw, and the objections are submitted to both Houses separately; and if there is but one return from the State, the votes contained in the return shall not be rejected, except by the affirmative vote of both Houses. But when more than one return shall be received from any State, then the regularity of the returns is to be decided by the concurrent votes of both Houses; and no vote shall be counted except by the concurrent vote of both Houses acting separately. The plan proposed by the House committee provides for the appointment of two tellers by each House, who, upon the opening of the certificates by the President of the Senate, shall read the certificates and make a list of the votes. If objection be made, whether to a single return or when there are double returns or more returns than one, the objection is to be decided by the vote of both Houses acting together as one body, and the majority shall govern. But all objections must be made before the call of a State.

There are only three provisions of the Constitution relating to the subject of electors for President and Vice-President.

Article 2 provides:

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.

The next clause is as follows:

The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

The next is contained in the twelfth amendment. This article of the Constitution, after providing for the meeting of the electors and their manner of voting, their making a list of the votes cast, and the certificate of the electors to the list of votes, and transmitting them to the seat of Government sealed, and directed to the President of the Senate, declares as follows:

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted.

This is all there is directly upon the subject.

It is very clear that the persons to be present and authorized to act in this final count, and the only persons, are the two Houses of Congress and their presiding officers. In what capacity and how are they authorized to act?

The President of the Senate is to open the certificates—this much is settled and beyond controversy—"and the votes shall then be counted." By whom? If it had been intended that the President of the Senate should count the votes it would have been very natural and very easy to say, "The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and count the votes." But I will not discuss this question, inasmuch as both the plans under consideration ignore the proposition and in effect declare that the President of the Senate has no such authority. It is left then to the Senate and House of Representatives. The certificates are to be opened before them; they are assembled together in presence of each other; they constitute the returning board; the votes are laid before them; they are to do the counting contemplated by the Constitution; and up to this point the advocates of both propositions are agreed. But are they to count as one conglomerate body or as separate and independent bodies? Here is the point of difference.

They are spoken of in the Constitution as the Senate and House of Representatives. It is in the presence of the Senate and House of Representatives that the certificates are to be opened. The Senate can only be the Senate as an organized body recognized by the Constitution as consisting of two Senators from each State. The House of Representatives is an organized body consisting of Representatives from each State. The Senators represent the State organism, the several political bodies organized with power to pass laws, levy and collect taxes, and establish police regulations for the government of the society embraced within the limits of the territory which constitutes the State; the House of Representatives represents the people of the States directly. The Senate is federal in its character; it represents the States without reference to population. The House is national in its character, the ratio for a Representative being ascertained by dividing the population of the whole Union or of all the States by the number of Representatives composing that body. The framers of the Constitution designed that these two bodies should be separate and distinct and independent of each other. Powers belonging to one branch of the legislative department of the Government are not possessed by the other. The Senate unites with the President in the making of treaties with foreign powers and in the appointment of officers. The House of Representatives has the sole power of impeachment, and all bills for raising revenue shall originate in the House of Representatives. "Each House shall be the judge of the elections, returns, and qualifications of its own members."

All these provisions show that they are to be treated and considered as separate and distinct bodies, and that in the discharge of their duties and powers under the Constitution they must act separately. If there is an exception to this rule it must be shown affirmatively; and in the absence of any such affirmative declaration, when they are required to act as a Senate and House of Representatives, they must act separately. The Constitution makes no such affirmative declaration in this case; it speaks of them as the Senate and House of Representatives. It is true they are in the presence of each other, but the organization of each remains as it was before they came in each other's presence; besides, the very same article of the Constitution treats them as separate bodies, for if it appear upon the count that no person has received a majority of the electoral votes, the House of Representatives shall choose immediately by ballot the President, and in the same way the Senate is required to choose a Vice-President. It is clear then, to my mind, that the two bodies in making this count must act separately, as there is no warrant in the Constitution for acting otherwise; there is no intimation that it should be otherwise. If it had been intended that they should act as one body, instead of speaking of the Senate and House of Representatives it would have said the members of the Senate and House of Representatives, or have used some words to indicate such intention, but the language is exactly to the contrary.

The objection to the bill offered as a substitute to the bill which passed the Senate is in the proposal to ignore the existence of the Senate and the House of Reprensentatives as separate and distinct bodies, and to constitute a tribunal called a *joint convention*, composed of members of the Senate and the House of Representatives. There is no precedent for any such action, nor do I believe there is any warrant in the Constitution that authorizes it. But the gentlemen on the other side say that if there is no precedent let us make a precedent.

But we can not make a precedent in conflict with the letter and spirit of the Constitution. When I say that there is no precedent for any such occurrence I mean that in every instance in which there has been an electoral count from the foundation of the Government down to the present time no such plan has ever been adopted, and while it will not do to say that there is a settled precedent to the contrary, the fact is that the electoral count was determined either by the President of the Senate or by the vote of the two Houses acting separately and independent of each other, just as they would do in the case of the passage of a law. It requires the separate action of each body to pass a law,

and so it requires the separate action of each body to determine an electoral count.

There are precedents in the history of this country to the effect that wherever a controversy occurred in regard to the counting of the electoral votes the action in regard to that controversy was taken separately by each House. Such was the case in 1817, when the votes of the three electors from the State of Indiana were objected to. The Senate retired from the presence of the House in that case, discussed the question separately, and acted separately, and so it was in all other instances where there was any occasion for action.

The first electoral count in 1789 was made by the President of the Senate. In this case there was no controversy in regard to the votes of the electors from any State; so that while you have precedents that these two bodies acted separately and independently of each other there is no precedent for the plan proposed by the committee. We can make no precedent in regard to so important a matter as this which is not warranted by the provisions of the Constitution. The gentleman will find no clause in the Constitution which authorizes any such proceedings.

When the Constitution declares "that the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted" we all admit that this count shall be made by the Senate and House of Representatives in some way. The power of the President of the Senate to count is, for the purposes of the question now before the House, not to be considered.

The Constitution then in effect declares that the vote shall be counted by the Senate and House of Representatives just as laws shall be passed by the Senate and House of Representatives, it requiring the concurrence of both bodies in either case. How can it be claimed by any just or fair inference from the language of the Constitution that the Senate shall lose its character as a Senate and the House of Representatives its character as a body recognized by the Constitution, and that they should for that purpose alone and on that occasion alone be merged into one body, with authority to form a new organization, elect new officers, and transact business in that capacity?

The Constitution does not even say that they should be in joint session, but only that the certificates should be opened in the presence of the two Houses and the votes counted. And then, if there is a failure to elect a President, the Constitution further declares that the House of Representatives shall choose immediately by ballot a President. And in case there is no choice for Vice-President, the Senate shall choose a Vice-President.

All of these provisions are contained in the same article of the Constitution. Looking to the fact merely of the two bodies being in the presence of each other when the certificates are opened, it would be a plain interpolation upon the provisions of the Constitution to say that, when these two bodies met in the presence of each other for the purpose of seeing the certificates opened and making a count of the votes, they should be resolved into a mass-meeting, and as such determine by a simple majority vote all questions that arose in regard to the electoral count.

By such a proceeding the power of the Senate as such would be destroyed. The authority invested in the Senators as representatives of the States would be annulled, and each Senator would have the same and no more power than each Representative. A Senator in all other cases and under all other circumstances speaks and acts for his State without regard to its population, be it great or small. But under this plan he exercises only the same power that is given to any one Representative in the popular branch of the national Legislature.

The whole theory of our National Government is that it is a government of a mixed character, partly national and partly federative in its features, and this idea is carried out in all the provisions of the Constitution. It is not a government of mere majorities, and this is shown by the fact that it often happens that a President of the United States is legally elected by less than a majority of the popular vote. This feature is necessary to give independence to the different States which compose our Federal Union and stability to the Government itself.

The fifth article of the Constitution declares that "no State shall without its consent be deprived of its equal suffrage in the Senate." This principle is announced and carried out in the various provisions of the Federal Constitution, and in none of these, as it seems to me, is it more distinctly indicated than it is in this clause of the Constitution, which provides for the selection of the Chief Executive of the nation, where it makes the Senate, as such, one of the bodies authorized to make the electoral count. It is very clear to me that in regard to the passage of laws, so, in the determination of the electoral count, it requires the concurrence of action of both of these independent bodies created by the Constitution—one representing the States in their independent character as organized political communities, and the other representing the people of the United States, and that these two bodies are units—acting as two persons—just as two or more officers acting as a returning board—each acts and votes separately, and in this case, there being but two authorized to act, it requires the concurrence of both to produce a result.

And now as to the mode of action in case of objection to the returns. The electors are appointed in such manner as the Legislature of each State may direct; and the only limitation upon this power is that Congress may determine the time to choose electors and the day on which they shall give their votes; all else is to be left to the States; and in this regard the laws of the respective States are to govern. Whatever direction may be made by the laws of each State as to the manner of choosing electors is to govern and control the Senate and the House of Representatives in determining any question that may arise as to the votes from any such State, for the reason that the Constitution gives to each State the same power of providing for the manner of choosing electors. Whatever, therefore, is done by the State officers in pursuance of the State laws passed for such purposes is binding and conclusive upon both Houses of Congress in determining the electoral count.

But in case it is claimed that the law has been violated in choosing electors or where there is a controverted question presenting itself when the certificates are opened as to who has been chosen to the office of elector, the tribunal of ultimate resort, the Senate and House of Representatives of the United States, must determine. How far this tribunal may go behind the return of the State officers it is unnecessary to inquire at this time, but certainly where an objection is made to counting a particular vote or where there are two sets of electors presenting certificates of votes cast, each claiming to have been elected in pursuance of the laws of the State from which they come, or where there is a double return made from the same college of electors, this tribunal may determine and must determine what votes are entitled to be counted, and having the right to determine this question, they must be governed by such evidence as is sufficient in their opinion to enable them to determine it.

It is claimed that the second section of the act passed by the Senate is unconstitutional. That section reads as follows:

SEC. 2. That each State may, pursuant to its laws existing on the day fixed for the appointment of the electors, try and determine at least six days before the time fixed for the meeting of the electors any controversy concerning their appointment or the appointment of any of them. Every such determination made pursuant to such law so existing on said day, and made at least six days prior to the said time of meeting of the electors, shall be conclusive evidence of the lawful title to office of the electors who shall have been so determined to have been appointed, and shall govern in the counting of the electoral votes as provided in the Constitution and as hereinafter regulated.

Now, while I do not say that I approve of all the provisions of this section, it seems to me that it is clearly constitutional. It means this and this only: that whenever a State shall make provision by law for determining any controversy in regard to the appointment of electors from such State, and there shall be a determination of such controversy by the State authorities, made six days before the time of the meeting of the electors, such determination on the part of the said authorities shall be conclusive evidence that said electors have been appointed, and shall govern the House of Representatives and the Senate in counting the electoral votes. It merely fixes the rule of evidence, which shall be conclusive in the determination of the electoral count. If the State fails either to pass any such law, or if there is no determination by the State authorities in regard to such controversy, it leaves the matter to be determined by the best evidence which may be brought before the tribunal making the count of the electoral vote. The State is not bound to pass any such law or to determine any such controversy, nor can the Congress of the United States compel the State so to act.

I am not sure but that it would be better to leave the whole question to be determined by the Senate and House of Representatives when they come to make the final count. It would be perhaps wiser that all such questions should be determined by this tribunal, in the face of the whole nation and under the responsibilities which rests upon it at so important a crisis, than to leave it to be determined by separate State action which shall be binding upon them. But however this may be, there is nothing in the section in violation of the Constitution. It is simply a provision for adopting a mode by which questions of dispute in regard to the appointment of electors may be determined by the State tribunals.

The Senate and House of Representatives being organized to count the votes, it follows that they must determine what votes are to be counted and all controversies in regard to such votes. And that in making this count they must be governed by the State laws in force at the time of the appointment of electors, because the Constitution gives to the States the right to direct the manner in which these electors shall be appointed: but of course the Senate and House of Representatives must judge as to whether the State laws have been complied with in each particular case, and how far they have been complied with by the ordinary rules of evidence that prevail in such cases.

According to the well-settled principles of law, international and municipal, in every civilized community, the acts of public officers are presumed to be valid; and whatever papers come before them in the form of certificates purporting to be the acts of public officers of a State under its laws must be presumed to be correct. The power is given to count the votes, and under that clause of the Constitution which gives to Congress the power to make all laws "which shall be necessary and proper to carry into execution all powers vested by the Constitution in the Government of the United States, or in any department or office thereof," Congress has the right to pass a law to determine the manner

of making this count of votes. It has the power to say by law how these two bodies when they meet in the presence of each other shall be organized; how they shall act; how their votes shall be taken upon any given proposition; and also by what rules of evidence they shall be guided in coming to a determination upon any controverted point.

This the bill, the Senate bill and the House bill, have undertaken to do, and there is no material difference in the provisions of the different acts in that respect, except that the Senate bill does in the second section provide for a character of evidence which shall be conclusive on both bodies in making their count. There is this difference, however, in the modes of action under the two plans:

According to the plan proposed by the House committee, whenever an objection is made to a return, or whenever more than one return or paper purporting to be a return from a State shall have been received by the President of the Senate, the presiding officer of the joint convention shall submit to the members thereof the determination of the questions involved, which shall be decided by a majority of the votes of the joint convention.

According to the plan proposed by the Senate, upon the reading of each certificate the President of the Senate shall call for objections, if any; and when all the objections shall have been made to any vote or paper the Senate shall withdraw and consider the objections, and the Speaker of the House of Representatives shall in like manner submit the objections for the consideration of that body. But no electoral vote or votes from any State from which but one return shall be made shall be rejected except by the affirmative vote of both Houses. But if more than one return from a State shall have been received, then those votes only shall be counted which the two Houses, acting separately, shall concurrently decide to be the lawful votes of the legally-appointed electors of such State.

These provisions proceed upon the constitutional idea that the concurrent action of both bodies is required. When there is but one return, it being the act of a public officer, it is *prima facie* correct, and requires, therefore, the concurrent action of both bodies to overturn it. When there are two returns, the two *prima facie* cases offset and destroy each other, and it requires the affirmative action of both bodies to determine which is the true return.

In this discussion it has been claimed that the House of Representatives is really the body alone authorized to make the electoral count, and upon this ground that:

"Being charged with the duty of electing a President in a defined contingency, of course the House of Representatives alone can judge when that contingency shall arise. To this end it must of necessity examine and count the electoral vote; it must count to ascertain its total number, that it may learn what a majority of that number is."

The answer to this is that the House does count under any theory, but the idea seems to be that if the Senate counts at the same time, the count made by the House amounts to nothing; in other words, the House of Representatives gets no information, can not learn what a majority is, or whether there is a majority by making a count of the votes, if some other body or some other person makes a count at the same time this is simply absurd.

The House of Representatives is an independent body. It must determine for itself when the contingency arises which authorizes it to elect the President from those, not exceeding three, who have received the highest number of votes; and as all the certificates are to be opened in the presence of the House as well as the Senate, I see no difficulty in enabling them to obtain all the information necessary to determine this question. Besides, as has been well argued by the gentleman from Alabama [Mr. HERBERT], the same argument would apply to the Senate, which, in a contingency provided for in the same article, has authority to choose the Vice-President. With all due respect to my friend from Connecticut [Mr. EATON], whose opinion upon these questions I value most highly, I cannot see the force of this argument.

And now, Mr. Speaker, permit me to say that it is all-important that we should at this session adopt some rule by which the electoral votes are to be counted, and we can not expect that the Senate will ever consent to a rule which for the time being puts that body out of existence; which gives to each Senator a voice no more potential than that of a member of this House in determining matters of such vital importance to the people of this country. This is not a party question, and no considerations of party fealty or party supremacy ought to enter into its consideration. The interest of all parties, the peace and welfare of our common country, may be dependent upon the speedy settlement of this question. We have before us a Presidential contest. The forces are already being marshaled for the conflict. That this contest will be fierce, bitter, uncompromising, we have every reason to believe. It may be close; I trust not; but the electoral vote of one State, or one electoral vote, may determine the result.

How important, then, is it that we should determine by law plain and unmistakable how this matter is to be decided. The people will submit to law and to a lawful settlement of almost any controversy when the law is made plain to them—for they know that without law there is no liberty, no security; but be assured that they will not again submit to any questionable device by which the election of President may be determined. Many of us believe that there are more important issues involved in this contest than the mere question as to whether this man or that man should occupy the Presidential chair for the next four years. Behind this and above it, rising far superior to the personal ambition of one man or of one party, are questions that may determine for weal or for woe the destinies of this people for unnumbered generations to come. I hope therefore that we may lay aside all considerations other than those which look to the determination at this time and during this session of some plan which will leave no doubt as to how and by what tribunal the Presidential count is to be made.

Contract Labor.

Service shall with steeled sinews toil,
And labor shall refresh itself with hope.
—*Shakespeare.*

SPEECH

OF

HON. JAMES H. HOPKINS,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1884.

On the bill (H. R. 2550) to prohibit the importation and immigration of foreigners under contract to perform labor in the United States, its Territories, and the District of Columbia—

Mr. HOPKINS said:

Mr. SPEAKER: The power to prohibit the introduction into this country of an undesirable element of population is simply the natural right of self-defense. The fathers of the Republic declared one great purpose of the formation of the Government "to be to secure the blessings of liberty to ourselves and our posterity." This was not intended to restrict the enjoyment of these blessings to the framers of the Constitution and their direct descendants, as is evident from the fact that provision is made in that instrument itself for the naturalization of foreigners. But it is also evident that fears were entertained that too many involuntary immigrants might be brought here. And hence the power was given to Congress to impose a heavy tax upon such imported persons, and to entirely prohibit their admission to the country after the year 1808. Undoubtedly the steady importation of slave labor was the special evil to be guarded against. And the petitioners for the pending bill allege that a system of servile labor is now being introduced into this country in violation of the spirit, if not of the letter, of the prohibition. And the evidence taken before the Committee on Labor, to some extent, sustains this allegation.

But if this were not so, it is not only the right but the duty of Congress to interpose its power to prevent the introduction of persons whose presence would prove injurious to the "general welfare." It is our first duty to protect our own citizens against the pauperism, disease, and immorality of aliens. An examination of the testimony clearly shows that there are just grounds of complaint against certain classes which have within the past few years been brought into our midst.

It must be remembered that these objectionable people are not voluntary immigrants. They have not sought homes here because of attachment to our free institutions. They indicate no intention of becoming citizens; they manifest no respect for our Government; they do not assimilate with our people; they do not endeavor to conform to our customs; they do not strive to rise from the degraded condition in which they were found in their native country; they show no appreciation of freedom or the advantages and opportunities it offers to manly endeavor; they pay no taxes; are not subject to military service; in short, they bear no portion of the burdens of the Government, and are, therefore, entitled to no share of its benefits.

We have justly boasted that this country is an asylum for the oppressed of all lands. Our doors have always been open and a cordial welcome has ever been and ever will be extended to all who flee hither to escape oppression and enjoy constitutional liberty. The very act of making this their home by voluntary adoption shows a knowledge of our institutions which caused the exercise of volition. Such immigrants promptly take the necessary steps to secure the rights and assume the duties of citizenship. So far as I have heard in the investigation of this matter there is no one anywhere disposed to interfere with, or in the slightest degree obstruct, this class of incomers. But there are others actuated by no such motive, having no such purpose, who are influenced solely by a mercenary consideration to come here temporarily, gather what they can, and return to their homes. Such people have no claim upon our consideration. While this country is an asylum for all, it is not a field for all to raid over and ravage and then abandon, bearing away their spoils.

Almost every argument which has been used, and used effectually,

against the admission of the Chinese will apply with equal force against those from whom this bill is particularly designed to protect us. It has been proved that the Sclavonians and debased Italians who are brought here under contract have no family ties; they have no sacred shrine called home; they have no religious emotions or impulses; they kennel together like brutes, are disgustingly filthy in their habits and bestial in their appetites; they treat women with the utmost cruelty, and that is an unmistakable evidence of barbarism.

Mr. Speaker, no one can read the testimony taken by the Committee on Labor without a sigh for humanity and a shudder for those of our citizens who may be brought in contact with such revolting objects. Such an element is as dangerous as dynamite, as loathsome as leprosy. While philanthropy would prompt us to minister to these creatures, patriotism impels us to protect our own people from their demoralizing presence.

It is true, Mr. Speaker, that this Republic has grown in strength and wealth and glory by the commingling of different types of civilization; but all of these had elements of assimilation and readily blended together in a homogeneous whole. Each contributed something to the common stock of physical power and mental vigor; and in a generation or two all traces of the diversified origin disappear, and all are distinctly recognized as one great family, knowing but one nationality, and connected together by a common interest and a common hope. And in order to perpetuate the Republic and secure its prosperity we must see to it that we have a congenial and homogeneous people. It is our duty as legislators to exclude from our midst all who give no promise of patriotic fellowship.

Ireland, Germany, France, Sweden, Switzerland, England, Scotland, and Wales have sent of their best blood to mingle and grow richer here. Our priceless mines, our boundless acres, our wealth of forests, our varied industries, our liberal Government extend an open and cordial invitation to all of these and other countries who come to live with us and become part of us. This bill stands in the way of none such. But it says to those who may be lured by hire alone, there is no room here for aliens seeking to snatch the bread from our hungry citizens and recross the ocean to eat it in their native hovels. To permit this would be unjust to our own people who help to support the Government. And besides its injustice I have showed its demoralization in so far as those are concerned whose character, habits, and manner of coming have aroused the fears and prompted the present agitation of this subject.

I have already said that the class of immigrants referred to is dangerous to our institutions. They are so debased and ignorant as to be on the border line of barbarism. The only idea they have of government is that force is the dominating power. They have no conception of free self-government by a people, and hence we find they mistake liberty for license and abuse the privileges of domicile. I speak from the facts disclosed by the testimony, and of course speak only of the classes described. Doubtless there are in these classes individuals of character and energy and ability, who have come and would still come here under contract without intending to become naturalized; but we can only legislate for classes, not for individual exceptions.

It is also true that there have been classes of workmen far above the Sclavs and Italians alluded to who have been brought to this country under contracts made abroad. The objections to the presence of the brutalized and degraded do not apply to those now referred to. But even as to them this bill will prove a benefit. Mr. Martin, Mr. Morgan, and Mr. Leach, intelligent officers of the Amalgamated Association of Iron and Steel Workers, gave to the Committee on Labor detailed statements of the importation under contract of large bodies of foreign workmen induced to come by delusive stories and false representations, the real purpose of their employers being to supplant their former employés or coerce them into acceptance of lower and unremunerative wages. The American laborers need the protection of this bill against such unfair competition; and foreign workmen need this protection against the imposition which may be practiced upon them by those whose avarice might prompt their importation, but whose heartlessness would turn them out friendless and homeless in a strange land when they had served the purpose of their coming.

It seems to me, Mr. Speaker, that all classes of political economists can support this bill. The protectionists can not oppose it without avowing that their professions have been hypocritical. To exclude the products of pauper labor and admit the pauper labor itself is inconsistent and illogical. And the revenue reformers can support this measure, because it is intended to protect our own citizens against the capitalist as well as the foreign pauper; and in doing so it levies no tax upon our own people.

Mr. Speaker, I venture the assertion that in the whole course of our legislative history there never has been received such a mass of petitions in favor of any measure as has come up from all corners of the country demanding the passage of this bill. The signatures can be counted by the tens of thousands and the petitions can be measured by the mile. The various labor organizations have spoken in no uncertain voice in demanding the passage of this bill; and these organizations will command that respectful attention which their numbers, intelligence, and character deserve.

Mr. Speaker, I have discussed this question without indulging in any demagogy and without any attempt to make political capital. In that spirit I think all economic, humane, and patriotic questions should be considered in this legislative body. We may well question the sincerity of those who, professing to support this just measure, pervert the discussion into partisan harangue, and display a greater anxiety to secure political success than to promote the interests of our working people.

I have been amazed at the remarks of the gentleman from Michigan [Mr. CUTCHEON] in pretended advocacy of this bill, but full of adverse criticism and unwarranted comments. That gentleman's eulogy of the Republican party in connection with labor legislation is ill-timed and unwise, because it is not based upon historic truth. In the boastful assumption of credit to the Republican party for the passage of the homestead law, the gentleman must have forgotten that the first homestead bill was introduced into the House of Representatives by Stephen A. Douglas in 1849, and in the Senate two weeks later by Andrew Johnson, both honored members of the Democratic party. The agitation of this great question was begun by these great Democratic leaders long before the Republican party was born.

And the gentleman was no more fortunate in his allusion to Chinese immigration. It was his own party which opened the doors, invited and encouraged these people to come, and when they became a nuisance and a danger to our civilization, and their exclusion was imperatively demanded, a Republican President vetoed the first bill that was passed; and of the votes cast against the bill which became a law a majority of them were by Republicans. And during the present session of Congress, upon the bill to perfect the former law, every one of the opposition votes came from Republican Representatives.

The gentleman from Michigan [Mr. CUTCHEON] supplements his own groundless boast by copious extracts from the recently adopted platform of his party. But that is a bold and bald assumption of virtues which the party does not possess. For more than twenty years that party held undisputed power to pass any measure which they desired. Year after year the laboring people of the country cried out for some recognition, for the enactment of some laws in their interest; but their demand was unheeded, and now when a Democratic committee has reported and a Democratic House has passed a bill to establish a bureau of labor statistics this Republican party, which persistently refused to pass it, seeks to steal from the Democracy the credit of that measure. And the same is true of the pending bill. The evils to be guarded against have existed for years. The Republicans when they had the power to give relief refused to exercise it. Now that the Democracy have interposed and are about to enact the needed law, the attempt is again made to snatch from them the honor.

Further than this, in his imprudent zeal in behalf of his party the gentleman from Michigan suppresses the fact, of which he certainly is aware, that his party in 1864 passed an act to encourage the importation of labor under contract, and provided for the mortgaging of the laborers' wages for twelve months.

The reckless disregard for consistency and for the truth of history of the Republican party is further shown by its declaration in regard to the public domain. After ruthlessly despoiling the nation's patrimony to enrich gigantic corporations, after giving away about 200,000,000 acres, they have the unblushing effrontery to proclaim that they are in favor of preserving the public domain for actual settlers.

While the Democracy are laboring to wrest from the corporations unduly favored by the Republicans the vast areas of lands illegally held, because unearned, distinguished Republicans have stood in the breach opposing the effort. And yet the national convention of that party hypocritically declares in favor of the forfeiture of the very grants which in their profligacy they made.

I regret, Mr. Speaker, the attempt of the gentleman from Michigan [Mr. CUTCHEON] to divert the discussion of the pending bill from its legitimate course into a partisan channel. It seems to me it would have been in better taste, if the gentleman really favors the bill, to criticise it frankly and fairly rather than to sneer at its author and misrepresent and abuse his party. I have no doubt the author of the bill [Mr. FORAN] and the Committee on Labor would have been glad to receive any suggestions from the gentleman which would tend to perfect the bill. But his main purpose seems to have been to bring discredit upon the bill and glorify his party at the expense of the measure he pretends to favor.

The gentleman from Ohio [Mr. FORAN] has labored long, conscientiously, and intelligently in behalf of the working classes; and the slur sought to be put upon him is unprovoked and unmerited. The assailed will suffer less than the assailant, and I may further remark to the discomfiture of the gentleman from Michigan that this identical bill has received the approval of the labor organizations.

Nor will the Democratic party suffer from the groundless abuse heaped upon it. No one of intelligence can be deceived upon these questions. The Democratic party has ever been the natural and consistent friend of the poor man. It has watched his interests with jealous care; it has always stood between him and the arrogance of capital and the heartlessness of corporations; it has encouraged and promoted his prosperity, and strengthened his arms and cheered his heart in the hard battle of life. The Democratic party's devotion to the interests of labor does not ex-

haust itself in shallow resolutions and empty declarations, which are but delusive words; but it verifies its sincerity by acts. It distinguishes its accession to power in this House by the passage of practical measures of recognition and relief of the working classes; and it will move straight on in this path of pleasant duty despite the snares and obstructions of its opponents. And its reward will be not only the grateful appreciation of "the sons of toil," but the consciousness that it is elevating manhood and is thus strengthening and adorning the temple of liberty.

Rivers and Harbors.

SPEECH

OF

HON. THOMAS J. HENDERSON,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. HENDERSON, of Illinois, said:

Mr. CHAIRMAN: I did not expect to address the committee at this time, and would not have done so but for the remarks of the gentleman from Wisconsin [Mr. JONES], which perhaps demand some reply from the friends of the so-called Hennepin Canal.

The gentleman from Wisconsin says that if this canal is of interest to any portion of the country it is to the people of the Northwest. I say that it is as much to the interest of the people of the Eastern and of the Middle States to build this canal as it is to the people of the Northwest. If it is of interest to any portion of the country to construct this canal it is for the reason that it will secure cheaper transportation to the people in connecting the lake system of navigation with the upper Mississippi River. This canal will give a continuous line of water transportation from Quincy and Saint Paul to the city of New York. And I say to the gentleman from Wisconsin and to the gentlemen from New England and New York that in my judgment this canal is a national work, and will benefit the East as well as the West in maintaining our commercial relations and promoting our commercial interests.

It has been frequently stated here and urged against the building of this canal by the United States that the Erie Canal was built by the State of New York. But while it is true the Erie Canal was built by the State of New York, it is also true that it has been paid for by the people of the East and the people of the West, who have shipped their commerce over it, and who have not only reimbursed the State of New York for every dollar expended in the construction of the canal, but have paid into the treasury of the State of New York, over and above the cost of construction, maintenance, and repairs, according to the official reports, more than $41,000,000. Mr. Chairman, no one who has not investigated the subject knows or can have any idea of the great benefit which the Erie Canal has been to the commerce of the country. I say without hesitation that in my opinion the State of Illinois alone could afford to maintain the Erie Canal for the benefit it is to that State, saying nothing about other States of the Northwest, in cheapening transportation upon her products and her commerce.

Mr. POTTER. Then let Illinois build this canal.

Mr. HENDERSON, of Illinois. The gentleman from New York says, "Let Illinois build this canal." That would be very well, Mr. Chairman, if Illinois alone were interested in the building of this canal. But the truth is that Iowa and other States are really more interested in its construction than is the State of Illinois. Any member who will take the pains to look at the map of the United States will see that this proposed canal is in the northwestern portion of Illinois, and that the people of the State living east and south of the Illinois River are not so much interested in the Hennepin Canal as are the people of Iowa and the Northwest. But, Mr. Chairman, I put this question upon broader grounds. It is a national work and of national importance. It will benefit many States and many sections of the country; and therefore it should be constructed by the United States and in the interest of all the people, East as well as West and North as well as South, for whatever benefits a part of the States of this great country must add to the glory and prosperity of the whole. The gentleman from Wisconsin has said that there was not much consideration given to this question in the committee. I do not know how he obtained his information. But the truth is Congress has had its attention directed to this measure for many years. This canal was projected fifty years ago. John C. Calhoun, when Secretary of War in 1819, I think, made a report in favor of the construction of a canal to connect Lake Michigan with the Mississippi River, urging it at that time, among other reasons, because a national armory and arsenal would probably be located at its termination, which will be the fact if this extension is made from the Illinois River to the city of Rock Island.

It is true that since that time the conditions of the country have changed. We have railroads to-day and had none at that time. But if you are going to give the benefits of cheaper transportation to one portion of our country by constructing locks and dams to improve rivers otherwise wholly useless for navigation, do not deny improvements like this, which will be a hundred times more beneficial to the commerce of the country. Do not improve rivers in other parts of the country, when in so many cases but few people and but little commerce are benefited, and then say to the millions of people interested in this improvement, "You must construct this canal yourselves, or the State of Illinois must construct it for you."

If money is to be expended out of the national Treasury for internal improvements to give the people greater facilities and cheaper transportation in shipping their commerce, I am sure there is no work in this bill now under consideration that will benefit so many people and so much commerce, in cheapening transportation, as this proposed canal; and certainly there is none more worthy of such expenditure.

The gentleman from Wisconsin has also said that this canal does not go on the most available route. Mr. Chairman, so far as I am concerned, it is known that I am not tenacious about the route of this canal. I am anxious to have the canal built somewhere, and will be satisfied with any one of the routes surveyed; but I will say to the committee that this canal is proposed by this bill to terminate at the city of Rock Island, where there are three cities with perhaps 50,000 inhabitants, where railroads converge from various portions of Iowa and Illinois. The other route mentioned by the gentleman terminates on the Mississippi River, where there is at present no town, no city, and where no railroad terminates.

Besides, sir, on Rock Island there is located the largest armory and arsenal in our country, if not in the world. This canal, if built to Rock Island, may therefore be of great interest to the Government itself. I have said that there are at that point three cities of 50,000 inhabitants—Rock Island, Davenport, and Moline.

I wish to call the attention of the committee to some of the statistics of these three cities, and perhaps no better statement can be made to show how the people of Pennsylvania, how the people of New York, and how the people of New England, as well as the people of the West and Southwest, may be interested in the construction of this canal.

I read from the report of the engineer who had charge of the survey of this canal.

A single locality may here be specifically mentioned as furnishing significant illustration of the general fact thus urged to attention. The tri-cities of Moline, Davenport, and Rock Island (to name each in order of its manufacturing importance) have had their respective business interests carefully revised, in statistical form, at the close of each year, for the columns of the Davenport Gazette. The last of these reports, that of January 1, 1883, for the year 1882, presents some noteworthy figures: A single plow manufactory establishment at Moline (Deere & Co.) consumed in 1882 1,110 tons of steel, 3,000 tons of wrought iron, 900 tons of pig iron, 300 tons of malleable iron, 2,000,000 feet of oak and ash lumber, 400 tons of grindstone—

And grindstones come from New England, I believe—

thirty tons of emery, and two hundred and fifty barrels of oil and varnish, employing weekly seven hundred men. Another establishment (the Moline Company's plow works) used only a less aggregate of similar material, the value of the product of these two establishments footing up to $2,500,000 for the year. The Moline Wagon Company manufactured goods to the value of $625,000, the Deere Planter Company to the value of $600,000, the two malleable iron companies to the value of $280,000, the machine, engine, and boiler shops to the value of $480,000, the paper mills to the value of $150,000, the pump factory to the value of $125,000, while the saw-mills and other establishments aggregated a yield of products exceeding in value a million dollars more.

That is the information relating to only one of these three little flourishing manufacturing cities (Moline), which get their supplies largely from Pennsylvania—certainly of iron, steel, and coal—and who also get their hard lumber from other parts of the country. They send their manufactures, the plows and other agricultural implements and machinery, throughout the country by water or rail.

We come now to what is said of the other two of these three cities, Davenport and Rock Island. I again read from the report of the engineer:

In Davenport the enumerated manufactures of the year—agricultural implements, lumber, flour, oatmeal, glucose, carriages, woolen goods, cigars, clothing, &c.—aggregated a value of $5,864,876, and the value by jobbing houses the sum of $8,046,730; the shipments of local freight by three railroads, 17,536 car-loads, and the receipts, 16,653 car-loads. In Rock Island the plow works manufactured goods in excess of a million dollars in value, the glass works to the value of $200,000, stove works to the value of $100,000, the saw-mills 80,031,566 feet of lumber only, and 18,328,750 shingles, 16,653,000 laths, and 198,650 pickets. If to this partial exhibit of the manufacturing interest of Rock Island city were added those of the United States arsenal on Rock Island the aggregate of railroad shipments would be 17,982 car-loads shipped, and 18,258 forwarded by four roads, including the receipts and exports of coal, largely mined from the extensive coal-fields lying within an area of fifteen miles east and northeast of Rock Island.

There we have an exhibit of the three cities of Davenport, Rock Island, and Moline, at the western terminus of the route, as provided in this bill. And it seems to present forcible reasons for the termination of the canal at Rock Island.

It must be remembered that the Mississippi River runs west and south from Rock Island, and that you are constructing this canal, if it

shall be constructed, for the benefit of those who live below as well as above its termination on the Mississippi River. But, Mr. Chairman, let this canal be built somewhere. I ask it in the name of the 2,000,000 people in Iowa, who are deeply interested, and who through their governors and Legislatures have for many years been by joint resolutions and memorials urging Congress to construct this canal. I ask it in the name of the State of Illinois with her 3,000,000 people, whose Legislatures have also repeatedly urged Congress to construct this work, not only for the benefit of the commerce and people of Illinois, but of the entire country. These two States contain more than 5,000,000 people and more than one-tenth of the population of the United States. They contribute their full share to the revenues of the General Government, now being appropriated in this bill for works of much less importance to the commerce of the country than this canal; and not only that, but they contribute their full share to all that makes this country great and prosperous.

The Calumet River and the City of Hammond.

SPEECH

OF

HON. THOMAS J. WOOD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the bill (H. R. 7012) making appropriations for the construction, repairs, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. WOOD said:

Mr. CHAIRMAN: I have an interest in this bill on account of the proposed improvement of the Calumet and Wabash Rivers in the northwestern part of the State of Indiana. My first duty is to my constituents, to whom I must account for my conduct here, and I would fail in the duty of a Representative if I neglected to support their interest or their rights upon this floor. The Calumet River has come into prominence in the last few years as a navigable stream from the splendid harbor at South Chicago on Lake Michigan, to the city of Hammond, in Lake County, Indiana. I ask in this bill an appropriation for the final survey and estimates of the cost of the improvement of this stream for a distance of about fourteen miles, and for the reason that heavy business enterprises are begun and projecting all along its banks that promise a magnitude not known at any other point in the West.

Hammond has grown from a small village in 1870 to a growing city in 1884. Her increase in population, in volume of business, and substantial growth in the few years past stands without a parallel in the Northwest. Hear me for a moment while I state some of its advantages and enterprise as a coming commercial and manufacturing city. It is located on the Grand Calumet River, near the west line of the State of Indiana, and about eighteen miles from the center of business in Chicago. Her railroad facilities are not excelled anywhere. I give a list of them, and the varied regions they penetrate, to show the easy access to materials used in every branch of industry:

Michigan Central, through Southern Michigan, and gives connection with the pine lands in the North.

New York, Chicago and Saint Louis (Air Line): East to New York through Cleveland, Buffalo, &c.

Chicago and Atlantic (Western Erie system): Opens up entirely new hard-wood country.

Louisville, New Albany and Chicago (North and South): Gives direct connection to all Southern points, and penetrates Indiana block-coal region.

Chicago Belt Line Railroad, connecting with and giving us Chicago shipping rates over the following: Chicago and Northwestern, Illinois Central, Baltimore and Ohio, Chicago, Milwaukee and Saint Paul, Chicago, Burlington and Quincy, Chicago, Rock Island and Pacific, and others.

In the near future railroad-car building shops will be completed upon land purchased for the purpose, which will employ hundreds of laboring men and skilled workmen.

The great slaughter establishment on the margin of the Calumet River has grown to many times its original capacity through the skill, care, and energy of M. M. Towle, the founder of this substantial young city. I believe I am correct when I say that there are slaughtered from 800 to 1,500 cattle per day in this establishment, and the dressed beef is shipped in refrigerator-cars to New York, Boston, and over the sea to Liverpool.

I can not take the time of the House in giving in detail the business of this fast growing city, but will say there are first-class lumber-yards, many large and active manufacturing establishments there, employing many hundred men. The lumber and building material, coal, and other heavy freight coming from Lake Michigan down the Calumet River to this city amounts to a large sum annually, and is carried over the numerous railroads to all parts of the country. In fact, lumber can be bought $1 per 1,000 feet cheaper here than it can be bought at the lumber yards or docks in the city of Chicago, and it can be shipped to all points south by convenient railroad, including Louisville, Evansville, and southwest to Saint Louis and Kansas City.

The lumber trade bids for wonderful growth here, for the reason $1 per thousand feet saved is a wide difference in the purchase-price of large cargoes, every foot of which will come down the Calumet River to this city. This water way opens up the lumber trade of the great lakes, where the supply at present is inexhaustible. All light and heavy freight can be shipped cheaply on this river to any point on the great lakes without any change of vessels. The extensive coal and lumber yards, grain-elevators, iron and steel mills, and other manufacturing establishments must leave the city of Chicago at no distant day and locate on this Calumet River at or near the city of Hammond.

I make no unwise prediction when I say that in the near future this enterprising city will reach 20,000 inhabitants and have few, if any, equals in the Northwest as a business and manufacturing place. I am proud of this young city. She is in my own county of Lake. Indiana will feel a deep pride in her marvelous growth and claim its thousand wheels of busy industry as her own. I present her claims to-night and ask for a friendly recognition. She asks that this river be improved. Under the law I can only ask now for a survey and final estimates made by the civil engineers of the Government, which I want done early this summer, and at the next session of Congress I shall ask for $75,000 to be expended in widening and deepening this river to make it equal to the growing trade and increasing commerce of this prosperous city.

I also ask for a preliminary survey of the Wabash River between Logansport and Delphi. I want the report to Congress of the Government engineers as to whether this river can be made navigable between these two cities by the modern system of slack-water navigation and the probable cost thereof. I am asking something for my own people which has never been asked before; but that is no reason for a denial now; it is a modest demand, and I hope the House will grant it.

Contract Labor.

SPEECH

OF

HON. JAMES LAIRD,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1884,

On the bill (H. R. 2550) to prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, its Territories, and the District of Columbia.

Mr. LAIRD said:

Mr. SPEAKER: The gentleman from Missouri, who seemingly arrogates to himself the right to speak for all the political virtues, embodied or not, advocates the passage of this non-partisan act by attacking an absent person and assailing the Republican party, whose representatives have so far only spoken in its favor. Is the gentleman so surpassingly sensitive that he will not permit us to argue with him. Must we sue for the privilege of voting for the measure? The reference of the gentleman to the now repealed act of July 4, 1864, in aid of immigration, is unfortunate. It invites an appeal to a history which he and all the balance of the party he invokes to aid in the passage of this act might wish buried in oblivion. Not defending the action of the party then in power in passing the act referred to, it will be remembered that the then supply of labor was reduced by the absence from its ranks of 2,500,000 of its best men, who were at the front fighting to free 5,000,000 other human beings from the slavish chains of the party to whom he now turns for protection to American workmen against the slavish competition of imported contract labor.

With the sentiment and principle that this bill seeks to transmute into law no man who loves his country and his kind can contend. To me it strikes at this evil: People are imported here from the lowest human levels of the earth under a contract the gist of which is that they yield to another all their volition as to what they are to do when they get here, who to do it for, and what they are to receive. This may be said to be equal to slavery, and as such not only dangerous to independent labor but to free government as well, and as such obnoxious to national right and voice, being against public policy. But the bill should be further guarded so as not to prevent any person from coming to this country with or without the aid of others when such person comes in good faith to make this land his home and become one of its citizens. This is the logic of the law of protection to things applied to men; and being opposed to the employment of Hessians, either in peace or war, I shall vote for the passage of this bill.

The Count of the Electoral Vote.

SPEECH

OF

HON. JOHN V. L. FINDLAY,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 21, 1884,

On the bill (S. 25) to fix the day for the meeting of the electors of President and Vice-President, and to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, and also the substitute bill reported by the House Committee.

Mr. FINDLAY said:

Mr. SPEAKER: This, in my judgment, is the most important bill which has come before the House this session. It is impossible to consider the clause in the Constitution which provides for the counting of the electoral votes for President and Vice-President without being confronted at every stage of the investigation with the thought that either the framers of the Constitution nodded or else deliberately cast the provision in this skeleton form for the purpose of removing the subject beyond the jurisdiction of Congress. It is true that the Constitution is not a code but an enumeration of powers. And yet this theory of constitutional construction will scarcely account for the naked simplicity—I might almost say the looseness—in which one of its most important provisions has been conceived. This provision is thus briefly and dryly expressed:

> The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted.

There are three things made perfectly clear by this provision. First, that the President of the Senate shall open the certificates containing the electoral votes; second, that this shall be done in the presence of both Houses; third, that the votes shall then be counted. When there is no dispute this is all that is necessary; but whenever a controversy arises over an electoral return it is obvious that the provision is singularly defective in not providing the means by which the controversy shall be determined, if it was intended that Congress should be the determining tribunal. Such disputes have arisen—once in the memorable Jefferson-Burr controversy in 1801, once in 1821 over the vote of Missouri; once in 1857 over the vote of Wisconsin, and at other times of more recent date when the question was of no practical moment, as there was a choice by the people, whether the disputed vote was counted or not.

Once, however, and so recently that it is not only in the memory but in the immediate presence of us all, this question assumed the most serious and threatening aspect, from which the country was only relieved by a dangerous experiment, not likely to be repeated. I shall not refer to that humiliating period of our history further than to say that no true American can recall the scenes then enacted without a shudder of mingled disgust and apprehension. The spectacle is only worthy of remembrance now and upon this floor for the admonition it contains, and no man ought to refer to it here, whatever he may do elsewhere, except for the purpose of emphasizing the importance of clearing away an obstruction which more than all others threatens wreck and disaster to the Government.

There are two bills before the House which propose different plans for the settlement of this perplexing question: one, the Senate bill, of which the distinguished Senator from Massachusetts [Mr. HOAR] is understood to be the author, and the other by the venerable statesman from Connecticut [Mr. EATON]. The Senate bill proposes that a disputed count shall be settled by the two Houses, sitting separately, and by the concurrent affirmative action of each in the case of a single return, without which the vote of no State shall be rejected. If the two Houses disagree the vote shall be counted, except in the case of a double return. The House bill, on the other hand, proposes that all disputes arising over the count in the case of a double return shall be settled in joint convention of both Houses, to be presided over by the President of the Senate, by a per capita vote of Senators and Representatives.

Between these two plans the House is now called upon to make choice. Is it better that the Houses should separate and, as distinct bodies, determine questions of this sort, or is it wiser to keep them together in one collective body and thus resolve these questions without a separation? Regarded in any light the subject is full of difficulties, and the inclination of my mind was at first on the question of constitutional power against the proposition of Mr. Eaton's bill, and like himself I have been brought to its support with considerable reluctance and misgiving. It is perfectly clear that the Constitution makes to express provision for the creation of this joint convention with the power of per capita voting. The language of the Constitution is, that the President of the Senate, in the presense of both Houses, shall open the certificates. Both Houses are to be in one meeting-place, usually the Hall of the House of Representatives, but they are there in their distinct capacity as Houses.

By what authority, then, shall you decompose these distinct legislative bodies into units of membership, each invested with a vote and to be erected into a new and distinct body called a joint convention? This is the question which gave me doubt and about which my mind is not yet clear. But the Constitution provides expressly for the execution of all granted powers, and even without such express grant it would follow by necessary implication. The President of the Senate, in my opinion, has no power to count the votes. His duty is merely a ministerial one and is confined to the duty of opening the certificates. The requirement, then, is that the votes shall be counted. By whom? Clearly I think by the two Houses. If they have the power, then, to make the count, have not they the power to provide by law the mode by which the count shall be conducted, disputes settled, and the result ascertained?

If the Houses have not this power and the President of the Senate is not invested with it then it resides nowhere; it is in the clouds, and the consequence would be that nothing short of a constitutional convention could supply the defect. To accept this consequence would be to abandon the case, for the emergency is upon us now and must be met, and can not and will not wait for the tardy relief of a convention or an amendment to the Constitution. In such a case I am prepared to give the country the benefit of the doubt and vote for any measure which will put to rest this disturbing question.

It will be observed that the question of constitutional power over the subject is assumed by the Senate bill. If that bill should become a law, then we declare that there is power to legislate upon the subject. I am inclined to think that the power exists, and if it does, then the question is resolved into one of modes by which it shall be exerted. If the two Houses separately may settle a disputed return by virtue of a law of their making as the Hoar bill proposes, then what reason can be given why, by a similar law, the members of the two Houses may not in joint convention settle the same question?

If to this it be replied that the two Houses are bodies expressly recognized by the Constitution and the joint convention is not, still I think the rejoinder may be made with considerable force that the two Houses as such, except in the joint exercise of the law-making power, have no jurisdiction over the subject, and that in providing by law for the exercise of the power to count it is just as constitutional to do it in one way as the other. The question is, does the power exist; for if it does, then the choice of means is only limited by the consideration whether they are appropriate and plainly adapted to the accomplishment of the end. Considering the case then as a question of expediency rather than power, what is to be said in favor of the Eaton as against the Hoar bill?

I go for it because the President of the United States is an officer chosen by the vote of the people, through the intermediate agency, it is true, of the electoral college, but still none the less is the object of popular choice. The States as such, except in a given contingency, do not elect the President, and when this is done in the case of the contingency referred to, it is accomplished by the votes of the representatives of the States constituting this House, who are themselves selected by a direct vote of the people. The choice is not made by the Senate. In either case it is apparent I think that the framers of the Constitution intended that the President should be the representative of the people of the several States rather than of the States themselves. The Constitution provides for the establishment of two branches of the legislative body, one of which should be chosen by the people of the respective States and the other by the States through their own Legislatures. The executive head of the Government was intended to be the representative of the people of the United States as distributed among the several States, and not of the State organizations as such, although of course there is a mild infusion of the federal principle in the election of President, by the equivalent of Senatorial representation in the electoral college. If there ever was any doubt about this proposition it seems to me to have been settled by the fourteenth amendment to the Constitution.

Before the adoption of this amendment there was much discussion and dispute whether there was a people of the United States as distinguished from the people of the several States. It was claimed that there was no such status as original and underived citizenship of the United States; that the primary citizenship was that of the respective States, and that through this medium and by this genesis alone was a citizen of the United States created. I think there is very good authority to the contrary, and to be found in a very singular quarter. If it were not now a matter of curious speculation rather than of substantial moment, I think it would not be difficult to show that Chief-Justice Taney was of this opinion and boldly proclaimed it in the famous Dred Scott case. But, however this may be, all doubts upon the subject have been set at rest by the fourteenth amendment and by the decision of the Supreme Court in the Slaughter-house cases construing that amendment. There is a people of the United States, and that people is composed, in the language of the amendment, of "all persons

born or naturalized in the United States and subject to the jurisdiction thereof."

This being so, and the President being elected by this people indirectly by the popular vote, it seems to me that all the analogies of the case point to the resolution of any disputed point growing out of the returns of that election by that body which is nearest to the people and their more immediate Representatives. It would follow from this proposition that this House should determine all such controversies, and the argument certainly would not be weakened by the further consideration that in the case of a failure to elect by the people the duty of making an election of President immediately is conferred by the Constitution on the House of Representatives. The practice, however, has been different, and the Senate has always insisted upon its right to have a voice in settling Presidential electoral disputes, and it would be impossible at this day to induce the Senate to yield its asserted jurisdiction altogether.

The Eaton bill proposes a compromise. It proposes that Senators, not the Senate, shall have an equal voice with the Representatives of the people in determining all questions in dispute arising out of the returns of the electoral votes. A majority of the votes of the members of the two Houses, not sitting as such, but in joint convention, shall determine all such questions. As it was under the twenty-second joint rule the disagreement of the two Houses would result in the rejection of a disputed return. As it is under the proposition of the Hoar bill such a disagreement will result in the counting of the disputed return where there is only one return, and so far the Hoar bill is an improvement on the twenty-second joint rule. In either case it will be observed that the Senate can defeat the popular will as represented by this body, to which, in the last resort, the duty of electing a President is confided.

If the House should be of opinion that the vote of a particular State should not be counted, and the Senate that it should be counted, the return in the case of a single return would have to be accepted under the Hoar bill, as it requires the joint affirmative action of both Houses to reject a vote in such a case. If there should be two returns, however, and two State tribunals have made contradictory adjudications, or if there should be two returns, without any judicial action on the part of the State from which they came up, then by the provisions of the Hoar bill in case of a disagreement between the two Houses there could be no count of the vote of the State giving rise to the dispute, but it would have to be rejected, as under the provisions of the twenty-second joint rule. To make this clear let me suppose a case. Suppose that two returns come up from the State of Massachusetts, and connected with them an adjudication by two tribunals of that State, each in favor of a different return. At the same time there are two returns from Florida upon which there has been no adjudication by her courts. Objection is formally made in the manner provided by the Hoar bill to the counting of these returns, and the two Houses separate for the purpose of considering and determining the matter in dispute. The House is in favor of one of the returns from Massachusetts as presented by one of her tribunals, and the Senate is in favor of the other return. The House votes for one of the Florida returns, and the Senate for the other. What would be the law in such a case if we should pass the Hoar bill? Neither returns could be counted, because in the case put both Houses must agree or the vote is lost. It seems to me it would be a most dangerous experiment to allow in such a case one House to have a negative upon the action of the other. The temptation to disagree when the Houses represented different political parties would be so great that but few members, if any, would be able to resist it.

It has been demonstrated time and again that the political conscience is a flexible and elastic rule of action that readily yields to the slightest pressure of party exigencies. Rarely if ever is a contested election upon this floor settled upon its real merits, and Lord Macaulay somewhere says, that no impeachment for a political offense has ever taken place in England, when the result from the complexion of parties could not be as safely predicted from the beginning as at the close of the trial. When the great office of President is at stake, with the immense patronage at its disposal, it would be expecting too much of human nature, under the tyranny of party, to omit any opportunity to accomplish its ends, more especially under that loose code of morals which teaches that all is fair in politics, as in war or in love. The late Senator Morton, in his elaborate report to the Senate upon this subject, denounced in vigorous terms this very proposition; and in the debates in the Constitutional Convention the language of some of its members upon the same subject was equally strong.

There were seven different propositions before that body for the election of President—by the people, by the Legislatures of the States, by the governors of the States, by electors chosen by the people, by electors chosen by lot, by the national Legislature on the nomination of three or two candidates by each State, by the national Legislature on the nomination of one candidate by each State. At one stage of the deliberations it was voted by seven States to four that the Chief Magistrate should be elected by joint ballot by the Senate and the House of Representatives.

Before this vote was reached, however, the smaller States, jealous of their rights, proposed that the vote should be taken, not by joint ballot but by both Houses, which is very much the proposition of the Hoar bill. But to this it was replied that delay and confusion would ensue if the two Houses voted separately, each having a negative upon the choice of the other.

Mr. Wilson, of Pennsylvania, observed "that the Senate might have an interest in throwing dilatory obstacles in the way if its separate concurrence should be required." So Bancroft, in his History of the Formation of the Constitution, says:

> In every stage of the proceeding the convention suffered no chance for the failure of an election, and had specially guarded against the failure of an election by the negative of one House upon the other, leaving the rules for the conduct of the electoral colleges, or of the two Houses, when in the presence of each other, to be supplied by the familiar experience of the States. (Volume II, page 182.)

Hamilton said that "the mutual connection of the President and Senate will perpetuate the one and aggrandize both. I see no better remedy than to let the highest number of ballots, whether a majority or not, appoint the President." When to this is added the fact that the eventual election of President is vested in the House of Representatives, the argument seems to me overwhelming that the Senate can have no separate voice whatever in the election. The fact that this eventual election is conducted in the House of Representatives by States does not at all weaken the argument to any one familiar with the historical development of the Constitution.

There was from the beginning a jealousy on the part of the smaller toward the larger States, the most conspicuous manifestation of which is found in the establishment of the Senate itself. Another is found in the constitution of the electoral college, where each State has as many representatives as it has in both Houses of Congress and where both States and people are represented. Accordingly, when it was agreed to repose in the House of Representatives the final duty of electing the Chief Magistrate, the smaller States demanded that they should have an equal voice in making this choice, and it was conceded. But while this is so, it is also true that the direct Representatives of the people, although voting by States, are charged with the ultimate responsibility of electing the President of the United States. That part of the governmental organization which is more peculiarly the representative of the States, the Senate, is denied the power of interfering with this choice. The whole case is summed up by Bancroft as follows:

> The language of the Constitution is a concise, clear, and imperative demand: "the votes shall then be counted." The convention is left with no one but itself to interpret its duties and prescribe its rules of action. No power whatever over the counting of the votes is devolved on the House of Representatives or on the Senate. Whatever is granted is granted to the two Houses in the presence of each other, representing the States and the people according to the compromise adopted for the electoral colleges.—*Formation of the Constitution*, volume 2, page 184.

It is perfectly clear from this that a joint convention of the two Houses is to do the counting, and that the idea of a resolution of this body into its two constituent elements for the settlement of disputes wherever they arise never entered into the contemplation of the framers of the Constitution.

But can not these two bodies, the House and the Senate, in advance of the assembling of the joint convention of which they are the constituent parts, agree upon a mode of action by which they shall be governed in making this count, either in execution of a power necessary to carry out a granted power or by mutual consent? If the two Houses in the presence of each other in joint convention may adopt rules by which the count shall be conducted, what is the objection to their agreeing to these rules before they meet? Surely none, on the score of convenience and sound policy. If there is power to do it, all will admit, I think, it ought to be done.

I know that it was contended by no less an authority than Mr. Abraham Baldwin, of Georgia, himself a member of the grand committee of the Constitutional Convention which had this very matter in charge, that there was no such power in Congress under the eighth section of the Constitution. His contention was that all the power over the subject was vested in the electoral colleges, and that the two Houses had nothing to do but to see that the returns were properly authenticated. Nothing short of a constitutional amendment could remedy the defect, if defect there was, which he stoutly denied. And of this opinion also was Mr. Charles Pinckney.

At the same time Mr. Baldwin also contended that the joint convention of the two Houses must count the votes, and that there was no such power vested in the Houses as Houses sitting separately. And so he voted in the Jefferson-Burr controversy in 1801 along with Langdon and Pinckney, both of whom had also been members of the convention which framed the Constitution thirteen years before. The historian of the Constitution very properly observes that the student must carefully ponder the constitutions of the several States and the provisions they contained for the election of public officers if he would rightly understand the provision under discussion. The States elected their officers at that time by joint ballot of the legislative branches, some in joint convention, as Massachusetts, and others, as Virginia, by a concurrent vote, with a provision for the count of the ballots by a

committee appointed by both Houses. When, therefore, it was provided that the votes should be counted after the certificates had been opened by the President of the Senate, the meaning of the clause in the presence of the Senate and House of Representatives was that the counting should be done in accordance with the Massachusetts rather than the Virginia plan. There is no power, in my judgment, for the two Houses to separate after they have met for this purpose, unless it be for a recess, but the work of the joint convention must be fully performed and completed before the body is dissolved. The underlying theory of the House bill is that the two Houses are under the same roof as Houses. Hence either can withdraw at its pleasure, and must withdraw for the purpose of considering and determining any question which gives rise to controversy. The theory of the framers of the Constitution was that the identity of the two Houses, for the time being, was merged in a joint convention of both, and that it was the duty of this convention, and not of the two Houses as such, to do the counting.

The Eaton bill is framed upon this theory. The fundamental proposition underlying it is that the counting is to be by joint convention of the two Houses, and it does not recognize the right of separation for the purpose of considering or determining any question arising during the course of the count by the concurrent action of the Senate and the House, either in the case of a single or a double return, and this being the fundamental idea, of course some rule as to the mode of voting must be adopted. This is fixed upon the per capita basis, not only because it is the natural and usual basis adopted by joint conventions, but also because there is an obvious propriety in determining disputed questions arising out of the count in close analogy with the method by which the electoral college is composed.

The States have in the electoral colleges the same representation which they enjoy in the Congress of the United States. Each State appoints as many electors as it has Senators and Representatives. When a dispute arises as to the choice made by these colleges there is an obvious propriety in determining it by a per capita vote in the joint convention of both Houses, where both States and people are represented. As before observed, one of the modes proposed for the election of President was by joint ballot of the two Houses. This was finally succeeded by the adoption of a body of electors, to be elected in such wise as the Legislatures of the States should appoint, each State having the right to appoint as many electors as it had Senators and Representatives in the national Congress.

As a part of this scheme it was proposed that all the electors from all the States should meet at one point, and there elect the President and Vice-President, under such rules as to voting, ascertaining, and authenticating the result as the college might adopt. Owing to imperfect communications between distant parts of the country, and the consequent difficulty in bringing the electors together, this scheme was abandoned, and separate colleges, sitting in each State, took its place. It was a part, too, of the original conception of these bodies that they would divest themselves of all partisan feeling, and, imbued with a lofty sense of patriotism, cast their ballots, themselves the best men in the country, for the worthiest men in the Republic.

It is not necessary to remark that this part of the scheme has been a conspicuous failure. The electors have not been the best men in the country, and have never exercised any choice except that of the party which elected them, and indeed it would not be considered honorable to do so. It was never contemplated, however, that such puzzling questions as confronted Congress in 1877 would have to be met and settled. It does not seem to me that the framers of the Constitution ever considered a contingency such as is provided for by the measures now under discussion.

Double returns or contradictory adjudications upon such returns or a doubtful single return do not seem to me to be within the purview of that instrument. It is almost inconceivable if such was the case that some other provision should not have been made than the simple requirement that the certificates should be opened in the presence of the two Houses and that the votes should then be counted, more especially when we remember that the twelfth amendment to the Constitution, which was adopted for the express purpose of correcting defects in the mode of electing the President, makes no change whatever in the original provision prescribing the method of passing upon the electoral returns. That is left precisely where it was originally; that is, in the words so often quoted, "the votes shall then be counted."

It is true that the word count does not mean mere enumeration, but involves also the idea of discrimination, as the counter of money has the right to reject the bad and accept the good; yet still, if the convention had been in session after the troubles in 1877, I think it quite clear that it would have provided in distinct and unmistakable terms not only for the counting of the votes, but who should do it and how it should be done. Reading the instrument in the light of contemporaneous debate, it seems to me quite clear that its framers would never have remitted the settlement of a disputed electoral return to the separate action of both Houses. Whether they would have considered it wiser to have provided for a final adjudication by the States themselves upon the election for President, and so left nothing for Congress to do but the mere ministerial duty of opening the returns and in some solemn manner declaring the result, is a matter of pure speculation and conjecture.

It is quite probable, however, that they would have rejected this plan upon the ground that the integrity of the United States should not be reduced into absolute dependence upon the good faith of each of the States; that there should be lodged somewhere in the Government of the United States, representing all the States, a power to protect itself, in the exertion of which it would necessarily protect its constituent bodies against the fraud of any single member. The simulated voice of a State, echoed by a false and fraudulent return, not only does violence to the people of the particular State which it misrepresents, but involves the whole federative system of States in discord and confusion.

The other States are powerless to remedy this evil by separate State action, and there is, therefore, an absolute necessity why this protecting power should be vested somewhere in the General Government, which represents all the States as well as all the people of the States. For this reason I think it would be doubtful statesmanship to allow any State to determine the policy of all the other States by an election for President which these other States in their united capacity could not scrutinize and impeach. If, then, the States in their separate capacities can not finally adjudicate upon this question, if it would be bad policy to permit the two Houses sitting separately to act as final arbitrators in view of the almost certain negative each would exert upon the action of the other whenever they were politically opposed, there would seem but one possible way of escape out of the difficulty, and that would be by adopting the compromise proposed by Mr. Eaton's bill. But, Mr. Speaker, I quite agree with him that it is far more necessary that something should be done than that any particular measure should receive the sanction of this body. So fully impressed am I with its importance, that I do not think I am stating the case too strongly when I say that it would be positively criminal for this House to adjourn without taking some action upon the subject.

Food-Fishes and their Protection.

"They take up all of them with the angle, they catch them in their net, and gather them in their drag; therefore they rejoice and are glad."—*Habakkuk*, i, 15.

SPEECH

OF

HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 12, 1884,

On the bill (H. R. 3108) to protect fish in the Potomac River in the District of Columbia, and to provide a spawning-ground for shad and herring in the said Potomac River.

Mr. COX, of New York, said:

Mr. SPEAKER: As to this bill, there is no question of our paramount authority to legislate. It is intended to prohibit as unlawful fishing in the Potomac, and in this District, with certain nets, both stationary and floating. The second section provides a penalty, namely, a fine and a forfeiture of nets, boats, and apparatus. It saves angling with the "out-line," and allows the United States Commissioner of Fish and Fisheries, or his agents, to take fish of any kind from the waters of the Potomac, in any manner desired, for scientific purposes or for propagation.

THE PENDING MEASURE.

This bill proceeds on the idea that the valuable shad and herring fisheries in this District should be preserved from extinction. The report of my colleague [Mr. SPRIGGS] reveals the fact, in regard to the catch of these fish, that there has been a constant decrease from 1868 up to 1879. The catch in 1868 was—of shad 219,205, of herring 689,392; and in 1879, of shad 21,498, and of herring 222,887.

Now, what shall Congress do to save this fishery once, and even yet, so valuable? This is the main question. It is answered by this bill, which has been drawn, as I understand, by Professor Baird, the Superintendent of Fish and Fisheries. There is no doubt that it will pass; and, in so far as the disuse of nets can, under such penalties, protect the fisheries of the District, this much will be effected.

The proviso in the bill recognizes the importance of the scientific experiments made here under the auspices of the Fish Commissioner of the United States, and the utility of the special efforts for propagation.

In this bill, therefore, a vast and progressive range is mapped out, as well for the local interests of this District as for the entire country. Scientists and economists at home and abroad regard the experiments carried on here as ensamples for their guidance, instruction, and welfare.

NEW ENGLAND INTERESTED.

The fishery interest is one which the last census shows to be of immense importance. Perhaps it is most important to New England considered in its deep-sea bearings, and for purposes of commerce; but since the plans of the commission have replenished and multiplied food-fishes in our estuaries, bays, and streams, it is of great importance to the inland as well as to the coastwise States.

I confess, Mr. Speaker, to being specially interested in this subject. In legislation here, as my former colleague on the Foreign Affairs Committee from Massachusetts [Mr. RICE] remembers, we did our part to give what "protection" we could from the Dominion fish, which under the treaty were allowed to come in free. I did not, on economic reasons, urge the revocation of that treaty. I urged it because of the swindle confessedly perpetrated on this country in the fish award of $5,500,000. That award was made under false data. The money should have been repaid to us. Its possession by Great Britain is a burning disgrace and shame. After the proofs of forged books and documents which were tendered by her own citizens, it is the monstrosity of international ethics and courtesy to retain this money. Massachusetts protested through her representative here (General Butler) against the premature payment of the award. That and my own urgent protestation remain indelibly recorded.

THE GOOD PURITAN FOLK.

It was especially fitting that the sons of Massachusetts should have made a defense of our fishing interests upon that occasion. The escutcheon of that Commonwealth is a "codfish." The early culture of her aristocracy was fish-culture. Indeed, her religion is allied with the piscatorial calling. Adventurers to New England of the "Northern Company" were not altogether inspired by the promised yield of gold and silver, though visions of bonanzas were not wanting. Their fancied treasures lay in the sea. Their divining rod held its hook, line, bob, and sinker. It is of record that when the Pilgrims went to King James for their charter, they said to him that they desired to go to the New World to worship God—and catch fish. "What profits do you intend?" asked the king. On being told—"those from fishing," he replied ironically: "So God have my soul, 'tis an honest trade; 'twas the Apostles' own calling." These good Puritan folk expected to find miraculous argentiferous draughts in the mouths of the fishes. They have ever since "sacrificed to their net and burned incense to their drag; because by them their portion is fatness and their meat plenteous." No wonder then, that this godly class broke forth into hymning praise to the Creator for the blessings they received from the sea:

> Ye monsters of the bubbling deep,
> Your Maker's name upraise;
> Up from the sands, ye codlings peep,
> And wag your tails always.

SACRED ASSOCIATIONS

However irrelevant to this discussion the connection between piety and angling, it does not detract from the dignity of this calling to know that it has high authority, great antiquity, and sacred associations. Was it not the Psalmist of Israel who said, "They that occupy themselves in deep waters see the wonderful works of God"? Did not our Saviour choose for the great work of the Gospel the prudent, peaceable, and devout fishermen? Of the Twelve, were not four of this simple craft? While reproving scribes and moneyed men for their peculiar employment, the Savior gave to these simple disciples the power to speak all tongues, to persuade by their quiet manners and sincere eloquence, and to perform wonders unheard of before upon the chosen soil of Palestine. Peter, Andrew, James, and John, the four fishermen, as the good Izaak Walton has said with great felicity, were men of mild and sweet and peaceable spirits, as, indeed, most anglers are—

And it is observable that these our four fishermen should have a priority of numeration in the catalogue of the twelve apostles. And it is yet more observable that when our Savior went up into the mount, when he left the rest of his disciples and chose only three to bear him company at his transfiguration, that these three were all fishermen. And it is believed that all the other apostles, after they betook themselves to follow Christ, betook themselves to be fishermen too, for it is certain that the greater number of them were found together fishing, by Jesus after his resurrection, as it is recorded in the twenty-first chapter of St. John's Gospel.

The Bible has many references to this quiet, contemplative calling, to which it is not necessary here and now to refer.

Whatever may be the controversy between theology and science, or revelation and reason, it is certain that in early New England revelation and science met on common grounds—the fishing-grounds! Practicalness went hand in hand with science, and Science meekly worshiped at the shrine of Faith.

FISHING AN ANCIENT CALLING.

Fishing and fish-culture are not new discoveries; nor are the present modes, especially by line and spear, novel. Necessity was the mother of these as of other arts. It is said that Deucalion, just after the flood, invented angling for food to save his starving family. Seth taught it to his sons. It is believed by some that Japan and China early understood artificial propagation. Fishing runs into mythology; for, is not the trident of Neptune the fish spear, thrice armed? As an ancient and most fishlike muse sings:

> Then darts the trident, and the briny flood
> Is crimsoned with the incautious victim's blood.

Do we not read in the Bible about putting a hook into the jaws of Leviathan? Is not this a clear reference to angling on a large scale? The Ichthyophagi are as old as Strabo who records them.

The fishermen of the past may have been poor, but they were never cowardly. They may have been ignorant, but they had an eye for beauty, which was improved by the iridescent hues of the finny tribes, and by the rare views of nature on sea and shore. They may have been simple, but it was from their humble guild that the grandeur of the New Dispensation came to a sinful world, to improve and bless.

We may go back to Egypt—that ancient mother of spiritual and temporal empire, and read upon her monuments and paintings, the designs and modes by which fish were taken and preserved for the chief butlers and bakers of the Pharaohs. Worshiping, as they did, animals of various kinds, it was not infrequent that one tribe in Egypt declared war against another for eating up her deities! Even the fun on a fishing excursion which our urchins now enjoy, Cleopatra herself practiced on Antony, in her frolicsome mood, when she ordered her divers to put a salted fish on his hook, whereat he pulled with vehement agitation.

> Thus she was used to take delight with her fair hand
> To angle in the Nile.

PISCINE LORE AND LUXURY.

I have made a pilgrimage to the tomb of Izaak Walton in Winchester Cathedral, and have made my homage to that "grand old man" and rare old fisher. I found that his remains were under a large black slab, in a chapel in the south aisle called Prior Silkstead's Chapel. It was evening when I endeavored to decipher the poetic tribute to the ancient angler—"crowned with eternal bliss."

The cheerfulness of his disposition and the serenity of his mind gave to him ninety years of felicity, in the midst of great and good and yet sportive scholars and churchmen. I honor him as well for his pen as for his hook and line; as well for his grace of diction and genial muse as for his many-colored flies; and, above all, for that lesson of equipoise which he teaches in his rambles after his favorite recreation. He teaches the contemplative as well as the sportive quality of the art.

But if any one should think that the literature of fishing began with Izaak Walton let him read classic lore. It is as full of the details as it is of the fun and poetry of fishing. Arion rides upon a dolphin as easily as the bold Viking darts out of the Norse *fjörds* in his war *jægt*. But neither the classic nor the romantic past has any history or fancy equal to the reality of our deep-sea fishing, or to our artificial reproduction from the *ova*. It is said by a clever writer on this theme, that the luxurious Romans achieved great wonders in the art of fish-breeding, that they were able to perform curious experiments with the piscine inhabitants of their aquariums, and that they were well versed in the arts of acclimatization. This writer alleges that "the value of a Roman gentleman's fish-pond in the palmy days of Italian banqueting was represented by an enormous sum of money. The stock kept up by Lucullus was never valued at a sum less than £35,000! These classic lovers of good things had pet breeds of fish, as gentlemen in the present day have pet breeds of sheep or horned cattle. Lucullus, for instance—to have such a valuable stock—must have been in possession of unique varieties derived from curious crosses. Red mullet and fat carp, which sold for large prices, were not at all unusual. We can ascertain that £60 were given for a single mullet, and more than three times this sum for a dish of that fish. Enormous sums of money were lavished in the buying, rearing, and taming of the mullet; so much so, indeed, that some of those who devoted their time and money to this purpose were satirized as "mullet millionaires." These old Romans are the archetypes of our codfish aristocracy. Social life repeats itself.

ICHTHYOLOGICAL MYTHOLOGY.

How fancy has sported with the fishes! Strange stories about sea-monsters fill the pages of ancient lore and modern fish-gossip. These stories culminate in the mysterious kraken, the apochryphal sea-serpent, and the real octopus. These narratives of sea-monsters are not

surprising when we think of such oddities of the sea as the cuttle-fish and other armed brigands of the deep. The inhabitants of the sea are, perhaps, more curious, if not more numerous, than those upon the land. Our deep-sea dredging is bringing to the surface and light such *outré* forms of marine life as to make the prehistoric monsters respectable in fashion and form.

The heavens in their remote and strange phases declare the glory of the marine life. Are not the four principal constellations called after the marines? Does not the zodiac connect astronomy with sea-monsters? In one of the tractates of the London Exhibition Mr. Phil Robinson thus revels in the imagery of sea-things as translated to the sky:

What antiquities, then, they are, these sea-myths of our stellar hemispheres! Tumbling in open space, the happy Dolphin, belted with stars, the gift of grateful Olympus; the luminous Sea-lizard; Cetus, the shaggy whale, spangled from twinkling snout to twinkling tail, that, but for the strong, bright-fronted Ram that intervenes, seems agape to swallow the suppliant Andromeda; Hydra, dripping stars as it goes, and trailing its gem-lit convolutions across the hemispheres; the Flying-fish, feathered and beaked, darting its brief flight from the pole of the southern ecliptic; the austral Fish, with radiant eyes uplifted to the grateful flood that the Waterer forever pours upon it; the Sword-fish, cleaving its bright way to encounter in the ocean of the firmament its hereditary foe; the Tortoise, that in its starry concave holds the lyre whence Mercury first struck the music of the spheres.

Above all, the Fishes of the zodiac,

"The double Pisces, from their shining scale,
Spread wat'ry influence and incline to sail,"

foster the sailor-spirit in men and teach navigators to be boldly self-reliant, preside over sea-fights, and are the patrons of fishermen.

But the children born under the sign are, by a poetical extension of the Venus tradition, hot-blooded, given to jealousies and strife; for the tradition is that "when the skies grew weak and giants strove, and snaky Typhon shook the throne of Jove," Venus fled the tumultuous scene, and hiding herself in the Euphrates as a fish, inspired the scaly tribes with new passions, "and with the ocean mixt her fire." So, too, the Southern Fish claims Aphrodite's favor, for the legend says that it saved her daughter from drowning in the Lake Boethe; and yet another claims for it that it is the progenitor of all the fishes in the firmament.

Next "glowing" Cancer,

"As close in 's shell he lies, affords his aid
To greedy merchants and inclines to trade."

But over births his influence is hardly more auspicious than the Fishes', though in omen it is happy—

"The dream's good;
The Crab is in conjunction with the sun."

These whimsies of astrology still keep their place in our astronomies. They show how the unknown has ever been regarded as the supernatural or marvelous.

From gems taken from the heads of fishes rare wonders were worked by the Magi. Helen won suitors by a jewel out of the belly of a fish. Amphitrite rode about at her own sweet will in a sea-shell. And a thousand other figments indicate that in the twilight of history the unknown above the earth was in strange association with the marvels beneath the sea. As the gentle Elia says:

Gorgons, and Hydras, and Chimeras dire—stories of Celæno and the Harpies—may reproduce themselves in the brain of superstition, but they were there before. They are the transcripts, types—the archetypes are in us and eternal.

—— Names, whose sense we see not,
Fray us with things that be not.

Lamb's fancy ran strong upon marine spectra:

Methought I was upon the ocean billows at some sea nuptials, riding and mounting high with the customary train—of tritons and nereids gamboling around—sounding their conchs before me, and jollily we went careering over the main, till just where Ino Leucothea should have greeted me with a white embrace.

IMMENSITY OF THE NUMBERS OF FISH.

Figures of speech and arithmetic fail to show the immensity of the numbers which the sea gives us of its finny life. Juvenal said that the sea was overfished. This may have been true of Lavinian shores, as it is of some of our rivers, like the Potomac, when swept with destructive nets. But Juvenal had not seen or heard of the banks of Newfoundland and their opulence of fish, nor of the Lofoden Isles with their mountains of piscatorial wealth. The teeming Arctics were unknown to the Roman conquerors of the world. Could Juvenal have heard Professor Huxley dilate on the cod mountains—one hundred and twenty to one hundred and eighty feet in vertical thickness, in and around those waters, or the strōms of Norway which affrighted our youthful fancy, he would have modified his own poetic idea as to overfishing the sea.

THE CENSUS OF THE SEA.

A shoal of codfish one mile in superficial extent contains 120,000,000 fish! Yet not more than half of that number of codfish are taken in one year on the coast of Norway. The cod lives on herring, hence such a shoal will eat 840,000,000 herring in a week! The idea that sea-fisheries are being overworked is almost a joke, when we remember what science reveals. Science tells us that our fixed fisheries contain only five per cent. of the fish of the sea.

Nor is this swarming of marine life a marvel, when we know how fish yield their eggs by millions. The queen bee, it is said, has her 50,000 eggs a season. But the fecundity of fish might as well be expressed by some algebraic formula as this—$x + y = \infty$—. Bertram in his Harvest of the Sea says that he counted the separate eggs in the roes of some of our fish. He counted exactly 7,000,000 eggs in a sturgeon. In codfish he gives 3,400,000; in flounders, 1,250,000; in soles, 1,000,000; and in mackerel, 500,000!

We can not too much admire the nice accuracy of scientific scrutiny and enumeration. Let us take a glance at these strictly accurate figures. We will estimate the value of herrings—in the raw state—at $1 a hundred. We have to pay at retail in the markets 5 or 6 cents each for the manufactured (smoked) article. At a dollar a hundred, a little school of codfish of the area of Rhode Island consumes in one year herring to the value of $473,928,000,000! Gentlemen can see at a glance that the annual appropriations made by the sub-marine directors of schools must exceed this sum many thousand times for the codfish establishment alone! What has Congress done that is in any degree comparable with this encouragement of fish-culture? We call ourselves a wealthy nation; yet we spend less than $80,000,000 a year for our schools—while one little codfish school costs for its support every year, nearly thirty times the assessed valuation of all our real and personal property! But I will not mortify you with any more humiliating calculations. Let these give you some incentive toward the important work of fish-culture.

Where do the fish go? Comparatively few of them reach our tables as food. They have the delight of eating each other. The smaller pass their time in guarding against being eaten by the larger fish. If one-half survived there would be no need of restoring our shipping—navigation would cease.

FISH AS ICHTHYOPHAGI.

This reminds me, Mr. Speaker, that fishes are cannibals, as my motto indicates. Fish prey on fish, and live fish like live fish; so that we need have no compunction when preying on them.

Professor Rice, of the New York commission, has designated the kind of fish on which different fish feed. Some are select, like the striped bass; others omniverous, like the bluefish; and all are enormous feeders. Eight alewives, of three-quarters of a pound each, were found in a sixty-six-pound striped bass! Forty mullets were found in a thirty-pounder! I have seen in the *fjörds* above the Arctic Circle, in the swift tide-currents, endless flocks of birds, ready to devour the fish which congregate to destroy other fish. Sharks, porpoises, and other fish of prey know when and where to find the weak "Innocents Abroad."

SPORTIVE ELEMENT.

No Bergh has yet appeared to prohibit the fish in their gambols after other fish or to enjoin men from gamboling after them. Indeed, a part of the sport of fishing consists in decoying the wriggling beauties upon the hook. In the North Sea they double the sport, for they have a hook so shaped as to catch a small fish, whose wriggling and struggling attracts the larger fish. It is said that the first admirer of American beauty, the traditionary husband of the original Mrs. John Smith—*née* Pocahontas—who settled the earliest English colony on this continent, often fished in the waters of this District; and that he assisted greatly to develop the fishing industry of the rivers round about Jamestown. He fished along our sea-shore as far up as Maine, and gave to his occupation its useful and delightful harmony when he said:

And is it not pretty sport, to hale up two pence, six pence, and twelve pence as fast as you can hale and veare a line?

The sportive element which comes out of the same game of chance, with which statesmen of former days pursued horse-racing or poker, gives through its uncertainty and luckiness to the toiler of the sea the charm with which no other laborious pursuit attracts. Is it not a sort of gratification to watch the unwary fish, to entrap and entice him, not merely by studying his habits and migrations, the weather influences, and the nature of the ground, but by copying the qualities of the fish, its courage, vigor, velocity, and cunning? Thus the sportsman may render his pursuit exciting. With nicest skill and judgment he "tackles" the subtle salmon and the wary trout, whose pluck makes the sport so gameful and the flesh so toothsome.

THE GENTLE ART.

I have had some experience in fishing. May I be pardoned if I refer to the fact that I have fished under the shadows of our Sierras in Tahoe, lake and stream; that I have followed the mountain rivulet Restonica in Corsica, where the waters blanch the boulders into dazzling whiteness, and the associations of the vendetta and the Bonapartes give a ruddy tinge to the adventure; that I have caught the cod in the Arctic around Cape Nord, under the majestic light of the midnight sun; that I have angled in the clear running Malaren Saltsjön, which circulates healthfully amid the splendid islets of stately Stockholm; that I have flecked the waters of the Bosphorus, in sight of the historic Euxine and the marble palaces and mosques of two continents; that I have been tossed in shallops along with the jolly fishers of the Bay of Biscay; that I have sauntered near the pillars of Iskanderoon which were erected by a grateful Mediterranean people on the spot where Jonah was thrown

ashore by the whale; but where'er I wandered, whether I cast my line—

——— under hanging mountains,
Or by the fall of fountains,

my thoughts have always bounded o'er the main to ride the league-long rollers on the shores of New Jersey along with my favorite life-savers—to see and feel the "bluefish wriggling on the hooks." But, Mr. Speaker, notwithstanding these widespread endeavors, I am not prepared to say that there has been any perceptible diminution of the quantity of fishes in the waters of our planet!

ADVANCEMENT IN FISHING.

Marine fishing, from small beginnings in upon the rock-bound coast made its way down to the Chesapeake and James River, where the mollusk helped to swell the gains of our ancestors of eight generations ago. The ventures for cod, mackerel, and whale carried the pioneers of this trade far out upon the banks of Newfoundland and into the waters around Nantucket.

But it was not until after our civil war that the fisheries began to grow with steady increment. Professor Goode estimates the value of our products now at more than $100,000,000. Our census bulletins amplify and specify, by States and localities, the products of our fisheries. They show the capital invested in 1880 to be $37,955,349; and the number of persons employed at 131,426. For the variety of this and kindred industries, I refer to the table prepared by Professor Goode, which I shall append to my remarks. Its figures are more significant for our legislative action than any ancient, classic, or hallowed relations which the curiosities of profane or sacred literature may furnish.

NEW INVENTIONS.

Beyond all the dreams of poetry, the fables of mythology, or the enthusiasm of such dreamers as Izaak Walton, has been the progress of our fishing industry under the advanced conditions and inventions of our time.

It was a great step when Jacquard made his famous net. It astounded the dullards of the age, and made him for a time a demi-god among the astonished fishermen of France and England. But it was only a step compared with the strides now being made by the improved, and less expensive, apparatus invented to capture, preserve, and transport fish. Our newly fashioned trawling nets, recently on exhibition in South Kensington, are marvels. Our unrivaled fishing-schooner, with its special advantages, captured the admiring thousands who gazed at her model in the British exhibition. The steam-vessels rigged for the whale-fishing; the purse-seine and its machinery; the new and deadly explosive harpoon and bomb-lance for the monsters of the deep and the deeps below the depths, which our scientific plummets are sounding—all these new modes of force, thus harnessed by mechanism, have received incentive, inspiration, and aid from the efforts of voluntary and State associations, as well as from home and foreign exhibitions under Federal patronage and appropriations.

MARVELS OF TRANSPORTATION.

We may not indulge in the dainties of the Roman epicure who displayed his many-hued beauties alive to his guests, before cooking and serving; but for abundant food and plucky game, for marvelous breeding and wonderful distribution, no devices compare with those of our own time and country. By new modes of transit, frozen mullet are brought from New Zealand to be sold in old England, and live carp are sent in tanks over car-wheels from Washington to Dakota and Texas. Under the name of Kennebec salmon, large quantities of salmon from rivers of the Pacific Slope are being sold at this moment in New York, and even by dealers in Washington markets. The little blue-back (*Oncorhynchus nerka*) and the quinnat (*Oncorhynchus chonicha*) are now sold in this city at the price of 50 cents per pound. These are brought in refrigerator-cars from the Columbia River, Oregon, and are in such a good state of preservation as to pass readily for Maine salmon.

By telegraph to-day we learn that a car-load of 20,000 salmon from the Dalles, Oregon, is *en route* for New York, and is to arrive in eight days. This is what may be called the fruit of an enterprise by means of water frozen and water vaporized—ice and steam—for the preservation and transportion of this rarest of fish, fresh from the grand river of our Pacific coast.

OTHER ELEMENTS OF ADVANCEMENT.

The demand for fish-food has been greatly increased by the enhancement in the minds of people of fish as a healthful diet, by the extension of railroads in our country, and by the utilization of ice in transportation and of cans for preservation. I need not refer to the manufactories for oil and guano, now grown into a great business on the Long Island and New England coasts. Even the skin of the fish taken is made into glue and isinglass, and has resulted in a large and valuable trade.

FISH CULTURE PRE-EMINENT.

But after all, sir, the practice of fish-culture has been the grand motor and factor. It was started by Dr. Garlick, of Ohio, in 1851—Ohio, where so much of utility emanates. It was improved upon in New York, I am proud to say, where, if anywhere, Ohio is outdone. The report of the fish commissioners of New York for this year is intensely interesting, as showing the practical progress of fish-culture. Not the least interesting part of it is the dissertation by Mr. Mather on the methods and results at Cold Spring Harbor, the new hatching station. It deals with the food of fishes, the spawning of sea fish, and the artificial culture of shell-fish. Already this commission has, without emolument, hatched out and placed in the rivers of New York 85,000,000 young shad. An astonishing return is coming year by year. A simple apparatus has secured the oyster, after artificial propagation, until he settles down to steady living. All honor to this disinterested enterprise! All honor to Seth Green, Hon. R. B. Roosevelt, Mr. E. G. Blackford, and their New York associates, who, as artificial breeders of fish, have aided nature in her efforts to multiply and replenish the waters of our land with this food for the million! All honor to the United States Commission, which, inland and outland, by investigation and experiment has inaugurated a new era of fishing and fish multiplication, and has thus added so immeasurably to the sum of human comfort! All honor to the Congresses which have forwarded the work of the commission by furnishing funds for the deep-sea soundings, the sea-shore fisheries, and the distribution inland of fish suited to the localities and wants of our people!

RANGE OF THE INTERESTS.

From Cape Hatteras to the Gulf of Saint Lawrence, where mackerel and menhaden are taken; from North Carolina to Massachusetts, where the oyster and other mollusks abound; about the keys of Florida, where the red snapper is caught in abundance; from the fur-seal fishery of Alaska to the North Pacific, which our whalers penetrate; from the waters where rolls the Oregon that once heard no sound save its own dashing, but now hears the hum of men engaged in a great industry, to the great lakes, where white-fish play around the isles made memorable by Perry's victory; from one end of our land to the other, over one hundred thousand of hardy men pursue this interesting and adventurous industry. A million of souls depend upon the pursuit. Their fleet is nearly 7,000 vessels and 45,000 boats. Even upon such a small bill as this, Mr. Speaker, we may signal from this Capitol and District to these toilers of the sea our interest in their avocation, and elevate and protect it without detracting from or burdening other interests. Here there can be no "overproduction."

POPULAR AND SCIENTIFIC NOMENCLATURE.

I sometimes wonder whether we would not popularize the interest in this industry more if we could only interpret to the people the remarkable names of the fishes we catch and consume. The dead Latinity of their nomenclature is more terrific than some of the monsters of the deep of which poetry and fable are full. I hold in my hand a treatise by Professor Goode and Mr. Bean. It is a part of the proceedings of the United States National Museum. It says that in a paper on the fishes of Nova Scotia and Labrador, Mr. R. H. Storer described a species under the name of *Platessa rostrata*. "This species," it is said, "has been a puzzle to ichthyologists." Dr. Gunther, in 1862, ventured to remark that it appears to be allied to the *Pleuronectes rostrata*. Professor Gill, in 1861, referred it to his nominal genus *Myzopsetta*, and in 1864 to *Limanda*. All of which is quite puzzling to those who are not ichthyologists; but the classification appears clear when we find out that the fish thus clad in this bewildering Latinity is—a flounder! But it is none the less a delight to know when one is tasting the luscious shad at this its season that it is of the *Anadromous* kind, of the herring family, known as *Clupea sapidissima;* or that we may alternate our worship in Martha's Vineyard in midsummer with a quahaug bake of the *Venus mercenaria!* What a joy to know, when meandering around Tom's River, in New Jersey, that we can perceive the backward movement and shadow in the water of the *Callenictes hastatus!*

Perhaps this refinement in terminology is the rebound from the peculiar patois of the fishmonger from earliest times. In Greece and Rome, later in Italy and Spain, the fishermen or fish dealers—especially mongers of the gentler sex—were noted for their uncontrollable vivacity of tongue. Billingsgate has survived the demolition of other famous gateways into London. It is to-day an illustration of a business that runs up to £120,000 and is growing beyond precedent. How picturesque is the description given of this famed locality:

If without the trouble of taking a long journey we desire to witness the results of the British fisheries, we have only to repair to Billingsgate to find this particular industry brought to a focus. At that piscatorial bourse we can see in the early morning the produce of our most distant seas brought to our greatest seat of population, sure of finding a ready and a profitable market. The aldermanic turbot, the tempting sole, the gigantic codfish, the valuable salmon, the cheap sprat, and the universal herring, are all to be found during their different seasons in great plenty at Billingsgate; and in the lower depths of the market buildings countless quantities of shell-fish of all kinds, stored in immense tubs, may be seen; while away in the adjacent lanes there are to be found gigantic boilers erected for the purpose of crab and lobster boiling. Some of the shops in the neigborhood have always on hand large stocks of all kinds of dried fish which are carried away in great wagons to the railway stations for country distribution. About 4 o'clock on a summer morning this grand piscatorial mart may be seen in its full excitement—the auctioneers bawling, the porters rushing madly about, the hawkers also rushing madly about seeking persons to join them in buying a lot, and so to divide their speculations; and all over is sprinkled the dripping sea-water, and all around we feel that "ancient and fish-like smell" which is the concomitant of such a place.

There has ever been a deal of satire against the frugal and hard-worked fish-wives; not merely those who congregate in Billingsgate, but in

all fisherland, and in every market where grostesque repartee, "shapely shanks" and dulcet voices are at a premium. We know how the humorous sally of Daniel O'Connell silenced the furious fish-hawker of Dublin. He called her a "parallelopipedon," a regular solid, a prism, whose base was a parallelogram! She succumbed before his transcendent power of vituperation. Had he been compelled to go through the ordeal of a whole fish market as I have seen it in France, where all—

> Were mad to speak, with none to hearken,—
> They set the very dogs to a-barking,

he would have prayed for the extension and advancement of a scientific nomenclature, rather than endure a jargon of Babel and Bedlam combined.

A NEW CLASSIFICATION.

It would seem, sir, a safe remark for a layman in this fishing business to say that fish live in water. But when I meet with the fact that a species is found in Ceylon that lives in the earth or exists in mud, not to mention others that fly in the air and perch on trees, it will be confessed that a classification under the head of water-animals is less scientific and certain than under that of vertebrate. Perhaps I may say that fish are the only animals, except the rhetorical man, whose breathing apparatus requires to be kept moist by fluid saturation!

REASONS FOR LEGISLATION.

We find in Bertram's Harvest of the Sea this very pertinent question: "Why should not an acre of water become as productive as an acre of land?" If this is suggestive for Europe, how much more suggestive as applicable to our own country! The answer given on this point with reference to France, Germany, and England is that fish-culture in those countries is essentially practical, hence it is not much wonder that in France it has been taken under the protecting wing of the state.

Calling to its aid learned men and humane, the English parliament enacted, after much investigation, the sea-fisheries act of 1868. A prolonged inquiry by a commission, of which Professor Huxley was a member, led to this. The act repealed obsolete laws, established liberty to fish in any part of the sea, bays, and estuaries; and in various ways it gave the impulse of good regulations to this industry in Great Britian. It did not go so far as the Roman precedent, when Domitian ordered a special session of the Senate to discuss the cooking of a turbot; but it displayed a wise foresight as to the catching and preservation of the British herring and other fish.

A legislator, caring for the common weal, should not only look at the economic value of fish as food for the people, but he should also regard the fisheries as a fostering element in seafaring and training for maritime adventure and hardship, with a view to the humanities of life-saving on the coast and the possibilities of international conflict.

What wonderful advancement we have made since the beginning of the seventeenth century in gathering the harvests of the sea, the census returns will demonstrate. This was best seen at the Berlin and London exhibitions, where to the eye of mankind our progress was made conspicuously manifest. A similar display is now about to be made here. What place more fit than our own museum? Under the efforts of Professors Baird, Goode, and others, this industry has received fresh momentum and gained grand results, "known and read of all men." But all their efforts would have been in vain for the advancement by scientific methods without the aid and countenance of the Federal Legislature.

HONORS OF OUR LAND.

In conclusion, I may be allowed to say, that it is a matter of peculiar gratification that even as late as the 9th of February, 1871, Congress passed a general and generous law providing for investigations as to the diminution of our food-fishes; and that at the same time it took measures for their increase and distribution. It is also a matter of congratulation that the resolution establishing the office of Commissioner of Fish and Fisheries led the way to the selection of Professor Baird, who has not only assisted, as Secretary of the Smithsonian Institution, in the increase and diffusion of knowledge among men, but who has also increased and diffused both fish and the knowledge thereof among men, women, and children in forty States and Territories, not to speak of what he has done in the way of international exchange.

That he carried off the highest of the honors at the Berlin exhibition, that our country won the highest prizes in London, and that these glories have inured to the general welfare, is not the least among the benefactions which science in its practical application has showered upon the people of this country, and which they have gladly shared with the millions of other lands. Let the good work go on! Let Congress appropriate its generous aid to the hatching stations and ponds where science is doing this grand and useful work! Let the eulogy of Professor Huxley upon the ingenuity, energy, and scientific knowledge of Professor Baird and his assistants find a general echo in our homes, as well as here and now, to the end that something of that praise which comes after our labors are done may greet these fishers in the waters of science while they are in full hope, faith, and life to enjoy our laudations!

APPENDIX.

Statistics of fisheries in the United States in 1880.

[Prepared for the Tenth Census, under the direction of G. Brown Goode.]

States and Territories.	Grand total.			Persons employed.		Apparatus and capital.						
						Vessels.			Boats.

Backbone Railroad Land Grant.

SPEECH

OF

HON. CARLETON HUNT,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1884,

On the bill (H. R. 5682) to repeal section 22 of the act to incorporate the Texas Pacific Railroad Company, approved March 3, 1871, and to declare the forfeiture of the land grant therein made, and for other purposes.

Mr. HUNT said:

Mr. SPEAKER: By the twenty-second section of the act of Congress of March 3, 1871 (16 Statutes, 579), there was a grant made *in præsenti* to the New Orleans, Baton Rouge and Vicksburg Railroad Company, a then existing corporation under the laws of Louisiana, of every alternate section of land designated by odd numbers within twenty miles of the line of road, to be thereafter fixed on the ground, and in case any of such lands were so affected by adverse rights or equities at the time of such definite fixing that the grant could not directly attach to the same, then a further grant was made of the right to select in lieu thereof other lands of like quantity outside of said twenty-mile limit, but within thirty miles from the line of the road, provided such lieu lands should be designated likewise by odd numbers and be subject to grant at the date of final fixing of the line of road.

From these grants, first of lands in place within twenty miles of the road on each side, and, second, of indemnity lands outside of twenty but within thirty miles, have arisen the terms "granted limits" and "indemnity limits."

The New Orleans Pacific, as assignee of the New Orleans, Baton Rouge and Vicksburg Company, has selected, within the "granted limits" in the New Orleans land district, 252,176.63 acres; in the Natchitoches land district, 355,266.72 acres; making a total of selections within the twenty-mile granted limits of 607,444.35 acres. The same company has also selected lieu lands within the "indemnity limits" in the New Orleans land district, 173,552.09 acres; in the Natchitoches land district, 234,997.32 acres; making a total of indemnity lands, 408,549.41 acres. Add to this the selections of granted lands, 607,444.35 acres; and we have a grand total of 1,015,993.76 acres. But of this total, as I am informed, some 47,000 acres must ultimately be deducted as in conflict with the grant made to the State of Louisiana by section 1 of the act of June 3, 1856 (11 Statutes, 18), to aid in the construction of the road from Vicksburg via Monroe to Shreveport. There will also, as I understand, be 100,000 acres more rejected on account of other claims than those of the company (see letter from the Land Office to E. B. Wheelock of January 2, 1882, page 2, Senate Document 31, &c.), leaving a net residue liable to patent of about 869,000 acres. In no event is it likely that the company, if the grant is not forfeited, will obtain more land than is here indicated, although it may obtain patents for a trifle less.

It is probable, then, that if patents ever issue they will not exceed 870,000 acres for lands in place and indemnity lands. Some of these lands, according to my information, may be worth $2 or $2.50 per acre, while by far the greater quantity are not worth $1 per acre. I am told by those on whom I rely, that if the company, with patents in its hands, can sell all at an average price of $1 per acre and make the conversion within two years after the issue of the patents, it will be fortunate. If the proposition to forfeit this grant about three years after the entire completion of the route in aid of which alone it was made were addressed upon the instance of proper parties to a court sitting in the State of Louisiana, it is not impossible that the demand might be sustained. In the proceedings of such a tribunal the much-criticised transactions attending the transfer involved; the merely nominal consideration paid therefor; the ratifications by the respective companies, and the speedy withdrawal of oppositions in the case in the United States court at New Orleans—all these and many kindred proceedings might perhaps fall under rigid judicial scrutiny, and the company insisting on title to so large a quantity of land by virtue of them be held to a strict reckoning.

I am not prepared to say how far, if at all, the case in this view would be one which would commend itself to a judge. But Congress is not hampered by strict rules of law. It may respond to broad suggestions of natural justice and public policy. It ought to consider, I think, the leading motive of a preceding Congress in making any grant at all, and if that motive has been fully gratified and within a time not wholly unreasonable under all the embarrassing circumstances of the grantee, then I consider Congress ought not to forfeit the grant, on the very faith of which alone, as it well appears, the object involved has been actually attained. In such connection Congress ought to inquire what would be its course had no road at all been built and no grant ever been made, and whether it would not, in the case here supposed, now make the grant to any responsible company willing to build a road in order to connect the Gulf with the Pacific coast? If the necessity for a road in 1871 justified and required a grant, can it be denied the necessity would be even greater in 1884? If, then, a grant in 1884 of these lands would be justified to secure such a road as has been built on the faith of a grant already made, upon what ground of right reason and public policy can that be taken back by Government which would be given again?

It is matter of wonder to skilled and practical men, familiar with the difficulties of building and maintaining railways in the alluvial swamps of lower Louisiana, that so good a road as that here concerned was constructed at all, and the wonder is increased when one takes into account the ravages of late overflows and crevasses. It is likely, according to my best information, that the entire proceeds of the grant, as previously estimated, will not more than repair the direct and indirect losses from the present flood on a large portion of the line. It is questionable, indeed (so writes me an experienced civil engineer and independent gentleman), whether even with the grant any good railroad can be maintained between New Orleans and Shreveport unless the United States shall build the levees along its route. Without this grant it certainly could not be, unless aid was drawn from extraneous sources independent of the mere earnings of the road.

Rivers and Harbors.

SPEECH

OF

HON. ELZA JEFFORDS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. JEFFORDS said:

Mr. CHAIRMAN: The beginning of our history as a nation is more strange than even the fabled story of the founding of Rome. Bands of exiles and outcasts from the Old World formed the nucleus which has been transformed into the foremost nation of the earth in all that constitutes true greatness. No gift of speech however matchless, no powers of description however marvelous, can adequately portray the rapid growth and unparalleled development of this nation. History teaches us that all the other nations, from the first foundation of human government under the patriarchal system down to this time, have grown slowly and gradually into greatness, advancing feebly step by step, and between each intervening step a century elapsed; while our nation by a single colossal stride has reached the very pinnacle of national grandeur.

When one reflects that a century has not come and gone since our Government was founded, that less than one hundred years ago we were but thirteen feeble colonies, thinly populated, stretching along our Atlantic seaboard, with less than 3,000,000 inhabitants; that we are now thirty-eight States and seven Territories, extending entirely across the continent from the Atlantic to the Pacific Ocean, with a population of nearly 60,000,000, it is with swelling pride that we point to the record of our development as the most marvelous in the annals of time.

We have to a great extent been the architects of our own great fortunes, although nature has bestowed upon us unequaled advantages. We have every variety of climate to be found between the frigid and torrid zones. We have the largest and longest rivers, and more of them; the greatest lakes, and more of them; the broadest valleys, and more of them; the richest mines, and more of them, than any other nation on the habitable globe. These are some of our natural advantages, and of these we have not been entirely unmindful, but we have not made the most of them. For more than a quarter of a century greater attention has been given to artificial means of development than has been bestowed on our natural resources.

This brings me to a discussion of the measure now under consideration. No question of greater magnitude nor of more widespread importance nor of more universal interest to the welfare of the whole people of this nation can ever come before a Congress of these United States for its consideration. The improvement of our rivers and harbors is of direct interest to every citizen—to every man, woman, and child in the United States.

The river and harbor bills have been a fruitful theme of discussion ever since the foundation of our Government. Able and well-meaning men, with undoubted sincerity of conviction, have antagonized these bills step by step, and, with a recklessness of statement that still prevails, have denounced them as schemes of public plunder. It was only the other day that an honorable gentleman stood upon the floor of this House and flippantly described the present measure as the "annual plunder bill." I have no quarrel with these gentlemen. Sneers and denunciation are not the weapons of thoughtful minds. This question must be treated and disposed of on its merits. The friends of the bill under consideration are disposed to discuss it fairly and honestly, but they are not to be frightened by threats or alarmed by denunciation. We will meet argument with argument and fact with fact, but the cry of "steal" and "plunder" will not frighten us from the course we have marked out for ourselves.

It is not a little remarkable that the bulk of the opposition to this bill comes from States that are bountifully provided with every conceivable method of cheap and convenient transportation. New York with her network of railways and her magnificent canals can well afford to oppose these appropriations. Doubtless New York can well afford to do without river and harbor appropriations. It might not be unsafe even to hazard the opinion that New York would be immensely pleased if the Mississippi River were rendered entirely unnavigable. There would then be no fear of rivalry from the Southwestern seaboard, and New York would have things entirely her own way. Fortunately, however, the South and the West have a voice in these matters, and unless I mistake the drift of public opinion in those sections the time is coming when the question of cheap water transportation will override all others in this Hall of legislation, and when the advocates of river improvement will be in sufficient numbers here to demand and enforce the utmost liberality of expenditure by the National Government toward the improvement of national and local water ways.

The river convention that was assembled here a few weeks ago gave voice to this sentiment with no uncertain sound. That convention was no ordinary body of men. The wealth, the intellect, the commerce, the manufactures, and the agriculture of the Mississippi Valley were represented there by men worthy of the great mission intrusted to them.

Their deliberations were marked by great ability and singular unanimity. There were no two opinions in that body. Thirty millions of people spoke there through their accredited representatives, and with one voice they declared—

That it is the manifest and imperative duty of the Government of the United States to cause to be made such improvement of the Mississippi River and its navigable tributaries as shall permanently secure the safe and easy navigation thereof, thereby cheapening freights and reducing insurance and other burdens and expenses, thus promoting the vast inland commerce of the nation, and creating new avenues of foreign trade, and not only inviting increased production and population, but assuring greater prosperity to the whole people. Especially is this duty obvious and our demand justified in view of the donations already made by Congress in land, amounting to nearly 200,000,000 acres, and in bonds, issued or guaranteed, nearly $100,000,000 more, in aid of artificial highways, the property of individuals, and which even at lowest rates must furnish the most costly form of transportation on a large scale—as compared with appropriations not yet one-tenth so great in all, for the improvement of more than 15,000 miles of natural water ways, whose freedom from tax or monopoly is protected by constitutional guarantees, while in cheaper service and unrestricted competition they afford the most effectual check upon exorbitant charges by any other route to the sea.

The improvement of the Mississippi and its navigable tributaries, not only its principal tributaries, but all of its navigable tributaries, is the question of paramount interest in seventeen States and three Territories of this great nation. All that vast and fertile region of country lying between the western slope of the Alleghany Mountains and the eastern slope of the Rocky Mountains is known as the Mississippi Valley. This is subdivided into what is termed the Ohio River basin, with its tributaries, with its 241,000 square miles of territory. The Missouri River basin, with all its tributaries, with its 520,000 square miles of territory, and the Upper and Lower Mississippi River, with all its tributaries, with its 1,403,000 square miles of territory.

Within this region just described lie the very seat and center of empire in this nation. It contains within its embrace more than half of the population and wealth of the nation. It pays, and largely pays, more than one-half of the internal-revenue taxes which are paid into the Treasury of the United States.

This is not only a national river, but so far as trade and commerce are concerned it is international in its character, as it bears upon its mighty bosom the commerce of almost every nation of the earth. This is not a State river, it is a United States river. There are ten States bordering upon the Mississippi River. Neither one of these riparian States has, nor have all of them combined, any jurisdiction over this river. From its source to its mouth the United States Government has exclusive jurisdiction over it. If any one or all of the riparian States were to attempt to exercise jurisdiction over this great river for the purpose of controlling its waywardness or curbing its eccentricities to the exclusion of the other States, with what alacrity would the other States rise up in opposition to any such assumption of power. If the improvement of the Mississippi and its navigable tributaries is not undertaken by the General Government, then it must be undertaken by the riparian States.

It needs no Daniel come to judgment to foretell that any combination of States with a view to forming an association of such a continuous work as would be requisite to accomplish the desired result would be fraught with the most serious political danger. This would be a confederation and combination in the central part of the nation for their mutual and common protection, which the National Government had failed and refused its aid. This could not fail to weaken the common bond of sisterhood among the States; the reciprocity of interest would be wanting, the obligation of mutual benefits would no longer be felt or recognized, and the very worst and most fatal phase of sectionalism would be evolved.

Let the idea once become prevalent among the people that the vital interest of each locality or section must be looked after and cared for by an association of States—that moment will the bonds of the Federal Union become loosened. The moral effect of the adoption of such a sentiment would be to pave the way to political disintegration. Who is

bold enough to deny that such neglect on the part of the National Government would be a sufficient warrant for such action on the part of the neglected States? Let it be distinctly understood that no such action is contemplated, because there is a much better alternative suggests itself, and that is that the States and Territories interested hold in their own hands a far better remedy. It will not be many years before the people of the States and Territories directly interested in this question of the improvement of the Mississippi River will decline to send any man to the Senate of the United States, to the House of Representatives, who is not avowedly in favor of voting all the money that may be needed for this grand work.

The time is near at hand, and my individual belief is that it has already arrived, when no man can be elected President of the United States who has not pronounced views in favor of the improvement of the Mississippi and all of its navigable tributaries. It is entirely safe to predict no political party can ever carry a national election which does not announce itself in favor of improving the navigation of this greatest of our national water ways, including the building of levees and to use all the methods necessary to secure the alluvial lands of the Mississippi Valley from inundation. It is as much the duty of the National Government to control the angry and destructive floods of the Mississippi River and to protect her citizens against their ravages as to repel the invasion of a foreign foe or suppress a domestic insurrection which had passed beyond the power of State control.

In the preparation of this bill the committee have, in my opinion, acted with an undue amount of timidity. The estimates of the United States engineers for the Mississippi River are $7,741,000. The committee has only appropriated $3,400,000, a reduction of over 50 per cent.; and this amount is intended to cover not only the cost of improving the channel of the river, but all the harbors along its line, including Memphis, Greenville, Vicksburg, Natchez, and New Orleans. I am at a loss to determine upon what principle the committee acted unless it was the principle of horizontal reduction which seems to find much favor on the other side of the House this session. The amount is totally inadequate to the necessities of that great channel of internal commerce. In my district alone there are two harbors upon which half a million of dollars could be profitably expended this year.

The town of Greenville, a town of 4,000 inhabitants, and containing property valued at two millions, is daily yielding to the encroachments of the mighty Mississippi and is in momentary danger of being engulfed in its mad waters. It has no resources of its own to ward off this calamity, and its only hope is that the Federal Government will reach out its powerful arm and save it from destruction. You ask upon what principle can such outlay be defended. I answer, upon the principle that if this town is destroyed the aggregate wealth of the nation is decreased by two or three millions, and that it is wise economy to spend $150,000 to save three millions. I defend it also upon another principle.

Greenville is an important point of Southern commerce. Almost the entire cotton crop of five counties seeks an outlet there for reshipment to the commercial world. The products of the West are landed there by the boat-load and distributed to points in the interior, and the cotton comes back in exchange. The value of its commercial transactions would sum up more than five millions annually. Its railroad connections extend for miles into the interior and new lines are being projected constantly, so that both as a commercial point and a source of national wealth it is entitled to the protection of the General Government. The city of Vicksburg, as you are doubtless aware, is cut off from the main channel by a diversion of the river from its former course. When the water is at its lowest stage it is impossible for steamboats to reach the city and there is great danger that unless something is done and quickly, too, that the city will be left high and dry.

Appropriations are annually made to correct this evil, but they are uniformly insufficient to accomplish material results. If all the money appropriated for four years had been expended in one year Vicksburg would be to-day beyond the necessity of aid. It is this shortsighted economy, this penny-wise, pound-foolish system which prevails everywhere in the construction of these bills that in nine cases out of ten renders the appropriation unproductive of satisfactory results. Why not approach the question boldly and fearlessly? The harbor of a city or town is either a proper subject for appropriation or it is not. If not, reject it entirely. If it is, appropriate a sufficient amount of money, so that the most desirable results will follow. If $250,000 is needed, give it at once and finish the business; do not dole it out by the thimbleful so as to render its application practically futile. Such a practice is radically wrong, and is doubtless due to the prevailing prejudice against liberal appropriations in river and harbor bills; but I look forward to the day, not far distant, when public opinion will have so changed on this subject that the River and Harbor Committee will not be hindered in its action by the fear that the bill may be too large.

There is much diversity of opinion as to whether levees are safe barriers to inundation. I think I speak the sentiment of ninety-nine hundredths of the people who dwell on the banks of the Mississippi when I say that there are no two opinions on the subject in that locality. The very best proof that the people of Arkansas, Mississippi, and Louisiana believe in levees is that they have poured out their money like water in building them. Ever since the war the counties in the State of Mississippi bordering on the river have associated themselves in levee boards and have spent countless thousands in the construction and repair of levees. And they are doing so yet, to-day.

The last Legislature of Mississippi authorized the issuance of bonds to the amount of $500,000, all of which is to be applied to the construction and repair of levees in one district. They ask no favors of the National Government in the way of levee building, and they do not expect to see their private property protected at public expense, as is claimed here. What they do ask is simply this: that wherever the building of a levee is found necessary to channel improvement, that the work be done by the Government under the direction of its officers and at its own expense. But it would not be an unreasonable request if the people who suffer from annual inundation by this great river should ask the Government to relieve them from the burden of levee building. The cost would be trifling compared to the benefits that would ensue from such a policy. The annual damage from overflow can not be numbered by thousands. I am within safe limits when I place it at millions; but be it what it may, it is so much cut off from the wealth of the nation. Will anybody deny that it would be wise policy to check this drain on the nation's resources?

Do the gentlemen who talk so glibly of the unconstitutionality of levee appropriations and protecting private property at public expense ever stop to think that the land that is washed by the waters of the Mississippi furnishes the largest source of our national wealth? Did it ever occur to them that the cotton crop brings one hundred millions more gold into the country than wheat and corn combined? Here are the figures:

Cotton, raw	$247,328,721
Cotton, manufactured	12,951,145
	260,279,866
Iron and steel manufactures	19,165,321
Corn	27,756,082
Flour	54,820,459
Wheat	119,879,341
Bacon and hams	38,155,952
Lard	26,618,048
Pork	6,192,268
Butter	2,290,665
Cheese	11,134,526
Petroleum and coal-oil	40,998,138
Tobacco, leaf and manufactured	22,095,229
Wood, and manufactures of	26,783,708
	395,903,937

So that our cotton crop supplies nearly 40 per cent. of our annual productive wealth, and the percentage threatens soon to increase to 75; for England is refusing our grain and looking to India for food, and Germany has closed the door to our hog products, so that the time is not far distant when cotton will once more be king. To this result it is your duty to contribute by protecting the soil where cotton is raised from all danger of overflow. The money can not be more judiciously expended. It is wise statesmanship to do so.

It is the opinion of the leading engineers of the Army and the most eminent engineers in civil life that the construction of the levees are an aid to channel improvement, and as most of the members of this House are familiar with the reasons assigned for this opinion it is not necessary that I consume your valuable time in reproducing them, but shall content myself by referring you to their reports on this subject. If the opinion of these experts, the very ablest in the land, is to be relied upon at all we are bound to believe them when they tell us that the levees are an aid and a material aid to the improvement of channel navigation.

If this be true, and I do not see how any reasonable or sane mind can doubt it, then to that extent and for that purpose it is just as legitimate and wise and just as any other means, not more expensive than the building of levees.

The objection that levee building is an expenditure of public money for the protection of private property or that it is an expenditure for local benefit only is not well founded. All improvements of rivers and harbors must of necessity be local as to the place of expenditure; and while all such improvements are local, yet the benefits arising from them are national and in some instances international. For instance, the improvement of the harbors of New York, Boston, Philadelphia, Baltimore, and other seaport cities and of the Mississippi River may be regarded as works which are international in their benefits, as they are connected with the trade of all the commercial peoples of the earth. The improvement of each of these places when considered separately is local, as before stated, but when considered in conjunction with each other and as part of one system they are each national and redound to the national welfare.

The building of levees it is conceded is a material aid to the improvement of channel navigation. The protection afforded thereby is incidental, but this incidental protection it is estimated will reclaim, between Cairo and the mouth of the Mississippi River, at least 35,000,000 acres of the most fertile lands on this continent, worth at a low estimate $500,000,000. This will increase the actual wealth of the nation billions of dollars. Is there any one within reach of my voice that is prepared to say that the money spent with such a possibility in view would not be well spent? This is not a local nor a sectional

question. It appeals to the patriotism of every man, woman, and child in the land, and even the political economist who takes no sentimental view of things will concede that money spent in such a cause would yield a rich return.

There is another phase to this question that I desire to touch upon before I conclude, although I am aware what a mountain of prejudice I will have to overcome in the effort to make you see this thing as I see it. It is the fashion here to ridicule appropriations for small streams, and even gentlemen who ordinarily would not be suspected of making any pretensions to wit can not resist the impulse to poke their cheap humor at small streams. They are called by one honorable member "mud creeks, mountain brooks, and frog ponds." Another gentleman is pleased to disport his fancy with playful reflections on creeks and steamboat landings; and really I can not find fault with him, for the author of these excruciating witticisms is, I am informed, a railroad president; and I am free to say the friends of river and harbor improvement do not expectmuch support from that direction. In fact it is an unanswerable argument in our favor that the railroad interests are opposing us so bitterly.

I confess that I see little cause for ridicule in the fact that people should seek to improve their facilities for carrying their products to market and bringing home supplies in return. Steele's Bayou is in my district. The committee has appropriated $2,500 to render it navigable. My railroad friend on the other side thought this very funny, and went into convulsions of humor over it. Perhaps if he lived on the banks of that stream and had to drive an ox team ten miles over impassable roads to the Mississippi River to get a barrel of flour his hilarity might gradually check itself. The people along its banks are not burdened with wealth. The majority of them are hard-working colored men and women, who make their living by the sweat of their brow and never saw a railroad in their lives. A steamboat with one chimney and a 10 by 4 cabin is good enough for them, but they can not have even that because the stream they live on is full of obstructions and dangerous to navigation.

I am here to represent them and their interests, and I consider it my duty to serve them as faithfully as I would those of the nabob railroad president in the district if we had one. They are citizens and taxpayers, and their welfare and interests are as worthy subjects of legislation as that of the citizens of the proudest city of the land. As long as I have a voice here it shall be heard in their behalf, and neither sneers nor ridicule shall silence me.

I do not wish to be regarded as an opponent of railroads. On the contrary, I hail them as indispensable factors in the progress of civilization. The magnificent strides that this country has made on the road to wealth and prosperity is largely due to their instrumentality. My voice and my vote shall at all times be ready to encourage new lines of enterprise in that direction. My language is simply intended to remind gentlemen that in their championship of the railroads they are too prone to ignore the merits and advantages of a well-connected and well-developed system of national water ways.

One word more and I have done. The people of the South are particularly entitled to the liberality of this Congress. As I have pointed out, they contribute the greater portion of the wealth of the country. It has cost them much to attain that point of productiveness. The war left them poor, bankrupt in money and hope. No people were ever so sorely stricken. But their recuperative energies were strong and invincible. With no resources but the rich soil that was theirs by inheritance, they proceeded slowly to rebuild their shattered fortunes. They had much to contend against—misrule, oppressive taxation, flood, and plague, but they did not succumb. It would be impossible to describe the privations they endured, the obstacles they had to overcome; but they have survived them all, and are to-day a brave, strong, self-reliant people. They ask no unreasonable favors; they simply demand their rights and a just share of those revenues they help to supply.

Rivers and Harbors.

SPEECH

OF

HON. EBEN F. STONE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. STONE said:

Mr. CHAIRMAN: The time at last has come when the question of a river and harbor bill, which shall recognize the duty and the policy of the establishment by the General Government of a system of water transportation, coextensive with our vast domain, is conceded by all parties to be a proper subject for legislation. The constitutional scruples, which troubled Jefferson and Madison and their immediate successors, have disappeared under the drift of great forces, and the policy which they admitted to be urgent, but only possible by an amendment of the Constitution, has been worked out by the operation of natural causes, which have silently and gradually, but none the less effectively, so changed our Constitution that to-day,—not idealists, not speculators, who by some ingenuity of construction can always find in that instrument what suits their purpose,—the Supreme Court of the United States, whose special function it is to preserve our political system, by compelling a strict observance of our organic law, has recently, in the Legal-tender case, in effect, decided that this General Government of ours, which, even Hamilton in 1802 declared to be a "frail and worthless fabric," is clothed with all the power that may be needed in our national career for the common defense and general welfare.

The doctrine of this decision is that the General Government is sovereign, and, by virtue of its sovereignty, will be held to have every power needed to deal with the exigencies of empire, unless it be expressly prohibited by the Constitution. If the people had anticipated this construction of the Constitution, which is now judicially established, it would never have been adopted. But happily for the country, it was our good fortune to have had, in the early history of the Government, a man who not only had the judicial temperament but the prophetic eye, whose figure in bronze now sits within the shadow of this Capitol, apparently lost in thought, and brooding over the great questions of constitutional law which he can see looming up in the future. It is to Marshall that we are indebted for the doctrine of implied powers, which invests this Government, substantially, with all the attributes of sovereignty.

Jefferson was right when he said, in a letter to Madison, that if the power to build a light-house were conceded, upon that infraction would be built a second, and upon that a third, until the Constitution were made to comprehend every power of government. The same thought was expressed by Madison in his veto of the act to set apart certain funds for internal improvement in 1817, in which he denied that the power to regulate commerce included the power to construct roads and canals and to improve the navigation of water courses, and contended that the construction claimed would render nugatory and superfluous the careful enumeration of powers in the Constitution, and have the effect of giving to Congress a general power of legislation embracing every object within the purview of a legislative trust. This message is interesting, because it predicts with clearness exactly what has taken place. To-day, without violence or forced construction, in obedience to a natural law of evolution, this Government is exercising, with the consent of the people, nearly all the powers, that naturally reside in a great nation, essential to the proper organization and administration of its public affairs.

This is no longer a union of States, bound together by a single interest, and, for the most part, separate and independent, as was the case when the Constitution was formed, but a great nation, with that assimilation and correlation and solidarity of interests that constitute national life. It was never accurate under our Constitution to define State rights as State sovereignty. But the term was used for some years, not inappropriately, because it expressed the popular idea of the relation between the State and the General Government, which it was not convenient to dispute. But that time has passed. The sacredness of State rights is essential to the integrity of our political system, but the dogma of State sovereignty has lost its force and is no longer applicable to our affairs. Our leading industries are all national, and demand a theater for their enterprise as wide as the continent. And it is not too much to say that, in the future that is before us, the great cities, in which are concentrated the energies and ambitions of our national life, are destined to play a more important part than the States in which they are situated.

It would be easy to show, by a review of the history of this question, how the strict construction of the Constitution which so generally prevailed at the time of its adoption has gradually yielded to the force of circumstances and to the logic of events, till the doctrine of Adams and Gallatin and Clay and Webster, and other public men of the liberal school, has become the opinion of the whole country, received everywhere without modification or dispute. It is now admitted that, under the commerce power of the Constitution, it is competent to deal with any subject, which can be fairly construed as legitimately belonging to our foreign or interstate commerce, and the idea that once obtained, that the power to regulate did not include the power to facilitate and to promote commerce, seems so narrow and so pedantic and so inconsistent with the natural meaning of the terms, that it is difficult to understand at this day how such a construction was ever received by those whose opinions were authority on questions of constitutional law.

But, as I have said, constitutional obstacles no longer obstruct the open pathway of our national career. Under the view now held by the Supreme Court of the Constitution there is no difficulty in finding adequate power in our General Government to deal with any question of administration that may arise, and State governments and institutions will give place to a spirit of nationalism, which, unencumbered with constitutional scruples, will rule over the national councils and shape the destiny of the Republic. The question of the improvement of the rivers and

harbors becomes simply a question of expediency, to be decided by general considerations of public policy, and by these alone. There is reason to think that, in the past, the constitutional argument has sometimes been invoked from motives of policy, not so much for the purpose of preserving the sacredness of that instrument untouched, as to serve the wishes of some sections of the country, whose interests would be unfavorably affected by the improvements proposed.

It is interesting to know that, when the Constitution was adopted, all the States of the Union were seaboard States, dependent largely for their prosperity on their coasting and foreign trade, and equally interested in the establishment of a general policy which should control and regulate navigation by the imposition of uniform rates of taxes, and avoid the evils and embarrassments which had existed under the Confederation. By virtue of the Constitution the entire revenue to be derived from taxes on foreign commerce was to be paid into the United States Treasury, and the States relinquished the right to charge tonnage duties without consent of Congress. It is undoubtedly the fact that the commerce power was put into the Constitution to avoid the evils and inconveniences of State legislation, inspired by local jealousies and rivalries, by the establishment of a general policy which should protect and promote the interests of the whole country. It is no exaggeration to say, that it was the exigencies of marine commerce, for which State legislation was altogether inadequate, which made the Constitution. In the resolutions of the Virginia convention, which led so directly to the adoption of the Constitution, this is the only argument urged in support of it. It is now, I say, simply a question of expediency, and upon this question there has been a remarkable unanimity of opinion on the part of the eminent public men of the country of all schools from the time of the adoption of the Constitution to the present.

In his last annual message, in 1808, Jefferson says:

> The probable accumulation of a surplus of revenue beyond what can be applied to the payment of the public debt * * * merits the consideration of Congress. Shall it lie unproductive in the public vaults? Shall the revenue be reduced, or shall it not rather be appropriated to the improvement of roads, canals, rivers, education, and other great foundations of prosperity and union under the powers which Congress may already possess or such amendment of the Constitution as may be approved by the States?

Madison, in a letter to Van Buren, says:

> I have never considered the power—

Referring to internal improvements—

> as within the grant of the Constitution. But such improvements being justly ranked among the greatest advantages * * * and having the peculiar recommendation of binding the several parts of the Union more firmly together, I have always thought the power ought to be possessed by the common Government, which commands the least unpopular and most productive sources of revenue, and can alone select improvements with an eye to the national good.

Government roads—

Said Hamilton—

> canals, and navigable rivers, by diminishing the expense of carriage, put the remote parts of a country nearly upon a level with those in the neighborhood of the town. They are upon that account the greatest of all improvements.

And this opinion has been ably advocated by Clay, Calhoun, Benton, Webster, Seward, and others, who foresaw the future of this country, and the importance of easy and rapid intercommunication to its growth and prosperity. In 1808, Albert Gallatin, then Secretary of the Treasury, prepared and submitted to Congress an elaborate report of a system of internal improvements, in which he proposed inland navigation, with the aid of canals, of sea-going vessels from Massachusetts to North Carolina, a great turnpike road from Maine to Georgia, improvements of the navigation of four of the principal Atlantic rivers, connecting them by canals and turnpikes with the Western rivers and the Mississippi, and a continuous line of water transportation from the western extremity of Lake Michigan by the way of the lakes and the Saint Lawrence to the seas—a great scheme, worthy of his genius and statesmanship. The estimated cost was about $20,000,000, and it was thought that the General Government could accomplish it in ten years by an expenditure of two millions a year. Foreign complications which took place about this time, and the war of 1812, postponed indefinitely the execution of this plan, and the construction of public works of any description for many years. Then the subject of internal improvements became a political question, which, for a long period, extending even to the time of the commencement of the civil war, was one of the principal issues between the Democratic and Whig parties. The suppression of the rebellion worked a radical change in the temper of the people, and extinguished that idea of State sovereignty which was so hostile to national prosperity and glory, and to-day the people of this country are not simply citizens of their respective States, but, first and specially, citizens of the United States, bound together by that community and solidarity of interests and by that passion for glory and empire which are essential to the life of a nation composed, as this is, of an aggregation of States, whose jurisdiction, in regard to their domestic matters, is original and exclusive.

To-day, the spirit of nationalism pervades our people. Doctrines of constitutional law, which were suited to our former condition, and were justified by the letter and the history of the Constitution, have given place to a more liberal construction, that gives scope and room for the exercise of all the powers of government. Loyalty to the State is subordinated to loyalty to the nation, and the power of the General Government to deal with any subject of legislation that may arise in the exigencies of our national career, unless it be expressly prohibited in the Constitution, will not in the future be either questioned or denied.

But with the possession of power comes the responsibility of power, and, if it be competent for the General Government to make provision for public works, and such works are needed for the general welfare, it is the duty of the Government to do it. No narrow policy should limit the action of the Government in this respect. No local jealousy, unworthy of a great nation, should demand liberal appropriation in one place and deny it in another. All parts of our country should be recognized as worthy of attention, and a system of internal improvements organized and adopted liberal and comprehensive, conducted wisely and economically, but equal to the demands of a great nation, with its large resources and opportunities, and its possibilities in the future.

But I have dwelt too long on general considerations, and will come now to the bill before us. It appropriates $12,619,100 for the improvement of rivers and harbors, being a little more than a third of the amount recommended by the estimate of the engineers, which was $35,301,885.

This sum is distributed as follows, namely:

One hundred and thirty-five rivers	$7,684,000
One hundred and four harbors	3,812,100
Twelve channels and inlets	390,000
Five ice-harbors	61,600
Four breakwaters	165,000
One canal	300,000
Four special surveys	57,000
Examinations, &c	125,000
	12,619,100

Distributed geographically it will stand as follows:

New England:		
Rivers	$211,000	
Harbors	437,500	
		$648,500
Atlantic coast and Gulf:		
Rivers	2,004,600	
Harbors	1,802,500	
		3,807,100
Lakes:		
Rivers	1,273,500	
Harbors	914,000	
		2,187,500
Mississippi and Western rivers		5,303,400
Pacific coast:		
Rivers	$377,500	
Harbors	295,100	
		$672,600
Total		12,619,100

All the money is to be expended in the continuation of improvements already commenced with the exception of $247,500, which is appropriated for the construction of new work, not including herein the Hennepin Canal.

The largest appropriation in the bill is for the Mississippi River, for which the committee have allowed $2,400,000. It is believed that the commission in charge of this work have discovered the true method of controlling the waters of this immense stream, and that, in a few years, by a simple process, they will have a channel of a minimum depth of water of sixteen feet from New Orleans to Cairo. The work heretofore has been limited, for the most part, to Plum Point reach and Providence reach, but the success of this part of the undertaking has, in the judgment of the engineers, made it reasonably certain that the object in view can be accomplished, and the committee have recommended the appropriation, without restriction on the discretion of the commissioners in its application.

Of the entire amount appropriated $7,684,000 is for the improvement of river navigation, and the major part of this is for the improvement of that great system of rivers which terminates in the Mississippi. It is our magnificent rivers which make it possible to establish a system of cheap water transportation equal to the demands of our great and increasing commerce. The Missouri River drains an area of 524,000 square miles; the upper Mississippi of 162,000; the Ohio of 241,000, and the lower Mississippi of 314,000; total, 1,241,000 square miles—more than a third of our whole territory. The Columbia River, with its tributaries on the Pacific coast, whose valley is destined to be the home of an active and prosperous and enterprising people, drains an area of over 300,000 square miles.

It has been the habit in the past to criticise the river and harbor bill as if it were the duty of Congress to distribute the amount appropriated equally among the different States; and Gallatin, in his scheme of national improvements, submitted in 1808, proposed that those States, which did not receive their full share of recognition in his general plan, should be indemnified by a gift from the Treasury for purely local purposes. This was when the States were sovereign, or thought that they were, and, by virtue of their sovereignty, claimed to be on an equality. But to-day the States are lost in a spirit of nationality and subordinated to the demands of the general welfare. It is not a question of what each State shall have, but of what the country needs; and the money appropriated is no longer misapplied to make an equal dis-

tribution between the States. If misapplication takes place, it is for other reasons.

Of the new works which have been inaugurated by the committee, I wish to speak of the harbor of refuge at Sandy Bay, Massachusetts. It is proposed to establish at Rockport, at the extreme end of Cape Ann, a national harbor of refuge of the first class. There is only one national harbor of refuge of any pretension on the Atlantic coast, and that is at the mouth of Delaware Bay, called the Delaware Breakwater Harbor. This was commenced more than fifty years ago, and has been of great service to commerce; but it is now confessedly inadequate to accommodate all the vessels that may take shelter there, and is gradually shoaling up by reason of the accumulation of the silt which comes down the river. To remedy this, it will be necessary to close the gap separating the two portions of the breakwater, which will somewhat impair the accessibility of the harbor. Sandy Bay is formed by the angle which separates the shore lines of the bay at the extreme end of Cape Ann. It lies directly in the highway of commerce between Boston and Portland and all the seaports on the northeastern coast, to the Bay of Fundy and the British provinces.

It is estimated that more than fifty thousand vessels pass Cape Ann every year, and the importance of a harbor of refuge at the extreme end of this cape was so urgent, that more than fifty years ago, the General Government expended about $60,000 in the construction of a seawall, which afforded a partial shelter to vessels in distress. Of late years, the attention of the public has been directed, by considerations of humanity, to the importance of life-saving stations and harbors of refuge for the protection of human life; and foreign governments have expended large sums for the construction of national harbors, which shall afford all the protection possible for the safety of life and property, and are now doing everything possible for this purpose. The French Government has of late years appropriated 6,686,000 pounds for the improvement of its harbors, and has expended 4,928,000 pounds on the five ports of Dunkirk, Havre, Calais, Boulogne, and Dieppe. This subject has recently been carefully considered by a select committee of the English Parliament, and it has been decided to construct three national harbors of refuge on the eastern coast of England and Scotland.

England has already established two national harbors of refuge of the first class on the southern coast, namely, at Portland and Plymouth, and is constantly expending large sums for the improvement of her harbors and rivers. Germany, Italy, Spain, and the Netherlands have, of late years, expended large sums in public works of this character, and the expediency of such expenditures, for the interest of trade and commerce and humanity, is acknowledged by all civilized nations. The duty of our Government, with its ample resources, to make adequate provision for the safety of life and property, exposed to the perils of the sea, can not be denied.

Some years since the Government decided to construct a national harbor of refuge of the first class on the Pacific coast, and the work has been delayed only because the engineers can not agree as to the best location. Believing that a harbor of this character is needed on the northeastern coast of the Atlantic, the committee have selected Sandy Bay for this purpose, subject to the opinion of a board of engineers that this is the best location on this coast for such a harbor. It is a large undertaking, but the extreme cheapness of material at this point, where an abundance of stone can be obtained at a very low price, makes it possible to construct a breakwater here, notwithstanding the depth of water, for a price considerably less than the cost per linear foot for works of a similar character in other places.

The harbor of Portland, on southern coast of England,—the cheapest work of the kind ever constructed, cost $600 per linear foot; Plymouth, $1,500 per linear foot; Holyhead, $600 to $800; Marseilles, $1,000; Algiers, $610; Colombo, on the island of Ceylon, $750 to $800. The harbor at Sandy Bay will not exceed $500 a linear foot, and the inclosed area of this harbor is very much greater than that of either of those above mentioned, so that if the comparative cost is determined by the amount of anchor space obtained in each instance for the money expended, which is the true measure of cost, it will be found that the harbor at Sandy Bay will be by far the cheapest of all.

Many of the great harbors, that have been constructed, are deficient in water to float the modern vessels of deep draught, and at Rockport there is ample water to accommodate vessels of the largest size in any part of the inclosed area. For depth of water, accessibility, freedom from ice and silt and deposits of any kind, good anchorage, with large harbor space in proportion to expenditure, amply sufficient to hold the entire shipping of the North Atlantic,—this point seems to offer special advantages for the object in view. There is another consideration entitled to weight. The English engineers and officers of the army and navy who have recently testified before the select committee of Parliament agree in this, that no national harbor of refuge should be constructed not suitable for a military or naval station. And, in case of foreign complications, and the necessity of guarding our coast, where is the point on our coast superior to this, flanking Boston Bay, and commanding the shore line on either side for a long distance? As a naval station, or a rendezvous for our cruisers, it has advantages well worthy of consideration. If built, it will be one of the most magnificent harbors in the world, and, in inclosed area of deep water for the accommodation of large vessels, second to none in Europe or elsewhere. It will be a credit to our engineering talent, and an illustration, in its magnitude and character, of the strength of our national resources.

The Hennepin Canal, connecting the waters of the Mississippi, at Davenport, with Lake Michigan, at Chicago, is also a public work of great importance, and essential to a system of water transportation which shall bring the products of the Northwest to tide water, at the lowest possible cost.

The natural water course is the people's highway, where every citizen can travel as he pleases, exempt from toll or monopoly of any kind; and it is the duty of the Government to improve its character for purposes of transportation, by deepening its channel and removing obstructions, wherever it be practicable. This is clear under ordinary conditions, but where the common roads, with carriages driven by horse-power, are superseded by railways and steam-cars, and the whole business of land transportation is in the control of irresponsible syndicates, whose natural impulse is to charge all the traffic will bear, what remedy so effectual to protect the people from exorbitant charges, as a system of water transportation free to everybody, and cheaper than land transportation under the sharpest competition?

I wish to refer to an objection that is often made to some particular appropriation in a river and harbor bill, that it applies to a place that is not of national importance; as if this consideration were decisive. This implies a misconception of the power of the General Government, and of its duty in this respect. Our political system is so framed that the power of the General Government, in respect to harbors and navigable rivers, is unlimited and exclusive. By virtue of this exclusive jurisdiction it is the duty of the Government not merely to facilitate the operations of commerce, in those places where the business is so large as to be national in its character, but also, in those places of no national pretensions, whose joint contributions to the commerce of the country are the cause of its greatness and prosperity. They pay their proportion of the taxes which supply the Treasury, and are entitled to recognition.

Under the English system, Parliament, while charging the imperial exchequer with the entire cost of a few great national harbors, generally contributes about one-third or one-quarter of the expense of the improvement of rivers and harbors, and the remainder is furnished by the local boards that represent the locality where the work is done. The local boards are allowed to charge a toll for the use of these works. But, under our system, it was long ago decided that the imposition of tolls was impracticable, and no State will improve its harbors and water ways, systematically, for the use of the citizens of the United States, when it can not indemnify itself for the expense of it by harbor dues, or charges of some kind. In the early history of the Government, some of the States, with the consent of the General Government, charged tonnage duties on vessels to indemnify themselves for the expense of harbor improvements, but the practice was soon discontinued as inconsistent with the general welfare.

I submit, then, that, under our system, it is the duty of the General Government, in the exercise of its commerce power which it has received from the States and the people as a trust, to be administered for the general welfare, not only to improve those harbors whose commerce is of national proportions, but to establish a system of water transportation, so broad and so comprehensive, that every part of our common country shall feel its influence and partake of its advantages.

It is the fashion of late in some quarters to denounce a river and harbor bill as a swindle, and this idea, two years since, was so industriously exploited that many excellent people were led to believe it. But it only needed to study the New York press and the relation of the railroad system to the commerce of New York, and to reflect upon the possible results of a cheap system of water transportation and of the free navigation of the Mississippi upon the fortunes of the railroad syndicates and of all connected with them, to perceive that what seemed to the uninitiated as the spontaneous outbreak of a righteous indignation was, in fact, a premeditated, preconcerted, systematic attack, inspired and organized by interested parties.

The river and harbor bill of 1882 was open to criticism, as every river and harbor bill of necessity must be. It is impossible to frame a bill of such a miscellaneous character, containing a large number of items, that shall be unexceptionable. To quarrel with such a measure because it is not perfect, where the object is honest, is unreasonable. To denounce it as a swindle, is to charge the authors of it with dishonesty and corruption. What will you say of those who make the accusation, if you find on examination that there is no ground for the charge, and that it is only to be explained by the suggestion of unworthy and interested motives? The Secretary of War, after an extended examination of the bill, with the purpose of criticising everything of doubtful character, could not find, excluding the appropriation for the Sacramento and Feather Rivers, which was rejected for special reasons, four per cent. which he thought were not proper objects of legislation. And this season a number of objects, which he thought inadmissible, were brought to the notice of Congress by the engineers in charge, as especially urgent and needing immediate attention.

I refer to this as showing the difficulties that inhere in the subject. I repeat, it is impossible to make a river and harbor bill which shall be entirely satisfactory. And my experience on the River and Harbor

Committee has taught me, that it is the duty of Congress to devise some method by which the subject of river and harbor improvement can be considered, systematically, by some board selected for the service, whose judgment will not be unduly influenced by local considerations, and who, while capable of taking a national and comprehensive view of the whole subject, will not be unmindful of the claims of all parts of the country to due recognition and encouragement.

It must not be forgotten that, for all purposes of navigation and commercial intercourse, the navigable waters of the several States are not subject to the jurisdiction of the States, but are the public property of the United States, and subject only to Congressional regulation. (See 3 Wallace, 724.) Every stream and harbor, therefore, as part of the public property of the United States, which the General Government holds in trust for the general welfare, should receive its due share of attention, and, when neglected, has the same right to complain that a country village has, when left out of the postal service and denied a post-office. It is simply a question of duty and of expediency in each case. Twelve millions seems a large sum in the abstract, but, when compared with our resources, it seems inconsiderable—less than the surplus revenue of the Treasury for sixty days. In 1808, when Gallatin recommended an expenditure of two millions a year, and his plan was inspired by John Quincy Adams, our net revenue was $17,000,000. An appropriation at this time, in the same proportion, would be equal to three times the sum recommended by the committee.

Mr. Chairman, the question of transportation should receive from this Government careful consideration. We are attempting to establish on this western continent a great nation, which, by a division of political power between the States and the Union, is hoping to reconcile the rights and liberties of the people with the responsibilities and exigencies of empire. Territorially, the different parts of our country are widely separated, and the obstacles of space and time to a vital union are only to be overcome by a wise use of all the facilities for communication which science and civilization can command. A great future is before us. Our people are impatient of State lines, and, instinct with courage and energy and enterprise, are eager to enter on a national career. But a national career implies a national policy, which shall, as far as possible, remove all physical obstacles to that cheap and convenient exchange and interchange of commodities, and to that sympathy and community of interests, essential to the general prosperity.

The Unwise Agitation of the Tariff Question at this Session of Congress.

SPEECH

OF

HON. CHARLES A. SUMNER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884.

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. SUMNER, of California, said:

The effort has been made with great diligence and sometimes with considerable art, to have it appear that the cause of tariff reform is at this time inclusively and exclusively infolded and expressed in what has come to be known as "the Morrison bill." But whenever that proposition is distinctly protested against, by those who have here as good a right to speak on the subject as any, the effort or intention is disclaimed; and we are told that after the bill shall have passed out of the Committee of the Whole with a favorable report, there will be opportunity to amend. This gracious suggestion—for such has been the form of the occasional response—has been given, however, in the last few days of the time within which general debate is limited. The fact of the lateness of the hour, conjoined with the manner and style of delivery, contribute toward strengthening the natural and prevailing belief, that if this bill does go hence without an agreement to the fatal motion, it is probable that the successful endeavor of the management will be to secure its passage through the House in the precise mold and with every letter it now possesses. Besides, not all of us are wholly unaware of the momentum which a measure of this kind acquires by moving through the first stages of legislation unchecked; sometimes in this way gaining as it were a resistless energy of its own, which not all the earnest work for halting on the part of its authors and original advocates can avail to stay for a moment's further consideration. Therefore it seems to be unfortunately the fact that no other alternative is left to the members of this House, with respect to the question of legislation upon tariff at this session. We must support this measure as it reads, or be unable to give our affirmative vote for any other bill on the subject.

The situation is forced to this extent. Indeed, some of the champions of this measure have not hesitated here and elsewhere to proclaim in effect that we must sustain this bill, jot and tittle, or suffer the consequences!

Things personal as well as tables statistical belong to this occasion. Of the latter, surely you have had an abundance, and that abundance often in fatiguing duplicate. And not merely personal opinion, but faithful direct representation of the dominant sentiment among our constituences may now properly be set forth, and ought to be the subject of careful, deliberate, conscientious reflection.

In 1880 the Democratic national convention, assembled at Cincinnati, presented to the country a platform in which our party declared in favor of a tariff for revenue only. In order that there may be a clear and unmistakable understanding as to what this platform declaration and pledge imported, let the whole paragraph be read and heard at this moment. This is it:

> Third. Home rule; honest money, consisting of gold and silver and paper, convertible into coin on demand; the strict maintenance of the public faith, State and national, and a tariff for revenue only; the subordination of the civil to the military power, and a general and thorough reform of the civil service.

It will be observed that the tariff plank was put in the middle of this paragraph; it was adapted, and was intended, perhaps, for quick running glance only. I do not hesitate to say, now that I have made due and diligent inquiry with a view to ascertain the fact, that an immense proportion of the citizens who read the Democratic platform of 1880 gave to this subdivision in this section, at the beginning of the campaign, no such construction as was afterward put upon it by the Republican management and has here been sought to fasten within its syllables. But I have not time to dwell upon this in the present opportunity. It will reappear hereafter in my remarks under the light of a brief prefatory historical recital.

The Democratic convention of 1880 was held in Cincinnati in June of that year. The following autumn months of September and October witnessed the strange and confessedly demoralizing and somewhat humiliating spectacle of the majority of the Democratic speakers upon the campaign rostrums endeavoring to re-explain these words, or give them an interpretation entirely hostile to the doctrine of free trade, and not inconsistent with the boundary of action on the subject which in 1883 was set forth at their State convention by the Democracy of Ohio. It cannot be denied that our party went before the people in the fall of 1880 begging them not to put a construction upon the plank referred to that would bear any support for a free-trade advocacy.

And it should be said and emphasized in this juxtaposition that with most of the Democratic speakers and editors the disclaimer and the accompanying interpretation referred to were thoroughly honest proclamations, for it can not be denied or doubted that a majority of our party in this country were then and now are in favor of incidental protection; and, I must repeat, thousands in the glance of the first readings did not for one moment imagine that the meaning deprecated would be attached to the clause so harmfully quoted by our opponents—that signification which in strict rendering the words unquestionably imbodied and set forth.

More than this: In the earlier portion of the campaign of 1880 there were distinguished speakers sent out from Democratic headquarters—from the national or New York committee-rooms—duly commissioned and salaried, whose utterances and reasonings were sharp and precise in favor of the theory of free trade for our country, so far at least as to reach the standard of Great Britain. But when our foes in September, 1880, "sprung" the issue upon the line "a tariff for revenue only," focalizing and pressing home upon these words and their interpretation thereof, swift messengers of recall were put upon the track of Henry George and other eminent advocates of the abolition of custom-house dues. No less a man than one of our foremost Representatives on this floor, who has in a most earnest and instructive manner participated largely in this discussion, with authority inherent and acquired or bestowed bid the youthful crusaders of the free-trade knighthood to cease from their eloquent warfare and retire to the rear of the camp.

But besides and beyond and, if you please, above all this, our honored candidate for Chief Executive himself came forward with a declaration which it was unmistakably intended should disabuse the public mind of the prejudice that was engendered against our organization by the charge made in the Republican newspapers and by Republican orators,—the charge that we purposed inaugurating a free-trade administration in the event of the election of General Hancock to the Presidency of the United States.

It must be timely to recall *verbatim* what our Presidential candidate had then to say in reference to this matter. And that his language may be thoroughly understood by those who have had no other reading on this correspondence, or who have forgotten its origin or can not recall without a literal reprint the style of the summons served upon him, I desire that the Clerk read to this House the letter of Governor Randolph as well as the reply of General Hancock. Both will be found in the New York Herald of October 16, 1880. And mark you now, before and while you hear these passages, that a minority of our party in this House is now ordered to vote for the pending bill because it is in such connection alleged to be "a firm first step toward free trade."

These are the letters; hear them:

MORRISTOWN, N. J., *October* 11, 1880.

MY DEAR GENERAL: My attention is called to-day to an interview, or a reported interview, had with you by a person representing the Paterson Guardian. As I read the report it seems to me that you were very imperfectly under-

stood or very indifferently reported. I come to this conclusion because of my knowledge of your views upon the tariff question. The report does you injustice.

The subject is one which our manufacturing friends are very solicitous about, and very properly so.

I regret that your views upon the tariff question, as I understand them to be, had not found fuller expression in your letter of acceptance.

If the misrepresentation of your tariff views continue, would it not be wise and just to take some occasion to put yourself right?

Very truly, yours,

THEODORE F. RANDOLPH.

General W. S. HANCOCK,
Governor's Island, New York.

GOVERNOR'S ISLAND, *New York, October* 12, 1880.

MY DEAR GOVERNOR: I have received your favor of the 11th. In my letter of acceptance I expressed my full sympathy with our American industries. I thought I spoke plainly enough to satisfy our Jersey friends regarding my tariff views. I am too sound an American to advocate any departure from the general features of the policy that has been largely instrumental in building up our industries and keeping Americans from the competition of the underpaid labor of Europe.

If we intend to remain honest and pay the public debt, as good people of all parties do, and if we mean to administer the functions of government, then we must raise revenue in some way or other. With a reunited and harmonious country we shall certainly in time pay off the public debt, but the necessity of raising money for the administration of the National Government will continue as long as human nature lasts. All parties agree that the best way for us to raise revenue is largely by the tariff. So far as we are concerned, therefore, all talk about free trade is folly.

But the tariff question will probably be treated with justice to all our interests and people by some such bill as Eaton's. I believe that a commission of intelligent experts, representing both the Government and American industries, will suggest tariff measures that will relieve us of any crudities and inconsistencies existing in our present laws, and confirm to us a system which will be judicious, just, harmonious, and incidentally protective, as well as stable in its effects.

I am, very truly, yours,

WINFIELD S. HANCOCK.

To Hon. THEODORE F. RANDOLPH,
Morristown, N. J.

And furthermore it should be mentioned and magnified in this connection, that not alone by himself or from his own judgment did our Presidential candidate give utterance as quoted, but it is notorious that it was after due counsel with leaders in the party, some of whom I have reason to believe are members of this House, he lent the great significance and authority of his name to such a qualifying and disclaiming proclamation. Nor was any man in our party of acknowledged prominence and influence as a national leader heard upon the hustings to demur to that which our nominee for the chief executive office, by and with the advice and consent of his next friends, so put upon the newspaper record.

What of all this, Mr. Chairman? Much every way.

Not by word of national platform alone is our record and promise to be exhibited and invoked upon for consideration and for soliciting and impelling to action here; but by the plank and the interpretation thereof immediately or shortly thereafter given, are we to be conjured and constrained. And if there be distinction and difference and even contradiction between the two—between the clause in the creed and the text of the unchallenged rendering, between the former and the personal assurances of the principal candidate and his orators and journalists—then must the latter prevail and bind. If that which is called a construction be in substance and effect a retraction, can it be regarded otherwise than, at least, as destroying the strength of the original statement of principle—destroying the original, at least, for any such coercing purpose as is contemplated, as is uttered and hourly reiterated here.

Now, it ill becomes any political party anywhere to obtain power by a declaration of principle which it has not sincerely at heart, or by a disclaimer of intention which it at heart retains and fosters. And least of all—if there can be a comparison of small and great in this relation of secular affairs in this Republic—least of all should such duplicity be manifested by a national political organization. Without thought of personal disrespect to any one, I say that such a proceeding is not honest. I challenge it as debasing and corrupt. Some of the Republican party managers were once conspicuously guilty of this species of outrage and iniquity (and pray let them retain a monopoly of it), and for that reason, among others, I, as one of a great army, came out from its lines and took my position, fifteen years ago, with the regenerated Democracy of the United States. It was the Republican party that declared in 1868 that the right of suffrage should be determined by the States in the North, respectively, and not by the General Government. And then, having acquired or retained power by virtue of such declaration, its Senators and Representatives here proceeded to pass a constitutional amendment, and by various methods of party management and machinery, some of which were most reprehensible, Republican managers proceeded to force it through State Legislatures; which amendment conferred upon the negro race throughout this Republic the privilege and authority of the ballot.

That there may be no misconception here, it is well perhaps that you should hear again the second paragraph of the Republican national platform of 1868:

Second. A guarantee by Congress of equal suffrage to all loyal men at the South was demanded by every consideration of public safety, of gratitude, and of justice, and must be maintained; while the question of suffrage in all the loyal States properly belongs to the people of those States.

The above paragraph in the Republican national platform of 1868, was—singularly (and appropriately?) enough—followed immediately by this language:

Third. We denounce all forms of repudiation as a national crime;

* * * * * * *

Prior to the assembling of the national convention of the Republican party in 1868 the leaders of that organization were suspected and accused of the intention indicated, and the plank on the subject referred to was an isolated and most italicized statement, politic and necessary at the time, upon which the success of that party in that campaign largely, if not absolutely, depended. And throughout the canvass of 1868 Republican orators and editors proclaimed and advocated the doctrine of this last portion of the second paragraph.

Now, no one proposes to revive a debate upon the subject of that amendment. The amendment is in the Constitution for all time, and no Democrat for one moment contemplates attacking it. But the flagrancy of the breach of public party faith referred to is not now and can not be denied. However you may have regarded the proposition to amend, in its letter considered, no intelligent candid Republican will undertake to justify on moral grounds the misrepresentation and other principal means by which that change in or addition to the organic law of the nation was effected.

It might be said—it has perhaps been intimated—that inasmuch as our candidate was not elected in 1880, we are not bound by the platform recitals and the accompanying interpretation of that time; although that would be a very queer evasion and excuse on the part of my antagonist—as peculiar and censurable, I deferentially submit, as would be a violation of a compromise compact of legislation by refusing to vote for a measure agreed upon because the one that had precedence was defeated. And, second, that so much time has elapsed since the last Presidential canvass that we are entitled to bring forth new issues, or, if you please, take a new position upon an old question of public policy and legislative enactment. These things can not be said except by those who are prepared to admit in candid acknowledgment of the logic of the situation that they have changed positions, or that they do not here occupy that vantage ground usually claimed for them; that they are no more accusers, but defenders; no longer to be considered in the attitude of leaders and generals that purpose reading men out of the party who do not obey their behests on the tariff-bill programme; but apologizers for themselves in this day on this issue and amid these scenes of Congressional action.

It is not for me to say—it has not been and will not be said by me—that political issues in their relations to political parties in this country are sharply defined and morally inclosed within walls reared at the end of every four years; that between the striking of the clock, from national convention to national convention, no public man ought to advocate policies or plans in conflict with the last party creed for which he contended. But can there be any doubt in such a case as this as to the proprieties, and as to that which belongs to the intellectual and moral integrity of the situation? Please understand and mistake not; I am confronting and combating the "party call and command," as it is claimed, fully expressed without and often eloquently hinted within this Chamber. I am not guilty of that foolish thing, contending that no member or committee of our party can honorably introduce a tariff bill at this session of Congress. For the sake of my party, as well as in behalf of the best interests of this country, I meet and contend against an order of alleged party discipline on a proclaimed path of "a firm first step toward free trade."

That any individual may change his views at any time—entirely, absolutely—and even gain just credit and applause for frankness and sincerity manifested in such action, it would be absurd to question or deny. Indeed, we know that it was well said by one of old, that it was difficult to tell which of the twain was the biggest fool, the man who was always changing his opinion or the man who never changed. But here is an endeavor to coerce men of Democratic faith and lineage into the support of the so-called Morrison bill on an asserted obligation of party honor and political fidelity. Do not misapprehend or forget for an instant the respective positions of the disputants.

You may change and I may not. Your hour to sit in judgment has not come. I may be with you in thought and conviction on the main question, and yet deem it not only inexpedient but in violation of a formal platform promise, as authoritatively explained and construed, or in plain contradiction of the whole combined convention and subsequent committee and candidate action and assurance, to act here in favor of this or that original proposition or amendatory section. Would you have it otherwise? Then might not those in whose company I now speak, and shall act, with far better right and grace call upon party associates who would arraign us to answer themselves and plead excuse. We possessing the commission to cite and to certify and if need be to cast out, a commission far more legitimately derived or obtainable from decisions and judgment on party creed, pointed and punctuated by contemporaneous or quickly-coming party campaign assurances?

Now we will bring up a little nearer to our firesides. In 1882 there was a memorable political campaign in that distant Commonwealth which I have the honor in part to represent. During that canvass there was no issue joined on the subject which has been under discussion

here for the past two or three weeks. There was very little talk upon the stump about it except what was confined to the Republican speakers, who were not confronted by us upon this topic. Overshadowing and excluding everything else was the question of monopoly, especially the monopoly of a railroad corporation. Thousands of voters cast their ballots for us who sit with one party in this House—a solid Democratic delegation—who would surely have given their suffrages in favor of opposing candidates had they dreamed that we were to put in an appearance here to lend our support to such a measure as the one pending in this Committee of the Whole on the state of the Union. I speak now for no one but myself, and intend no reflection upon any one of my honored colleagues; but I have sought this opportunity of utterance, because I desire to say, once for all, that I should have to consider that I did a dishonest act as a Representative in this Congress, if after having been elected under the circumstances indicated I joined the greatly respected majority of my party here who have not the guiding and restraining home influences that appeal to me, in approving by word and vote this proposition that emanates from the Committee of Ways and Means.

Here are public petitions and private letters, which in the aggregate bear the signatures of thousands of leading citizens of California, protesting against the passage of this bill; containing the names of men who for many years in that politically doubtful State have been consistent and earnest and energetic and, I will not forget to add, munificently generous in their adherence to and aid of the Democratic party. And do you say that I can not fail to support this measure, this confessedly most imperfect manuscript of legislation, without subjecting myself to reprimand and indictment as one recusant to Democratic faith and practice, when under such circumstances such voices come up to me from among the people of my Commonwealth?

If there is authority here to draft a new article of party constitution, or, if you please, to revive one which has been in abeyance, and put it in statutory language, and then summon Democrats to subscribe or take seats on the other side of the House, then I crave your audience to say that we ought at least to have here a bill that is entitled to very respectful consideration on all other accounts. There is no insolence in that suggestion, I humbly submit. Nay, if you are drawing lines and making combat across them, you might expect retaliation. That, however, I have neither the disposition nor the temerity to attempt.

What is this bill? "Tariff revision?" Nothing of the kind. Let not the English language be outraged by such a profession. The bill revises nothing.

It proceeds out of a committee of fifteen members, which committee includes some of the leaders on either side of this House, and as all the country ought to know—especially under the circumstances just referred to—which includes a majority composed of Democratic leaders on this floor. And for these gentlemen we all have the greatest personal respect. There is of course no lack of ability and experience—quite to the contrary—which should pre-eminently fit them for the work and the accomplishment expected in this very relation, from their hands. During full sixty days after our reassembling in January these honored and gifted Representatives sat in council on this subject, and at the end of that time they floated forth this patent scythe-blade tariff projectile.

Mr. Chairman, had we not a right to expect a better outcome than this? I am not going to delineate it in general or metaphoric terms. It has been in that way fitly and sufficiently described by the venerable Representative from Connecticut [Mr. EATON]. And I would that his words could have a reader by the side of every Democratic hearthstone in this country. For verily they were the apt words of truth and soberness.

But I am admonished: "Have a care how you venture to classify these two little pages of Bill delivery, with the appendix of random, guesswork arithmetic, gotten up by one of the clerks in one of the Departments. Beware how you speak lightly of this puzzling text, lest you increase the weight and severity of your punishment for disobedience to the mandates of the party caucus hereunto promulgated! What hazard are you at, when even the veteran statesman and political party hero from Connecticut [Mr. EATON] has been given notice, in some appreciable and unmistakable manner, that he opposes or questions at his peril?"

Sentence by sentence did I approvingly follow his analysis and characterization of this bill and deplore with him the management under which it has been sought to compel a majority in this House to acquiesce in and indorse its provisions. And as I attended him through that masterly extemporaneous discourse I remembered—I could not but recall—the time when I heard that voice, full thirty years ago, giving eloquent utterance to records and rules of Democratic faith and practice, as he spoke in halls and from balcony stands in the capital of his Commonwealth during the progress of a Presidential campaign. I remember when he sat—found wise and faithful and inflexible amid the timid and the far less sagacious of his own party, in the Senate of the United States, breasting a storm of appeal from within and from without—solicitation and threat alike unavailing to move him from his righteous judgment and resolve. O, patriot of patriots! At that hour and in that dire emergency alone upholding the pillars of the Constitution! Simply and tenaciously insisting and to the last persisting that the man whom the people had lawfully chosen to be Chief Executive of this nation should be seated, under the law and rules as they read, in the Presidential chair; as he must have been and would have been if the regularly prescribed methods succeeding election and preceding inauguration had been adhered to and resolutely pursued by all the legislators of the nation who desired to live under the administration of Samuel J. Tilden.

Turn him out of the Democratic party! And because he will not vote for such a bill as this? Challenge him and put him to flight and exile? Let Dares in his youth and in his boasted strength of pugilistic elocution be tumultuously applauded as "swaggering forward he draws the gauntlets on," "defies the circling host," and in default of instant answer demands the prize. See how old Entellus "drives and batters Dares all abroad," until "Father Eneas suffers not their heat go further, nor Entellus feed his fury more;" but rescuing the Trojan champion from his aged but resistless foe, half leads, half bears him weak and limping to the waiting boat.

Mr. Chairman, were we not entitled to a bill from this committee of able and experienced and distinguished legislators that should have been exact in its statements and enumerating in detail—such a bill, and none other, accompanied by directly informing and argumentative calculations made by experts in the committee-room and verified by members having that department of inquiry and preparation especially in charge; presenting in definite and explicit language in the bill itself each object of import article by article, each imposed tax dollar by dollar and fraction by fraction? Why not, in so important and grave a matter as this? When even the distinguished advocate of tariff agitation at this session, who has had the closest intimacy with the practical workings of our schedules, is compelled to say that the present system must not "go" otherwise than "as it came, slowly, and by such wise and moderate steps as will commend themselves to the judgment of all fair-minded men?" Nor let me fail here to present the two paragraphs following the quotation just read from Mr. HEWITT'S speech, delivered in this House so late as April 30, 1884.

> To abolish protective duties at once would ruin me; it would ruin the manufacturers; it would dislocate the labor of this country now engaged in the protected manufactures. We have no right to inflict this wrong. Hence, with the views I entertain, I have not hesitated upon all occasions to confirm the statements of gentlemen upon the other side that this reform must be made slowly. I warn my friends upon this side not to proceed rashly. I warn them that any mistake they may make will be taken advantage of by the manufacturers to put down wages, and to persuade the workmen that we are their enemies and not their friends.
>
> There is only one method by which we can accomplish this great result. Remove duties where it is possible—and there is plenty of room—without injuring existing interests, and then the steady progress in the improvement of the condition of the working classes, especially in their regular employment, without loss of time, which is what they want now more than high wages—this steady progress will convince the workingmen that we are on the right road; and particularly will it convince them when they find that in the day of profits their trades-unions will be powerful enough to demand a better and fairer share of the earnings of industry.

The accusation has gone abroad, and has not been met by saving denial or explanation, that the Republican party has blundered in this relation,—greatly, grossly, almost irreparably. If the Democracy of this House was not to be permitted to agree on that line of non-action at this session which was commended with great particularity and vehemence by the Washington Daily Post and by other so-called Democratic organs (that have not a word to say against railroad and telegraph monopolists), that are now seeking to traduce and defame every Democratic Representative here who will not approve or vote for this bill (and, by the way, I will append to my speech an editorial article from the Washington Post of March 15, 1883, written and published when that paper was under the same management as now), if the Democratic members of Congress were to be called upon to act at this session with respect to a tariff measure issuing from the Ways and Means Committee, was not every member on this side, on single call or objection, entitled to a specific proposition or series of paragraphs on which to exercise judgment and conscience alike? What! Follow one sweeping blow in the dark with another and call that revision and reform?

Shall it be said there was not sufficient time for selection and itemizing? Then it shall be said that it was not a time to bring forth from the committee any bill whatsoever on this subject.

I appeal here and hence, and standing within the ranks of the Democratic party where I have done my full share of arduous service these fifteen years last past, whether there appears any foundation existing at the beginning or laid during the progress of the consideration of this subject for any gentleman here or any number of gentlemen here to set up a standard of political orthodoxy and write anathema over it. For it is assumed that they put themselves by this measure on a platform by and from which the citizens of this Republic will say that they are or ought to be clothed with excluding powers.

For one, I declare with reluctance but as in duty bound that I could not under any conditions praise this bill, coming as it does from the heretofore justly renowned Democratic members of the Committee on Ways and Means of the Forty-eighth Congress. There would appear to have been no study for it in the committee; there is no legislative genius displayed in it, although we know that there is plenty

of educated intelligence behind it. And as a party measure, supposing that to be alone considered, no possible good will or could come out of it.

Mr. Chairman, it is said that the Democratic party must present and advocate free-trade doctrines, or we shall have no issue of clear-cut lineaments before the American people during the coming Presidential campaign. What! no issue, with railroad and telegraph monopolies oppressing us on every hand, and with the almost certain prospect of a candidacy from the Republican national convention that will be obviously the first choice of the owners and managers of these monopolies?

We have put up the bars against Chinese immigration so far as we could, but Chinese labor is not in any event far from our doors. Many classes of artisans in San Francisco would probably be soon forced to take rice-djet wages or be thrown out of employment entirely, if this bill should become a law, by reason of competition from Chinamen located on our borders or engaged in the manufacture of goods in their own land. It is difficult to make exact inquiry as to these matters under the wording of such a measure as this. But it is deserving of notice that the California newspaper organs and circulars of the owners of the transpacific steamship lines are very earnestly in favor of free trade and strongly commend the pending bill, while it is also true that some of them—some of the so-called Democratic numbers in the list, doubtless in enforced deference to local public sentiment—concede that this presentation and pushing is inopportune and likely to prove unavailing at this session.

The wiser editors of railroad and telegraph monopoly organs, however, evidently recognize the fact, without being explicitly told of it from monopoly headquarters, that the introduction of this bill at this time effects or amounts to a diversion in favor of their masters. Ah! if the honorable and renowned gentlemen who brought forth these pages had had the slightest serious suspicion in this direction, how carefully they would have inquired if it had any foundation, before, at this session, under the circumstances that surround us, they presented and with their great strength urged the passage of this measure!

Tariff reform, tariff revision we all desire; and for one I have never hesitated to declare myself in favor of reducing the custom-house levy until the income from imposts on foreign products and manufactures shall ultimately be brought down reasonably close to the expense account of the Federal Government—a liberal margin being allowed for the incidental and accidental—a discrimination for our own productions and industries being meanwhile carefully and skillfully and jealously preserved and maintained.

But the moment you concede, as you must, as you do, that free trade is to-day "impracticable," that, in the language of the eminent gentleman from New York [Mr. HEWITT], even a reduction taking off only so much as strictly speaking could be denominated protective would be "ruinous" to him and to all other manufacturers, you give the questions as to selection of articles and amount of subtraction from duties into all our hands. Each item should be submitted to us all, as are the paragraphs coming from that most diligent and laborious and painstaking of House committees,—the Committee on Rivers and Harbors. It is then and thereafter, neither more nor less, and nothing other than an inquiry as to degree: how much shall you take off here, and how much shall be—how much ought to be—the deduction on that article? The committee should have treated this subject in this clear and simple manner, and exhibited that modicum of respect for us who are without their council, and, if you please, especially for those who have made their first advent here, which would have been implied by a section-text embracing all items, and a report in detail.

There is no pretense anywhere but that the present tariff is iniquitous in its discriminations. But it is not like the schedule of a railroad company, with respect to which the authors and corporation publishers claim approximate perfection, and with respect to which a horizontal cutting in some cases, if too great, is met and compensated for in other instances where it is certain that charges bringing revenue to the one coffer will still remain relatively high and positively exorbitant.

A question of degree; that is what this is. Even if it be acknowledged for the moment that the British free-trade standard is the correct one, still it is a question of degree. And in representing my own constituency, who have named to me and the committee some articles which they prayed might be untouched, as well as in giving utterance to my individual opinion by my action here, I want and I demand a fair basis for consideration and judgment from the hands of a principal and an industrious committee of this House. There need be no fear as to the reasonableness of such a desire and demand. And one man can just as well go before the country upon that proposition and upon my side of it, as three men can go before the country on the other side. Why not? "Thrice armed is he who hath his quarrel just."

Mr. Chairman, I may be wrong, but it does appear to me that upon this subject, where there is so much heat and temporarily party-dividing opposition, there ought to have been in this body a practical unanimity. All can see and all declare that the present law of tariff is imperfect, that the schedule of charges is too high, that in some instances the impost is outrageous. Some contend that on the one fact of recent change—the passage of a law reducing the imposts at the last session—it behooves us to wait at least another year before this subject is touched at all even in the privacy of a committee council. And while we allude to this and observe the impatience with which most of the members of that splendid delegation from the State of Kentucky—with whom I had the honor to stand in a minority a few weeks ago with respect to a subject that most nearly, if not almost exclusively, affected their immediate constituencies—when we see how, with a single exception, those gifted gentlemen regard our reluctance in these premises, we can not avoid bringing to mind the language which their most distinguished statesman of a former generation once used on a similar occasion.

> But in my opinion, sir, the sudden repeal of the tariff policy would bring ruin and destruction on the whole people of this country. There is no evil, in my opinion, equal to the consequences which would result from such a catastrophe. * * * And what is the just complaint, on the other hand, of those who support the tariff? It is that the policy of the Government is vacillating and uncertain, and that there is no stability in our legislation. Before one set of books are fairly opened, it becomes necessary to close them and to open a new set. Before a law can be tested by experiment, another is passed. Before the present law has gone into operation, before it is yet nine months old, passed as it was under circumstances of extraordinary deliberation, the fruit of nine months' labor, before we know anything of its experimental effects, and even before it commences its operations, we are required to repeal it.

All can see that tariff revision and reform belong upon the banner of any party that puts forth a national platform on which electoral votes are called for in this year of our Lord. I hope and trust that there will be much mutual instructing in the coming canvass and a clear understanding on this subject at its close.

I firmly believe that a bill could have been framed at this session very largely reducing the tariff charges of our Government, for which there would have been no need of a party conference, for which no caucus constraint would have been claimed, against which there would not have been cast five Democratic votes; while it would have received a great number—I think a majority—of votes from the other side of the House.

But why this introduction and this consequent perturbation? Why these threats of party ostracism and expulsion?

If I did not have such profound respect for my fellow-Democrats upon this floor as I profess on all proper occasions, and as I do feel proud with some references to proclaim, I might be led to suspect, in some flashing moment of thought on this subject, that an underlying and perchance inciting motive constraining and compelling a few Representatives here to act in regard to this subject—a motive operating all unconsciously to them—was the wish to capture and establish a leadership in the approaching struggle for the election of a Chief Executive. But I will not entertain or tolerate such a suspicion.

But some things in this relation are certain and not to be effaced. The judgment of the party, as intelligently deduced from official and current expressions one year ago, was hostile to this agitation in this form at this session. Whatever of pledge in general terms was given on this subject two years ago, in a comparatively few localities, received legitimate modification in legislation that has since been had in this Capitol during the second session of the Forty-seventh Congress. Whatever of specific party promise was made in any of the States in 1883 respecting this issue was unfriendly to the introduction and urging of such a measure as is now pending before us; but required something of an opposite nature,—a promise not unobserved but unfulfilled.

"A firm, first step toward free trade!" How so? Any subtraction, no matter how insignificant in point of amount, might have been christened with such a title. But no: this makes the guessed-at minimum for the heroic "firm first step." And one of the foremost advocates placidly declares—in so speaking at once exhibiting his own courageous complacency, I had almost said his reckless indifference, and the entire ignorance of himself and all his associates as to what will be the precise effect, in each or any instance, of this slashing text—"Sometimes we will cut to the quick and draw blood." Is that the language of conservative Democracy? Is that the speech of Jeffersonian statesmanship, when dealing with such a question in any legislative tribunal? But let credit be given here in the way it is due. This is a candid, if not inadvertent, confession of the character of the measure on which the summons of partisan fealty has been laid.

No time to consider the impositions and extortions and consequent oppressions and tyrannies and corruptions of railroad monopolies; no time so far to listen here to pleas for the reduction of excessive fares upon railroads built by the aid of the loan of the Government's bonds and money and the absolute grants of the people's land, under laws that specifically reserved and prescribed the right of Congress—that has accrued—to regulate the tolls; no time to give full audience here on the question of enlarging the postal facilities of this Government, so as to provide, in accordance with the spirit and in obedience to the very letter of our Constitution, as interpreted by a century of Congressional and administrative action, for the telegraphic transmission of the letters of the people at reasonable rates—as is provided by every other civilized nation on the face of the earth; but weeks, and if necessary months, for the advocacy of a "firm first step" in the path of legislation, which if taken by us and approved and followed by other legislators who are beyond us and who are between us and the wished-for consummation, will result admittedly—nay, it is almost the sentence of boasting—in flesh-cutting and blood-letting, when, as a law for the market, the manufacturer, and the husbandman, the statute—the enact-

ment of which is the "step"—passes into and across the business interests of the country.

APPENDIX.

[From the Washington Post of March 15, 1883.]

THE DEMOCRATIC DUTY.

The Post's opinion of the revenue bill passed by the Forty-seventh Congress is in entire accord with the opinions expressed by the leading opponents of the measure in both Houses of Congress.

* * * * * * *

The Post is not and does not propose to be in favor of renewing the tariff fight in the Forty-eighth Congress. The dominant party has gotten its load on its back, and it should be permitted to carry it undisturbed into the campaign of 1884. It is a load that will grow heavier every day, for light is breaking in on the public mind and the iniquities of our tariff schedule are beginning to be seen as they are. When the Democratic party has the three branches of the legislative power in its hands—the House, Senate, and Presidency—it will be for the first time in many years not only able to legislate, but responsible for action or non-action.

Only one of these branches will be Democratic for the next two years, and that one will not be required to attempt the impossible, and load itself with failure and the odium of needlessly disturbing the business interests of the country. Shall the Democratic party forego all the immense advantages of its present position? That is the question involved in the proposition to open up tariff legislation next winter. Shall the Democratic party, on the eve of a Presidential campaign, with victory in sight, undertake a palpable impossibility, with no chance of gain, but a certainty of loss in popular strength?

No measure that would be honestly Democratic could get through the Senate, and if such a bill was passed by both Houses it would meet death at the other end of the Avenue.

The duty of the Democracy, as we see it, is to let the tariff severely alone until the possession of legislative power shall clothe that party not only with the responsibility but with the means of putting Democratic principles into the shape of law. The Democratic situation at this time could not be improved. The opposition has done just what it would have done if it had been inspired with an earnest desire to help elect a Democratic President. It has done this not from choice, but from compulsion of circumstances beyond its control. For "there is a divinity that shapes our ends, rough-hew them how we may."

Let the Republican party stagger into the campaign of next year under its intolerable burden, to find the Democracy compact, elate, determined, and confident; not demoralized by failure in an ill-advised effort to do an impossible good.

Rivers and Harbors.

SPEECH

OF

HON. NEWTON C. BLANCHARD,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the State of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. BLANCHARD said:

Mr. CHAIRMAN: I apprehended that the feature of this bill which would be most assailed on this floor would be the appropriation to commence the construction of the Hennepin Canal. I was not surprised, therefore, when my friend from Wisconsin [Mr. JONES] based the main part of his argument against the bill upon that appropriation.

It is well known by the members of the Committee on Rivers and Harbors that in the consideration of this question by the committee I was not in favor of placing in this bill an appropriation to commence the construction of that canal. But having been overruled by a majority of the committee, I will say now that I am not only in favor of the construction of that canal, but I am in favor of permitting the appropriation for the commencement of that enterprise which is contained in this bill to remain there. The opposition which I raised to that measure in committee was not because I did not think the canal should be constructed, but was for other reasons, which it is unimportant for me here to state.

That canal, extending as it does from the Mississippi River to the great lakes, and connecting as it does the magnificent system of waters of which the Mississippi River is the nucleus with the system of water ways through the lakes and the Saint Lawrence River and by way of the New York canals and Hudson River to the Atlantic, is a work which I think this country should not longer delay the inauguration of.

This has been called by recent writers the "canal age." It is the canal age in all countries except our own. I have been reading up what other countries have done in respect to this matter of canal construction and what they are now doing in that regard. I will read to the House some notes I have made upon that topic, and if gentlemen will give me their attention I think they will find them interesting.

CANALS.

It has been well said that navigable canals are to those people who inhabit inland countries what marine science is to maritime nations.

The most flourishing nations have always been engaged in enterprises of this kind; thus employing the studies and the leisure of peace, as well as stimulating the enterprise and engaging the energies of their people.

The Chinese, who have been described as "that singular people who were several centuries before us in the invention of printing, of gunpowder, and of the compass, and whom, nevertheless, we have left far behind in their application and their use; who have cultivated astronomy and painting without ever making any considerable progress in either; and who, with a wish to go into higher studies, occupy themselves on a very complicated mechanism of reading and writing," have in no instance so much merited the praises bestowed on them by travelers as in that which relates to their dikes, their bridges, and their canals. Among all the water-works which contribute to the riches and to the conveniences of this extensive and populous empire, that which may rival the glory of European or American architecture is the Yun-ho, called the Grand or Imperial Canal, which joins the rivers Kiam and Hoang-ho, and which forms a continued navigation for more than three hundred leagues from Canton to Pekin. It is perhaps the greatest canal in the world; is from 200 to 1,000 feet broad and 10 feet deep. There are in all 400 canals in China, with a length in the aggregate of 12,000 miles, whereby that country is enabled to sustain one of the most crowded populations of the world, 333 to the square mile, or, if restricted to the cultivated portions, nearly 600. Holland sustains a population of 593 to the square mile, and has scarcely a village without its water road.

The first masters in science, the architects of the obelisks, the ancient Egyptians, who, with such efforts of industry, compelled the waters of the Nile to fertilize their plains and to form a communication between their cities, conceived a plan that might have changed the whole face of Europe by shortening the distance between it and the East Indies and China. They began a canal which was to establish a communication between the city of Memphis and the Arabian Gulf, and so to continue the navigation of the Nile and the Mediterranean. Strabo, Diodorus, and Herodotus clearly state the fact, and travelers still discover some vestiges of the work. "The caliphs roused the slumbering genius of the nation for astronomy, geography, and physics; they also undertook to form the junction of the two seas; but they did not carry on the works to any great extent." A canal begun by Necho and finished by Darius once connected the Nile with the Gulf of Suez, and some traces of it are still visible.

The warlike and conquering spirit of the ancient Romans left them no leisure to engage in enterprises of this sort, in proportion to their knowledge and their greatness. Projects of this kind, however, were from time to time entertained by them; that of Julius Cæsar to excavate a canal from Rome to Terracina, the plan for the union of several rivers proposed in the reign of Nero, and others mentioned by Pliny as the ideas of Trajan, were never carried into effect. The canal by which Caius Marius supplied his camp from the Rhone, in the vicinity of Arles, was by no means an extensive work. We have no account of the date when the Peterborough canal in England was constructed. Lombardy was the only theater on which the Romans chiefly distinguished themselves in undertakings of this description. Quintus Curius Hostilius made an opening into the Po from the Mincio, which joined the Tartaro and the ancient Philistine Canal. Æmilius Scaurus drained the marshes of Parma and Placentia by means of navigable canals. Augustus, by another canal, united the different branches of the Po with the ports of Adria and Ravenna.

Even in the darkest ages some monuments of similar works have been left. Odoacer has given his name to a canal which went straight to the sea from the river Montone before it reached Ravenna.

The Moors opened a much larger canal from the city of Grenada to the River Guadiana, now called the Guadalquiver.

The Aragon Canal in Spain was commenced by Charles V in 1528, and completed toward the close of the eighteenth century.

Charlemagne, in the vast extent of his expeditions and enterprises, undertook the project of forming a junction of the Main and the Rhine with the Danube, and of the ocean with the Black Sea. He even began the canal that was to join the Almutz, one of the tributaries of the Danube, with the Rednitz, which discharges itself into the Main.

The two canals which form the communication of the Ticino with the Adda, and which unite at Milan, are the most perfect and most celebrated work of hydraulic architecture previous to the restoration of the arts and sciences.

The Canal Della Martesana was constructed in the year 1460 under the Duke Francis Sforza, and the two canals were joined together toward the end of that century by Leonardo da Vinci.

Sluices, with double gates, or the pound locks for canals, were invented and carried into effect, for the first time, on the Brenta, near Padua, in the year 1481, by two engineers of Viterbo, of which circumstance Zendrini has preserved the memory in the twelfth chapter of his book on Running Waters. Leonardo da Vinci instantly availed himself of this great invention to form the junction of the two canals of Milan. The invention of these locks produced, moreover, the continuation of the navigable canals of Bologna, of Modina, and of several others in Italy.

The first locks that were ever erected in France were those of the canal of Briarre. This canal was begun in the time of Henry IV and the Duke of Sully, and was completed under Louis XIII and Cardinal Richelieu. Its length is eleven French leagues, and it forms a communication between the Loire and the Loing, which is one of the tributaries of the Seine. Under Louis XIV another canal was drawn from the Loire near Orleans, which flowed to meet the first canal of Briarre near

Montargis; and as in summer there was an insufficiency of water in the Loing to supply a commodious navigation, under the minority of Louis XV they determined to run another canal all along the banks of the river to the vicinity of the Seine; and this, properly speaking, is the continuation of the old canal of Briarre.

In the reign of Louis XV was formed also the canal of Picardy, forming a junction between the Somme and the Oise, which afterward enters the Seine about five leagues from Paris.

One of the most famous canals is that of Languedoc, one hundred and forty-eight miles long, which forms a communication from the Mediterranean Sea to the Garonne and the ocean. Boats pass from the one sea to the other, traversing valleys and mountains, and ascending to the height of six hundred feet above the level of the two seas. The harbors of Bordeaux and Marseilles avoid, by this means, a circuitous route of communication of upward of eight hundred leagues. This great undertaking, commenced in 1666, was completed as early as the reign of Louis XIV, after a labor of fourteen years and an expenditure of eleven million livres.

Another great canal undertaking was the junction, made by Peter the Great, of the Baltic with the Caspian Sea. Vessels from the Caspian Sea ascend the Volga and then pass into the Tuertsa, which is one of its tributaries. It is here that the canal begins which flows into the river Sna, by which you descend first into the Mesta and thence into the Wolkowa; afterward into the canal which runs along the banks of Lake Ladoga; and, lastly, in the Neva to Petersburg and the Baltic. They have also made another canal, which establishes a communication between the Volga and the River Don and the Black Sea. In Poland, another communication has been opened from the Baltic into the Black Sea by means of the canal that joins the Vistula with the Boristhenes.

The junction of the rivers Oder and Spree by means of a canal was the work of Frederick William, surnamed the Great Elector.

In Flanders there is an ancient canal which goes from Brussels to the Scheldt.

The canal system has been more largely developed in Holland than in any other country in Europe. Canals were commenced in Holland and Belgium in the twelfth century. They enabled Flanders to become the center of commerce about the fourteenth century. Owing to the flatness of the country and the abundance of water, the canals in these countries are for the most part without locks except at their outlets. They realize in perfection the requirements of inland navigation. They serve as the highways of traffic throughout the country. In Amsterdam the number of canals nearly equals the number of principal streets. The Dutch canals have in general proved very remunerative undertakings, and gave the Netherlands an importance in Europe in the Middle Ages quite disproportionate to the extent of the country. In 1626 was begun a canal which when finished connected the Meuse with the Rhine.

The canal from Ghent to Ostend is the work of the present century. The rivers Rhone and Rhine are connected by a canal; also the Seine and the Rhone; also the Loire and the Saone, and the Scheldt and the Somme. At the outbreak of the French revolution last century there were 663 miles of canals in France, while in 1870 there were 2,954 miles of canals (since increased), 2,065 miles of canalized rivers, and 1,871 miles of uncanalized rivers, making in all 6,890 miles of inland navigable-water communication in France.

In Ireland the navigation of the river Shannon has, by means of canals, been extended into the heart of the country. There are also in Ireland the Grand and the Royal Canals. The Grand Canal has a length of ninety-nine miles. Its summit level is two hundred feet above the sea. It has several branches, raising its total length to one hundred and sixty-four miles. It runs through the bog of Allen, which occasioned a large expenditure. The Royal Canal is ninety-two miles long and rises to a height of three hundred and twenty-two feet above the sea at its summit level. There are, in all, three hundred miles of canals in Ireland.

In Scotland, I believe, near Glasgow, the two seas on the east and west have been joined by means of a canal passing from one frith to the other.

In England there is a canal which passes from the city of Liverpool to Warrington. The Bridgewater Canal extends from Worsley to Manchester. The river Mersey is joined by means of the Grand Trunk Canal with the Trent and the Humber; and a junction was proposed, and I believe carried into effect, between the Trent and the Severn, which flows into the Bristol Channel. The Thames and the Severn are also united by a canal. Notwithstanding the fact that canals were not introduced into England until 1755, later than in any other of the European countries, those I have named above and others, connecting many of the towns, especially in the southern part of Great Britain, have in the aggregate a length of 2,800 miles; greater than the navigable length of her rivers, which is only 2,500 miles. The completion and opening of the Amsterdam Ship-Canal has been the work of recent years. The Henares and Esla Canals in Spain were begun in 1863 and completed in 1868.

The Cavour Canal, in Italy, was commenced in 1862, and cost over $20,000,000. It is fifty-one miles long, and has a fall of seventy-one feet. In India, what is known as the Buckingham Canal, going from Madras to the Kistna delta, has been contructed; also a canal running along the Malabar coast. But the most extensive work of this character in India is the Ganges Canal, opened in 1854. This canal, with its main branches, is about six hundred and fifty miles long. It was remodeled about 1866, and an extension, known as the Lower Ganges Canal, was commenced, to supplement the original canal. This Lower Ganges Canal, not yet completed in 1882, is designed to have a total length of five hundred and eighty-two miles.

There are other canals in the Northwest provinces of India, known as the Agra and Eastern Jumna Canals; also the Orissa and Sone Canals in Bengal, and yet others in other provinces of India. The British Government has expended in the construction of navigation and irrigation canals between the years 1867 and 1878 £10,570,000.

The Suez Canal, connecting the Mediterranean and Red Seas, through the Isthmus of Suez, and saving a long circuitous route around the Cape of Good Hope for maritime traffic between Europe and the southern coast of Asia, is one of the greatest works of modern times. "It is certain, however," says Harcourt on Rivers and Canals, "that the construction of such a channel was not a modern idea, as Herodotus mentions a proposal for cutting through the isthmus; nor, indeed, can it be considered an entirely modern undertaking, as there is evidence that a water communication for small vessels between the two seas was formed and maintained from about 600 B. C. to 800 A. D., but was subsequently allowed to fall into decay." The idea of reopening a channel of communication appears to have originated with Napoleon I.

The canal as now constructed is ninety-nine miles long, from one hundred and ninety-six to three hundred and twenty-eight feet wide, and has a depth of twenty-six feet. Its total cost, according to M. De Lesseps, amounted to a little over £20,000,000.

For most of the foregoing data concerning canal construction I am indebted to the work of Paul Frisi, an eminent Italian hydrographic engineer of the last century, and to a very useful treatise on rivers and canals, published in 1882, by Harcourt, an English engineer.

There are twelve canals in the State of New York, of an aggregate length of eight hundred and eighty-six and a half miles. The construction of these canals was commenced in 1817, and the Erie was completed in 1825. The enlargement was commenced in 1835, and the construction account closed in 1862, although practically completed in 1859.

The cost of the twelve canals, including enlargement and land damages, was $65,644,848. To this add interest on loans and the cost of repairs and management up to 1865, inclusive, and the total cost to New York was $107,853,056.

The amount of tolls received, inclusive of the year 1865, was $93,272,287, enough, less $14,580,769, to pay off in full the entire cost of the canals.

The length of the enlarged Erie canal is three hundred and fifty miles.

It is not new in the history of canals that there should be doubters as to their capacity, efficiency, and even practicability.

Not far from 1817 De Witt Clinton, commissioner of the State of New York, came to Washington and requested the General Government to enter with the State of New York into the joint construction and ownership of the proposed Erie Canal. The answer returned was that the General Government was not able to assist in so expensive a work. After its completion, in 1825, Mr. Clinton, in a speech at a jollification meeting, depicting in glowing terms the vast benefits which would result from the undertaking, stated that in fifty years from that date Buffalo, then an Indian trading station, and Chicago, a frontier post, would contain a population each of 100,000 souls. This remark was the subject of newspaper comment at the time, wherein Clinton was styled an enthusiast and zealot. Yet his prediction was more than fulfilled within less than fifty years.

About the year 1820, soon after the Erie Canal was projected, Gouverneur Morris, who with James Hawley shares the honor of its conception, writing to a friend in Europe, said:

> Hundreds of large ships will at no distant period bound on the billows of these inland seas. Shall I lead your astonishment up to the verge of credulity? Know, then, that one-third part of the expense borne by Britain in the late campaign would enable ships to sail from London through the Hudson River into Lake Erie.

Mr. Chairman, nearly 3,000 ships now "bound on the billows of these inland seas," and upon the Mississippi and its tributaries quite 3,000 more. And no man can now fix the limit at which the extension of the water route then conceived and the development of the country then inaugurated shall stop. A water communication extending from New York over two-thirds the breadth, and possibly the entire breadth, of the continent, and from the jetties of the Mississippi to the Straits of Mackinaw, will furnish the only reliable check against extortionate charges for transportation.

Now let us see what other countries are projecting and doing in the way of canals and water routes.

From a paper on canals prepared in March of the present year (1884) by Horatio Seymour, jr., late State engineer and surveyor of the State of New York, I take the following:

> Great Britain is contemplating a canal from Liverpool to Manchester, and also from Belfast to Galway, at a total cost of $280,000,000.
>
> The French have projected four great water routes within their own territory, and have appropriated the sum of $200,000,000 for works which will cost at least five times that amount to finish.
>
> The German Empire is expending $86,000,000 on its water routes.
>
> Austria has in contemplation a canal from the Danube to the Elbe, one hundred and thirty-eight miles long, which is to cost $29,000,000.
>
> Holland has lately completed a ship-canal from the city of Amsterdam to the sea.

Russia is building a canal from St. Petersburg to Cronstadt.

Greece has nearly completed at Corinth a canal four miles long, costing $5,500,000.

France is engaged in the greatest canal enterprise ever attempted—the Panama Canal—to connect the two great oceans, forty-six miles in length, and which will cost $120,000,000. Besides, she has in contemplation a new Suez canal and a channel leading from the Mediterranean Sea to the Desert of Sahara.

In America, Canada proposes a canal from Trenton, on Lake Ontario, to Georgian Bay, a distance of two hundred miles, besides a smaller enterprise at Carillon, and the Murray Canal. In addition to these she has nearly completed a water way, costing $50,000,000, leading through the St. Lawrence to Lake Erie, by which she hopes to divert our grain trade from the cities of New York, Philadelphia, and Baltimore to Montreal.

The liberality of France in dealing with its rivers and harbors is in singular contrast with the policy of the United States in such matters. On one single harbor, that of Cherbourg, it has expended no less than $100,000,000—more than Congress has given to all the rivers and harbors in this country in a century. Since 1852 it has given $125,000,000 toward improving its various interior water ways, and is now spending from $10,000,000 to $15,000,000 a year for this purpose. She is expending this much per annum on her rivers and harbors when where she counts hers by tens we count ours by hundreds.

Mr. Chairman, in more than one provision of the Constitution can be found authority for Congress to make appropriations for the improvement of our rivers and harbors. I argued this branch of the subject very fully in a speech in the Forty-seventh Congress, on the 6th of June, 1882, and do not now propose to review the subject. What is known as the "commercial clause" of the Constitution is not only broad enough to cover all appropriations made for the improvement of the navigation of the navigable waters of the United States, but also to warrant the expenditure of large sums in the construction of canals. If it be permissible to canalize our rivers, it is permissible to construct canals outright. But, sir, this question is not a new one in Congress. By reference to the early records of this body I find that on the 15th of December, 1817, a committee of the House of Representatives reported in favor of the power of Congress—

1. To lay out, construct, and improve post-roads through the several States, with the assent of the respective States.
2. To open, construct, and improve military roads through the several States, with the assent of the respective States.
3. To cut canals through the several States, with their assent, for the promoting and giving security to internal commerce, and for the more safe and economical transportation of military stores, &c., in time of war, leaving in these cases the jurisdictional right over the soil in the respective States.—*Sergeant's Constitutional Law*, page 326.

President Madison, in his message to Congress, December 5, 1815, said:

Among the means of advancing the public interests, the occasion is a proper one for recalling the attention of Congress to the great importance of establishing throughout our country the roads and canals which can best be executed under the national authority. No objects within the circle of political economy so richly repay the expense bestowed on them; there are none the utility of which is more universally ascertained and acknowledged; none that do more honor to the government whose wise and enlarged patriotism duly appreciates them. Nor is there any country which presents a field where nature invites more the art of man to complete her own work for their accommodation and benefit. These considerations are strengthened, moreover, by the political effect of these facilities for intercommunication, in bringing and binding more closely together the various parts of our extended confederacy. While the States individually, with a laudable enterprise and emulation, avail themselves of their local advantages by new roads, by navigable canals, and by improving the streams susceptible of navigation, the General Government is the more urged to similar undertakings, requiring a national jurisdiction and national means, by the prospect of thus systematically completing so inestimable a work.—*Elliott's Debates*, volume 4, page 479.

Again, sir, I find that on a proposition to invest a certain portion of the public lands in shares of the Chesapeake Canal, Mr. Bayard, of Delaware, in the Senate of the United States, on February 13, 1807, said:

It is admitted that the Constitution does not expressly give the power to cut canals, but we possess and are in the daily exercise of the power to provide for the protection and safety of commerce and the defense of the nation. It has never been contended that no power exists which has not been expressly delegated. There is no express power given to erect a fort or magazine, though it is recognized in the delegation of exclusive legislative powers in certain cases. The power to erect light-houses and piers, to survey and take soundings on the coast, or to erect public buildings, is neither expressly given nor recognized in the Constitution, but it is embraced by a liberal and just interpretation of the clause in the Constitution which legitimates all laws necessary and proper for carrying into execution the powers expressly delegated. On a like principle the Bank of the United States was incorporated. Having a power to provide for the safety of commerce and the defense of the nation, we may fairly infer a power to cut a canal; a measure unquestionably proper with a view to either subject.—*Elliott's Debates*, volume 4, page 471.

These, Mr. Chairman, are the utterances of some of the fathers of the Republic, affirming at an early day, and when most of the framers of the Constitution were still living and when that instrument was fresh before the country, the power and duty of Congress to enter upon the work of canal construction.

But I will not go further into that question, but invite the attention of the House to the utility of canals as factors in the solution of the great problem of cheap transportation.

Mr. Chairman, it is a well-known fact that the actual cost of transportation is usually much less on water lines than on railroads. Therefore, where water lines come into competition with rail lines, the rates on the former exert a regulating influence over those on the latter.

There are now more than 100,000 miles of railway in the United States, extending into almost every town. These railroads are so closely connected as to be operated practically as one line with respect to shipments over two or more roads. Against these railroads, as competitors, holding them in check as respect freight rates, our water routes can be relied on.

Mr. Horatio Seymour, jr., in the paper before referred to, states that the revival of canals in Great Britain and Europe has been brought about "by the conclusion arrived at by the authorities that in any country it is highly important, alike for agriculture and other industries, that there should be a network of canals running somewhat parallel to that of railroads." He further says:

In this country the opinion that canals and water routes have lost their value for internal commerce has proved to be unfounded. Never in our history have they been of greater use. During the past season the great water route, consisting of the lakes, the Erie Canal, and the Hudson River, has carried a bushel of wheat from Chicago to New York for the average price of 9.16 cents, while the charges by rail were over 16 cents. At this low rate the canal has carried 42,350,916 bushels of grain. The water route is not only to be credited with this large amount of transportation, but also with having forced the railroads running to the seaboard to lower their rates.

But the amount saved in transportation is not the full measure of the benefit to all classes of our citizens. We have been enabled to send vast quantities of grain and other products to Europe which could not have been sold there if they had been burdened with the pooling rates of railroads.

The cost of carrying our products to the markets of the world has been so much reduced that the balance of trade has been turned in our favor. The currency of our country has been lifted to a par with specie, and the wealth which it has yielded to our producers gives hope to all classes of more prosperous times. No one can study the statistics of past years and fail to see that this is mainly due to our canal and water routes, without which we should not have had such a volume of exports nor such a wide margin in our favor in our commerce with the world.

Mr. Joseph Nimmo, jr., the very efficient Chief of the Bureau of Statistics, in his report on commerce and navigation for 1883, says:

The growth of foreign commerce of the United States for the last eighteen years has been very largely the result of the improved facilities which have been provided for internal transportation upon the lakes and the Erie Canal, upon railroads, and upon the Mississippi River, as well as for transportation upon the ocean.

* * * * * * *

These improvements in transportation have, as before stated, been made chiefly during the last fifteen years. During that period the foreign commerce of the country has much more than doubled.

This is shown by Mr. Nimmo, as follows:

The total value of exports of merchandise from the United States increased from $281,952,899 during the year ending June 30, 1868, to $823,839,482 during the year ending June 30, 1883, and the value of the imports of merchandise into the United States increased during the same period from $357,436,440 to $723,180,914.

Quoting the above, Mr. Seymour continues:

From the same report we learn that previous to 1874, except in occasional years, the balance of trade was against us. During the year 1873 we paid to foreign countries $119,656,288 more than we received, but since that time, except for the year 1875, the balance of trade has been in our favor, and for the year 1883 we receive $100,658,488 more than we paid.

This change was effected by the water route, that lowered its rate on a bushel of wheat from 26.6 cents in 1872 to 14.2 cents in 1874 and 9.16 cents in 1883, and by so doing forced every line of transportation to the seaboard to make a proportionate reduction.

Mr. Chairman, railroads have never furnished as cheap transportation as water routes, and the latter can always be relied on to keep freight tariffs down to a reasonable point. Different railroad lines running parallel with each other pool their issues, and thus practically cease to be competitors for the traffic of the country. Not so with the water routes. Everybody's boat or craft can ply on them, and the great number of boats and lines of boats engender sharp competition among themselves as well as with the railroads for the carrying trade. Thus it is that cheap transportation ensues.

The following table compiled by Mr. Nimmo, and found in his aforesaid report for 1883, shows, for a series of years, the difference in rates by rail and water, and the great advantage of the latter over the former:

Average freight charges per bushel for transportation of wheat from Chicago to New York during the years 1868 *to November* 1, 1883, *inclusive.*

Years.	Average rates per bushel.		
	By lake and canal.	By lake and rail.	By all rail.
	Cents.	*Cents.*	*Cents.*
1868	25.3	29.0	42.6
1869	24.1	25.0	35.1
1870	17.5	22.0	33.0
1871	21.6	25.0	31.0
1872	26.6	28.0	33.5
1873	19.2	26.9	33.2
1874	14.2	16.9	28.7
1875	11.4	14.6	24.1
1876	9.7	11.8	16.5
1877	7.5	15.8	20.3
1878	10.1	11.4	17.7
1879	13.0	13.3	27.3
1880	13.2	15.7	19.7
1881	8.6	10.4	14.4
1882	8.7	10.9	14.6
1883, January 1 to November 1	9.16	12.0	16.1

This shows that during the year 1883 the water route has saved 6.94 cents on every bushel that it has transported, or $2,939,153.57 on the 42,350,916 bushels which it carried. This great sum has been gained by the people.

This table, Mr. Chairman, shows how great is the utility of the Erie Canal not only to the people of the State of New York, but of the great West, and eloquently presents the argument justifying the appropriation contained in this bill for the inauguration of the Hennepin Canal enterprise. I believe, sir, that the General Government should construct this canal and others. All other countries are ahead of us in enterprises of this character. With less ability in a financial way than ourselves, they have exhibited a spirit of progress in matters of this sort it would be well for us to imitate. What better way of expending the large surplus which has accumulated and is constantly accumulating in our Treasury than to develop and make the most of the great advantages which a bountiful nature has bestowed upon us? Every work of this kind completed will repay in a few years, in a saving to the people, the cost of its construction. It is really in the line of economy to make appropriations for works of this character. The digging of canals where needed, such, for instance, as the one under consideration, the Chesapeake and Delaware Canal, the one proposed across the peninsula of Florida, and others, should keep pace with the improvement of our rivers and harbors.

But, sir, let us look further into this question of transportation by rail and by water. The more it is investigated the more apparent become the advantages possessed by the latter over the former.

FREIGHT CHARGES.

The comparative freight charges as between Saint Louis and New Orleans by water and between Saint Louis and New York by rail are indicated by the following statements, showing the rates which prevailed during the first six months of the year 1881. Rates from Saint Louis to New Orleans on bulk corn from January 1 to July 1, 1881, per bushel, were—

	Cents.
January and February	9
March	8
April	7
May	6
June	5

While all-rail rates on grain per bushel from Saint Louis to New York during the same period were: January, February, March, and April, 24½ cents; May and June, 21 cents.

This shows a difference of about 16 cents per bushel in favor of the river route.

In May, 1881, the rate from Saint Louis to Liverpool via the Mississippi River was only 18½ cents per bushel, whereas at the same time by the rail route via the Atlantic seaports it was about 30 cents per bushel; a difference of 11½ cents per bushel in favor of the river route.

At high and medium stages of water on the Mississippi River grain can now be transported in barges from Saint Louis to New Orleans at a profit for 4 cents per bushel, and hence the difference in favor of the route by river and sea to Liverpool is even greater than as stated above.

What is wanted is such a condition of the river, as regards depth and navigation, as will admit of stability and continuity in the lowest rates of transportation.

In this connection I take the following extract from a letter written in February, 1881, by H. Lowrey, president of the Saint Louis and New Orleans Transportation Company, to the secretary of the Merchants' Exchange of Saint Louis:

> In the uncertain condition of the river (as regards depth of water) during the period of navigation, the lowness of the rate of 5 cents per bushel can not always be depended on; but with the depth of water which the contemplated improvements between Cairo and Saint Louis will undoubtedly give, the time is not far distant when the rate named, 5 cents per bushel, may be continuously counted on.

As showing the wonderful capacity of the Mississippi River, when high, as a medium of transportation, Capt. B. D. Wood, of New Orleans, largely engaged in the transportation business on the river, in an address before the Committee on Rivers and Harbors, made the following astonishing statement:

> The towboat Jno. A. Woods towed twenty-six boats or barges containing 26,000 tons of coal from Louisville to New Orleans, a distance of 1,450 miles, at a cost of $25,000. To transport the same amount of coal by rail from Louisville to New Orleans at the low rate of one-half a cent per ton per mile would cost about $176,000, and to transport this amount of coal there would be required 2,600 cars, and it would take 80 locomotives to pull it, and in all would make a train about 18 miles long.

In his report on internal commerce of the United States for 1881 Mr. Nimmo says:

> The navigation of the Mississippi River is at times affected by low water, especially in that part of the river between Saint Louis and Cairo. The enjoyment to the full extent of the advantages afforded by the Mississippi River requires the employment of steamboats and barges of large size, and drawing, when loaded, about eight feet of water. At times, however, the river falls so as to admit only of the employment of boats and barges loaded to draw not more than four feet. This greatly increases the cost of transportation. The actual cost of transportation in vessels drawing only four feet is said to be nearly twice as great as when loaded to eight feet.

This subject was carefully considered by a select committee of the Senate on transportation routes to the seaboard in their report submitted April 24, 1874. It was found that during the nine years from 1865 to 1873, the condition of river navigation below the city of Saint Louis was as follows:

Average number of days less than four feet	3½
Average number of days over four feet and less than six feet	52⅔
Average number of days over six feet and less than eight feet	103⅝
Average number of days over eight feet and less than ten feet	69⅓
Average number of days over ten feet	136⅔

It appears from the foregoing table that during nearly one-half of the year the commerce of Saint Louis was more or less affected by low water.

The average stage of the river below Saint Louis during the years from 1874 to 1880, inclusive, was as follows:

Year.	Less than 4 feet.	Over 4 feet and less than 6 feet.	Over 6 feet and less than 8 feet.	Over 8 feet and less than 10 feet.	Over 10 feet.
	Days.	*Days.*	*Days.*	*Days.*	*Days.*
1874	.....	146	30	175	14
1875	.....	.....	.....	.....	.....
1876	.....	.....	.....	.....	.....
1877	.....	64	80	59	156
1878	.....	51	92	87	119
1879	4	81	79	55	145
1880	20	66	73	46	156

During 1877 the river was closed for thirty-six days on account of low water. During 1878 it was closed for sixteen days on account of low water. During 1879 it was closed for forty-one days on account of low water, and during 1880 it was closed for four days on account of low water. I have not the figures for 1881, 1882, and 1883.

Mr. Chairman, the wisdom of the judicious expenditure of money by the Government in the improvement of our water ways was never better illustrated than by the success of the jetties at the mouth of the Mississippi and the incalculable benefits which flow therefrom.

JETTIES.

The value of the Mississippi River as a commercial highway, and consequently its regulating influence over rail rates, has been greatly increased by the completion of the jetties at its mouth. Before the jetties were constructed it was with great difficulty that sea-going vessels drawing over sixteen feet of water could pass the bar at the mouth of that river. Fifty years ago this was not a very serious detriment to commerce, but the size and consequently the draught of sea-going vessels have since been greatly increased.

At the present time sea-going vessels, embracing both sailing vessels and steamers of the larger class, have a draught when loaded of from twenty to thirty feet. The obstruction to navigation by this class of vessels presented by the bar at the mouth of the Mississippi River became, therefore, a serious detriment to the commerce of that river and to the trade of the city of New Orleans.

Work upon the jetties was begun in the month of June, 1875, and their construction was so far advanced as to admit of the passage of vessels on the 4th of March, 1876. The depth of water reported upon their completion was twenty-nine feet. Now it is thirty-three feet. Before the jetties were constructed the charges for the towage of vessels from the Gulf to the city of New Orleans were from $1.25 to $1.50 per registered ton, according to the size of the vessel. The towage charges now are about 50 cents per ton. Material reductions have also been made in the rates of insurance on vessels and cargoes.

It would be difficult to estimate the value of the jetties in a commercial point of view. More than 3,000 vessels enter at and pass out of the mouth of the Mississippi River, and none of them are detained on account of an insufficient depth of water. Through their instrumentality New Orleans has become the second exporting city in the Union. For the year ending June 3, 1883, she was next to New York in value of exports, and ranked third in total foreign commerce, the amount of the latter being $104,704,076. Thus the building of the jetties has transformed New Orleans into a great seaport, seven lines of steamers being now employed in her foreign trade.

One of the most striking illustrations of the commercial advantages of the improvement of navigation effected by the jetties is furnished by the fact that the Southern Pacific Railroad Company have pushed their line across the State of Texas to New Orleans, largely for the reason that vessels of greater draught can reach that city than can enter at any of the ports of Texas.

The growth of the foreign commerce of New Orleans since the work was begun upon the jetties is indicated by the following table, show-

ing the tonnage entered at that port from foreign countries during each year from 1870 to 1883:

Tonnage entered at New Orleans from foreign countries during each year ending June 30, from 1870 to 1883, inclusive.

	Tons.		Tons.
1870	458,447	1877	603,183
1871	566,797	1878	718,163
1872	501,965	1879	652,789
1873	522,791	1880	760,910
1874	630,945	1881	963,835
1875	454,006	1882	620,072
1876	599,582	1883	734,791

This table shows an increase of nearly 100 per cent. of the tonnage from foreign countries at New Orleans from 1871 to 1881. It is impossible to show the growth of the domestic or coastwise trade of New Orleans since the completion of the jetties; but it is believed to have been greater than the growth of the foreign trade of the city.

As the result of the improvement of the navigation of the Mississippi River, and especially of the deepening of the water at its mouth by the jetties, the exports of wheat, wheat flour, corn, and corn-meal from New Orleans rose from 1,257,656 bushels in 1871 to 16,859,343 bushels in 1881, and exhibited an increase of 4,650,119 as compared with the exports of the preceding year.

The foregoing figures, and much of the foregoing data, I obtained from the valuable reports of Mr. Nimmo on the internal commerce of the country.

In his work on rivers and canals, the eminent English engineer and author Harcourt, speaking of the jetties at the mouth of the Mississippi, says: "It may be fairly said that the results attained in so short a time are among the most remarkable achievements of river engineering."

All honor to the great hydrographic engineer James B. Eads, who proposed and executed this colossal work. His fame is not confined to his own country; other countries acknowledge his great merit. Notably, the English Government has recently given striking evidence of the fact in inviting his opinion on the practicability of a proposed work of improvement of great magnitude in that country. The Albert medal of the Society of Arts, which is annually awarded by the society for eminent merit in promoting the arts and manufactures, has this year been bestowed upon Captain Eads. The jetties, Mr. Chairman, have opened a gateway to the outer world for that

GRAND CONTINENTAL AVENUE,

the Mississippi River, with its two thousand miles of main river and ten or twelve thousand miles of navigable tributaries.

To better the condition of this twelve or fourteen thousand miles of navigable water way (constituting two-thirds of the inland navigation of the Union) there is appropriated in this bill, in round numbers, about $6,500,000. And, sir, this sum is small when we consider the extent of country drained by this system of water ways. Look at it a moment. The valley of the Mississippi contains 768,000,000 acres of the finest lands on the face of the globe—enough to make more than one hundred and fifty States as large as Massachusetts, more territory than the areas of Great Britain, France, Spain, Austria, Prussia, European Turkey, and the Italian Peninsula combined. If peopled as Massachusetts is, it would contain five times the present population of the United States; and as France is, it would hold as many people as the whole area of Europe contains; and as Belgium and the Netherlands are, with not the same danger of famine, barring floods, it would contain four hundred millions of souls.

It was Thomas Carlyle, who, apropos of the unfounded fear of the world's overpopulation, made a mathematical calculation that the Mississippi Valley could raise corn enough, at the moderate estimate of thirty bushels per acre, to feed ten times the present population of the world.

The Mississippi River is the natural drain of that vast area of our territory lying between the Alleghany Mountains on the east and the Rocky Mountains on the west, and reaching from our most northerly boundaries to the Gulf of Mexico in the south, and embracing not less than nineteen States and Territories, and over 1,200,000 square miles.

The delta of this vast drain extends from 29° to 38° 30′ north, or across eight and one-half degrees of latitude. It is about six hundred miles in length by an average width of sixty miles. It embraces within its confines portions of the States of Missouri, Illinois, Arkansas, Tennessee, Mississippi, and Louisiana, and contains about 38,700 square miles, or in acres, allowing six hundred and forty acres to the square mile, the enormous aggregate of 24,868,000 acres. (Report of Hon. E. JOHN ELLIS, Forty-fourth Congress, first session.)

There is territory enough in the Mississippi Valley to make seven hundred and eighty farms each forty miles square. The rainfall on this extensive area must find its way through the main channel of the Mississippi to the sea. Some idea of the immense volume of water thus carried may be had by the statement that at extreme high water the Mississippi discharges 1,210,000 cubic feet of water and 2,000 cubic feet of solid matter into the Gulf per second.

The State of Louisiana, by the operation of natural laws, owes the servitude of drainage for the waters of two-thirds of the entire country, rushing, oftentimes, madly to final rest in the sea. Over the soil of that devoted State must be drained the rainfall of nearly half of the northern part of this continent. It is no wonder that frequently the Mississippi River within the limits of the State is fifty and sixty miles wide.

The denudation of the slopes of the mountains and hills, in the area drained by the Mississippi, and the deforestation of the valleys themselves, and the clearing up of the country for cultivation, have resulted in precipitating all at once, as it were, the rainfall into the rivers. When forests covered the country, the tangled mass of leaves, foliage, brush, and undergrowth on the ground retarded the drainage of the water, held it back, so to speak, and allowed it gradually to escape into the channels of the streams. By this means innumerable springs and brooks were formed and kept running during the entire year. But now the opening of the country for cultivation has facilitated the drainage of the rainfall into the rivers; the springs and brooks are dried up; nothing is there to hold back the waters, and their rapid and abnormal accumulation into the channels of the rivers have produced, and it is feared will continue to produce, the disastrous floods now so frequent. To prevent this, the fostering hand of the General Government is needed to be put forth with more vigor and activity than it has heretofore been.

It will not do to allow that magnificent country known as the alluvial valley of the Mississippi to be relegated to its primeval condition of swamps and jungles. It was deemed conducive to the general welfare that we should acquire this territory from France; it is certainly equally conducive to the general good to preserve it as a habitable, cultivable country. This can only be done by prevention of inundation. There is, sir, no power competent to handle this question except that of the Federal Government. No State can do it—

First. Because the work is too vast, too costly for any State through which the river runs to undertake it.

Second. Because the end aimed at can only be achieved as the result of a vast system of works which shall embrace the whole river.

Third. Because any State attempting it would be circumscribed by its own territorial limits.

Fourth. Because the river, being the property of the United States, Congress alone has power, under the grant to "make all needful rules and regulations respecting the territory or other property belonging to the United States," to say what works shall be done or plans adopted for its regulation. This power "to regulate" as much includes curbing, controlling, restraining the river within its own proper metes and bounds by levees, dikes, or other works, as it does prescribing rules regulating the navigation of the river, or the exercise of any other authority over the river.

Mr. Chairman, the States in the alluvial valley of the Mississippi have made persistent and herculean efforts to throttle this monster of inundation, but without success. It is too much for any one State to handle; too much for several States, acting together, to handle.

My own State, sir, which owes this servitude of drainage for the waters of two-thirds of the Union, has put forth tremendous efforts to beat back the waters from her fertile fields. Her people have been heavily taxed by State and by district for this purpose. As showing these efforts, I will read the following letter to myself from our present chief State engineer:

STATE OF LOUISIANA, OFFICE BOARD OF STATE ENGINEERS,
New Orleans, April 24, 1884.

DEAR SIR: Your letter of date the 21st instant, requesting "a statement of moneys that the State of Louisiana has paid out for levee building, including all payments on account of such building, as far back as possible," has been received.

In reply I have the honor to state that the records of this office (extending back to the close of the war) show the expenditures for levee building incurred by this State up to April 1, instant, to have been $12,731,675.46.

The above is inclusive of expense for closing and preventing crevasses and of balances remaining to be paid in settlement of incomplete contracts.

Very respectfully, your obedient servant,

HENRY B. RICHARDSON, *Chief State Engineer.*

Hon. N. C. BLANCHARD, M. C.
House of Representatives, Washington, D. C.

Mr. Chairman, if this beautiful country, the delta of the Mississippi, but for the floods fit to have been selected as the original Garden of Eden, can be preserved from inundation, it will require the imagination of a Milton and the graphic discription of a Bulwer to depict the coming glories of that land. A soil of wonderful fertility, bringing forth seeds sown in its bosom "an hundred-fold;" the land of the magnolia and the orange, of the cotton plant and the sugar-cane. Again will teeming, busy millions find secure and happy homes there, and thousands of sturdy immigrants, fleeing from the overcrowded provinces and marts of the Old World, will seek settlements within its borders. Then, indeed, will it become "the land where great enterprise broadcast is sown;" or, in the words of a song sung by one of the troubadours of Louisiana:

Land of the mocking-bird, sunlight and beauty,
Land where the willow bends over the stream;
Land where the odor of sweet-scented flowers
Enraptures the senses and nurtures a dream.
Land where the cypress, majestic and solemn,
Infolds in its shadow a silvery gloom;
Land where the prairies are frosted with lilies,
And yellow-leafed jasmines are always in bloom.

Land where the maidens are worthy of Eden,
Land where the men are chivalric and brave;
Land where the hero lives ever in story,
Whilst tears of affection drop over his grave.
Land of De Soto, of Bienville, of Tonti,
Land where no exile stood ever alone;
Land where the seeds of ambition are springing,
Land where great enterprise broadcast is sown.

Baltimore Post-Office Building.

SPEECH

OF

HON. JOHN V. L. FINDLAY,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 23, 1884,

On the bill (H. R. 7380) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1885, and for other purposes.

Mr. FINDLAY said:

Mr. SPEAKER: The amount estimated as necessary for the continuation of the work on the Baltimore post-office building was $400,000. This has been cut down by the Committee on Appropriations to $100,000. The clerk to the committee informs me that he understood the Supervising Architect of the Treasury to say that $100,000 would be sufficient until the next appropriation was made. The Architect, however, informs me that $150,000 is the lowest possible amount he could get along on.

The general desire on both sides of the House is to let the bill pass and allow all amendments to be made in the Senate, in order to bring about an early adjournment. With this understanding I am willing to let the bill pass without an objection, when a single objection will prevent its consideration in the mode in which it is proposed to be considered and passed.

It is poor economy to stint the appropriations necessary for the completion of public works, however wise it may be to enter upon such works with deliberate caution. This building is now up to the first story, and with ample money in the Treasury it would be simply foolish not to appropriate a sufficient sum to carry on the work. I shall vote for this bill, therefore, with the distinct understanding that the amount necessary to continue the work on the Baltimore post-office shall be finally appropriated by this House before it adjourns.

Aid to Common Schools.

SPEECH

OF

HON. JAMES K. JONES,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1884.

On the bill (S. 398) to aid in the establishment and temporary support of common schools.

Mr. JONES, of Arkansas, said:

Mr. SPEAKER: The subject of national aid to the cause of education in the States is of very great importance. No measure has excited more earnest comment in Congress for years. Its friends and its foes alike insist that very important results must follow its passage, the one side claiming that there is more of good to the country at large in its promised results than any measure considered here in a long while; the other insisting that it is fraught with evils—a very Pandora's box, from which even hope will escape, and that its enactment into law will do more to destroy our form of Government than any one step ever contemplated by Congress perhaps. With this difference of opinion among great and wise men, it certainly becomes the duty of each of us to weigh well the reasons for whatever step we propose to take in this connection.

The opponents of this measure insist that it is not only unwise and impolitic, but they also say that its passage would be a serious violation of the Constitution of the United States. This latter position of course is absolutely conclusive if correct, and while I would not for a moment presume to place my opinion upon a great constitutional question against those of men who have not only devoted much care and attention to the subject, but have also brought great mental powers, years of training, and profound erudition to the consideration of the question, yet I may venture among the opinions of great men to select that line of thought which appears to me to be most in accordance with proper rules of construction and to be the real meaning of the Constitution.

Each member of Congress is responsible to his constituents for the correctness of his views on all public questions, and each must select the positions upon which he is willing to stand and be judged.

There can be no doubt that the tenth amendment to the Constitution was but the expression of a jealousy of the Federal Government and was intended to make the States doubly secure against its aggressions. In organizing the Confederation power had been accorded to the General Government with so stinted a hand that that Government fell into contempt and a new one became a necessity, but the intention was clear in the new one only to give the Government so much power as was necessary to accomplish the purposes of its organization, and not to permit any aggressions upon the rights of the States. It is our duty to guard this boundary of Federal power with jealously, and in this spirit I have endeavored to consider the power and propriety of passing this bill.

THE NATURE OF THE CONSTITUTION.

The Supreme Court of the United States, in speaking of the nature of the Constitution, in the case of Martin *vs.* Hunter (1 Wheaton, 325) uses this language:

> The Constitution unavoidably deals in general language. It did not suit the purposes of the people, in framing this great charter of our liberties, to provide for minute specifications of its powers or to declare the means by which those powers should be carried into execution. It was foreseen that this would be a perilous and difficult if not an impracticable task. The instrument was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence.
>
> It could not be foreseen what new changes and modifications of power might be indispensable to effectuate the general objects of the charter; and restrictions and specifications which at the present might seem salutary might, in the end, prove the overthrow of the system itself. Hence, its powers are expressed in general terms, leaving to the Legislature from time to time to adopt its own means to effectuate legitimate objects, and to mold and model the exercise of its powers as its own wisdom and the public interest should require.

The history of our country has demonstrated the wisdom of this design. Our development, wonderful as it has been, has not had the effect to outgrow or leave behind the Constitution, but the provisions of that instrument by reason of this generality are found to be adapted to each new phase in our unparalleled growth and development. The eminent law writer, Mr. Francis Wharton, in his recent commentaries on American law, expresses his views as follows:

> But while necessity does not abrogate constitutional limitations, their meaning, when couched in general terms, is unfolded under the action of changing conditions. "The Constitution," said Mr. Clay in a speech made in 1816, "never changes; it is always the same; but the force of circumstances and the lights of experience may evolve to the fallible persons charged with its administration the fitness and necessity of a particular exercise of constructive power today which they did not see at a former period." * * * Thus the power to make treaties holds in it dormant until the due period arrives the power to make treaties of annexation; in the term "commerce" lies dormant not merely commercial dealings on the high seas as was at first supposed, but commercial dealings in the great rivers forming the avenues of business between the States; in the term "post-roads" lie dormant steamboat lines and telegraph wires. There must from the nature of the case be in the constitution of an empire elasticity in all powers distinctly imperial, while in an empire which is a confederation of sovereign States, peopled by freemen of English traditions, there must be a strict maintenance of the rights of the States in all matters municipal and an absolute guarantee of the rights of personal liberty, of security of property, and of equality in the eye of the law. Without freedom of imperial development within its orbit there would be no government fitted for the American people; without absolute guarantee of State and personal sovereignty within their orbits there would be no American people fit to be governed.

CHANGED CONDITIONS—CHANGED OPINIONS?

Many instances might be given of these changes of opinion under changed conditions not only in our best and purest men but in courts as well as in popular sentiment. A striking instance of this is to be found in what is now understood by the power to regulate commerce, as compared with what was understood by that power in the early history of the Government. At the time of the adoption of the Constitution the wildest imagination never dreamed of what has already been accomplished in the development of commerce. Yet, who denies that this power extends to commerce as we understand it now. We to-day can scarcely conceive what has been accomplished in our own time, so marvelous has been our progress, yet I believe no one insists that this power is confined to the regulation of commerce as those words were understood when the Constitution was adopted or even as they were understood half a century afterward.

It may not be amiss to compare for a moment some of the ideas of the past with the facts of the present to illustrate these changes, but to do this I will not go very far back, and will select a time within the lives and perhaps within the memory of members of this House.

In February, 1826, in the Senate of the United States, in opposing the creation of Oregon Territory, Mr. Dickerson, of New Jersey, said:

> But is this Territory of Oregon ever to become a State, a member of this Union? Never. The Union is already too extensive, and we must make three or four new States from the Territories already formed.
>
> The distance from the mouth of the Columbia to the mouth of the Missouri is 3,555 miles; from Washington to the mouth of the Missouri is 1,160 miles, making the whole distance from Washington to the mouth of the Columbia River 4,703 miles—but say 4,650 miles. The distance, therefore, that a member of Congress of this State of Oregon would be obliged to travel in coming to the seat of Government and returning home would be 9,300 miles. This, at the rate of $8 for every twenty miles, would make his traveling expenses amount to $3,720.
>
> Every member of Congress ought to see his constituents once a year. This is already very difficult for those in the most remote parts of the Union. At the rate which the members of Congress travel according to law, that is, twenty miles per day, it would require to come to the seat of Government from Oregon and return, four hundred and sixty-five days; and if he should lie by for Sundays, say sixty-six, it would require five hundred and thirty-one days. But if he should travel at the rate of thirty miles per day it would require three hundred and six days. Allow for Sundays forty-four, it would amount to three hundred and fifty days. This would allow the member a fortnight to rest himself

at Washington before he should commence his journey home. This rate of traveling would be a hard duty, as a greater part of the way is exceedingly bad and a portion of it over rugged mountains, where Lewis and Clarke found several feet of snow in the latter part of June. Yet a young, able-bodied Senator might travel from Oregon to Washington and back once a year, but he could do nothing else. It would be more expeditious, however, to come by water round Cape Horn or to pass through Behring's Straits, round the north coast of this continent to Baffin's Bay, thence through Davis's Straits to the Atlantic, and so on to Washington. It is true this passage is not yet discovered, except upon our maps, but it will be as soon as Oregon shall be a State.

At the conclusion of this remarkable argument Mr. Dickerson moved to table the bill, which was carried. And it now takes six days to go from here to the State of Oregon, and fresh fish are now sent from Oregon to the tables of the rich in New York.

For sixty years the opinion was held and time and again expressed by the Supreme Court of the United States that the admiralty jurisdiction of the United States courts did not extend to the rivers above tide-water. Without the slightest change in the law or the Constitution, at the end of that time the other position was taken, and no one questions the absolute correctness of this view now. With commerce as our fathers knew and understood it, this old ruling might have remained, but the development of our commerce absolutely forced a change in these views.

Gentlemen who oppose this bill because they are strict constructionists now speak of the power to purchase territory as being "perfect from principles of great public policy." Yet in the early days of the Government the Federalists even, as well as the Republicans, positively denied this power, and it is well known that Mr. Jefferson thought a constitutional amendment necessary to sanction the purchase of Louisiana. Thus the strict constructionists of our time go very far beyond the Federalists of Jefferson's time in construing the powers of the Government in this matter.

These changes of opinion only illustrate the wisdom of the framers of the Constitution in their immortal work and are instances of the natural growth and development of our National Government within its constitutional orbit. No one, for instance, will claim that the power to purchase territory, as now universally admitted, is a usurpation or a violation of the Constitution. It is simply a clearer and fuller understanding of our constitutional powers under circumstances that Mr. Jefferson and the Federalists of his time had no conception of.

Section 8, article 1, of the Constitution is as follows:

The Congress shall have power to lay and collect taxes, duties, imposts and excises to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States;

To borrow money on the credit of the United States;

To regulate commerce with foreign nations, and among the several States, and with the Indian tribes;

To establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States;

To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures;

To provide for the punishment of counterfeiting the securities and current coin of the United States;

To establish post-offices and post-roads;

To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

To constitute tribunals inferior to the Supreme Court;

To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations;

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

To provide and maintain a navy;

To make rules for the government and regulation of the land and naval forces;

To provide for calling forth the militia to execute the laws of the Union, suppress insurrections and repel invasions;

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress;

To exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings; and

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof.

CONSTITUTIONAL POWER.

Whether we have the constitutional power to pass the pending measure depends upon the meaning of the first clause of this section. If this clause is a mere limitation upon and qualification of the succeeding grants of power, then this bill should not pass, but if it is separate and distinct from them, the power to pass this bill is clear, no matter whether we regard the words "to pay debts, provide for the common defense and the general welfare of the United States" as a distinct and substantive power or as merely qualifying the clause in which they occur.

It is a familiar rule of construction that effect shall be given to the whole of the instrument under consideration and to every part of it, and if different parts appear to conflict they must be harmonized, if possible, and that construction should be adopted which renders every part and every line operative. This rule applies especially to written constitutions.

This section granting legislative powers to Congress, looked at in a common-sense way, not attempting to "squeeze" any particular meaning out of it, but taking the words as meaning what they say, seems to be seventeen separate and distinct grants of power, and I can see no more reason to say that the first clause is limited and controlled by succeeding clauses than to say that either of those succeeding is limited by some other. But this has been more clearly and better said by great men, as we shall see hereafter.

The twelfth clause of this section granting power to raise and support armies is limited by a provision that no appropriation shall be made for that use for a longer period than two years. The object of this limitation is plainly to keep the organization of the Army under the control of the people. This limitation, being in the opinion of the framers of the Constitution necessary, is plainly expressed. If, then, the intention was to make the first clause of this section a mere limitation on the succeeding powers, why did they not as plainly say that? The intentions of the "enlightened patriots who framed the Constitution" required no concealment. Why, then, should they not "employ the words which most directly and aptly express the idea they intended to convey?"

Chief-Justice Marshall said that—

As men whose intentions require no concealment generally employ the words which most directly and aptly express the ideas they intend to convey, the enlightened patriots who framed our Constitution and the people who adopted it must be understood to have employed words in their natural sense and to have intended what they said.

Mr. Cooley says that the thing which we are to seek in construing a law is the thought expressed, and "to ascertain this the first resort in all cases is to the natural signification of the words employed."

And Thomas Jefferson said:

We should on every question of construction carry ourselves back to the time when the Constitution was adopted, recollect the spirit manifested in the debates, and instead of trying what meaning may be squeezed out of the text or invented against it, conform to the probable one in which it was passed.

Adopting these rules of construction, it occurs to me that Mr. Monroe's analysis of clause 1 of this section is correct, as follows:

That the second part of this grant—

Alluding to the first clause of this section—

gives a right to appropriate the public money, and nothing more, is evident from the following considerations:

First, if the right of appropriation is not given by this clause it is not given at all, there being no other grant in the Constitution which gives it directly, or which has any bearing on the subject, even by implication, except the two following: first, the prohibition which is contained in the eleventh of the enumerated powers not to appropriate money for the support of armies for a longer term than two years; and, secondly, the declaration in the sixth member or clause of the ninth section of the first article, that no money shall be drawn from the Treasury but in consequence of appropriations made by law.

Secondly, this part of the grant has none of the characteristics of a distinct and original power. It is manifestly incidental to the great objects of the first branch of the grant, which authorizes Congress to lay and collect taxes, duties, imposts, and excises; a power of vast extent, not granted by the Confederation, the grant of which formed one of the principal inducements to the adoption of this Constitution. If both parts of the grant are taken together, as they must be, for the one follows immediately after the other in the same sentence, it seems to be impossible to give to the latter any other construction than that contended for. Congress shall have power to lay and collect taxes, duties, imposts, and excises. For what purpose? To pay the debts and provide for the common defense and general welfare of the United States—an arrangement and phraseology which clearly show that the latter part of the clause was intended to enumerate the purposes to which the money thus raised might be appropriated.

Thirdly, if this is not the real object and fair construction of the second part of this grant, it follows either that it has no import or operation whatever, or one of much greater extent than the first part. This presumption is evidently groundless in both instances; in the first, because no part of the Constitution can be considered as useless—no sentence or clause in it without a meaning. In the second, because such a construction as made the second part of the clause an original grant, embracing the same object with the first, but with much greater power than it, would be in the highest degree absurd. The order generally observed in grants, an order founded in common sense, since it promotes a clear understanding of their import, is to grant the power intended to be conveyed in the most full and explicit manner, and then to explain or qualify it if explanation or qualification should be necessary. This order has, it is believed, been invariably observed in all the grants contained in the Constitution. In the second, because if the clause in question is not construed merely as an authority to appropriate the public money, it must be obvious that it conveys a power of indefinite and unlimited extent; that there would have been no use for the special powers to raise and support armies and a navy, to regulate commerce, to call forth the militia, or even to lay and collect taxes, duties, imposts, and excises.

An unqualified power to pay the debts and provide for the common defense and general welfare, as the second part of this clause would be if considered as a distinct and separate grant, would extend to every object in which the public could be interested. A power to provide for the common defense would give to Congress the command of the whole force and of all the resources of the Union; but a right to provide for the general welfare would go much further. It would in effect break down all the barriers between the States and the General Government and consolidate the whole under the latter.

Again, he says on the same subject:

The grant consists, as heretofore observed, of a twofold power: the first to raise and the second to appropriate the public money, and the terms used in both instances are general and unqualified. Each branch was obviously drawn with a view to the other, and the import of each tends to illustrate that of the other. The grant to raise money gives a power over every subject from which revenue may be drawn, and is made in the same manner with the grants to declare war, to raise and support armies and a navy, to regulate commerce, to

establish post-offices and post-roads, and with all the other specific grants to the General Government.

In the discharge of the powers conveyed in any of these grants there is no other check than that which is to be found in the great principles of our system, the responsibility of the representative to his constituents. If war, for example, is necessary, and Congress declare it for good cause, their constituents will support them in it. A like support will be given them for the faithful discharge of their duties under any and every other power vested in the United States. * * * But should the Representative act corruptly and betray his trust or otherwise prove that he was unworthy of the confidence of his constituents, he would be equally sure to lose it and to be removed and otherwise censured according to his deserts.

Again:

Had it been intended that Congress should be restricted in the appropriation of the public money to such expenditures as were authorized by a rigid construction of the other specific grants, how easy would it have been to have provided in it by a declaration to that effect. The omission of such declaration is therefore an additional proof that it was not intended that the grant should be so construed.

And after a full and elaborate argument, which I regret I can not quote entire, he sums up the matter as follows:

The substance of what has been urged on this subject may be expressed in a few words. My idea is that Congress have an unlimited power to raise money, and that in its appropriation they have a discretionary power, restricted only by the duty to appropriate it to purposes of common defense and of general, not local, national, not State benefit.

From all of which it appears clear that the words "to pay the debts and provide for the common defense and general welfare" are not an independent power on the one hand nor absolutely meaningless on the other, but that they are qualifying words, relating to this one clause alone; and that the powers conveyed in this clause are distinct and independent, as are the powers in the subsequent clauses. This is the construction that has been placed upon this section by the practice of the Government from its beginning until this session of Congress.

CALHOUN'S OPINION.

Mr. Calhoun at an early day clearly vindicated the right of the Government to make appropriations without reference to the powers succeeding this clause. This had been the unvarying practice of the Government before, and it seems from his statement that up to that time it had never been objected to. I quote from his speech of February 4, 1817, in the House of Representatives. In speaking on that occasion of the power now under consideration he said:

What can be more express than the Constitution upon this very point?

The first power delegated to Congress is comprised in these words: "To lay and collect taxes," &c. First the power is given to lay taxes; next the objects are enumerated to which the money accruing from the exercise of this power may be applied, namely, to pay the debts, provide for the defense, and promote the general welfare; and last the rule for laying the taxes is prescribed, to wit, that all duties, imposts, and excises shall be uniform. If the framers had intended to limit the use of the money to the powers afterward enumerated and defined, nothing could have been more easy than to have expressed it plainly. I know it is the opinion of some that the words "to pay the debts and provide for the common defense and general welfare," which I have just cited, were not intended to be referred to the power of laying taxes contained in the first part of the section, but that they are to be understood as distinct and independent powers granted in general terms, and are qualified by a more detailed enumeration of powers in the subsequent part of the Constitution.

If such were in fact the meaning intended, surely nothing can be conceived more bungling and awkward than the manner in which the framers have communicated their intention. If it were their intention to make a summary of the powers of Congress in general terms which were afterward to be particularly defined and enumerated, they should have told us so plainly and distinctly; and if the words "to pay the debts and provide for the common defense and general welfare" were intended for this summary, they should have headed the list of our powers and it should have been stated that to effect the general objects the following specific powers were granted. I ask members to read the section with attention, and it will, I conceive, plainly appear that such could not have been the intention. The whole section seems to me to be about taxes. It plainly commences and ends with it, and nothing could be more strained than to suppose that the intermediate words "to pay the debts and provide for the common defense and general welfare" were to be taken as independent and distinct powers. Forced, however, as such a construction was, I might admit it and urge that the words do constitute a part of the enumerated powers. The Constitution gives to Congress the power to establish post-offices and post-roads. I know the interpretation usually given to these words confines our powers to that of designating only the post-roads; but it seems to me that the word "establish" comprehends something more. But suppose the Constitution to be silent, why should we be confined in the application of moneys to the enumerated powers? There is nothing in the reason of the thing that I can perceive why it should be so restricted; and the habitual and uniform practice of the Government coincides with my opinion. Our laws are full of instances of money appropriated without any reference to the enumerated powers. We granted by a unanimous vote, or nearly so, $50,000 to the distressed inhabitants of Caracas, and a very large sum at two different times to the St. Domingo refugees. If we are restricted in the use of our money to the enumerated powers, on what principle can the purchase of Louisiana be justified? To pass over many other instances, the identical power which is now the subject of discussion has in several instances been exercised. To look no further back, at the last session a considerable sum was granted to complete the Cumberland road. In reply to this uniform course of legislation I expect it will be said that our Constitution is founded on positive and written principles and not on precedents. I do not deny the position; but I have introduced these instances to prove the uniform sense of Congress and the country (for they have not been objected to) as to our powers; and surely they furnish better evidence of the true interpretation of the Constitution than the most refined and subtle arguments.

Such was the opinion, deliberately expressed, of one of the most wonderfully gifted men of this or any other country, and we shall find him acting upon this construction many years after.

Lord Coke said that great regard ought, in construing a law, to be paid to the construction which the sages who lived about the time, or soon after it was made, put upon it, because they were best able to judge of the intention of the makers at the time when the law was made.

And on this very subject of the force of contemporaneous construction the Supreme Court of the United States, in 6 Wheaton, 264, said:

Great weight has always been attached, and very rightly attached, to contemporaneous construction.

And in Colley vs. Board of Wardens (12 How, 311–15) the same court upon this subject uses this language:

In addition to what has been said respecting each of these constitutional objections to this law, it may be observed that similar laws have existed and been practiced on in the States since the adoption of the Federal Constitution; * * * and that this contemporaneous construction of the Constitution, since acted on with such uniformity in a matter of much public interest and importance, is entitled to great weight in determining whether such a law is repugnant to the Constitution, &c.

This construction of Mr. Monroe quoted above does not rest alone upon his authority, high as that is, but his opinions as therein expressed are the result of long and patient reflection on his part and of his observation of the opinions and actions of the great men who had been called upon to practically construe these powers before him, and are the summing up of his own mature judgment and the experience of the Government. And it should not be lost sight of that Mr. Calhoun was a member of his Cabinet when these views were given to the world and was of course a party to them, and his own votes subsequently cast demonstrate that he continued to the end of his life to act upon this construction.

INSTANCES OF APPROPRIATIONS.

The name of the instances of appropriations by the Government for purposes not enumerated in section 8 of article 1 is legion. In discussing this question Judge Story says:

In regard to the practice of the Government, it has been entirely in conformity to the principles here laid down. Appropriations have never been limited by Congress to cases falling within the specific powers enumerated in the Constitution, whether those powers be construed in the broad or their narrow sense. And in an especial manner appropriations have been made to aid internal improvements of various sorts, in our roads, our navigation, our streams, and other objects of a national character and importance. In some cases, not silently, but upon discussion, Congress have gone the length of making appropriations to aid destitute foreigners and cities laboring under severe calamities, as in the relief of the Saint Domingo refugees in 1794, and the citizens of Venezuela, who suffered from an earthquake in 1812. An illustration equally forcible, of a domestic character, is in the bounty given in the cod-fisheries, which was strenuously resisted on constitutional grounds in 1792, but which still maintains its place in the statute-book of the United States.

It is well known that in Mr. Jefferson's administration Louisiana was purchased and fifteen millions paid for it; that during his administration the Military Academy was established at West Point, and that in 1808 he recommended an additional appropriation out of the Federal Treasury to enlarge it. But another great work begun in his administration, was continued by his successors, which, great and important as it doubtless was, certainly could not affect the "general welfare" of the country anything like the present proposed measure. I allude to the Cumberland road; yet we find Mr. Jefferson, the father of strict construction, approving this appropriation of public money for internal improvements, and this, too, while Mr. Madison, was his Secretary of State, and these appropriations were continued until fifteen or twenty of them had been made, and until the appropriations to this work aggregated millions of dollars.

If this bill providing for a mere dirt road of certainly very little general importance was in the opinion of these two men within the constitutional powers of the Government, certainly a matter of great and general national importance like the present measure, affecting every man, woman, and child in this country, affecting the very Government itself, its peace and its permanency, is within the scope of its powers.

In addition to the instances already given of the exercise of this power numberless others might be cited. Among these, and as extraordinary as any already mentioned, is the appropriation of $500,000 made in 1847 to aid suffering Ireland, and for which Calhoun, Webster, Sam Houston, Reverdy Johnson, and Crittenden voted. This has been followed by appropriations for the benefit of sufferers by flood, fire, and pestilence in numerous cases. And this Congress during this session has passed, without a dissenting vote I believe in either House, a bill appropriating a valuable piece of property to Fort Smith, in my State, to aid the public schools of that place, which, in proportion to the interests involved, is largely in excess of this proposed donation, and is certainly far more local in its nature than this bill. Besides this, this Congress has passed an act to loan a million and a half of dollars to the exposition at New Orleans.

But beyond all this the Government has donated immense bodies of lands to the States and to corporations to aid them in building railroads, which donations are said to exceed 140,000,000 of acres. Besides this, the Government has loaned its credit for similar purposes to railroads by issuing its bonds amounting to over $60,000,000, upon which interest has been paid by the Government until bonds and interest amount to more than $100,000,000, and over 4,000,000 of acres of land have been donated to building canals.

For many years the Government has been appropriating lands to the aid of schools, and about 100,000,000 acres of the public domain have,

I believe, been so appropriated. Here we have practical expositions of the Constitution running parallel with the history of the Government, and the constant assertion of constitutional power going very far beyond the authority necessary to pass this bill.

DONATIONS OF LANDS.

But it has been asserted that the donation of lands to the public schools was not made under this section, but that the power to do that was derived from section 3, article 4, of the Constitution, which confers upon Congress the power to dispose of and make all needful regulations respecting the territory or other property of the United States. And it is claimed that under this section Congress had the constitutional right to so donate the public lands, and, further, that under it Congress had full power to sell lands and donate the proceeds to schools, but that these donations of lands could not be considered precedents for this bill. This is not strict construction, but on the contrary is the very loosest possible, and in reply to this I will only quote from Mr. Monroe as to the meaning of the second clause of the third section of article 4, as follows:

Since, then, it is manifest that the power granted Congress to dispose of and make all needful regulations respecting the territory and other property of the United States relates solely to the territory and property which had been ceded by individual States and which after such cession lay without their respective limits and for which special provision was deemed necessary, the main powers of the Constitution, operating internally, not being applicable or adequate thereto, it follows that this power gives no authority and has no bearing on the question of internal improvements.

And this was confirmed in Scott *vs.* Sandford (19 How., 436).

If Mr. Monroe's opinion is correct, this section conveyed no power of donating land nor the proceeds of the sale of land for internal improvements; and if not for them, then how does it confer the right to donate them in aid of schools in the States?

And Mr. Monroe further affirms, as we have already seen, that the sole power of appropriation conferred upon Congress is by clause 1, section 8, article 1. But I repeat his words on this point:

If the right of appropriation is not given by this clause it is not given at all, there being no other grant in the Constitution which gives it directly or which has any bearing on the subject, even by implication, except, &c.

So we find that he believed that all power of appropriation was and is derived from this one clause, and of course that the constitutional powers and constitutional limitations are the same in all appropriations of revenue, no matter whence the revenue may be derived.

In the very nature of things it can not be that the framers of the Constitution ever intended to give Congress an unlimited power to appropriate one fund and a limited power to appropriate another. Money going into the Treasury, no matter whence it comes, is revenue; a proper disbursement of one dollar would be a proper disbursement of another; there is no difference in the money. Besides, if the power to purchase territory is "perfect from principles of great public policy," and we can donate that, as these gentleman all admit we can, then all we have to do is to buy land with the money and donate that, thereby doing indirectly that which can not be done directly, a sort of legerdemain not tolerated by the law; for it is an axiom that whatever is prohibited by law to be done directly can not legally be effected by an indirect and circuitous contrivance. It seems to be clear then that there is no more unlimited constitutional power to appropriate money arising from the sale of lands than from any other source, and no less. And upon this view Mr. Pierce, while President, expressed himself in the following forcible way:

I respectfully submit that in a constitutional point of view it is wholly immaterial whether the appropriation be in money or in land. The public domain is the common property of the Union just as much as the surplus proceeds of that and of duties on imports remaining unexpended in the Treasury.

Then the appropriations of land or money to aid schools or for internal improvement is a precedent for this bill, and is the exercise of a power not enumerated in section 8, article 1, subsequent to the first clause, and not to be found in the Constitution outside of that section. The donations of land to school purposes and purposes of internal improvement was either unconstitutional or authorized by clause 1, section 8, article 1, of the Constitution. If they were constitutional, the same clause that authorized them authorizes this.

A HERESY.

Where a very serious mistake is made in my opinion in considering this question is in accepting as correct, as axiomatic in fact, a very grave political heresy, which claims that if Congress has the power to make this appropriation it has also the power to control the object for which the appropriation is made. This is not a new doctrine, but is one which has been invariably decided against in the history of the country and has never been recognized as correct or acted upon by the Government. The unvarying repudiation of this doctrine, beginning with the Government itself and among the men who organized and for years administered it, ought by this time to be considered eternally settled. I regret exceedingly to see able and pure men now lending the aid of their great names to the establishment of a doctrine so pernicious and so much at war with the interest of both the State and Federal governments.

THE TRUE DOCTRINE.

The doctrine as taught and acted upon by the great minds which brought order out of chaos in the beginning of our Government is that the Government has the power to appropriate money to aid the States in internal affairs affecting the general, not local welfare, but that it can not interfere with the States in the management and control of the affairs so aided, these remaining, as before, absolutely under the control of the States. This being the simple meaning of the Constitution, and having been understood and accepted as the fundamental law of the land for a century, is by this time certainly not an open question.

In a debate in the Senate some time since upon this question Mr. GEORGE, of Mississippi, said—

That the phrase "to provide for the general welfare of the United States" used in the taxing clause which I have read is not a substantive, distinct, and independent power, under which Congress may do anything deemed by it to be conducive to the general welfare, is, I think, now well settled in the practice of the legislative and executive departments, as well as by the decisions of the courts. That the Federal Government is one of delegated, limited, and enumerated powers is not now, I believe, denied.

It seems to be conceded that whenever we exercise a power we are bound to look to the Constitution for it; and that any exercise of a power not granted by the Constitution is on our part a pure usurpation. These are my views, at least, and I shall adhere to them.

And commenting on this Mr. COKE said:

Here is a declaration of State rights upon which Mr. Jefferson would have been content to have rested himself. He would have been willing to go to the world on it, for Mr. Jefferson never made a clearer or stronger statement of State-rights doctrine than the honorable Senator from Mississippi did in making this statement of the views which he says are his and which he says he intends to adhere to.

This view seems to me perfectly sound and correct, and it seems that Mr. Madison believed that Congress did not have an unlimited power to do anything deemed by it conducive to the general welfare, but that he believed that this power was confined to such things as could be accomplished by the making of appropriations of money—just the extent to which this bill goes and no further. On March 3, 1817, he said:

A restriction of the power "to provide for the common defense and general welfare" to cases which are to be provided for by the expenditure of money would still leave within the legislative power of Congress all the great and most important measures of government, money being the ordinary and necessary means of carrying them into execution.

This language was used in vetoing a bill which provided for internal improvements in the States, and which he seemed to understand to claim the right in the Government to control after they were constructed. This position he repudiated, and, after stating his objection to the bill on this account, he concluded with the statement of the true power of the Government just quoted. He had three times before this approved bills appropriating money for the Cumberland road—$50,000 in 1811, $30,000 in 1812, and $100,000 in 1815.

It may be well just here, too, to mention this important fact in connection with the Cumberland road: that while the Government appropriated millions of dollars to it, and by its own commissioners laid out the road, and it was actually constructed by the Government itself with the consent of the States, there was at no time any claim set up by the Government that it had any right to enter the States for the purpose of controlling or even protecting the road; and when, in 1817, the bill above referred to was passed to provide for internal improvements, and which seemed to contemplate the control of such improvements by the General Government, Mr. Madison promptly vetoed it.

OPINIONS OF STATESMEN.

In this message Mr. Madison, who was called the father of the Constitution, who was a member of the "Grand convention," the author of the Virginia resolutions, one of the authors of the Federalist, and who had served for eight years as Secretary of State during Jefferson's administration, had himself succeeded to the Presidency, and had administered that office eight years, as among the last, if not indeed the very last, act of his official life, in this message distinctly recognized the right of the Government to make appropriations for purposes not enumerated in the Constitution, and at the same time as distinctly denies that the Government has the right to control the objects for which the appropriation is made.

In this view Mr. Monroe fully concurred, and in vetoing a similar bill in 1822 he said:

A right to impose duties to be paid by all persons passing a certain road, and on horses and carriages, as is done by this bill, involves the right to take the land from the proprietor on a valuation, and to pass laws for the protection of the road from injuries. * * * It is a complete right of jurisdiction and sovereignty for all purposes of internal improvement, and not merely the right of applying money under the power vested in Congress to make appropriations, under which power, with the consent of the States through which this road passes, the work was originally commenced and has been so far executed. I am of opinion that Congress do not possess this power; that the States individually can not grant it; for although they may assent to the appropriation of money within their limits for such purposes, they can grant no power of jurisdiction or sovereignty by special compacts with the United States. This power can be granted only by an amendment to the Constitution and in the mode prescribed by it.

And again he said:

Good roads will facilitate the transportation of the mail, and thereby promote the purposes of commerce and political intelligence among the people. They will, by being properly directed to these objects, enhance the value of our vacant lands, a treasure of vast resource to the nation. To the appropriation of the public money to improvements having these objects in view and carried to a certain extent I do not see any well-founded constitutional objection.

And again:

The right of appropriation is nothing more than a right to apply the public money to this or that purpose. It has no incidental power, nor does it draw after it any consequences of that kind. All that Congress can do under it in the case of internal improvements would be to appropriate the money necessary to make them. For every act requiring legislative sanction or support the State authority must be relied on. The condemnation of the land, if the proprietors should refuse to sell it, the establishment of turnpikes and tolls, and the protection of the work when finished must be done by the State. To these purposes the powers of the General Government are believed to be utterly incompetent.

And further, in speaking of the Cumberland road, he said:

In this instance, which is by far the strongest in respect to the expense, extent, and nature of the work done, the United States have exercised no act of jurisdiction or sovereignty within either of the States by taking the land from the proprietors by force, by passing acts for the protection of the road, or to raise a revenue from it by the establishment of turnpikes and tolls, or any other act founded on the principle of jurisdiction or right. Whatever they have done has, on the contrary, been founded on the opposite principle, on the voluntary, unqualified admission that the sovereignty belonged to the State and not to the United States; and that they could perform no act which should tend to weaken the power of the State or to assume any to themselves. All that they have done has been to appropriate the public money to the construction of this road and to cause it to be constructed; for I presume that no distinction can be taken between the appropriation of money raised by the sale of public lands and of that which arises from taxes, duties, imposts, and excises; nor can I believe that the power of appropriation derives any sanction from a provision to that effect, having been made by an article of compact between the United States and the people of the then Territory of Ohio.

General Jackson also agreed in this view of the powers and limitations of the Government, regarding the question as settled, and after reviewing the message of Mr. Madison of March 3, 1817, he says:

I have not been able to consider these declarations in any other point of view than as a concession that the right of appropriation is not limited by the power to carry into effect the measure for which the money is asked, as was formerly contended.

He also mentioned the administration of Mr. Monroe upon this question as follows:

The views of Mr. Monroe upon this subject were not left to inference. During his administration a bill was passed through both Houses of Congress conferring the jurisdiction and prescribing the mode by which the Federal Government should exercise it in the case of the Cumberland road. He returned it with objections to its passage, and in assigning them took occasion to say that in the early stages of the Government he had inclined to the construction that it had no right to expend money except in the performance of acts authorized by the other specific grants of power according to a strict construction of them, but that on further reflection and observation his mind had undergone a change; that his opinion then was: "That Congress have an unlimited power to raise money, and that in its appropriation they have a discretionary power, restricted only by the duty to appropriate it to purposes of common defense and of general not local, national not State benefit." And this was avowed to be the governing principle through the residue of his administration.

And that he (General Jackson) entirely acquiesced in this construction appears from the following. Commenting upon what has just been stated, he says:

The constitutional power of the Federal Government to construct or promote works of internal improvement presents itself in two points of view: the first, as bearing upon the sovereignty of the States within whose limits their execution is contemplated, if jurisdiction of the territory which they may occupy be claimed as necessary to their preservation and use; the second, as asserting the simple right to appropriate money from the national Treasury in aid of such works when undertaken by State authority, surrendering the claim of jurisdiction. In the first view the question of power is an open one, and can be decided without the embarrassment attending the other, arising from the practice of the Government. Although frequently and strenuously attempted, the power to this extent has never been exercised by the Government in a single instance. It does not in my opinion possess it; and no bill, therefore, which admits it can receive my official sanction.

And further he says:

This brief reference to known facts will be sufficient to show the difficulty, if not the impracticability, of bringing back the operations of the Government to the construction of the Constitution set up in 1793, assuming that to be its true reading in relation to the power under consideration, thus giving an admonitory proof of the force of implication and the necessity of guarding the Constitution with sleepless vigilance against the authority of precedents which have not the sanction of its most plainly defined powers. For although it is the duty of all to look to that sacred instrument instead of the statute-book, to repudiate at all times encroachments upon its spirit which are too apt to be effected by the conjuncture of peculiar and facilitating circumstances, it is not less true that the public good and the nature of our political institutions require that individual differences should yield to a well-settled acquiescence of the people and confederated authorities in particular construction of the Constitution upon doubtful points. Not to concede this much to the spirit of our institutions would impair their stability and defeat the objects of the Constitution itself.

This long line of precedents and authorities, approved by, I believe, all the Presidents, and acted on continuously by the Government, is to my mind conclusive of two points: First, that the Government has the right and constitutional power to pass this bill and to make appropriations to carry it into effect; and, second, that the Government can not, even with the consent of the States, control the object for which the appropriation is made without a constitutional amendment authorizing it; that this bill does not and could not convey directly or by any implication any such power. For myself, when I follow the teachings and example of Jefferson, Madison, Calhoun, and Andrew Jackson, and when these are fortified and illustrated by the unvarying practice of the Government for a hundred years, beginning with its infancy and among the men who made it, and when all this is fully in accord with my own judgment, I have little fear that I am wrong.

The only question, then, remaining for me is to determine whether the circumstances surrounding us at this time demand the passage of this bill.

THE NECESSITY FOR THIS ACTION.

I believe that the sheet-anchor of our form of government is intelligence, hence I am an earnest advocate of popular education. Daniel Webster uttered a sentiment of which history will demonstrate the truth when he said, "It is intelligence which has reared the majestic columns of our national glory, and this alone can prevent them from crumbling into ashes."

The spread of intelligence is to be the safeguard of our Government—it will be not only our protection against centralization of political and financial power on the one hand, but our sure and safe defense against communism, nihilism, and revolutionary tendencies on the other.

While ours was a comparatively frontier population, with sturdy self-reliance and individuality as a common characteristic, our dangers were not many; but with a dense population, accumulated wealth, and comparative effeminacy, new perils arise, and we must depend upon education and intelligence to counteract these as far as possible, for "as thou sowest so shalt thou reap" applies to States as well as to men. Next to the Christian religion, the great civilizer of men is the school. Public schools, like everything else, are criticised, but until something better is devised I am in favor of maintaining and extending them. In the comparatively brief period of their existence they have accomplished wonders, and are yet in their infancy. The system will improve with age and experience, I believe, until it will be regarded as the greatest means of promoting the universal brotherhood of man.

Speaking of the first common-school law, Macaulay said:

By this memorable law it was in the Scotch forge statuted and ordained that every parish in the realm should provide a commodious school-house and should pay a moderate stipend to a schoolmaster. The effect could not be immediately felt. But before one generation had passed away it began to be evident that the common people of Scotland were superior in intelligence to the common people of any other country in Europe. To whatever land the Scotchman might wander, to whatever calling he might betake himself, in America or India, in trade or in war, the advantage of his early training raised him above his competitors. If he was taken into a warehouse as a porter he soon became foreman. If he enlisted in the army he soon became a sergeant. Scotland, meanwhile, in spite of the barrenness of her soil and the severity of her climate, made such progress in agriculture, in manufactures, in commerce, in letters, in science, in all that constitutes civilization as the Old World never saw equaled or even the New World has scarcely seen surpassed.

And I believe that like efforts will be rewarded by like results in our own country. In speaking of the safety that intelligence brings in its train, Lord Brougham said:

There have been periods when the country heard with dismay that the soldier was abroad. That is not the case now. Let the soldier be abroad! In the present age he can do nothing! There is another person abroad—a less important person, in the eyes of some an insignificant person—whose labors have tended to produce this state of things. The schoolmaster is abroad! And I trust more to him, armed with his primer, than I do to the soldier, in full military array, for upholding and extending the liberties of this country.

I believe, then, that it is a duty we owe ourselves and the country to foster the spread of learning by every legitimate means within our power.

The necessity for action now can not be doubted for a moment. Seventeen per cent. of the people of the country are illiterate, or a total in 1880 of 6,239,958. Fifteen per cent. of the voters can not read and write. I believe that no President has ever been elected by a majority equaling 15 per cent. of the whole vote cast, and I doubt if any debated question of public policy was ever determined by so large a majority at the polls. This certainly leaves too great a power within the reach of unscrupulous demagogues. But bad as this is in the whole country it is worse in some States, the illiteracy among the voters in a number exceeding 40 per cent. of the total, counting white and colored.

If the States where this cloud of illiteracy is the most dense are making earnest efforts to help themselves, and on account of the magnitude of the work and their own circumstances they are unable to cope with the evil successfully and at once, then the Government should give them whatever aid it can.

EDUCATIONAL EFFORTS.

When the war closed the Southern States were in almost absolute desolation. By slow and painful means the wastes were built up, houses and fields year by year appeared, until now we are a reasonably prosperous people. But our accumulations, over and above a bare subsistence, have been small and our advance toward prosperity laborious and slow.

During the war, too, schools were suspended, and immediately after it the disorganized state of society and the struggle for bread and absolute necessaries overbore all other considerations, and in building temporary houses to live in, rebuilding fences, no time was left to prepare for schools; hence among the other misfortunes left us by the war is an increase in our illiteracy among the white people.

When the houses were built and the farms repaired then began the work of building up schools, and as illustrating the school spirit there now I will make only one selection from a number of opinions of able and competent men from the North, who have observed our efforts. Rev. Dr. Mayo, of Massachusetts, speaking of this subject, says:

I am pretty well acquainted with the condition of education in our country and in other countries, and I have no hesitation in announcing to you, gentlemen, my conviction that never within ten years in the history of the world has

an effort so great, so persistent, and so absolutely heroic been made by any people for the education of the children as by the leading class of the people in our Southern States. Practically, within ten years every one of these Southern States has put on its statute-book a system of public schools; practically, within this time, every district of country in the South has received something that can be called a school. This school public, as we may call it, consisting of State officials, of school officers, of superior teachers, of thoughtful people all over the South, is to my mind the most forcible, the most persistent, the most devoted school public now in any part of the world. There is no body of superior teachers doing so much work for so little pay and under such great disadvantages as in the South to-day. There is no minority of people working so hard to overcome this terrible calamity of illiteracy anywhere in the world to-day as in the South. I give this as the deliberate result of two years of observation in twelve States.

* * * * * * *

We must remember, gentlemen, that nine men out of ten in the South never saw what we call a good public elementary school. The thing that is necessary is to put for one year, for two years, for three years, in every district through that country a school that will be a fair representative of a public school, that the people can see it; and once having seen it and enjoyed its benefits, they never will give it up again. Now, it is utterly impossible for the average school authority to get the money to put such a school on the ground. Give to that man another $500, another $1,000, and at once, without wearing himself out with importunity, he can put on the ground the school that the people need; a school that instead of being a school that satisfies nobody, is a school that satisfies everybody; and once having seen that school for one year, for two years, for five years, for ten years, that people will be stimulated to great exertions, and will never give it up. * * * What is to be done should be done at once to meet the great demand of the present. * * * I am acquainted with the State superintendent of instruction, I believe, in every Southern State. I am acquainted with the State school board, I think, of every Southern State but two or three. I have studied with great care in the records of all those offices their methods of distribution of money. I believe there is no set of men in this country who are handling a moderate amount of money with greater economy, with greater fidelity, than these gentlemen. I believe if there is any set of men in this country that can be trusted to administer a fund of $10,000,000 or $15,000,000 in thirteen or fourteen States with fidelity, it is the school authorities of those States, and therefore it seems to me that this money should go directly to the children through the accustomed channels, of course being guarded by all proper safeguards in the central power.

Strong as this statement is it is none too strong.

THE RESULTS.

The results of this are very forcibly illustrated by a table which I find in an article by Henry Randall Waite, in the May number of the Princeton Review, and which I here present, with some comments of his.

TABLE I.

States and Territories.	Number unable to write.		Increase or decrease.	Number unable to write in each 1,000 of total population.	
	1870.	1880.		1870.	1880.
Southern	4,159,216	4,715,395	Inc. 556,179	300	255
Eastern and Middle	712,074	699,369	Dec. 12,705	58	48
Western	676,948	714,841	Inc. 37,893	57	44
Territories	64,643	84,575	Inc. 19,932	238	139
District of Columbia	28,719	25,778	Dec. 2,941	218	145
United States	5,641,600	6,239,958	Inc. 598,358	146	124

It will be seen that in the Southern States, in spite of every obstacle, such as inability to provide sufficient educational privileges, and regardless of the increase of over half a million in the aggregate of illiterates, the number of illiterate persons in each 1,000 of the total population shows a decrease for the decade of 45, as compared with 10 in the Eastern and Middle States, 13 in the Western States, 99 in in the Territories, and 73 in the District of Columbia. Turning to the individual States of the South, we find that the number and the decrease in the number of illiterates in each 1,000 of the population was as follows:

TABLE II.

States.	1870.	1880.	Decrease.
Alabama	384	343	41
Arkansas	275	252	23
Delaware	185	132	53
Florida	382	298	84
Georgia	396	337	59
Kentucky	251	211	40
Louisana	379	338	41
Maryland	173	144	29
Mississippi	378	330	48
Missouri	129	96	33
North Carolina	371	331	40
South Carolina	411	371	40
Tennessee	289	266	23
Texas	270	198	72
Virginia	364	285	79
West Virginia	184	138	46

Our people are to-day taxing themselves higher for school purposes than are the citizens of any part of this great country. The percentage of the total taxes in the United States going into the support of schools is stated at 22.6. In New England, 20.2; the Middle States, 19.5; the Western States, 26.6, while in Arkansas 30.3 per cent. are so used, and in Tennessee, 33.2.

Yet the amount of school resources per capita in New England is nearly $20, while in the South it is less than $3, the annual expenditures for the education of 5,703,218 Southern children being about $12,000,000, while nearly $58,000,000 are expended in the North for the benefit of 9,000,000 children.

A very serious drawback with which we of the South have had to deal in building up schools has been the great debt which was by the most unblushing frauds fastened upon the school districts all over the country by the so-called carpet-bag governments. This debt has stood like a lion in the path of progress, and for years a large part of the school taxes, which our people have been really ill able to bear, have been used to pay off these mementoes of wrong and oppression. These are now paid off, and we have the satisfaction to know that when we pay our school taxes now our children shall have the benefit of them. "The sting of taxation is wastefulness," but at last this is removed from our system, and taxes will be hereafter cheerfully paid.

THE OPINION OF A COLORED TEACHER IN THE SOUTH.

Some time since a distinguished Senator from the East asked a Senator from the South, from my own State, the following question:

Mr. FRYE. Now, I should like to ask the Senator another question, for I have the profoundest confidence in his judgment and his humanity both and his entire fairness of statement. I wish to know from the Senator whether or not in Arkansas, on the part of educators, there is any prejudice against the education of the colored children at all?

Mr. GARLAND. If I was now about to utter the last words I ever expected to say on this earth, I would say frankly that there is not, so far as I know; and a little further on I will attempt to show that we want to educate the colored people and that it is very important to us that they should be educated.

As soon as I read this I addressed a note to the most eminent colored educator in my State perhaps, a man I never had the pleasure of meeting personally, and one of whose opinions on this subject I knew absolutely nothing. In reply to my note I received the following letter:

BRANCH NORMAL COLLEGE,
Pine Bluff, Ark., April 2, 1884.

DEAR SIR: Your esteemed favor of March 29 reached me to-day, and I hasten to reply, fully sympathizing, as I do, with any and all efforts made for the educational upbuilding of this section of the country, and hoping that the haste with which this letter is written will be accepted as an ample apology for the many defects that will doubtless be found in its style and composition.

As, when a witness comes into court, one of the first subjects for consideration is "who and what is he?" it may not be inappropriate for me to give a brief account of myself; and I will therefore state that I am a native of Ohio, graduated at Ohio University (Athens) in 1853, and have been a resident of Arkansas since 1870.

During Governor Baxter's administration I was the incumbent of the office of State superintendent of public instruction. Prior to that time I was a reporter for the Arkansas Republican newspaper, and since that time have been principal of the Branch Normal College of the Arkansas Industrial University at Pine Bluff, to which position I was appointed by the trustees of the university, of which the then governor of the State, Hon. A. H. GARLAND, was *ex officio* president, at the very beginning of its existence, and have held the same continuously ever since. The act for the establishment of the Branch Normal College was approved April 25, 1873, and went into immediate operation, but owing to the intervention of the political troubles usually known as the "Brooks-Baxter war," no steps were made to carry its provisions into effect until 1875 (September 25, 1875), at which time Hon. A. H. GARLAND was governor of the State. The law authorizing its establishment was enacted with special reference to "the convenience and well-being of the poorer classes," and the institution was begun and carried on for a year or two as an experiment in a rented board house, constructed for an officers' barracks during the war.

The result of the experiment seems to have been satisfactory, for January 30, 1882, the school was moved into the edifice constructed by the State for its accommodation, a brick building trimmed with Alabama granite and covered with Bangor slate, which is one of the handsomest buildings in the State. This building has twenty acres of grounds attached, situated at the junction of the Little Rock, Mississippi River and Texas, and the Texas and Saint Louis Railroads, and is filled up with the best class of modern school furniture from the house of A. H. Andrews & Co., Chicago. During the last month, March, 1884, about four hundred dollars' worth of new furniture was placed in the building. Provision has been made for the purchase of some chemical apparatus, and something has been done in the way of collecting a library and cabinet of minerals. About twenty newspapers and magazines are on file regularly in the reading-room. The value of the entire property can not be less than $25,000. The annual attendance at the institution has increased from less than fifty at the beginning to over two hundred during the present year, the average attendance thus far for the present year being considerably over one hundred and fifty. The course of study is not as yet up to the usual collegiate standard, but is fully as extensive as in the most of normal institutions.

Two small classes have graduated and another will graduate this year. Nearly all of the students engage in teaching during the summer vacation, and even those who have not completed the course are as a rule much better qualified to teach than many who are attempting in our State to perform that work; and they are, I am satisfied, doing much for the educational progress of our State. In this connection it may be mentioned that two of the teachers in the Branch Normal College, and the principal and one assistant teacher in the colored public schools of Pine Bluff, received almost their entire training in the Branch Normal College.

As to the progress and capacity of these colored scholars, I am satisfied that taking into consideration the circumstances, they are all that could reasonably be expected. A great majority of them were raised in the country, remote from railroads, steamboats, where even mails and newspapers were a comparative rarity, and consequently ignorant of many things which persons more favorably situated learn by mere contact. For instance, I have a number of students who are reasonably proficient in algebra and geometry, who five years ago had never seen such books nor even heard their names. A teacher from the North will often be much surprised when he first teaches in the South among the colored people by finding that young men, fully grown, have never even heard the names of Napoleon Bonaparte or Daniel Webster. Of course in order to know what a school has done it is absolutely necessary to know what had to be done, and a fair estimate can not be made without taking into consideration the incidental as well as the direct educational advantages a class of students has enjoyed.

As to the educational progress that has been made in Arkansas since I have been a resident of the State, I can mention only a few illustrative examples. During that time the Arkansas Industrial University at Fayetteville, with its Medical College at Little Rock, and Branch Normal College at Pine Bluff, the Philander South College and the Little Rock University at Little Rock have been organized and located in handsome brick buildings. Southland College, near Helena, was a fine property; while Russellville, Prescott, Little Rock, and other cities have very excellent school buildings, usually of brick, nicely fitted up. The State has an educational journal, and a State teachers' association,

composed of both white and colored teachers, of which I have been a member since its inception, and in which I have served for several terms as an officer. I mention these facts as indicative of the public sentiment so far as colored teachers are concerned.

During the summer vacation of 1883 a series of teachers' institutes was held in the judicial districts of the State, under the supervision of Hon. W. E. Thompson, State superintendent of public instruction, which were largely attended by the teachers of the State. By his appointment I conducted the institute in the eleventh district, which was intended specially for the benefit of colored teachers, and was largely attended by them. I presume that it was managed satisfactorily, as at closing the conductor was presented with a handsome hunting-case gold watch. I am at present under engagement with the same gentleman to conduct similar institutes in five of the districts during the ensuing summer vacation. As to the general public sentiment in reference to a public school system, I think that there can be no doubt but that the preponderance is largely in its favor.

When in Little Rock a few weeks since I visited the office of the State superintendent, and was shown a letter from the board of trustees of a certain district who were quite anxious for that official to give them, by a decision, some mode of evading or of construing away the provisions of the law fixing a limit to the amount of local taxation for school purposes, which showed that at least the people were willing to tax themselves to a greater extent than the law allowed. By voluntary self-taxation the people support ten-months' public schools in nearly all our larger towns and cities for white as well as colored youth, and in the country districts the number of schools is rapidly increasing every year and the school term increased in length. If a school, white or colored, has been molested or interfered with since I have been in the State I have not heard of such occurrence. Three of the institutions which are or are intended to be of collegiate rank, namely, the Branch Normal College, the Philander Smith College, and the Southland College, are for colored students. In the first all, in the other two part of the instructors are colored.

In conclusion, I beg leave to remark that I have complied as nearly as lies within my power with the spirit of your letter by giving my personal observations and experience in reference to educational matters in Arkansas. Hoping that the circumstances of the case will vindicate the propriety of this being done, I take liberty of forwarding herewith a picture of the Branch Normal College building as visual collateral evidence of one of the statements herein, all of which will, I hope, under your able direction, be of some service in securing due consideration of what I regard as the most momentous question in regard to which the honorable body of which you are a member has to take action.

Very respectfully,

J. C. CORBIN,
Principal Branch Normal College.

Hon. J. K. JONES, *M. C.*

Believing that this letter is a fair and candid answer to a question naturally asked, and which will in the consideration of this bill arise in the minds of gentlemen often, I have read it entire.

THE EFFORTS OF WHITE AND COLORED PEOPLE.

For the purpose of showing further the spirit of our people and their surroundings in this matter, I addressed notes to a number of county clerks in my district, asking for the number of white and colored taxpayers in each county; the value of the property of each; the amount of school-taxes paid in all, and the number of children, white and colored, of school age in each. I find that no separate record is kept, and it is impossible to get such a statement.

In Columbia County, which is, I suppose, an average, the clerk, who has been in his office for twenty years and is thoroughly familiar with his county and personally knows almost every man in it, writes me as the following in substance:

Total number of tax-payers	3,160
Total taxable property	$1,691,597 00
Number of colored tax-payers	913
Their total assessed property	$16,915 00
School tax, county	$9,447 18
Amount paid by colored people on their property	$84 47
Children of school age (white)	3,481
Children of school age (colored)	1,745

Of course this does not include the poll-tax, which goes to the schools; nor fines, forfeitures, and penalties, which also go to that fund; and I suppose it does not include what is called the State tax for school purposes.

I introduce this simply to show how large a percentage of the tax which the white people steadily pay is used in educating the colored children, whose parents pay very little. The schools are begun on the same day and ended on the same day for white and colored children, it being, so far as I know, an accepted fact that the more thoroughly we can educate all the people the better for the State.

I do not mention this relative amount of taxes paid by white and colored people by way of complaint of them; for considering that they had been for centuries a race of slaves, that they had never known freedom and its responsibilities, I think their progress, considering their education, has been a credit to them. The first clear money is the hardest money made by even an educated man. Getting a start is the trouble; once started, progress is easy. But when the Government turned these people loose to make a living for and take care of themselves, without education, without business training, without property, and almost without even clothes, when daily bread had to come from daily labor, they of course could not overcome all these obstacles and progress as rapidly as Anglo-Saxons would have done under like circumstances. When you consider what had to be done their progress has been creditable. They are keenly alive to the benefits of education; and while the old men never hope to do more than read a chapter in the Bible perhaps, they do hope their children may be educated; but with the best efforts of our people and their own best efforts but little can be done without aid from the Government.

I believe we should be careful of excessive appropriations. No more money ought to be supplied by the Government than can be assimilated, in addition to what can be raised by the people themselves by reasonable taxes, but that much ought to be appropriated until the schools have gained strength and the system is firmly rooted and vigorous.

I believe that "slavery is but half abolished, emancipation is but half completed, while millions of freemen with votes in their hands are left without education;" and an enlightened policy on the part of the Government of the United States toward the States in this emergency will, I am sure, be productive of immeasurable benefit; that one day of such sowing willd roduce a thousand years of reaping.

The "Backbone" Land Grant.

SPEECH

OF

HON. NEWTON C. BLANCHARD,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1884,

On the bill (H. R. 5682) to repeal section 22 of the act to incorporate the Texas Pacific Railroad Company, approved March 3, 1871, and to declare the forfeiture of the land grant therein made, and for other purposes.

Mr. BLANCHARD said:

Mr. SPEAKER: In the district which I have the honor to represent on this floor lie nine-tenths of the land included in this grant, and nine-tenths of the settlers on the grant are constituents of mine. Hence, sir, my desire to be heard on a matter of so much interest to me and to those whose commission I hold here.

What I shall say will be of a character somewhat personal to myself. I shall not attempt to submit an argument, but merely the facts of the case in narrative form, giving the history of the grant and my connection with it. Reference has been made in the discussion to the agreement made by my colleague in the Forty-seventh Congress, Colonel Robertson, of the sixth district of Louisiana, and myself with the New Orleans Pacific Railroad Company for the protection of the rights of settlers, and it is more especially to state the reasons which influenced us to take that step that I desire to be heard.

Now, what are the facts in regard to this land grant and my connection with it? In 1871, nearly ten years before I was first elected to Congress, Congress incorporated the Texas and Pacific Railway Company. One of the sections of this act of incorporation provided that the New Orleans, Baton Rouge and Vicksburg Railroad (commonly called the Backbone road) should be made a branch of the Texas and Pacific from Shreveport, La., to New Orleans, with the grant of every alternate section of public land for miles on each side of the contemplated line of the road. This, then, was the beginning of the grant, and the wording of the act of Congress making the grant was peculiar in this, that the grant was made to the New Orleans, Baton Rouge and Vicksburg Railroad Company *or its assigns*. The grant was conditioned upon the construction of the road within a certain time; but it is well known to lawyers that the Supreme Court of the United States have more than once held that this is a condition-subsequent; that the grant does not fall by the failure to construct the road within the time named in the granting act; that it requires some act of the granting power to declare the forfeiture, and until this forfeiture be declared the grant continues in force.

Now, I fully believe that the New Orleans, Baton Rouge and Vicksburg Railroad Company was a fraudulent concern; that its purpose was to speculate; that it never intended to build the road and never had the means with which to do it; and that, so far as I know, it never stuck a spade in the ground. Still, in 1871, by solemn act of Congress, it was made a branch of the Texas and Pacific, and a huge grant of lands was made to it, "or its assigns." Of course, I was not responsible for this. It was long before my ambition soared as high as Congress. Louisiana had Senators and Representatives in Congress at that time—at least parties who claimed to be from Louisiana—and whatever of wrong there was in the making of the grant in the first instance, attaches to them and not to me.

After the grant to this company, years went by and no railroad was built or commenced. The necessity for the road increased, the demand for its construction became louder. New Orleans wanted it, Shreveport wanted it, the people along the proposed line of the road wanted it, the State wanted it. No one had any confidence that the New Orleans, Baton Rouge and Vicksburg Company would build it. Finally, as the result of the necessity and demand for the road, certain gentlemen in New Orleans associated themselves together and formed the New Orleans Pacific Railroad Company, which was chartered in June, 1875. Subsequently the act of incorporation was ratified and confirmed

by legislative act. Everybody was the friend and supporter of the new company and wishing them "God speed" in their efforts to build the road.

In March, 1876, the Legislature of Louisiana passed an act authorizing and requiring the police juries and municipal authorities of the parishes and towns along the line of the road to submit ordinances to the popular vote with reference to subscribing to the capital stock of the company, with the view of aiding in the construction of the road.

The same year a similar act was passed authorizing the people of New Orleans to vote on a similar ordinance in aid of the road by a subscription to the stock of the company.

Under these acts some of the parishes, notably the parish of De Soto, in my Congressional district, voted a tax and subscription in aid of the road.

I believe, however, no money was raised in this way for the company, owing to unfavorable action by the courts.

Then, by act approved March 11, 1878, the Legislature of Louisiana authorized and required the governor to issue and loan to the company bonds of the State, not exceeding $2,000,000, in aid of the construction of the road. Nothing came of this either, owing to the action of the courts. But this reference to the legislation of the State, in aid of the road, after the State had passed under Democratic control, either in whole or in part, shows the high favor in which the project of the construction of the road was held. Indeed, it is well known, so great was the demand for the road, that the people of the parishes through which it was to run, as well as elsewhere in the State, would have been willing for any company who would build it to have any reasonable amount of the public lands along its line.

All this time the management of the new company, the New Orleans Pacific, had been active and zealous in their efforts toward building the road. Its line had been surveyed and located, and contracts for grading had been made with the lessees of the penitentiary of the State of Louisiana. The company had little or no money, and the contracts for work on the road and for materials and supplies were predicated, for the most part, on the prospects of the road, viewed in the light of the high favor in which the project was held by the people of the State. Under these conditions much grading and other work was done; but about this time came the unfavorable action of the courts on the favorable action taken by the Legislature in aid of the road, and work was stopped; the prospects of the road grew dark, and its fortunes hung trembling in the balance. Despairing of aid from the State or parishes, the management of the company then determined to look elsewhere for the means with which to build the road.

Mr. Wheelock, the president of the New Orleans Pacific Company, came on to Washington and laid the facts before the Louisiana Senators and Representatives, and sought their aid to have transferred to the New Orleans Pacific Company the land grant made in 1871 to the New Orleans, Baton Rouge and Vicksburg Company, as the only prospect left offering a certainty of the construction of the road. This was before my election to Congress the first time. The grant to the old company had not been declared forfeited, and was still in force. There was no prospect whatever of the old company building the road. It was thought very proper at that time to transfer the grant to the new company, and no objection to this transfer came from any source whatever, except from parties who claimed to be stockholders in the New Orleans, Baton Rouge and Vicksburg Company, who held on in the hope of some personal gain to themselves. Louisiana's Representatives in Congress (the Forty-sixth), echoing the universal sentiment in the State favorable to the construction of the road, determined to assist Mr. Wheelock in his efforts to secure the transfer of the land grant to his company. One of them introduced a bill in the first session of the Forty-sixth Congress, the first section of which bill declared the land grant forfeited so far as the New Orleans, Baton Rouge and Vicksburg Railroad Company was concerned; the second section revived the grant in favor of the New Orleans Pacific Railroad Company; and a third section provided for the rights of settlers by allowing them to take their lands at the price of $2.50 per acre, which is the Government price per acre for the land in the even sections reserved by the Government to itself within the limits of the land grant.

This bill was referred to the Committee on Pacific Railways of the House, on which committee another of the Louisiana Congressmen served as a member. The bill was reported favorably to the House, but in the mean time parties interested in the old concern, the New Orleans, Baton Rouge and Vicksburg Company, rallied their forces and went to work to defeat the passage of the bill. By some means or other they were enabled to accomplish this, for it was found impossible to get the measure up for consideration, and the whole session passed without anything being done. The next session passed and still nothing could be done toward the passage of the bill. This was all in the Forty-sixth Congress, and before I ever came to Washington.

Despairing of carrying through the measure over the opposition of parties interested in the old company, the management of the New Orleans Pacific Company, it seems, determined to buy out the claims of the old company. It will be remembered that by the granting act of 1871 the land had been granted "to the New Orleans, Baton Rouge and Vicksburg Company *or its assigns.*" The proposition to buy them out was just what the old concern wanted and had been playing for, and, accordingly, were quick to yield assent to the proposition.

But the New Orleans Pacific Company themselves had no money to buy, nor to build the road after buying, and even with the land grant transferred to them, it would have been impossible to have raised the money on it at once, necessary to build the road.

It appears that at this juncture of affairs, recourse was had by the New Orleans Pacific Company to New York capitalists, and negotiations looking to obtaining the money from them, with which to build the road, were opened. It was found that capitalists like Tom Scott, Gould, Russell Sage, and others were willing to put their money in the road and build it, provided some assurances were given them that the land grant along the line of the road could be secured for the New Orleans Pacific Company.

It seems that Colonel Wheelock, the president of the New Orleans Pacific Company, returned to Washington with these statements of the New York capitalists, and laid the matter before the Louisiana delegation in Congress. Then it was that letters were given him by the members of the delegation, promising their aid to maintain the land grant and secure its reversion to the New Orleans Pacific Company.

My predecessor, Judge Elam, was then in Congress, and joined with the other members, both in the Senate and House, in giving these letters.

It was done in the utmost good faith, with the desire to assist in the material development of the State, and was in keeping with the sentiment then generally prevailing in the State, namely, a willingness that any one who would build the road should have any reasonable amount of public land along its line.

Armed with the aforesaid letters, Colonel Wheelock continued his negotiations with the New York capitalists, the results of which were that the old Backbone company's claim to the land grant was bought out, and the New Orleans Pacific road speedily constructed.

After the purchase of the old company's claim, and after completing the road, the New Orleans Pacific Company applied to the Secretary of the Interior for the recognition of its claim to the land. This was in the latter part of 1881. In December, 1881, I came to Washington for the first time to take my seat as a member of Congress. Up to that time I had not heard of the New Orleans Pacific Company as a claimant of the land grant. The history of the claim of that company to the grant as heretofore given, I learned after reaching Washington. Long before going to Washington, in December, 1881, I had made up my mind to secure, if possible, the forfeiture of the grant, and to this end had prepared the heading of a petition to Congress asking its forfeiture, which petition I had printed at my own expense, and sent hundreds of copies of the same throughout the parishes of my Congressional district for signatures.

Hundreds of names were attached to these petitions, which were then forwarded to me. I presented them to Congress and had them referred to the proper committees. This was in the beginning of the first session of the Forty-seventh Congress.

Very soon after getting to Washington in December, 1881, with the view of carrying into effect, if possible, my determination to secure the forfeiture of the grant, I examined into the status of the same, and then for the first time learned of the claim of the New Orleans Pacific Company. Not only did I learn that it was claiming the land, but was apprised that it was then urging the Secretary of the Interior to issue patents for the same to it, and that it was likely favorable action would be speedily taken by that official.

In company with my colleague in that Congress from the sixth district, Col. E. W. Robertson, I at once went before the Secretary of the Interior and filed a protest against his recognition of the claims of the New Orleans Pacific Company to the grant.

After filing the protest we asked the Secretary to suspend his decision until we could be heard in support of the protest and against the claim of the railroad company. This he agreed to do for a reasonable length of time. In the mean time I was apprized by members of the Louisiana delegation in Congress of the facts constituting the history of the claim of the New Orleans Pacific Company to the grant as hereinbefore given. I was told of the written assurances or pledges given Mr. Wheelock during the Forty-sixth Congress by the Louisiana Senators and Representatives, and I was assured that upon the faith, at least in part, of those promises the money to construct the road had been obtained and the road completed. I was not told this by strangers, railroad agents, or lobbyists (for no one of that class ever mentioned the land grant to me), but by members of the delegation in Congress from my own State. I was given to understand that good faith required absolutely the making good, on the part of my colleagues, of the promises given Mr. Wheelock during the Forty-sixth Congress; and that whatever action I might see proper to take looking to the forfeiture of the grant, I would have to be antagonized by my own delegation. And, finally, I was asked if I did not consider myself bound by the assurances given Mr. Wheelock by my predecessor and the other Members and Senators from Louisiana in the Forty-sixth Congress?

Up to that time I had not seen Mr. Wheelock in Washington, and he had never spoken to or written me on the subject of the land grant. But toward the last of December, 1881, he came on to Washington, made

the same statement to me with reference to the claim of his company to the grant that had been made by members of the Louisiana delegation, and produced the originals of the letters given him by the delegation in the Forty-sixth Congress. He also assured me that the money to build the road had been secured, at least in part, from Northern capitalists upon the faith of the land grant and the aforesaid letters of the Louisiana delegation. After a full and candid explanation of the whole matter he asked me to withdraw the protest, urging that good faith required the carrying out by the Louisiana delegation in the Forty-seventh Congress of the assurances given by the delegation in the Forty-sixth Congress. I confess that this view, held by Mr. Wheelock and my colleagues in the Forty-seventh Congress, impressed me. I took time to consider, and after full consultation with Colonel Robertson, of the sixth district—in whose district and my own all the land lay—we concluded that under all the circumstances of the case, and considering the almost hopelessness of any efforts we might make to secure the forfeiture of the grant (for you know, sir, the Forty-seventh Congress was not a good Congress to attempt the forfeiture of a land grant before), especially with the remainder of the delegation in opposition to us, the best way we could serve our constituents was to make the most of a bad case by securing the rights and claims of the settlers on the grant, even if to accomplish it we had to withdraw the protest we had filed.

Accordingly we, Colonel Robertson, my then colleague from the sixth district, and myself, notified our colleagues and Mr. Wheelock that if proper assurances were given us for the protection of settlers we would withdraw the protest. Our colleagues stated they would gladly aid us in securing the rights of the settlers. Colonel Wheelock was willing to recognize the rights of settlers, but thought they ought to pay $2.50 per acre, as that was the Government price for the land in the even sections reserved by the Government.

To this I objected as being too much, and finally it was agreed that the settlers should take their land at $2 per acre; one-third cash, balance in one and two years; and that they should have twelve months from the time when the patents issued to the company shall have been recorded in the several parishes, in which to apply for their titles.

An agreement to this effect was drawn up by me and signed by Colonel Wheelock on behalf of the New Orleans Pacific Company, and was subsequently ratified by the board of directors and stockholders of the company, and at the meeting of the stockholders called to ratify the agreement Mr. Jay Gould's representative voted a majority of the stock. After the execution of the agreement aforesaid, good faith, of course, required Colonel Robertson and myself to withdraw the protest we had filed, and we did so in a letter to the Secretary of the Interior.

Now this is the whole history of this land grant and my connection with it, from beginning to end. What I have done relating to it was with an eye single to the welfare of the settlers located on the land in my district. It was the best that could be done for them under the circumstances, for I foresaw then, as I foresee now, that the chances or probabilities of a final declaration of forfeiture were and are slight.

In what I have said my discourse has assumed altogether the narrative form. I have given only the facts as I know and understand them. In the more familiar phrase of the lawyer, I have merely "stated the case;" I have not attempted its argument.

Grave doubts have arisen in my mind as to the legal right to declare the forfeiture, which doubts have been greatly fortified, if not ripened into certainty, by the report of the Committee on the Judiciary of this House, which committee, composed as it is of able lawyers, have, on the question of the legal aspect of the case submitted to them, reported by a vote of 13 to 2 that the grant can not legally or equitably be forfeited.

And, sir, what is the position of the Committee on the Public Lands which reported this bill? That committee consists of twelve members; one is a Delegate from a Territory and has no vote, but still he is a member of the committee. Six members of this twelve concur in the majority report; five members and the Delegate, six in all, concur in what might be called the minority report. Thus it appears that the committee is evenly divided, and nothing is solved by their investigation of and deliberation over the case. I can not vote with the committee, because the committee is divided half and half, and neither half is the committee.

It is true, technically, that the half composed of the six members can claim to be the committee as against the other five members and the Delegate. But the fact remains that twelve giant minds, aided by other minds of colossal proportions, have wrestled with this matter, and the outcome is 6 to 6. Nothing is settled by that sort of a verdict; no doubt is cleared up; no lead to follow is established; no preponderance of opinion prevails. The committee is divided against itself. They have simply transferred the controversy from their committee-room to the floor of this Hall, and asked this House to settle for them what they have been unable to settle among themselves.

Both sides, in equal numbers, have appealed to this upper court, and here each side has assumed the office of advocacy of its respective pretensions. There, then, is no committee to follow, in the sense of a majority in number of the estimable gentlemen forming the committee. Under these circumstances, Mr. Speaker, but more especially because of the agreement which I, as the representative of the settlers, made with the railroad company for the protection of their (the settlers') rights, I have reached, after mature consideration, the conclusion that the true course for me to pursue, after a plain statement of the facts of the case, such as I have given, is one of neutrality—voting on neither side, not voting at all.

Were I to vote for the forfeiture I would be liable to the censure of having asked and obtained of the railroad company terms for the settlers at a time when I thought there was no probability for forfeiture, but as soon afterward as I considered there was some chance for forfeiture, I repudiated the agreement and acted in bad faith toward the company in seeking to promote the forfeiture.

Were I to vote against the forfeiture I would expose myself to the criticism of seeking to uphold, and have this House sustain, the action taken by me *ex cathedra*, and this because of self-interest actuating to the maintenance of said action as the result of the best and wisest judgment possible to be formed under the then circumstances; in other words, to save myself from the charge and consequences of having made a mistake of judgment and action in entering into the agreement for the recognition and protection of the rights of settlers.

Besides, were I to vote for forfeiture, and the forfeiture be not finally declared, I might by the said vote jeopardize the status of the rights of settlers as stipulated for in the agreement, for the railroad company might give trouble by taking the position that the settlers, through me, had elected to abandon the agreement and seek protection and easier terms in the chance of forfeiture and reversion of the grant to the public domain.

Hence, Mr. Speaker, my deliberate judgment is that I can, in this instance, the better serve my constituency, as well as conform more nearly to the principles of good faith and fair dealing, by abstaining from casting my vote.

The Yellowstone National Park.

SPEECH

OF

HON. LEWIS BEACH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 25, 1884,

On the bill (H. R. 7380) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1885, and for other purposes.

Mr. BEACH said:

Mr. SPEAKER: I do not propose to discuss this bill generally. The Committee on Appropriations has in the main discharged its exceedingly onerous duties with great pains and a very proper regard for the public interests. But there is one feature or rather provision in the bill to which I am inflexibly opposed. I refer to the item of $40,000 for the protection and improvement of the Yellowstone National Park. It is not the amount appropriated, but the object for which the appropriation is made, which excites my opposition. The subject is of sufficient importance to justify the rather extended remarks I desire to make. The time spent in the discussion will not be lost if I can succeed in convincing the committee, as I think I can, that the item should be cut out of the bill when a motion for that purpose is in order. But a few members are aware of the origin and growth of this National Park scheme and I trust that the committee will bear with me while I review its legislative history.

On December 18, 1871, Mr. Claggett, the Delegate from the Territory of Montana, introduced a bill in the House to set aside a large area of certain new discovered lands as a national park, and on the same day Senator Pomeroy, of Kansas, introduced a similar bill in the Senate.

On the 23d of January, 1872, the Senate bill was reported back favorably by Senator Pomeroy, who demanded immediate consideration. In a few brief remarks the distinguished Senator called attention to the great natural curiosities discovered in the proposed park, and stated that "the only object of the bill was to take early possession of the land by the United States and set it apart so that it could not be included in any claim or occupied by any settler," as had been the case in the Yosemite Valley. And yet in the same breath the ingenious but illogical Senator admitted that the claims of the Yosemite Valley settlers had been declared by the courts invalid on the ground that settlers on unsurveyed lands could acquire no right as against the Government.

After this brief explanation the further consideration of the bill was postponed, the morning hour having been insisted upon. It was taken up again on January 30, 1872, on motion of Senator Pomeroy.

Senator EDMUNDS said the land was so far elevated above the sea it was unfit for private occupation, and he hoped the bill would pass unanimously.

Senator Trumbull observed that some one might pre-empt or settle right across the path that leads to the wonders and charge every one

that passes along between the gorges of the mountains a fee of a dollar or five dollars. He furthermore said:

At some future time we can repeal this law if it is in anybody's way.

Senator Cole expressed grave doubts about the propriety of passing the bill, but he did not press his objections; and so, without further explanation or opposition, the bill was passed.

About a month afterward—on the 27th of February, 1872—the House took up the Senate bill and considered it.

Mr. DAWES stated that the bill followed the analogies of the bill passed a few years before, setting apart the Yosemite Valley and the "Big Tree country;" that the land was 7,000 feet above the sea and subject to frost every night in the year and entirely unfit for agricultural purposes; that the only purpose of the bill was to prevent depredations until the Government could devote it to some other purpose. With this assurance the bill passed by a vote of two to one.

Let me now call attention to the exact language of the bill. It has been incorporated into the Revised Statutes and embraces sections 2474 and 2475. Section 2474 reads as follows:

The tract of land in the Territories of Montana and Wyoming lying near the headwaters of the Yellowstone River, and described as follows, to wit, commencing at the junction of Gardiner's River with the Yellowstone River, and running east to the meridian passing ten miles to the eastward of the most eastern point of the Yellowstone Lake; thence south along said meridian to the parallel of latitude passing ten miles south to the most southern point of Yellowstone Lake; thence west along said parallel to the meridian passing fifteen miles west of the most western point of Madison Lake; thence north along said meridian to the latitude of the junction of the Yellowstone and Gardiner's Rivers; thence east to the place of beginning, is reserved and withdrawn from settlement, occupancy, or sale under the laws of the United States, and dedicated and set apart as a public park or pleasuring-ground for the benefit and enjoyment of the people; and all persons who locate, or settle upon, or occupy any part of the land thus set apart as a public park, except as provided in the following section, shall be considered as trespassers and removed therefrom.

Section 2475 provides that—

Such public park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be, as soon as practicable, to make and publish such regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation, from injury or spoliation, of all the timber, mineral deposits, natural curiosities, or wonders, within the park, and their retention in their natural condition. The Secretary may, in his discretion, grant leases for building purposes for terms not exceeding ten years, of small parcels of ground, at such places in the park as may require the erection of buildings for the accommodation of visitors; all of the proceeds of such leases, and all the revenues that may be derived from any source connected with the park, to be expended under his direction in the management of the same, and the construction of roads and bridle-paths therein. He shall provide against the wanton destruction of the fish and game found within the park, and against their capture or destruction for the purposes of merchandise or profit. He shall also cause all persons trespassing upon the same to be removed therefrom, and generally is authorized to take all such measures as may be necessary or proper to fully carry out the objects and purposes of this section.

Mr. Speaker, I have been thus particular in calling attention to the law itself and in reciting the various steps which led to its passage for the purpose of showing how, through haste and inattention, vicious legislation becomes ingrafted on the statute-book. Here is a law committing the country to a policy entirely alien to the purposes for which the Government was created and highly detrimental to the best interests of the people. It was passed without proper debate and with not a voice raised in either House to sound the note of alarm. The father of the bill, and to whom all credit or discredit of the scheme rightfully belongs, was Professor F. V. Hayden, of the United States Geological Survey. In the summer of 1871 he made an exploration of log-sources of the Yellowstone and Missouri Rivers. Maps, sketches, and photographic views of the hot springs, geysers, and other natural curiosities were taken and brought here to Washington. In a letter to the Secretary of the Interior under date of February 21, 1878, Professor Hayden writes:

I originated the idea of the park, prepared the maps, designated the boundaries, and in connection with Hon. W. H. Claggett, then Delegate from Montana Territory, wrote the law as it now stands.

He goes on to say:

During the pendency of the bill every effort was made by myself and other members of the survey to remove all objections to the bill, and the labor was constant and great. It is now acknowledged all over the world that the existence of the National Park by law is due solely to my exertions during the sessions of 1871 and 1872. The growing opposition to the withdrawal of any portion of the public domain for any purpose, however laudable, would undoubtedly have prevented the success of the bill at any subsequent session.

He then proceeds to tell how he allayed the objections of economical members. He writes:

While the bill was pending in Congress the principal objection urged against the park was that annual appropriations would be required for its care and improvement.

Here let me say this objection was not raised on the floor. It must have been encountered by the professor in his outside labors with individual members. He proceeds:

I was myself compelled to give a distinct pledge that I would not apply for an appropriation for several years at least. Had not Congress been assured that no demands would be made upon them for annual appropriations it is very doubtful whether the bill would have ever become a law.

I now wish to call the attention of the House to the money that the been appropriated for this park.

For several years after the passage of the bill Professor Hayden kept his promise and the park managed to get along very well without any assistance from the Treasury. It is true an attempt was made in 1875 (second session of the Forty-third Congress) to tack an amendment on the sundry civil appropriation bill of $25,000 for building roads in the park, but it was resisted by the late President Garfield, who was then in the House, and was defeated. The first appropriation appears in the sundry civil bill for 1878 and allowed $10,000 "to enable the Secretary of the Interior to protect, preserve, and improve the Yellowstone National Park." The next year (1879) a like amount of $10,000 was appropriated. In 1880 a further sum of $15,000 was appropriated, and in 1881 an additional $15,000 was appropriated. In 1882 the wording of the bill was somewhat changed. It reads:

For the protection and improvement of the Yellowstone National Park: For every purpose and object necessary for the protection, preservation, and improvement of the Yellowstone National Park, including compensation of superintendent and employés, $15,000.

The next year (1883), which carries the appropriation for the current fiscal year, expiring on the 1st day of July coming, the appropriation jumped up to $40,000.

As I want the House to keep informed of the legislative growth of this Rocky Mountain bantling, let me call attention to the precise language in the last appropriation bill. It reads as follows:

For the protection and improvement of the Yellowstone National Park: For every purpose and object necessary for the protection, preservation, and improvement of the Yellowstone National Park, including compensation of superintendent and employés, $40,000, $2,000 of said amount to be paid annually to a superintendent of said park and not exceeding $900 annually to each of ten assistants, all of whom shall be appointed by the Secretary of the Interior, and reside continuously in the park and whose duty it shall be to protect the game, timber, and objects of interest therein; the balance of the sum appropriated to be expended in the construction and improvement of suitable roads and bridges within said park, under the supervision and direction of an engineer officer detailed by the Secretary of War for that purpose.

The Secretary of the Interior may lease small portions of ground in the park, not exceeding ten acres in extent for each tract, on which may be erected hotels and the necessary outbuildings, and for a period not exceeding ten years; but such lease shall not include any of the geysers or other objects of curiosity or interest in said park, or exclude the public from the free and convenient approach thereto; or include any ground within one-quarter of a mile of any of the geysers, or the Yellowstone Falls, nor shall there be leased more than ten acres to any one person or corporation; nor shall any hotel or other buildings be erected within the park until such lease shall be executed by the Secretary of the Interior, and all contracts, agreements, or exclusive privileges heretofore made or given in regard to said park, or any part thereof, are hereby declared to be invalid; nor shall the Secretary of the Interior, in any lease which he may make and execute, grant any exclusive privileges within said park, except upon the ground leased.

The Secretary of War, upon the request of the Secretary of the Interior, is hereby authorized and directed to make the necessary details of troops to prevent trespassers or intruders from entering the park for the purpose of destroying the game or objects of curiosity therein, or for any other purpose prohibited by law, and to remove such persons from the park if found therein.

This legislation had become necessary on account of the arbitrary and dangerous course threatened by the Department of the Interior; and to a proper understanding of a matter which promises to give us some trouble in the future, let me go back a little. You will have observed that under the dedicatory act the Secretary of the Interior was authorized "in his discretion to grant leases for building purposes for terms not exceeding ten years of small parcels of ground, at such places in the park as may require the erection of buildings for the accommodation of visitors."

As the Northern Pacific Railroad approached completion the possibilities of the park as a show bonanza attracted the attention of the Barnums of the great Northwest, and sundry applications were made for leases in the park.

On July 27, 1882, the Secretary of the Interior granted to James S. Brisbin the privilege of putting a steam-vessel for carrying passengers on the Yellowstone Lake. Shortly after, on the 1st day of September, 1882, Merritt L. Joslyn, Acting Secretary of the Interior, for and on behalf of the United States, entered into a written agreement with Carroll T. Hobart, of Fargo, Dak., and Henry F. Douglas, of Fort Yates, Dak., and such other parties as might thereafter be associated with them, for the leasing of such lands within the park as they might require for building and other purposes.

Under this agreement the lessees were to have the right to cut and use timber, coal, and other material for the purpose of constructing their buildings and keeping them in repair. They were also to have all the arable land in the park they required for raising vegetables and grain (as they have frosts there every night in the year, the Agricultural Department would have to furnish them, no doubt, with new varieties of seed).

The rent reserved was not to exceed $2 per acre annually; and the lessees were to build one capacious hotel and auxiliary buildings, including bath-houses; they were to provide and equip stage lines and coaches to convey passengers to and from the park and to the different points of interest within it. They were to have the right to operate yachts and other sail-boats and row-boats on the lake; and they could erect a telegraph line throughout the park. They also were to have the right to establish stores or trading posts. After granting these valuable rights, the agreement goes on to say (and I invite the attention of the House to the language): "The party of the first part," that is, the United States, "hereby agrees that the parties of the second part shall have and enjoy the privilege herein and hereby conferred and granted, to the exclusion of any other person or persons, for the term of ten years."

Now, it must be borne in mind this was not a lease. It was simply an agreement to make a lease containing the stipulations mentioned. The distinction must not be lost sight of, for upon this point will turn the right of the covenantees to damages which they already claim against the Government.

The Secretary of the Interior was about to execute and deliver a lease in pursuance of this agreement and according to its conditions when he was stopped by a resolution introduced by Senator VEST on the 7th of December, 1882, calling upon him to furnish the Senate with a copy of all contracts for leasing of lands in the Yellowstone Park.

In fact, the lease had already been prepared, and the Secretary furnished the Senate with a copy in his answer to their resolution. An examination of the proposed lease shows that Senator VEST's resolution came none too soon.

I have no hesitation, Mr. Speaker, in characterizing this proposed lease as a monument of administrative folly or corruption. Under the law as it stood the Secretary had the power to "grant leases for building purposes of small parcels of ground." Under this lease he proposed to give away vast tracts of lands, and in such a manner as to practically shut off all approach by the public to the objects of curiosity within the park. First, he leases six hundred and forty acres—a square mile—around Liberty Cap; second, another square mile around Old Faithful; third, another square mile on the south bank of Madison River; fourth, another square mile around Soda Springs; fifth, another square mile around Baronet's Bridge; sixth, another square mile at the head of Cañon or Great Falls; seventh, about six hundred acres on the banks of Yellowstone Lake.

Having thus fenced in all the prominent points of interest with a grant of 4,500 acres, he goes still further and gives the lessees the right to occupy such other parcels of land within the park as they may need for the erection of buildings. Control is also given them over the geysers and other natural curiosities within the limits of the park. To make the lease still more odious, if such a thing were possible, the privileges granted are to the exclusion of all other persons.

I repeat it, Senator VEST's resolution came none too soon. It staid the hand of the Secretary of the Interior from signing and delivering the lease he had prepared and which if executed would have given to a few capitalists the exclusive control of the park for money-making purposes. The answer of the Secretary of the Interior to the resolution brought out all the hidden facts and gave rise to the debate which resulted in the legislation tacked on to the appropriation bill of last year and to which I have already adverted.

As soon as Congress adjourned—on the 9th day of March, 1883—the Secretary of the Interior executed a lease to Hobart Douglas, and Rufus Hatch, of New York, who was now taken into the scheme. This lease had a little more consideration for the rights of the Government and evinced some respect for the law under which the Secretary derived his power to act.

Instead of leasing seven distinct, separate tracts of six hundred and forty acres each as did the proposed lease, it conveys land at the same several points, but in parcels, however, of two acres or less each.

In other words, under the proposed lease the lessees would have taken about 4,500 acres, whereas under the executed lease they get (thanks to Senator VEST's resolution) but ten acres in all, which is amply sufficient for the erection of the buildings contemplated by the law.

The objectionable monopoly clause in the proposed lease is also cut out of the one executed and a proviso is inserted "that nothing herein contained shall be construed to prohibit the Secretary of the Interior from making other leases of land at other points within the park" for similar purposes.

But the most important point gained in the executed lease is that none of the several parcels of land leased shall be located within one-quarter of a mile of any of the geysers or the Yellowstone Falls.

This provision, it will be seen, prevents the lessees from fencing in the geysers, as they might have done under the original proposed lease.

Having secured their lease, Hobart, Douglas, and Hatch organized a corporation under the laws of the State of New Jersey and called it the "Yellowstone National Park Improvement Company," of which I will have something to say a little later on.

Now, Mr. Speaker, what is this Yellowstone Park of which we hear such fabulous stories? What are these great curiosities, the glowing description of which outrivals the pages of Herodotus? I think I can tell you, for I passed several days myself in the park last summer.

I want to say, in the first place, I did not visit it as a scientist but simply as one of the people in search of recreation and pleasure. I was not prepared to go into ecstasies over a fossil or lose my breath in wonder over a petrified log. Such things might have attractions for the paleontologist and the geologist. To me they had none. I wanted something to please the eye, something to fill the soul, something to inspire sentiment, something to admire. Accustomed as I was to the gorgeous scenery of the Hudson Highlands I have a right to expect, after all I have read of the wonders of the Yellowstone, to find something which would outshadow and overshadow the beauties of the mountain valley in which rests my own humble home on the banks of the Hudson River. Were my expectations realized? We will see.

It would be difficult indeed, Mr. Speaker, to find on God's footstool a more desolate region than these mountain-tops out of which it is proposed to make a national park. For miles and miles nothing greets the eye but charred logs and standing trunks of trees stripped of their branches by the devouring flames which have swept over the mountains. Occasionally you come across a second growth of pines springing from the ashes of previous fires. The beautiful green with which nature clothes her handiwork in more favored climes is not to be found. The grass, which here and there struggles for existence in the valleys and sheltered places, is brown and withered and so thin and scattered it would take a ten-acre range to fatten a grasshopper. There are no arable or agricultural lands. If there were, they would be of no use, for it must be remembered we are 6,000 feet and more above the sea and in the region of perpetual frosts. There is frost every night in the year.

On the occasion of our visit, which was in August, we came near freezing to death, although we slept under three pairs of army blankets. In the morning we needed a wringing-machine to prepare our clothes for wear, so saturated were they with the night dew. And yet, in face of these facts, some agricultural "crank" has proposed to make these arid lands bloom with the cabbage and the potato by adopting irrigation. If the nights are preternaturally cold, the days are correspondingly hot. We are much nearer the sun than when at home, and his fiery rays pour down upon our heads with relentless fury. We imagined at times the subterranean fires might have something to do with the excessive heat. If sudden and extreme changes of temperature are desired by the tourist or the health-seeker, then the Yellowstone Park is the place above all others for him to visit. Within the twenty-four hours which mark the day he can alternate between the heat of the tropics and the cold of the polar circle.

In going from one point to another in the park the visitor is conveyed in wagons drawn by two, four, or more horses. The nature of the country is such that roads are almost an impossibility. Hills are to be climbed and in some places they are so steep the toiling teams can scarcely lift the wagon, the passengers being obliged to get out and walk. At one spot we saw ten horses, goaded by the whips of their howling drivers, struggling up a hill with an army wagon which had been too heavily packed. In many places the roads are not only precipitous but highly dangerous, being scarped out of the mountain-side with no protection or guard against the yawning abyss below. At other spots streams and rivers with rough and uncertain bottoms are to be forded. Through the swampy lands we traverse corduroy roads constructed in the most primitive way.

And while upon this subject of roads, which seems to have been a favorite one in the appropriations for this park, I venture to say we can readily expend thousands upon thousands and then will have no roads fit for use because of the grades to be overcome; and we will require as many thousands more to keep them annually in repair on account of the wash and damage to which all mountainous roads are subject.

In addition to the tedium of journeying through the park over such roads as I have described, there are other elements of discomfort. The earth, of an alkaline nature, is ground to dust by passing wagons and raised in clouds, filling the lungs, permeating the clothes, and producing an irritation worse than the seven-year itch. There is, besides, a species of mosquito, whose size, when compared with a Jersey mosquito, is as a mastodon to a kitten, and whose voracity for blood equals that of the tiger, and whose capacity for inflicting pain exceeds the refinements of the Inquisition, and whose numbers are as the sands on the seashore. Woe to the unlucky traveler who has not provided himself with visor and armor of mail! In the practice of phlebotomy these Rocky Mountain mosquitoes have evidently supplemented their natural instincts with lessons taken of the managers of the Hatch hotel company.

In making the tour of the park, twenty-five to thirty miles is considered a fair day's journey. Thirty miles of jostling over such roads as I have described, under a broiling sun, amid clouds of alkaline dust, and pursued by remorseless mosquitoes, is not exactly the kind of enjoyment the average American pleasure-hunter is looking for. After such a day's journey the worn-out traveler had good reason to expect, from the advertisements of the hotel company, proper shelter, a comfortable bed, and reasonable board. This was the intention of the law when it gave the Secretary of the Interior the power to "grant leaves for building purposes at such places in the park as shall require the erection of buildings for the accommodation of visitors."

Under the grants by the Secretary to the "Hatch" company, that company proceeded at once to erect, at the Mammoth Hot Springs, a large hotel containing two hundred and fifty rooms, lighted with electric lamps, and estimated to cost, including furniture and outfit, $100,000. The Mammoth Hot Springs are situated at the first point in the park as we approach it from the Northern Pacific Railroad. At the time of our visit, in August last, this hotel was rapidly approaching completion.

It must be borne in mind the park is about 65 miles long and about 55 wide, containing an area of 3,575 square miles. This gives an extent about 200 square miles greater than the States of Rhode Island and Delaware combined. The main objects of interest, such as the Grand Cañon, the lake, the geysers, and the Falls of the Gibbon, are some

distance apart. To visit them all, or, as it is called, to "do" the park, a week to ten days is necessary.

This unusual length of time is required on account of the necessity of resting the horses after their excessive toil. The whole park could be "done" in three days by a proper system of relays, but that would seriously interfere with the profits of the "Hatch" company, whose interest, alike with that of the mosquitoes, is to keep visitors in the park as long as possible.

At the Mammoth Hotel conveyances are hired to make the trip through the park. For a very ordinary wagon and a very extraordinary pair of horses the "Hatch" company, who claim under their agreement with the Secretary of the Interior a monopoly of the livery business, will charge you about a hundred dollars.

We were somewhat set back by so unreasonable a proposition, but as we had come 3,000 miles to see the park we concluded to submit, and next morning we started out on the journey.

About twenty-five miles ride, without incident or attraction, brought us to the spot where we were to halt for the night. Here in the woods there was erected a large tent. Upon mattresses laid on the bare ground within this tent twenty-five of us were "bundled" in true Knickerbocker style, without regard to sex, side by side. To intensify our discomforts the rain which had begun to fall came trickling through the canvas roof. In the morning we were treated to a breakfast of elk-meat and "canned butter," which is another name for oleomargarine. For our bed and board we were charged at the rate of $5 a day—that being the regulation price sanctioned by the Secretary of the Interior.

The same class of accommodations and the same charges are made at the other halting places. It is only fair to say, however, the "Hatch" company claimed that these tents were temporary, and would probably be replaced with frame buildings during the next season.

We did think, however, that they might have given us something better to eat. The excuse offered for their dereliction in this respect was that the press delegation had consumed everything in the park. The press delegation consisted of several hundred newspaper editors who had been invited to witness, without money and without price, the wonders of this wonder-land. During their visit they were treated right royally. Hunters traversed the woods for deer; anglers whipped the streams for trout; and the distant ranches were scoured for butter; all to titillate the editorial palate. Under the Falls of the Gibbon these knights of the quill assembled, and to the merry clinking of cups and cracking of corks they poured their libations in Heidsick's best. When they returned home they became converted no doubt into miniature geysers and spouted high the praises of the park.

I want now, Mr. Speaker, to say a word or two about the general care and management of the park under the legislation of the last appropriation bill.

You will remember a superintendent was to be appointed by the Secretary of the Interior at a salary of $2,000, and ten assistants at a salary not exceeding $900 each. It was made the duty of the superintendent and his assistants to reside continuously in the park and "protect the game, timber, and objects of interest therein." And how do these assistants perform their duties? I can furnish a good illustration by an incident that came under my personal observation. It occurred while we were encamped at the Upper Geyser Basin. As we stood near our tent in the twilight of evening a stranger approached us and inquired if we had yet seen an extinct volcano, the name of which is now forgotten. Upon our answering in the negative he volunteered as a guide, and a short walk brought us to the spot in question. The formations were of a very curious and beautiful nature; and before we were aware of what he was about he had broken off several specimens, which he brought us to be borne away as relics. Upon closer acquaintance our guide turned out to be one of these nine-hundred-dollar assistant superintendents who had been placed there to protect the objects of interest.

In further illustration I may call attention to the report of Mr. W. Scott Smith, a special agent of the General Land Office, who was sent out to the park last summer to ascertain the true condition of affairs. In his report Mr. Smith says:

> One of if not the most important duties appertaining to the office of superintendent is to see that the wonderful curiosities about the springs and geysers are protected from destruction at the hands of vandals and curiosity seekers. Knowing that the Secretary of the Interior had placed under the control of the superintendent ten assistants to aid him in enforcing the regulations of the Department, I was astonished upon visiting the principal objects of interest to find no official at any one of them to look after and restrain those visitors, of which there were a large number, who were determined to obtain fine specimens. My astonishment was further increased when I was informed at the Upper Geyser by visitors that they had purchased very fine and choice specimens direct from some of the assistant superintendents. This led to further inquiries on my part, and I regret to say that the further I inquired the more I learned that some of the assistant superintendents have used their knowledge to obtain choice specimens to sell to visitors for good prices. Members of the United States Geological and Geographical parties in the park informed me that it was within their knowledge that the assistant superintendents had been engaged in this kind of business, and that in some cases their acts of vandalism were more outrageous than those perpetrated by visitors.

Now, Mr. Speaker, let me ask again what is there about this park to commend it as a pleasure-resort for the people? Absolutely nothing! The geysers are no doubt a great natural curiosity. It is a novel and interesting sight to see stupendous columns of hot water thrown upward in the air. To the Frenchman (who objected to the falls of Niagara because the water came down, which was a perfectly natural thing for it to do, whereas he longed to see it go up) the geysers would have produced some satisfaction, but even he would have tired of the sight after witnessing a couple of eruptions. There are other notable objects, but, as I have said before, they are of interest only to the scientist.

In regard to the wild animals which abounded in the park before it came under the ban of legislation, they can be better preserved by leaving their haunts in their natural state. The partial development of the park which has taken place has already driven them out, and it is a noteworthy fact that you can now travel for days without coming across a single specimen of wild animal.

To remedy the destruction that has occurred, some one from way out in Sioux City, Iowa, whose circular I hold in my hands, signed "D. H. Talbot," proposes to Senator ALLISON to establish in the park a grand zoological garden. This is a good scheme. We ought as a nation to have a first class "show," and in order to start it we should appropriate in this bill a round half million to secure Barnum's white elephant, the only animal of its kind on this continent, and imported at an expense of over $300,000. It may be objected that we have elephants enough on our hands, but we have not a real genuine live white elephant, and a sacred one at that.

Now, Mr. Speaker, it may very properly be asked of me, what provision would I suggest for the preservation of the geysers and other natural curiosities and the protection of the fish and game. I frankly admit it will never do to abandon the park to the prey of relic-seekers and pot-hunters. The curiosities, such as they are, should be preserved and the game should be protected. The simplest, most effective, and most economical plan is to put the park under the control of the Secretary of War, who could, without any additional cost to the country, station two companies—one of cavalry and one of infantry—within the park during the season in which it is accessible. Detachments from the infantry might be placed at the various geysers and springs to prevent spoliation, and the cavalry could patrol the park in search of poachers.

Another great advantage of the military would be their ability to fight and extinguish the flames which have already laid waste so much of the forest growth.

Mr. Speaker, I would thus protect this park with the military arm of the Government until the Territory of Wyoming, in which it mainly lies, is prepared to take her place in the sisterhood of States, and then I would make her a present of it—the same as we did California with the Yosemite Valley and the mammoth-tree country. This is the true and only policy. The one we have been pursuing is contrary to the genius of our institutions and will involve the country in the expenditure of fabulous sums of money.

If, however, we must have a national park let us have it where there is something to be seen and where the people can get to it. For one, I shall object to the last to taking the people's money for the further maintenance of a park 2,000 miles away for the benefit of European nabobs and American snobs. These are the only class who will ever visit the Yellowstone. If you want a national park why not establish one at Niagara Falls or in the Adirondacks or in the Highlands of the Hudson, where nature has been prodigal of her charms and to which less than a day's journey will bring over ten million of people. Such a park might possibly be justified under the "general-welfare" clause in the Constitution; the Yellowstone, never!

Mr. Speaker, the Committee on Appropriations has done wisely in cutting down the amount called for in the Book of Estimates for this National Park. The amount estimated was $96,800. It has been reduced to $40,000. The superintendent is retained at a salary of $2,000, and the ten assistants at $900 each. For the construction and repair of roads and bridges the balance of the $40,000 is appropriated.

In the original draught of this bill the ten assistant superintendents, who last year stole the curiosities they were placed to guard, were left out, and there was a provision for a detail of twenty-five soldiers of the cavalry arm of the service to act as a police force. This was in the line of the suggestion I made to the distinguished chairman of the Committee on Appropriations,

I regret to find that the bill as now reported reinstates these assistant superintendents and drops the provision for a military police. I must say I am not satisfied with the action of the committee. A mere reduction of the amount appropriated is not what is required. The committee should have gone further. It has simply lopped off a branch, leaving the bole standing. In the next Congress you will find sprouts starting up. I would like to see the stump dug out by the roots, and make an end of this whole national-park business.

The proper thing now to do is to turn the park over to the care of the military. The military are certainly equal to the task of taking care of this property, and inasmuch as we are now maintaining them and must continue to maintain them at posts in close proximity, I see no reason why the park should not be turned over to the Secretary of War until such time as we can make other disposition of it in the manner already indicated.

Mr. Speaker, we have gone far enough with this national-park humbug. Let us go no further. Let us wash our hands of the whole business.

The Pacific Railroads—Their History—Their Relations to the Government—Their Rights and Liabilities—The Bill to Increase the Thurman Sinking Fund and Reach Earnings on Aided and Non-aided Roads—Objections thereto—The Post Substitute—The Security of the Government Debt.

SPEECH

OF

HON. ISAAC M. JORDAN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 18, 1884.

The House having under consideration the bill (H. R. 6771) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862, also to amend an act approved July 2, 1864—

Mr. JORDAN said:

Mr. SPEAKER: Whatever doubts there might be, as an original question, as to the power of Congress under the limitations of the Constitution to make grants or donations of lands for public improvements, the power has been so long exercised that it is no longer a debatable question.

The policy and practice of Congress making these grants for the purpose of aiding in the construction of public improvements has prevailed from the earliest history of the country. They were made during the administrations of Adams, Jackson, Van Buren, Tyler, Polk, Fillmore, Lincoln, and Grant. Some were made for railroad purposes prior to 1850; and between 1850 and 1880 grants of the public lands for railroad purposes were made amounting to more than 150,000,000 acres, and patents have in fact issued for more than 50,000,000 acres of these lands.

The purpose which Congress has intended to accomplish by this disposition of the public domain has been the opening up of the Western Territories to settlement, the encouragement of emigration from the more thickly settled States, the development of the mineral and other great resources of the country, the building up of new political communities, and their admission into the Union as States. And it is a singular and interesting fact that while most of the original States made large cessions of lands to the Federal Government, none of them have ever asked or received any donations out of these lands. They have been made entirely in the interest of the Western and Southwestern States.

The rapid and marvelous development of all these States is attributable in a large degree to these grants. More than 16,000 miles of railroad have been built from the proceeds of lands so granted, and wherever these roads have been constructed towns and cities have sprung up like magic, the expectations of the Government have been more than realized, and the national Treasury has received indirectly far more than it would have done by the sale of the land itself.

Grants of this kind were made by Congress in the following States and Territories from the year 1850 up to the year 1880:

	Acres.
Illinois	2,595,053
Mississippi	1,137,130
Alabama	2,807,648
Florida	1,700,467
Louisiana	1,256,430
Arkansas	2,613,631
Missouri	2,605,251
Iowa	4,181,929
Michigan	3,355,943
Wisconsin	3,553,865
Minnesota	9,820,450
Kansas	8,223,380
Nebraska	6,409,376
Colorado	3,000,000
Nevada	4,000,000
California	16,387,000
Oregon	5,800,000
Dakota	8,000,000
Wyoming	4,500,000
Montana	17,000,000
Idaho	1,500,000
Washington	11,700,000
Utah	1,850,000
New Mexico	11,500,000
Arizona	18,500,000
Total	154,067,553

At the time, therefore, that the grants were made to the Union Pacific and Central Pacific Railroad Companies, although they were much larger than ever had been made before, no new policy was inaugurated by Congress; on the contrary, they simply followed a policy which had been adopted early in the history of the country. The first public man whose prophetic vision saw the future of the great West, and the importance of the Government taking steps to aid in constructing a railroad to the Pacific, was Stephen A. Douglas. As early as 1845 he prepared a bill to organize the Territories of Nebraska and Oregon, and to reserve to each of said Territories alternate sections of land forty miles in width on each side of a railroad from the Missouri River to the Bay of San Francisco.

After the admission of California the construction of a transcontinental road was continually under consideration in Congress. These measures all looked to the granting to said road of the public lands, and making them the carriers of the Government mails and other property. And from that time to 1856 the Government made surveys of and considered at least five different routes for that purpose. The Democratic and Republican parties demanded its construction in their party platforms, and Buchanan, in 1856, and Lincoln, in 1860, recommended the matter in their messages to the favorable consideration of Congress.

President Buchanan suggested long before the war that it be paid for in money and lands. In his message to Congress, December 6, 1858, he said:

> It would be inexpedient for this Government to exercise the power of constructing the Pacific Railroad by its own immediate agents. The construction of this road ought therefore to be committed to companies incorporated by the States, and Congress might then assist them in the work by grants of land or money, or both, with conditions and restrictions as to transportation of troops and munitions of war free of charge, and the carrying of the mail at a fair price.

Indeed, the construction of such a road, in view of our settlements upon the Pacific coast, became inevitable. It was impossible that in a country like ours our people would consent long to the inconveniences of an overland route requiring more than thirty days to go from the Missouri River to San Francisco, a route made dangerous by Indians and robbers, and which made the cost of transportation almost incredible. This road would have been built whether the war had come or not; but the war had much to do with its construction and with the character of the grant and subsidy given to the road, for without these it never would have been built.

What, then, were the circumstances which brought about the building of this road and the liberal subsidy and grant made for that purpose?

In April, 1861, our civil war commenced. On one side were arrayed all the Northern States, and on the other side all the States from Maryland to the farthest border of Texas. The territorial dominion of the Southern confederacy embraced about one-third of the United States. This conflict soon assumed vast proportions, and the Government found itself engaged in a great conflict for national existence. European nations, long jealous of our great prosperity, stood ready to take advantage of our condition in any way that seemed favorable to them. England was in strong sympathy with the South, and France was ready to obtain a foothold on this continent if possible.

As early as 1862 the French landed an army of invasion in Mexico, and, taking advantage of the party strifes in that unhappy country, were soon able to establish a monarchy on the ruins of the Mexican Republic. The Congress of the United States were well aware of this danger. They saw that our Western Territories were in peril. They saw California hesitating in her loyalty. They saw that the permanent occupation of Mexico by France was a barrier to any further extension to our territory south; that it threatened our control of the Gulf of Mexico, and made communication with California by water impossible without the consent of the French Government.

The construction of a railway across the continent connecting us with the Pacific States became an absolute necessity as a matter of national defense. The road had to be built. The Government had no money with which to build it. Her constitutional power to do so was doubtful. Our credit was impaired; gold and silver had gone out of circulation; a paper currency had taken its place; we were issuing our bonds by the hundreds of millions; the faith and property of the nation were pledged to their payment, and yet our bonds were selling at far below par. In this state of affairs Congress was in a condition to be liberal to any individuals or corporations who would undertake the hazard and experiment of constructing this road through a wilderness inhabited by the Indians, over deserts uninhabited by man, and over mountains covered with perpetual snow.

Under these circumstances, the Congress of the United States, on the 1st day of July, 1862, passed the act for the construction of a road from the Missouri River to Sacramento, 2,000 miles in length, by the Union and Central Pacific Railway Companies. By this act Congress proposed a grant to said companies of a right of way two hundred feet wide, more than 2,000 miles long, all necessary lands for depots, &c., and a donation of five alternate sections per mile on each side of the road for a width of ten miles, to extinguish all Indian titles which might interfere with the grant, and to loan to said companies its bonds at the rate of $16,000 a mile where the road was easy of construction, and for three hundred miles through the Rocky and Sierra Nevada Mountains at $48,000 a mile, and for one hundred and fifty miles at the rate of $32,000 a mile.

This seemed a princely offer, but such was the condition of the country and of its finances, such the hazards of the undertaking, such the timidity and conservatism of capital, that the companies were unable and unwilling even on these terms to build the road, and the Govern-

ment saw two years pass by and nothing done toward the construction of this great road. Such being the condition of affairs, it probably never would have been built had it not been for what was going on in Mexico. While we were engaged in our own conflict, which strained every nerve and taxed every resource, France was completing her conquest in Mexico and arranging to place Maximilian on the throne, and the United States, with shame, humiliation, and mortification, on the 12th of June, 1864 (nineteen days only before the amending act of July 1, 1864, was passed), saw Maximilian enter the City of Mexico amid the acclamations of the Mexican people and made emperor of Mexico.

At this time what was the condition of the United States? Our national debt had reached the immense sum of seventeen hundred and forty millions of dollars. The credit of the Government was greatly impaired at home and abroad. Sherman had met with a severe repulse at Kennesaw Mountain. Grant had been unsuccessful at Spottsylvania, and had met with severe disasters at Cold Harbor. One hundred thousand men had been lost in three months. Lincoln was about to call for 500,000 more soldiers. This, indeed, was the supreme hour of the war. In this great national trouble, with civil war endangering the life of the nation at home, with California hesitating in her loyalty, with Indian raids and troubles upon the frontier, with France violating the Monroe doctrine with impunity and placing Maximilian upon the throne in Mexico, was it a very remarkable or extraordinary fact that the Government or Congress of the United States should have offered such large inducements to her citizens and capitalists in order that a great military highway might be constructed which would connect the eastern and western parts of our vast dominions?

It may be well to quote here what was said by Justice Davis on behalf of the Supreme Court of the United States in deciding the case of The United States *v.* The Union Pacific Railroad, as reported in 91 United States Reports, page 79. He said:

> Many of the provisions in the original act of 1862 are outside of the usual course of legislative action concerning grants to railroads, and can not be properly construed without reference to the circumstances which existed when it was passed. The war of the rebellion was in progress, and owing to complications with England the country had become alarmed for the safety of our Pacific possessions.
>
> The enterprise was viewed as a national undertaking for a national purpose, and the public mind was directed to the end in view rather than to the particular means for securing it. Although the road was a military necessity, there were other reasons active at the time in producing an opinion for its completion besides the protection of an exposed frontier; there was a vast unpeopled territory lying between the Missouri and Sacramento Rivers which was practically worthless without the facilities afforded by a railroad for the transportation of persons and property. With its construction the agricultural and mineral resources of this territory could be developed, settlements made where settlements were possible, and thereby the wealth and power of the United States largely increased; and there was also the pressing want, in time of peace even, of an improved and cheaper method for the transportation of the mails and of supplies for the Army and the Indians.
>
> It was in presence of these facts that Congress undertook to deal with the subject of this railroad. The difficulties in the way of building it were great and by many intelligent persons considered insurmountable.
>
> The scheme for building a railroad two thousand miles in length, across mountains, over deserts, and through a country inhabited by Indians, jealous of intrusion upon their rights, was universally regarded at the time as a bold and hazardous undertaking. It is nothing to the purpose that the apprehended difficulties in a great measure disappeared after trial, and that the road was constructed at less cost of time and money than had been considered possible. No argument can be drawn from the wisdom that comes after the fact.
>
> The project of building the road was not conceived for private ends, and the prevalent opinion was that it could not be worked out by private capital alone. It was a national work, originating in national necessities, and requiring national assistance.

At the time the Pacific railroads were chartered and these grants made we were carrying on a great war, and this was regarded as a war measure, and seemed to be a proper exercise of power under the circumstances which then surrounded us. Now we are in the midst of profound peace, and no man in his senses would contemplate for a moment making such extraordinary grants of the public domain for such purposes, and no political party would now favor it. What seemed proper then would be improper and impossible now. Indeed at this time we are pursuing the far better and wiser policy, and instead of disposing of our public lands in large quantities to railroads or foreign syndicates, we are reserving them as rewards for the valor of our soldiers and as homes for those of our people who will settle upon and improve them.

Mr. Speaker, Congress in making these grants was governed by the exigencies of the times, and did what seemed best for the interest of the whole country. The object intended was national defense and the perpetuation of the Government.

Congress had more than one object in view in having these Pacific railroads built.

First. It desired to have a railroad built at once, over which it could carry troops, Government supplies, &c., in case of war with France, Mexico, or if necessary in connection with our civil war or trouble with the Indians.

Second. It desired a permanent postal and military road under Government control.

Third. It wanted to develop the great mineral resources of that vast Western country.

Fourth. It had in view the opening up of the whole of our Western territory to settlement, the building up of new communities and States, and increasing the wealth and power of the country.

Fifth. It expected to cheapen the expense of carrying the mail and Government supplies in the West.

Sixth. It believed that the construction of such a road would enable it to control the Indian problem.

And all these results have been more than accomplished.

THE OBJECT OF THE GOVERNMENT.

The object of the United States was not to make an investment or loan of money nor to make a profit; neither was it its principal object to obtain payment for the lands granted or to secure the money or credit which it loaned the companies. The object of Congress was a much higher and more important one, as will be found in the title and in almost every section of the act creating the same. The title of said act is as follows:

> An act to aid in the construction of a railroad and telegraph line, and to secure to the Government the use of the same for postal, military, and other purposes.

The sixth section of said act makes the grant upon condition not merely that the companies shall pay the bonds at maturity, but that "they shall keep said railroad and telegraph line in repair and use, and shall at all times transmit dispatches over said telegraph line, and transmit mails, troops, and munitions of war, supplies and public stores upon said railroad for the Government, whenever required to do so by any Department thereof, and that the Government shall at all times have the preference in the use of the same."

The twelfth section of said act provided that "the track upon the entire lines of said railroads and branches should be uniform, and the whole line of said railroad and branches and telegraph shall be operated and used for all purposes of communication, travel, and transportation, so far as the public and Government are concerned, as one connected and continuous line."

The seventeenth section provides that in case said railroad companies should fail to comply with the terms and conditions of the act by not completing the road, branches, and telegraph within a reasonable time, or by not keeping the same in repair and use, Congress might pass an act for the speedy completion or repair thereof, and appropriate the income of the road for that purpose.

The eighteenth section makes still more important and further reservations. Indeed, so much more important were these reservations by the Government of rights and powers over these roads than the money loaned to the companies, that Senator Thurman declared in the Senate of the United States that he would rather see the Government relinquish all claims to the bonds and interest loaned or paid for these companies than to release or surrender the power and control which it had reserved by the charter over them. His language was:

> I affirm, as I have affirmed before, that this Government had better lose every dollar due and all that is to become due to it by these companies than to give up the right which it has to alter, amend, or repeal the charter.

During the discussion of the matters relating to the land and bond subsidies in the Senate, Senator Wade, of Ohio, declared that he cared but little whether the Government ever received payment of a dollar of the money loaned these companies; that the Government would be more than compensated in what it would receive from the opening up of the country, the founding of new States, and that, as a matter of national defense, this road was an absolute necessity. Similar sentiments were expressed on the floor of the Senate and by members of the House and by almost the entire press, and the whole country was in hearty sympathy with this view and purpose. I have thought, Mr. Speaker, that, in view of the attacks which have been made upon those who were connected with the making of these grants, it was only right and just to call attention to the times and circumstances under which these subsidies were made. And I believe that by so doing we will be better able to understand and interpret the several acts relating to these roads. It is said that some members of Congress were induced to vote for the act of 1864 by improper considerations. This may be true, but Congress has not chosen to repeal these acts, the courts have not set them aside, but they have been admitted to be valid by the courts and by every Department of the Government, and to constitute a binding contract between the companies and the Government; and it is too late therefore to plead these matters now. So far as we are concerned in this case, we must deal with these as with any other acts of Congress, and we must respect them the same as if passed by ourselves. Indeed, as was said by the Supreme Court of the United States in the case of Fletcher *v.* Peck, hereafter cited: "The acts of the supreme power of a country must be considered pure for the same reason that all sovereign acts must be considered just, because there is no power that can declare them otherwise."

Mr. Speaker, the Pacific Railroad Committee have had under consideration for some time the subject of the relation which the Government sustains to the several Pacific railroads which are known as the bond-subsidized roads, and the best means of obtaining security for the amount owing by said railroads, and of ultimately obtaining payment of the entire indebtedness.

Two bills are now before the House for consideration and action. The one presented by the committee contains two main propositions:

First. The extension of the Thurman act, not only over the Union and

Central Pacific roads, to which it already extends, but also over the Kansas Pacific, the Central Branch of the Union Pacific, and the Sioux City and Pacific Railroad; and the requirement that each of these roads should pay into the sinking fund, created under the Thurman act, 35 per cent. of its net earnings, instead of 25, as at present required.

Second. To appropriate to the payment of the Government indebtedness all the money which the Government owes to any of said roads, or may owe them for transportation on any of its roads whether aided, owned, leased, or operated by said companies.

This plan is one which looks to compelling these companies to pay to the Government a larger amount from year to year than the condition of the companies will justify, provided they keep up their roads, pursue the policy which they have been pursuing in reducing the rates for passenger and freight transportation, and in contending and maintaining themselves against competition of rival roads. But this plan makes no provision for the payment or the extinguishment of the debt owing by these companies to the Government at the time of the maturity of the indebtedness, which will be in the year 1898; and the unpaid balance at that time, it is believed, will amount to not less than $75,000,000.

It was for the purpose of meeting this great and radical defect in the bill of Mr. THOMPSON which has led us into the consideration, development, and advocacy of the plan, clear, plain, and simple, by which these companies could be induced or required to give to the Government additional security for its indebtedness, and by which the payment of the debt would be insured beyond a reasonable doubt. We believe that we have completely accomplished these purposes by the bill of Mr. POST. It provides—

First. That the Secretary of the Treasury shall ascertain as of the date of October, 1884, the present worth of the indebtedness to the United States of said subsidized roads, after deducting any amounts paid thereon or in the sinking fund to the credit of said companies.

Second. That the Secretary of the Treasury shall divide the amount so found into a hundred and twenty parts, and receive from said companies a hundred and twenty bonds of each of said companies, payable in semi-annual installments, with interest at 3 per cent, per annum, and providing for the payment and extinguishment of one of said bonds every six months, with a proviso that said companies should receive no Government pay for transportation over any of their lines owned, leased, or operated until the bond next becoming due shall be paid.

Mr. BLOUNT. Will my friend allow me to ask what would be the difference in the amount paid to the Government by these roads under that proposition and the amount which the Government has been receiving from them? Of course we can not tell about the future.

Mr. JORDAN. I will state in regard to that in a few minutes, and then give a direct answer to the question of my friend.

Mr. BLOUNT. Of course I do not care when it is answered.

Mr. JORDAN. I will answer it in a few minutes; it will become a necessary part of my argument to answer it.

Third. That the statutory lien or mortgage created under the acts of July, 1862–'64, and the security created by the Thurman sinking-fund act of May 7, 1878, together with a further lien on the whole line of said companies, whether owned, leased, or operated by them, including rolling-stock, fixtures, &c., should be and remain as security for the payment of said bonds so to be executed. The companies have under this provision the right to pay up the whole of the indebtedness at any time. The said bill contains other and important provisions looking to the preservation of all the other rights held by the Government under existing laws.

This bill provides for the acceptance by the companies of the provisions of the bill, and that on failure to accept them they shall be required to pay 35 per cent. of their net earnings to the Government; and also provides in that event for a further and better investment of the moneys in the sinking fund.

These two plans are now before the House. The railroads which have been subsidized by the Government with bonds as well as lands are as follows:

The Union Pacific, running from Omaha to Ogden Station, a distance of 1039 miles.

The Central Pacific, which connects with the Union Pacific at Ogden Station, and runs from there to Sacramento City, a distance of 860 miles.

The Kansas and Pacific, running from Kansas City westerly to Gopher Station, in Kansas, 394 miles.

The Central Branch of the Union Pacific, running from Atchison to Waterville, Kans., 100 miles.

And the Sioux City and Pacific, running from Sioux City, Mo., to Fremont, Nebr., a distance of 101 miles.

The amount advanced to all these roads in the aggregate was $64,000,000, and neither it nor the interest matures until 1898. Large payments have been and are constantly being made upon this indebtedness, and while the amount now estimated to be owing is about $100,000,000, it is estimated that at the maturity of the bonds the amount owing will not be more than $75,000,000.

Three important questions now present themselves for the consideration of the House:

First. Will we adopt and pass the bill presented on behalf of the committee?

Second. Will we adopt and pass the substitute offered by Mr. POST? or,

Third. Will we leave the railroads as they now are, to pay what is required of them by law and under the operation and security afforded by the sinking fund created by the Thurman act?

I will speak on these points in their order.

The first principal provision of the bill reported by the Committee provides that the Government shall collect 35 instead of 25 per cent. of the net earnings of the roads; in other words, changes the Thurman bill to that extent.

Under the present or existing laws, from all the bond-subsidized roads, the amount annually received is $2,977,096.96.

Under the bill reported by the committee the amount received would be $4,502,295.62, making a little more than one million and a half, in addition to what the companies are now paying. And under the bill as amended the amount required would be nearly six millions of dollars. This is claimed to be the great merit of this bill, and the chief ground upon which it is urged; and certain figures are set forth for the purpose of showing that these companies are able to pay these extraordinary amounts of money. In our judgment this feature of this bill is one of the greatest and strongest objections to it. As we regard the matter, we consider that it is much more important that the people shall have cheap transportation over the whole system of the Pacific roads, and through them over all other roads, than that the Government should coerce the speedy payment of its debt. I regard cheap transportation over the Pacific roads, and over all other roads, as being the most important matter which can engage the consideration of Congress; and that every act in opposition to this idea should be regarded with hostility by Congress.

The report of the Union Pacific Railroad to its stockholders shows that for the year ending December 31, 1883, the aggregate amount of its passenger and freight traffic was considerably greater than the previous year. While it carried 21 per cent. more of passengers and 23 per cent. more of freight, its receipts were $1,821,342.46 less than the year before. Although we have not the official results before us, we are informed that the same result has occurred upon the Central Pacific and the other roads. This was occasioned solely by a reduction of charges in freight and passengers. We regard it as of the utmost possible importance that everything should be done to encourage this reduction and cheapening of transportation, and that nothing should be done looking in the opposite direction. The public who travel over these roads, and who transport their property upon them, are entitled to the most liberal consideration at our hands.

The bill of the committee is in direct conflict with the interest of every man, woman, and child carried over these roads, or who uses them as carriers of freight. Let me ask who is it who will be compelled annually to pay this additional million and a half of dollars (or $3,000,000 if the bill is amended as asked) which this bill proposes to add to the amount paid by these companies? Where do the companies get the money with which they pay and are to pay the large amounts required of them by the Government? Is it not a charge or exaction upon the public—upon the people—upon those who use the road? Every dollar in excess of what these companies are now required to pay to the Government will be raised by an increase of the price of passenger and freight charges on these roads. Railroad companies are not eleemosynary institutions. Certainly nobody on this floor has applied any names of that kind to them. They carry on business upon the same principle as natural persons, for the purpose of making money. If they must pay more they will charge more. The ratio of payment will be the ratio of collection, and hence the ratio of charges.

Mr. CASSIDY. Right in connection with that statement, if the gentleman will permit me, I will say that I have the report of the Government experts sent to Boston to examine the books of the company; and that report shows a falling off in the net earnings of the company, for the first five months of the present year, of $1,983,000 in round numbers.

Mr. BLOUNT. What was the amount of the last dividend?

Mr. CASSIDY. The last dividend they ever paid they had to borrow the money to pay it.

Mr. JORDAN. One of the roads I think pays 6 per cent. and the other 7 per cent.

Mr. BLOUNT. I mean the last dividend.

Mr. CASSIDY. One and three-quarters per cent.; they pay every three months.

Mr. JORDAN. Here is a reduction in the amount of the receipts of that road of nearly $2,000,000, and yet they have transacted nearly 25 per cent. more business than before. I am in favor of that sort of legislation which will permit these roads to keep on reducing their rates of freights in order that the people may have the benefit of that reduction in cheap transportation.

Mr. LAIRD. Will my friend permit me to ask him a question?

Mr. JORDAN. With great pleasure.

Mr. LAIRD. Can you show the House where the Union Pacific Rail-

road has ever reduced its charges for carrying freights and passengers a solitary penny? If so, I would like to have you do it.

Mr. JORDAN. I would refer my friend to the report of the Railroad Commissioner on that subject. He will find there that there has been a very large reduction both in 1882 and 1883.

Mr. LAIRD. I know there was a reduction in Colorado, where they had been charging 10 cents a mile for passengers, to 5 cents a mile, and there has been some reduction for passengers in Nebraska; but I know of no reduction in freight charges.

Mr. JORDAN. I think my friend has not thoroughly and fully investigated the report. He will find on examination that I am entirely correct.

Mr. PAYSON. Will the gentleman permit an inquiry?

Mr. JORDAN. Always.

Mr. PAYSON. How would it injure the general public if those gentlemen controlling these railway corporations should accept smaller dividends than they have been getting for the last eight years?

Mr. JORDAN. That will depend upon two propositions: In the first place, whether the dividends they have been getting are unreasonable dividends; and second, whether these roads are now in a condition in fact to pay dividends upon their earnings, or whether they are paying them by exhausting their reserve.

Mr. PAYSON. As a member of the committee, will the gentleman give the House his judgment as to whether the dividends these companies have been exacting from the people have not been extortionate ever since they first commenced paying them.

Mr. JORDAN. That will be part of the argument I will undertake to make before I close. The question is readily answered. The gentleman will find that I have considered all these matters very fully.

Mr. PAYSON. Will the gentleman allow one further inquiry? When he comes to descant on the dividends these companies have been paying, will he bear in mind the fact that none of these roads cost the present companies a single dollar?

Mr. JORDAN. Now, I would like to make a remark on that point to the House. What difference does it make, so far as regards the question upon which we are now passing, whether the owners of these roads have paid a dollar toward their construction? The Government of the United States did not give these companies these bonds; it loaned them bonds, did it not? The bonds were theirs to do with as they pleased.

Mr. PAYSON. It did.

Mr. JORDAN. And it is exacting payment of the bonds.

Mr. PAYSON. It is trying to do so.

Mr. JORDAN. What difference, then, does it make what the owners of the roads did toward the construction of the roads? The only question that can arise is whether the dividends which are being paid are upon a fair capital stock of the roads, and I will undertake to show that they are.

I am glad to see gentlemen interested in this question, and if they will follow me in what I say, or if they will investigate these matters as I have done for months as a member of the committee, they will come to the same conclusion that I do.

I resume my argument where I left off at the time I was interrupted.

Mr. Speaker, it would not be a difficult task in this House to show that tariffs, internal-revenue taxes are collected from the consumer; and passenger and freight charges are simply taxes levied by corporations upon individuals who travel and upon property which is transported.

This being so, we consider that this bill of the committee will result necessarily in an increase instead of a decrease of passenger and freight transportation over these roads, and that the public will pay, both in the cost of transportation and in the increased price of goods, all that is demanded by this bill in excess of what is paid now.

This argument ought to be sufficient to induce the House to reject a proposition which makes the people who use these roads pay an additional tribute of $1,500,000 a year, or $3,000,000 more, as now asked by the amendment.

There is another reason why we can not adopt the bill of the committee, and which seems to me a very strong one; and that is, a conviction that it is necessary to the successful management of the business of these roads that they should be allowed to use a considerable portion of their profits in constructing feeders and branch roads and in maintaining the best possible equipment for their roads. This has been the policy of these roads, in common with all the other great railroads of the country, and is a necessity forced upon them by powerful rivals who compete with them for every passenger and pound of freight carried over their lines. This policy has been beneficial to the companies, and has enabled them to maintain their main trunk lines in which the Government is interested, and to pay to it the amount required by the Thurman act, and to make their business successful and profitable. Upon this subject the Government directors of the Union Pacific Railroad say:

> The road-bed, track, buildings, and equipment are all in excellent condition and kept well up to the highest standard of the best roads of the country. The feeding lines are bringing each year additional traffic to the main line and increasing profits from their own business, to the permanent advantage of the whole system.

I regard it as greatly in the interest of the public that these roads should be well built, maintained, and equipped, and that they should have the means and be left free to compete with their rivals by making cheaper rates to the people in the future, and any other policy is short-sighted and unwise; and while it may cater to some local prejudice or feeling, it will, as a result, do great injury to the general business interests of the people; not simply those who use the road for local traffic, but that great body of the people who are carried over it, and who use it for more important and general purposes.

They should be allowed to use a considerable portion of their profits in constructing feeders and branch roads and in maintaining the best possible equipment for their roads. This has been the policy of all these roads. It is demanded by the necessities of business and travel over them; it is demanded in the interest of the public convenience. It is a necessity forced upon them by powerful rivals, who compete with them for every passenger and every pound of freight carried over these lines.

Look at the Union Pacific Railroad. You will find it paralleled from one end to the other by two great roads—the Quincy and Burlington Railroad upon the one side, and the Atchison and Santa Fé upon the other. The case is said to be the same in regard to the Central Pacific Railroad. It is said that all these roads are either paralleled by other great roads, or are compelled to compete with other and rival roads for all the business they transact.

Mr. GLASCOCK. Will the gentleman state what line there is parallel to and competing with the Central Pacific Railroad? There is no line competing with the Central Pacific road, and it absolutely holds a monopoly of all the California business.

Mr. CASSIDY. I hope the gentleman from Ohio will allow me to answer the gentleman from California.

Mr. JORDAN. I yield to the gentleman from Nevada, the chairman of our committee, for that purpose.

Mr. CASSIDY. The gentleman from Ohio, when he speaks of these roads being parallel, or in competition with other roads, means, as I understand him, that the Central Pacific does not control all the business in that section of the country, that there is a diversion of business from it, and consequently a reduction of the earnings of these subsidized roads. And now taking his statement in the sense in which he means it, I undertake to maintain that the completion, for instance of the Northern Pacific road, has diverted from the Union Pacific all the Montana freight, all the Washington Territory freight, and in a great measure the Oregon freight. I maintain, also, that the completion of the Southern Pacific has diverted a large share of the business from the Central Pacific.

Mr. GLASCOCK. Is not the Southern Pacific practically under the same control?

Mr. ANDERSON. Are not all these roads pooled?

Mr. CASSIDY. I am not speaking of competition as reducing rates, but in regard to its effect in reducing business.

Mr. JORDAN. Resuming where I left off, I desire to repeat that the policy of allowing these roads to construct or aid in the construction of branches and feeders has been beneficial to the companies and has enabled them to maintain the great trunk lines in which the Government is interested and to pay the amount required by their contract with the Government, the amount fixed by the Thurman act, and to make their business successful and profitable.

Another grave objection to this bill of the committee is that it will prevent them from paying dividends to their stockholders. When the Thurman bill was passed it was never contemplated for a moment that the roads should not pay a dividend to their stockholders; on the contrary, it was intended they should pay a dividend. It may be well here for me to quote from the remarks of Senator Thurman, the distinguished author and champion of the sinking-fund bill in the Senate.

On this subject Senator Thurman said:

> If the committee had not recognized the fact that it is for the interest not only of the companies, but of the country and the public, that the stockholders should be allowed to receive some reasonable dividends, because where roads pay dividends they are always better managed than where they pay none; if it had not been for those considerations we might justly have acquired more onerous conditions than those that we have imposed by this bill. Am I right about that? It is shown by the report of your committee, by going over the receipts and expenditures of these companies for long periods, that they can comply with this bill and pay every dollar of interest annually upon their indebtedness, both that whose lien is inferior to that of the United States as well as the first mortgage whose lien is superior; that they can pay every dollar interest upon their entire funded debt, pay all their operating expenses, pay to the Government what by existing law they are required to pay, and pay into a sinking fund what this bill requires them to pay, and then have annually for distribution among their shareholders as follows: The Union Pacific about 4¼ per cent. on the nominal value of the stock, or 6¼ per cent. on its present market value, and the Central Pacific about 6.4 per cent. on the nominal value of the stock.

One of the effects of this bill of the committee will be to prevent the payments of dividends to the stockholders. This is all wrong. The stock of these roads has been regarded by our people as a good investment. It is held and owned in all parts of the country. More than 5,000 persons are stockholders in the Union Pacific alone. The securities of these roads, including the stock, "have become favorites in the market for investments, and they are widely scattered at home and

abroad. They have taken to a certain extent the place of the public funds as investments." Stop the payment on these stocks, and you ruin thousands of innocent people.

Two of these roads—the Sioux City and the Central Branch of the Union Pacific—are not only put under the operation of the Thurman act by this bill of Mr. THOMPSON, but are required to pay 35 per cent. of their net earnings to the Government, when as a matter of fact they have never paid a dollar by way of dividend on their stock; and the latter road is in a state of hopeless insolvency.

Mr. THOMPSON. I will call the gentleman's attention to the fact that the Sioux City and Pacific Railroad paid as dividends on its capital stock the sum of $11,930, or more than 10 per cent.

Mr. JORDAN. I do not so understand the fact. That road has been in a chronic state of insolvency ever since its creation. If the company did pay the amount stated, $11,930, instead of being 10 per cent. on its capital stock, it would only be about 1 per cent. on its stock, which amounted to $1,000,000. And now let me ask the gentleman a question. Did this company, in the twenty years of its existence, ever pay any other dividend?

Mr. THOMPSON. I have not examined the full list of dividends. But I will state that last year it increased its net earnings over 200 per cent.

Mr. JORDAN. The gentleman is again mistaken. He is referring to the Central Branch of the Union Pacific, not to the Sioux City and Pacific Railroad, which only increased its earnings 28 per cent.

At the time I was interrupted I was considering the question of these roads being allowed to pay dividends to stockholders, and I have simply to add in addition upon that point that this view of the matter was taken by Senator Thurman in a discussion of his bill, that no Senator who took part in that discussion on either side ever suggested any other course.

Indeed, Mr. Speaker, will any man in his senses, any lawyer, suppose for a moment that a bill depriving the stockholders of all dividends would have been regarded by the Supreme Court as constitutional? They had already decided that the debt owing to the United States was not due until 1898, that the Government had no right until then to require payment, and it would have been more than unreasonable to require these companies to lay aside for the future so much of their earnings as disabled them from paying a dividend to their stockholders.

The stockholders of a railroad company are its owners, and to have deprived them of the whole of their dividends would have been an act so arbitrary in its character and so unreasonable that the Supreme Court would never have decided it to have been within the limitations of the constitutional power of Congress. If this policy had been pursued does any man suppose for a moment that this company would not have ceased business at once, and been compelled to abandon its property to the Government? And we would have found ourselves in the position of having the United States taking one more step in the direction of centralization, and found it engaged in carrying on the business of a railroad.

Mr. ANDERSON. Will the gentleman allow me to ask him a question?

Mr. JORDAN. I hope my friend from Kansas will not think me discourteous in declining to yield further. I have already been too generous in yielding my time for interruptions.

And now, Mr. Speaker, proceeding further in my objections to the bill of the committee I find another important argument against this bill is that it puts in jeopardy all the money now in the sinking fund under the Thurman bill, now amounting to about $5,000,000, and will result probably in having that law declared unconstitutional. There has been paid in already under that bill many millions of dollars which will be lost to the Government if that law should be declared unconstitutional. This law was declared constitutional, as has been stated, by a divided court. And whoever will take the trouble of examining the dissenting opinions of Justices Field, Bradley, and Strong will consider their argument against the constitutionality of the act of May 7, 1878, as entitled to the gravest consideration. In the mutation of human affairs but five of the justices who took part in the decision of that case are now on the supreme bench, and of these five only three believed the law to be constitutional.

This bill of the committee, by changing the amount to be paid in under the Thurman law and extending its operation, gives these companies an opportunity, if it does not invite them, to again test the constitutionality of this sinking-fund law. Is it good policy or wise statesmanship to do this? I have the highest possible regard for Judge Thurman, and this bill will long stand as a monument of his ability and skill as a lawyer and a statesman. At the same time I have the most serious doubts as to its constitutionality. Is it not better to stand where we are and take no chances in this matter? Let us be contented with what we have, and not, like the dog in the fable, lose the substance while grasping at the shadow.

Mr. JONES, of Wisconsin. Does not the railroad company have every year the right to test the constitutionality of that law, and will it not have that right whether we pass this bill or not?

Mr. JORDAN. I think it has the right to do it now, but these companies have not been disposed to do it, because they are willing to pay the amount required under these various acts. But if you undertake to say that these railroads shall pay annually a million and a half of dollars more than they are now paying (and indeed it would be more than three millions under the amendments made to the bill), then you will have so burdened them beyond their ability to bear that they will be compelled to find relief from your oppressive exactions either by appealing to the justice of the courts or by abandoning their business or surrendering their property. In my judgment, Mr. Speaker, this bill of the committee puts in jeopardy all the money now in the sinking fund and risks all that has been expected from it. In my opinion it is an unwise measure, and I desire on behalf of the Government and the public, whose servants we are, to put on record my protest against it.

I now come to the consideration of the fifth section of the bill of the committee, which is as follows:

SEC. 5. That the Central Pacific Railroad Company pay into said sinking fund the sum of $5,000,000; that the Union Pacific Railroad Company pay into said sinking fund the sum of $5,000,000; that the Kansas Pacific Railroad Company pay into said fund $2,000,000; that the Sioux City and Pacific Railroad Company pay into said fund $500,000; that the Central Branch of the Union Pacific Railroad Company pay into said fund $500,000, all of which said payments shall be made by said companies on or before Janury 1, 1885: *Provided, however*, That all sums of money, if any, which are claimed by said corporations, or any of them, as due them for services rendered the Government in transportation of mails, passengers, freight, or otherwise, as follows, namely: First, one-half compensation earned on bond-subsidized roads from January 1, 1873, to June 30, 1878; second, total compensation earned on non-bond-subsidized roads owned, leased, controlled, operated, or managed by subsidized companies from January 1, 1873, to this date; third, one-half compensation earned from July 1, 1878, to this date on bond-subsidized roads not embraced in the act of May 7, 1878, and which said sums so claimed have been withheld by the Government and applied, in whole or in part, to the payment of interest on the said subsidy bonds or to the purposes of the sinking fund, shall be credited upon said cash payments directed to be paid as aforesaid to the extent of the interest of each of said companies respectively in said claims; and upon all of said sums claimed to be due upon the accounts aforesaid and so withheld, and which have been applied to the payment of interest, there shall be interest allowed said corporations at the rate of 3 per cent. per annum from the said date of application until covered into the sinking fund under the operations of this act; and upon such portion as went into the sinking fund credit shall be given as of date it was passed to said fund, with interest at the rate produced by the investments then made; and if said credits when so allowed fall short of the cash payments herein required, the Secretary of the Treasury shall suspend the collection of the residue until further directed by Congress.

The accounts between the Government and the said corporations shall be restated to conform to the requirements of this act, and the unpaid interest account increased in proportion to the sums transferred from it to the sinking fund.

I read so much of the report of the committee as bears upon this section. It is as follows:

The accounts between the Government and the railroads are in a very unsatisfactory and uncertain condition. The complications arise principally out of the act of March 3, 1873, which has since been carried into the Revised Statutes as section 5260. The companies claim that this act was an attempted modification, without their consent, of what they claim was a charter-contract made in the act of 1864; that by said act Congress retained only the right to withhold and apply one-half the compensation earned upon the bond-subsidized portion of the roads by services to the Government; therefore, they say, the officers having retained all not only on the bond-aided portion but also on the non-bond-aided road owned by them (and upon roads not embraced by the Thurman act since it took effect), they have a right to recover the same back with interest.

These claims, as stated, are about as follows:

1. One-half compensation earned on bond-subsidized roads from January 1, 1873, to June 30, 1878	$1,753,554 79
2. Total compensation earned on non-bond-subsidized roads owned, leased, or operated by subsidized companies from January 1, 1873, to June 30, 1882	1,418,110 84
3. One-half compensation earned from July 1, 1878, to June 30, 1883, on bond-subsidized roads not covered by the act of May 7, 1878, or Thurman sinking-fund act	221,572 01
Total	3,393,207 64

This is for mail transportation alone, and the data furnished does not run down to date, nor has it been practicable to obtain sufficient information to give even an approximate estimate as to the amount of compensation earned by the bond-subsidized roads for services other than mail transportation of the three several classes above set forth and for the separate periods mentioned. It is thought it will equal, if it does not exceed, the amount above allowed for mail transportation.

These claims, if allowed with interest, will be over $10,000,000, and require large deficiency appropriations to pay the same. Shall they be paid, or in some way covered into the sinking fund?

It has been held by the Court of Claims that the Government could not retain, for the purpose of paying interest, any portion of the compensation due on the non-subsidized portions of said roads, or on roads controlled, leased, or operated by the subsidized companies; further, that it could only retain one-half the compensation for that purpose on the subsidized portions of said roads. This practically declares the act of March 3, 1873, inoperative, and leaves the Government to pay the claims above set forth, unless they can be covered into a sinking fund. (16 Court of Claims, 360.) It must be noted, however, that the sinking-fund act was not under consideration in the decision referred to above.

It will be seen that this section relates to three distinct classes of claims which it is sought by the arbitrary act of Congress, by a sort of legislative sequestration, to take from these roads and turn into a sinking fund.

I deny the authority of Congress to pass this act, and submit the question to the candid consideration of every lawyer and every fair-minded man in the House.

It is admitted in the report of the committee, and it was decided by the Supreme Court, that Congress could not take any of the money or current earnings of these roads and appropriate them to the payment of the debt; but it is said that, while we can not do this, we can order these companies to pay a sum larger than these amounts into the sinking

fund, allow them interest upon it (and thus kick the devil around the stump), and thus prevent the companies getting the money they are entitled to.

Now let us see what was decided in the Sinking-fund case.

The court decided in that case simply that Congress had a right to require the companies which had been subsidized by the Government with bonds and lands to lay aside so much of their current earnings, after paying a dividend to their stockholders, as would be necessary to protect the Government or other creditors, and that a sinking fund could be established in the Treasury of the United States for that purpose. That decision related wholly to the future earnings of the road, and did not operate on any moneys already earned. The fifth section of this bill, however, takes from these companies money already earned and owing to it by the Government, is retroactive in its character, deprives them without due process of law of rights already vested, and is therefore unconstitutional.

In the Sinking-fund case, decided by the Supreme Court of the United States, in 9 Otto, page 718, Chief-Justice Waite, in announcing the opinion of the majority of the court, recognized fully the position that I contend for, namely, that Congress had no power to pass any law setting aside the past earnings of any of the subsidized roads and placing them in a sinking fund. On page 719 the learned judge said:

> The precise point to be determined now is whether a statute which requires these companies in the management of their affairs to set aside a portion of their current income as a sinking fund to meet this and other mortgage debts when they mature deprives these companies of their property without due process of law, or in any other way improperly interferes with vested rights.

This shows that the decision did not relate to past earnings, but only to future income or earnings of the road. There was nothing retroactive about it.

On page 720 the learned judge was still more explicit on this point. The language used is:

> All agree that the power of Congress can not be used to take away property already acquired under the operation of their charters, or to deprive the corporations of the fruits actually reduced to possession of contracts lawfully made.

On page 721 the court seemed determined to leave nothing in doubt as to its meaning on this point, and said:

> It [Congress] can not undo what has already been done and it can not unmake contracts that already have been made, but it may provide for what shall be done in the future.

Again, on the same page, the court says:

> All such legislation will be confined in its operation to the future.

Mr. HOLMAN. But there is a power of alteration or amendment in the act.

Mr. JORDAN. My distinguished friend from Indiana suggests that there is a power reserved to the Government in the charter of these companies by which Congress may alter or amend the acts creating them. But, sir, it was upon that direct proposition that the court ruled, and I was reading from that very portion of the decision in support of my position, and I now call the attention of the gentleman and the House to this part of the decision again, and I will read a little more fully than I did before, in order that the House may see the full force of my position and what the court said on the subject:

> Taking both acts together, and giving the explanatory statement in that of 1862 all the effect it can be entitled to, we are of the opinion that Congress not only retains but has given special notice of its intention to retain full and complete power to make such alterations and amendments of the charter as come within the just scope of legislative power. That this power has a limit no one can doubt. All agree that it can not be used to take away property already acquired under the operation of the charter or to deprive the corporation of the fruits actually reduced to possession by contracts lawfully made.

The latter part, the gentleman will perceive, is what I read before.

And while I am upon the subject of the power of Congress to alter or amend the acts of July 1, 1862, and July 1, 1864, let me conclude all that I have to say upon that subject. These acts created one corporation, the Union Pacific, and recognized certain other corporations created by the State. These grants were not mere gifts or donations, but were made to these companies in consideration of certain acts to be done by them. The Government by these acts granted to these companies their right of way, a large amount of lands, and agreed to loan its bonds or credit. In consideration thereof the companies agreed to construct the roads and telegraph lines provided for in the act and keep the same in repair and use, to pay the bonds loaned at maturity, to transmit dispatches over the telegraph lines, and transport troops and munitions of war, supplies and public stores upon said railroads for the Government when required at certain rates, and give the Government a preference in so doing, and apply one-half compensation and 5 per cent. interest on bonds until paid. And it was provided in said acts that the companies named therein should "file their assent thereto under their seals in the Department of the Interior within one year;" and these acceptances were filed.

Now, until that was done no right passed from the Government or to these companies; when that was done a contract existed between the Government and these companies obligatory upon both, and from which neither of them could withdraw.

It must be evident to any one, who will consider the matter for a moment, that the United States in the enactment of these laws and making the contracts above mentioned acted in two distinct capacities. In creating the corporation and granting a franchise to it and to other corporations we see an act of political sovereignty, but in all other particulars we simply see the Government making contracts as a civil corporation. Under the power to alter and amend Congress unquestionably reserved certain rights in relation to these companies and to their franchises; but it could in the nature of things reserve no power whatever to alter, amend, or repeal any part of these acts which by the acceptance of the company constituted a contract. It seems to me that to take any other view of this matter would leave these corporations, after they had accepted the terms proposed by the Government, and after they had entered upon the execution of their contract and built their roads, entirely at the mercy of Congress.

Touching the authority of Congress as to its power to alter and amend such contracts, and claiming that in so doing it can not take away or destroy rights which have already vested, I desire to call the attention of the House to what has been said upon this subject by statesmen and courts.

Mr. Madison said, in the forty-fourth number of the Federalist—

> That laws impairing the obligations of contracts are contrary to the first principles of the social compact, and to every principle of sound legislation.

In the case of Fletcher *v.* Peck, reported in 6 Cranch, page 103, the court said, in substance: That legislative grants in the nature of a contract and under which rights have vested are not held *durante bene placito* of the law-making power.

In 15 Monroe, Kentucky Law and Equity Reports, page 320, it was said by an eminent judge that—

> A reservation by the Legislature in a charter of power to alter, amend, or repeal does not imply the power to alter or change the vested rights acquired by the corporation under the charter.

In the case of the Commonwealth *v.* Essex Company, in 13 Gray Reports, Chief-Justice Shaw, in speaking of the power reserved in the words to alter, amend, or repeal, said:

> Where under a power in a charter rights have been acquired and become vested, no amendment or alteration of the charter can take away the property or rights which have become vested under a legitimate exercise of the power granted.

In the case of Calder *v.* Buell (3 Dallas, page 388) it was said by the court:

> The Legislature may command what is right and prohibit what is wrong, but they can not change innocence into guilt, or violate the rights of an antecedent private lawful contract, or the rights of private property.

And Justice Swayne, in the case of Shields *v.* Ohio, in 95 U. S. S. C. Reports, said:

> Such alterations must be reasonable; they must be made in good faith, and must be consistent with the object and scope of the act of incorporation. Sheer oppression and wrong can not be inflicted under the guise of amendment and alteration.

Where, then, Mr. Speaker, is the power of the Congress of the United States to take away from these companies their vested right in the moneys already earned by them? Would any man have the hardihood to claim upon this floor that Congress could take the lands of these companies for the purposes of a sinking fund? If these companies had United States bonds, stocks, moneys, would anybody assert that Congress could take these and put them into a sinking fund? If, indeed, these companies were the owners of bills receivable and other choses in action, would it be said that Congress could seize on these, deprive the companies of them, and put them into a sinking fund? And what, Mr. Speaker, is a claim against the Government owing to these companies and withheld from them but a chose in action?

How pertinent at this point is the language of Judge Strong, to be found on page 738 in 99 U. S. S. C. Reports. He said:

> What is property? A right in action is as completely property as a title to land. A very large part of the property of the country consists in rights attendant upon contracts. The right of a promisee to demand payment when a note falls due is a right of property.

And so a claim owing by the United States to these railroad companies is a vested right, that can not be taken from them by retroactive legislation, or in any other way except by due process of law, and that has been defined to be "by law in regular course of administration through regular courts of justice."

Mr. Thurman never thought anything of this kind could be done, nor was it attempted by the act of 1873.

In 4 Devereux, North Carolina, page 1, Chief-Justice Ruffin said:

> To do indirectly in the abuse of the exercise of an acknowledged power, not given for but perverted for that purpose, that which is expressly forbidden to be done directly, is a gross and wicked infraction of the Constitution.

Mr. HEWITT, of Alabama. Will the gentleman permit me to ask him a question?

Mr. JORDAN. Yes, sir.

Mr. HEWITT, of Alabama. Are any of these roads now indebted to the sinking fund; and, if so, in what amount?

Mr. JORDAN. Four of them are not. The Union Pacific is indebted, but it claims $4,000,000 to be due to it from the Government by way of compensation for transportation. If this is adjusted there is not one of them that owes the sinking fund a dollar. But, Mr. Speaker, the next provision of this section is, if anything, more monstrous and illegal than the one I have just considered.

It proposes to take from these companies and carry into the sinking

fund the whole compensation earned on non-subsidized roads, whether owned, leased, controlled, operated, or managed by the subsidized roads, from January 1, 1873, to this date.

Mr. STRUBLE, of Iowa. The whole of the compensation?

Mr. JORDAN. No wonder it strikes my friend from Iowa as a strange proposition. Yes, sir; the whole compensation.

Now, in order that the House may understand the full force of this provision of the bill, let me make a brief statement of the facts: The Union Pacific Railway Company, including the Kansas Pacific, only received aid from the Government in bonds on 1,436 miles of its road. There is now embraced in the system of that road 4,327 miles. Eighteen hundred and twenty-nine miles are owned by the company and 2,498 miles are merely controlled or operated by the company.

The Central Pacific Railroad system embraces 3,003 miles. Only eight hundred and sixty miles were subsidized or aided in bonds, and 2,177 miles are merely leased or controlled by the Central Pacific.

Now, while not more than one-third of the Union Pacific and not more than one-fourth of the Central Pacific was subsidized, it is sought to take the earnings of 4,675 miles of road which received no Government aid. This amounts to an illegal appropriation into the sinking fund of several millions of dollars already earned, and honestly owing by the Government to these companies for transportation services on non-subsidized roads. By the charter or contract the companies agreed to allow the Government to retain one-half compensation on the subsidized or aided lines, but it did not agree to allow anything to be retained on non-aided lines, and the Government paid on such lines for many years. There was a consideration for a promise to pay the one-half compensation on an aided road, and there might be a pretense of right to require the other half to be paid into a sinking fund, but here there is no promise to pay any part of the compensation upon a line not subsidized, nor is there any consideration for such a promise.

But it is said that the Government deals with the corporations and not with the roads, and that the companies have promised to pay, and this makes them liable over the whole length of their road, whether they own it, lease it, or operate it—the same exactly as they are upon the subsidized portion of the road. Indeed, if this is so, why do you not apply the same principle that you do over the subsidized roads? Why do you not apply one-half to the payment of the interest on the bonds? Why pay it all into a sinking fund? If this proposition is correct, the companies are entitled to have one-half applied to the payment of interest, and you have no right to prevent it; and you could only carry the other half into the sinking fund.

The advocates of this bill must take one horn of the dilemma or the other. The Government either had or it did not have the same right to retain one-half of the compensation on non-aided as on aided lines. If it did have, then this provision of the bill is wrong, as it changes the application of this money by putting the whole into a sinking fund when it was bound to apply one-half to the payment of interest. If it did not have this right, then the Government should have paid this money to the companies.

Mr. Speaker, the author of this bill knew perfectly well that the Government had no claim upon the money earned upon these non-aided lines, and that it ought to have paid it over; and hence he seeks by this bill to have the whole of it carried into a sinking fund, and not one-half, as in case of the compensation on the portions of the road subsidized with bonds. But, Mr. Speaker, we need not reason or speculate upon this subject. It has been already passed upon and settled by the courts.

The first case which I cite is that of The United States *v.* The Denver and Pacific Railway Company, reported in 9 Otto, page 461. The syllabus of the case is as follows:

> The Denver Pacific Railway and Telegraph Company is not liable for the debt incurred by the Kansas Pacific Railway Company on account of subsidy bonds; and although it is bound to perform the Government service stipulated by the Pacific Railroad acts at the rates therein prescribed, and is subject to their provisions so far as they are applicable to it, no part of the compensation due it for such service can be retained by the United States.

Now let me read the note at the end of the decision:

> At a subsequent day of the term Mr. Justice Bradley remarked: "Since delivering the opinion in this case our attention has been called to the fact that, while affirming generally the judgment of the court below, we did not expressly pass upon the question of the right set up by the Government to retain one-half of the amount of compensation due from it to the claimant for the transportation of mails and other public property. This point was not overlooked in rendering our judgment in the case. We can not conceive on what principle the retention can be claimed, since the object of retaining the compensation for such services or any portion thereof, as expressed in the sixth section of the act of 1862, was to apply the amount so retained to the debt due to the Government for subsidy bonds granted to the companies that should receive the same. But the claimants in this case received no such bonds, and we decided that neither the company nor its railroad or property is liable in any way for the payment of any debt incurred for such bonds received by the Kansas Pacific Railway Company. Consequently there is no room for the application of the right of retention in this case, and the judgment of the Court of Claims was properly rendered for the whole amount of such compensation due."

In the case of The Union Pacific Railway Company *v.* The United States, reported in the sixteenth volume, page 353, of the Court of Claims Reports, the court held that compensation should be paid to a subsidized company for services on a part of its road owned but not aided by subsidy bonds. And in the same volume of reports, on page 361, will be found the case of The Central Branch of the Union Pacific Railway Company *v.* United States, in which the same court decided that compensation should be paid for services to a subsidized company on a line leased by it. These cases were regarded as so clear by the Attorney-General of the United States that they were not carried to the Supreme Court. Indeed, the decisions of the Supreme Court of the United States in the case of The United States *v.* The Kansas Pacific Railway Company, in 9 Otto, page 450, and the case of The United States *v.* The Denver Pacific Railway Company (above quoted, in the same volume of reports) had so settled the principles of these cases that it was useless to go any further in the matter.

In addition to all these decisions Hon. William Lawrence, First Comptroller of the Treasury, in one of the Pacific Railway cases, rendered an able and interesting decision, in which he reviews all the decisions upon the subject and decides the same way. The principle that I contend for ought now to be considered settled, as it has been decided by the First Comptroller of the Treasury, by the Court of Claims, and by the Supreme Court of the United States. In all these decisions the companies are held to be one thing and the roads another, and no duty or liability is held to accrue under the acts of July 1, 1862, and July 1, 1864, except upon or to the extent that the road was subsidized. Hence it is that the courts have refused to recognize any lien, right, or claim of any kind upon the non-aided lines. It thus appears that the attempt to take the earnings of these companies on the non-subsidized lines, whether owned, leased, operated, or managed, is illegal, and this section of the bill unconstitutional. This act of the Government might well be likened to the case of a mortgagee who holds a second mortgage upon a farm, and long before his debt becomes due files a bill in equity asking the court to appoint a receiver to collect the earnings not merely from the said farm upon which he has a lien, but also asks the court to require the debtor to pay to the receiver any earnings which he should make upon other farms which he should lease or control or manage. If there is any single element in this proposition upon which the court could act, then I can understand what my friend from Kentucky meant when he said that any court would sustain his bill.

Mr. Speaker, every provision of this fifth section of the bill of the committee is retroactive, and without due process of law deprives these companies of rights which have long since vested. They can neither be defended in the forum of law nor conscience. This whole section of this bill is a mere assertion of arbitrary power because the Government has got the money in its possession. It is indeed the clearest abuse of power and done without a shadow of right. It can be justified in no tribunal which proposes to do justice. It is the Government adjudicating in its own favor matters which it is unwilling to trust to the judicial tribunals of the country. It is an act by which the Government, having refused to pay what it was bound to pay, having retained by superior force or advantage of position as debtor, now seeks to justify itself.

It was once said by a distinguished judge that "a corporation had no soul to be damned nor body to be kicked;" and if this act is passed it would seem that they had no rights which Congress is bound to respect.

The next clause of the bill seeks to carry into a sinking fund the amount due from the Government to the Kansas Pacific, Central Branch of the Union Pacific, and the Sioux City and Pacific Railway Companies on their roads, whether subsidized or not. The same principles contended for above will apply to them, and I will take no further time on this subject.

The sixth section of the bill of the committee directs that all the compensation which the Government may hereafter owe to these companies for transportation over non-subsidized lines if owned, leased, or operated by them shall become and be the sinking fund. The argument above made and authorities above cited apply equally to that section, and I will not detain the House further on this subject.

Mr. BLOUNT. Does this proposition interfere with these—with the leases or contracts which these roads have made or with the payment of the amount due under them?

Mr. JORDAN. That depends upon the construction which may be given to the bill. I do not want to interpret the bill in that particular. Every member will have to do that for himself. I may say that I regard this clause of this bill as a reckless attempt to extend this octopus bill over non-subsidized lines without any reference whatever to their rights.

AS TO THE POST BILL, OR SUBSTITUTE OF THE MINORITY.

Mr. Speaker, I have said much more than I intended in this case, and I will therefore be brief upon what I have to say upon this substitute. It can well rest upon what has so ably been said by the gentleman from Pennsylvania [Mr. POST], and what may be said by the gentleman from Nevada [Mr. CASSIDY], the chairman of the committee.

It is not claimed that this bill is perfect, and indeed there are several amendments to it which have been under consideration and should be made before it is passed. The bill is before the House, and amendments can easily be made to relieve it of any objectionable features.

This bill when amended will, in my judgment, be far preferable to that of the committee as presented by Mr. THOMPSON.

It is the principle of this bill which we desire to have presented and considered by the House. If you examine it dispassionately and carefully you will adopt it. If the bill of the committee should become a law, and the amount required by it should be paid by the companies, there would still remain owing to the Government in 1898 $96,000,000. The Government would then be in the same position that it now is, except as to the amount now owing, and would have to devise some mode of collecting this debt and making a final settlement with the company. We have thought it best to make this condition of affairs known to the House, and to present a bill looking to such a settlement, and also looking to the ultimate extinguishment of the debt.

The substitute of Mr. POST provides that the amount of the indebtedness of the companies, or the present worth of such debt, should be ascertained; that this indebtedness should be divided into sums within the ability of the companies to pay; that the time for payments should be correspondingly extended; that additional securities should be given for each payment so to be made, and also for the payment of the whole debt. We are satisfied that the principle of this bill will have to be adopted at some time as the basis upon which to settle this matter with these companies. It is not so important to the Government that it shall have its money soon as it is that the debt shall be secured and its payment made certain. It is also important to the Government and the roads that this whole matter shall be taken out of Congress. A distinguished Senator from Indiana, Senator VOORHEES, in the debate at the time of the passage of the Thurman sinking-fund bill, used this language upon this subject:

> This subject ought to be removed from Congress; it ought not to be a theme of perpetual agitation in these Halls. The great interests at stake should not be made the playthings of stock speculators, brokers, and gamblers; nor should they be left open for every adventurous, aspiring, restless member of either branch of Congress to inaugurate a new agitation whenever his interests or his ambition might dictate.

The force of these remarks lies in the application.

By this substitute proposed by the minority payments are to be made every six months in certain fixed and definite sums. It is admitted by Mr. THOMPSON in his advocacy of the bill of the committee that at the maturity of the debt of the Government in 1898 there will still be due and owing by these roads the sum of $96,000,000; and the most remarkable and extraordinary thing is, that in the bill of the committee no provision whatever is made for the settlement or the extinguishment of this debt at its maturity. By the plan proposed by the minority in the substitute the amount which will be owing in 1898 will not be much greater than it will on the plan proposed by the committee. The amount required under the substitute is within the ability and capacity of the company to pay without interfering with the payment of reasonable dividends or with the successful management and operation of the roads. Neither will it require them to increase the price of freight or passenger transportation; on the contrary, it will leave them to pursue a policy dictated alike by common sense and the necessities of business, of gradually reducing to the public the cost of transportation. This substitute, if adopted, will take away every inducement of the companies to divert the business from the main trunk or subsidized lines to other roads, or to lessen in any way the amount of their net earnings. It settles at once all controversies between the Government and these companies, and makes an end of all litigation between them.

Requiring, as it does, that the companies shall give their consent to it, it yields at once to the Government all right to any moneys now owing for compensation upon aided or non-aided lines and all that may hereafter become due. It gives by consent all that is sought to be accomplished by the fifth and sixth sections of the bill of the committee. In order that the semi-annual payments may be made certain beyond question it provides that none of the earnings on subsidized or non-subsidized roads shall be paid until the bond next maturing or semi-annual payment has been made. And in order that the indebtedness to the Government may be made absolutely secure it provides not only that the Thurman sinking fund shall be continued, but that the lien of the Government shall extend not only over the subsidized roads but over the whole line of the road.

I make a part of my remarks a statement showing the mileage of roads operated January 1, 1884, by the several bond-subsidized roads. These are the main and substantial features of the substitute. I have not time nor do I care to enter into details. I am contending for an important principle. If there are any errors in the bill, let them be corrected by amendments.

Believing, Mr. Speaker, that the substitute is based upon a correct principle, that it will put an end to all the controversies between the Government and the companies, that it will be beneficial to the public in cheapening rather than increasing passenger and freight transportation, that it will quicken the disposition of these companies to pay, that it will lead to a gradual extinction of the debt, and that it will secure its payment and extinguishment of the whole debt beyond peradventure, I am heartily in favor of the principle of Mr. POST's substitute, and with slight amendments it should be adopted. If there is any mode by which additional guarantees and securities can be required from these companies or given by them, I will be glad to vote for any amendment looking to that end. Our object is to obtain a fair, honest, and just settlement of this debt.

Mr. Speaker, I have presented the reasons why the bill of the committee can not be adopted by the House, and some reasons why a bill embodying the principles of Mr. POST's substitute must be adopted sooner or later. If the House is not prepared to indorse either of these measures, or has not time in the few hours allowed for debate to give the subject the consideration which its importance demands, then let us stand where we are, leaving these companies as they now are, under their rights as created by the acts of July 1, 1862, and July 1, 1864, and under the operation of the Thurman sinking-fund act—a measure intended by its distinguished author to do the maximum of good to the Government and the minimum of injury to the companies. From a long and careful examination of the accounts of these corporations, running through many years, from a full consideration of all the information which has been furnished our committee by the friends and enemies of these companies, I am of the opinion that the Central Pacific and the Union Pacific, including the Kansas Pacific, are able—not without difficulty—to comply with their contracts with the Government and successfully carry on and manage their roads, that they can not pay any increased amount of their earnings, and that the Sioux City and Pacific can not even do that much; and I submit now, with little or no comment, the facts and figures to show the truth of what I have said.

I submit to be printed a statement prepared in the office of the Commissioner of Railroads, and which is official, of the revenue and expenditures of the entire line of the Union Pacific for the year ending December 31, 1883, as shown by the books of the company. It shows the total receipts of the company from all sources to be $23,226,862.77, the total expenditures to have been $22,958,498.05, leaving a surplus of $268,364.72. The amount earned by these roads varies considerably in different years; it may be a million or two more in one year than another, and our committee is informed that the present has been a year of loss and disaster to the company instead of profit.

An official statement prepared in the office of the Commissioner of Railroads I make a part of this argument. This statement shows the revenue and expenditure of the entire line of the Central Pacific Railway Company for the year ending December 31, 1882.

The total receipts	$26,675,502 41
The total expenditures	26,640,390 48
Leaving a surplus of	35,111 93

I submit with what I have to say a statement prepared in the office of the Commissioner of Railroads, showing the revenue and expenditure on the subsidized portion of the said company's road for the year ending December 31, 1882. It shows that after deducting from the amount earned by the company its expenditures, a dividend upon its stock, and the 25 per cent. required by the Thurman act, it would leave a deficit of $170,059.70.

I also make a part of what I have to say a statement showing the revenues and expenditures of the Central Branch of the Union Pacific Railroad Company, from which it will appear that after deducting from the amount of the receipts of said company its expenditures, interest upon its first-mortgage bonds, and allowing for a dividend upon its capital stock, and taking out the requirement demanded if the Thurman law is applied to this road.

I also have had prepared a statement, which I herewith present, showing the revenue and expenditures of the Sioux City and Pacific Railway for the year ending June 30, 1883. It shows the

Gross receipts to have been		$646,459 92
Operating expenses	$495,821 51	
Deducting new construction and equipment	33,915 28	
Interest on first-mortgage bonds	96,000 00	
Dividend on stock ($68,736.79)	60,000 00	
	685,736 79	
Leaving a deficit in the receipts of this company of		39,276 87

without paying a dollar under the requirements of the Thurman act if applied to this road.

It thus appears, Mr. Speaker, that these several companies can with difficulty comply with their contract with the Government and the requirements of the Thurman sinking fund, and that they are not able to do any more than this. It would seem wise, therefore, that we should either adopt the Post substitute or leave these roads as they now are, under the operation of the Thurman act.

Is the amount owing to the United States by the Central and Union Pacific Railway Companies secure by existing legislation?

I do not believe, Mr. Speaker, that there is any doubt whatever about it. For my part, I have no apprehension on the subject.

I do not believe that there is any danger that the United States will not receive every dollar owing to it by the Central and Union Pacific Railroad Companies, and I will occupy the House but a few minutes in showing that the debt owing by these companies is perfectly secure.

The amount of bonds advanced to the Central Pacific Railroad Company was $27,855,680. The interest at maturity of bonds will be $50,140,224. Total when due in 1898, $77,995,904.

The amount of bonds advanced to the Union Pacific was $27,236,512. The interest at maturity of bonds will be $51,000,000. Total at maturity of debt, 1898, $78,236,512.

Now observe and remember that I have in this calculation included interest for fifteen years in advance, which the companies do not owe and which the Government has not paid. In other words, in this estimate is included a sum of about $50,000,000 which would be excluded if we were considering the present indebtedness of these two roads.

But, Mr. Speaker, let us see, if gentlemen prefer it, what these two companies will owe in 1898, at the maturity of the debt, even when the Government has paid out $50,000,000 that it has not yet paid. Remember that more than $20,000,000 has already been paid by these two companies, and that under existing laws and the Thurman sinking-fund act they are required to pay nearly $3,000,000 a year, and while the debt is not being reduced, yet that the annual increase is less than a million a year.

I desire to read right here a careful estimate, not made by myself but by Mr. W. H. Armstrong, the United States Railroad Commissioner, showing the amount which will be owing by the Central and Union Pacific at the maturity of the debt in 1898. The estimate can easily be verified, and is as follows, and will be found in his report of 1883, on page 13:

CENTRAL PACIFIC RAILROAD.

Principal sum of bonds advanced		$27,855,680 00
Thirty years' interest, at 6 per cent		50,140,224 00
Total		77,995,904 00
Deduct transportation, &c., approximately, in round numbers, first fifteen years	$6,000,000	
Deduct transportation, &c., approximately, in round numbers, last fifteen years, at present rates	13,500,000	
By accumulation of sinking fund for the next fifteen years, estimated at $500,000 per annum, together with amount already in sinking fund, at 3 per cent. per annum	12,500,000	
		32,000,000 00
Balance due United States at maturity of bonds		45,995,904 00

UNION PACIFIC RAILWAY.

Principal of bonds advanced		$27,236,512 00
Thirty years' interest, at 6 per cent		49,025,721 60
Total		76,262,233 60
Deduct transportation, &c., approximately, in round numbers, for first fifteen years	$12,000,000	
Deduct transportation, &c., approximately, in round numbers, for last fifteen years, at the present rate	16,500,000	
By accumulation of sinking fund for the next fifteen years, estimated at $900,000 per annum, together with amount already in sinking fund, at 3 per cent. per annum	22,500,000	
		51,000,000 00
Balance due United States at maturity of bonds		25,262,233 60

By authority of the act of Congress of July 1, 1864, each of these companies placed a mortgage upon its road to the amount of the bonds advanced by the Government. This is the only lien or incumbrance prior to that of the United States, and the interest thereon has all been paid up. Subject to those mortgages the United States has the second lien on the whole line of these railroads and telegraph, together with the rolling-stock of every kind and description, and the act provides that "on the refusal or failure of said company to redeem said bonds or any part of them, when required so to do by the Secretary of the Treasury, in accordance with the provisions of this act, the said road, with all the rights, functions, immunities, and appurtenances thereunto belonging, and also all lands granted to the said company by the United States which at the time of said default shall remain in the ownership of the said company, may be taken possession of by the Secretary of the Treasury for the use and benefit of the United States."

This security on these two roads embraces, therefore, a railroad with a road-bed 200 feet wide, from Omaha to Sacramento City, nearly 2,000 miles in length, with all the equipments in cars and everything necessary to constitute a first-class road. Added to this is a telegraph line coextensive with the road, with all the apparatus connected therewith. These roads were built at great expense originally; they have been improved to meet the demands of business; they have constructed important branches and feeders, and now own in all about 3,000 miles of road; are interested largely in many of their branches and connections; they are in full running condition, and are operated under skillful management; the amount of their through and local business is constantly increasing; along their main lines and branches towns and cities have grown up; their business has become vast in amount and profitable in its character. By the time this indebtedness matures, in 1898, the population of the United States will have increased to 75,000,000.

The country through which this road passes will have its full share of this increased population and of the increased business which naturally comes from it. When we take all these things into consideration and add to them the power reserved by Congress in its charter over these roads, a power to take possession of the road itself and all of its equipments and property upon a failure to pay its debts to the Government, can any man doubt that the claim of the Government is entirely secure?

I have said nothing of the fact that the Central Pacific has laid aside more than $6,000,000 in a sinking fund to meet its mortgage which is prior to the lien of the Government; nor have I said anything of the valuable lands and other property owned by these companies, estimated at many millions of dollars.

Mr. Speaker, a great deal has been said as to the large amount of bonds advanced by the Government to aid in the construction of the Pacific roads, the amount advanced to each being about $27,000,000. Considering that this money was advanced by a Government representing 55,000,000 of people, there is nothing extraordinary or remarkable about it. Why, sir, the city of Cincinnati, with a population of not more than 300,000 people, a city which stands, however, without a rival in this country for the public spirit of its people and its citizens, issued its bonds to the amount of more than $20,000,000, most of them bearing interest at 7.3 per cent., and with the proceeds built and constructed and now owns a railroad running from Cincinnati, Ohio, to Chattanooga, Tenn., only one mile of which is within the limits of our city, and all the rest of it located in the States of Kentucky and Tennessee. We are now leasing this road for about enough to pay one-half of the interest which we pay on the bonds, and we will have to continue to do so until the whole of the bonds are finally redeemed. The people of Cincinnati built this great railroad for the purpose of establishing amicable and business relations with the people of the South. We did not regard this as a matter beyond the ability of the people of one city, but gentlemen upon this floor regard the amount advanced to these railroads as something marvelous and almost bankrupting the Government. Allow me to commend to the House and the country the spirit of the people of the city which I have the honor in part to represent on this floor, and which issued $20,000,000 of bonds to build the Cincinnati Southern Railroad.

I have said, Mr. Speaker, and I now repeat it, that I believe that the indebtedness owing by these companies to the Government is secure, absolutely secure. In my judgment these two railroads, with their franchises and property and rights, in possession of the country through which they run in full and successful operation, are worth more than $200,000,000. Indeed, I have been told by men of large knowledge and experience in such matters that they are worth greatly in excess of this amount. And now, sir, I have said much more than I intended to say upon the subject of these roads and their relation to the Government. But these matters have been under constant consideration by our committee for the last six months and the subject has become interesting to all of us.

Mr. Speaker, it will be seen that the advocates of the bill of the committee, and more particularly the gentleman from Kentucky, have made great outcry and clamor against these companies. Frauds committed twenty years ago, and which have no earthly connection with the questions now under consideration, are brought forward to bias our minds and prejudice the House. Language intemperate and unjustifiable has been used and employed against public men and officials of high and honorable character. Need I say, Mr. Speaker, that all these things are improper, and are wholly foreign to this subject in debate?

Need I say, sir, to this House or to the country that frauds perpetrated or alleged to have been perpetrated many years ago in the construction of one of these roads can in no wise aid us in a fair and honest judgment upon the matters now before us? So far as I am concerned, unbiased and uninfluenced by all appeals and considerations of this kind, I stand here as a member of this House endeavoring to the best of my ability to ascertain what are the legal rights of the Government and what are the legal rights of these companies.

I know no other way of looking at this matter. The rights of the Government upon the one hand and the companies upon the other are to be found, and found only, in the contracts existing between them. I know no difference between the relations that the Government sustains to these corporations and to any other citizen. In the eye of the law all rights are equally sacred, and certainly those which have been created under the acts of the Congress of the United States ought to be binding upon and respected by us as members of that body. Upon this subject I can not do better than to quote the words of Chief-Justice Waite:

> The United States are as much bound by their contracts as individuals. If they repudiate their obligations, it is as much repudiation, with all the wrong and reproach that term implies, as it would be if the repudiator had been a State, a municipality, or a citizen.

Our action in the matters now before us should be wise, conservative, just, and fair, and within our constitutional powers. Let us be careful, watchful, and zealous in the interest of the people, that every law made for the protection of their interests be enforced; let these companies be required to obey their charters, comply with their contracts with the Government, pay to it the uttermost farthing they owe; but when they have done this, let us give them the protection of the law, and see to it that the Constitution itself is not violated in an attempt to deprive them of their vested rights.

EXHIBIT No. 1.

Statement showing mileage of roads operated January 1, 1884, by the several companies to which the United States have loaned bonds in aid of construction.

RAILROADS OPERATED BY THE UNION PACIFIC RAILWAY COMPANY.

Name of road.	From—	To—	Miles.	Subsidized or otherwise.	Owned, leased, or controlled.
Union Pacific Railway	Council Bluffs, Iowa (Broadway depot).	Connection with main line	1.39	Not subsidized	Owned.
Do	Council Bluffs, Iowa (Transfer depot).	Junction Switch, Omaha, Nebr	3.73	do	Do.
Do	Junction Switch, Omaha, Nebr	Connection with C., St. P., M. and O. Railway.	2.46	do	Do.

WM. H. ARMSTRONG, *Commissioner.*

DEPARTMENT OF THE INTERIOR,
OFFICE COMMISSIONER OF RAILROADS,
Washington, D. C., April 9, 1884.

The Tariff.

So the question still presses what legislation is necessary to relieve the people of unnecessary taxes.—*Report of Secretary of Treasury, December 3, 1883.*

SPEECH

OF

HON. WILLIAM L. WILSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. WILSON, of West Virginia, said:

Mr. CHAIRMAN: I am grateful to my friend from Wisconsin [Mr. SUMNER] for yielding me a portion of his time.

Mr. Chairman, we stand to-day in the presence of a fact as significant as any that can arrest the attention of the representatives of a free people. An immense surplus revenue is pouring into the national Treasury, the product of unjust and excessive taxes. Can we go back to our constituents with the consciousness of duty performed if we do nothing to relieve them of this unwarrantable exaction?

FEDERAL AND STATE TAXATION.

Is there anything in Federal taxation that makes it different in its effects and in its burdens from State or municipal taxation? The United States have no independent resources from which to gather revenue. They have no money except what they take from the people in one or another mode of exaction. But because Federal taxation is indirect, because it operates through different methods and under different names from State taxation, are we to persuade the people that what in one form and with one name is regarded as a necessary evil, under another guise and with a different name may become a blessing and a source of general prosperity and advancement? Such a suggestion is a mere jugglery of words. It may delude the unreflecting. It can not deceive those who look through the veil of language, to the fact itself. They can no more be persuaded by the interested advocates of modern times than were the American colonists persuaded by Dr. Johnson that "taxation is no tyranny," but rather a beneficent and wealth-producing exercise of the power of government.

When the State collector presents his tax bill and enforces payment, if need be, by process of law, there is none so stupid as not to see that it lessens the means with which he may acquire the comforts and necessities of life. When the Federal collector lays hands upon these same comforts and necessities and increases their cost to the purchaser the effect is the same, though the act may not be so direct and palpable. Whether you take from me by taxes a portion of the money I have earned for the support of my family or add the amount to the cost of their support, the result to me and to them is the same. The tax-gatherer for the State meets me in the way as I go to purchase the comforts and necessities of existence and forces from me one-third of my hard-earned wages; the tax-gatherer for the Government outstrips me to the store and marks up 50 per cent. the price of these comforts and necessities. In what respect does the former harm me more than the latter?

SURPLUS REVENUE.

A Treasury surplus gathered by excessive taxes is as much a wrong under the United States as under a State. It is not only a wrong, but a danger. It represents an illegal exaction, an abuse of power, without warrant in law or in any sound theory of government. It is a standing menace to the freedom of our institutions and to the purity of their administration, for it is a standing temptation to dishonesty, cupidity, and prodigality. A great thinker has truly said that the world never saw a government so pure as not to be corrupted if a surplus revenue were placed at its disposal. It is therefore a dangerous symptom, to be dealt with vigorously and summarily.

Let me dwell briefly but with some detail upon this matter of Federal revenue as brought to the attention of this Congress by the official report of the Secretary of the Treasury.

The entire income for the last fiscal year was in round numbers $400,000,000, of which amount $215,000,000 were derived from customs, $145,000,000 from internal revenue, and the remainder from miscellaneous sources. The total ordinary expenditures were less than $266,000,000, leaving a surplus in exact figures of $132,879,444.41. For the present year he estimated receipts at $343,000,000, expenditures at $258,000,000. This would still leave a surplus income of $85,000,000. Later information shows this estimate to be too small; and it is within bounds to say that for the present fiscal year, ending June 30, the surplus will be not less than $100,000,000, and without some reduction of taxes it will exceed this enormous sum next year. Consider for a moment this portentous fact: After every legitimate demand of the Government on its present liberal and extravagant scale of expenditure is met and satisfied, the rapacious hand of the tax-gatherer goes on until it sweeps into the Treasury one hundred millions more! And this at a time when business is depressed, trade feverish, labor dissatisfied, manufactures struggling, and agriculture threatened with the loss of its markets.

Where is the member of this House who will go back to his people and confess that for one whole session he stood here, seeing this great polluting flood pouring into the Treasury, gathering its streams from every neighborhood, its contributory rivulet from the home of every toiling worker in the land, and yet lifted not a finger to stay its exhausting flow? Yet, sir, that is what, in effect, we are urged to do by those who oppose all legislation in the direction proposed by this bill.

WHO PAY THESE TAXES.

From what sources are these revenues drawn and in what proportion do the people of the United States contribute to them? As I have stated, the chief sources are the tariff, a tax upon imported goods, and the internal revenue, now chiefly a tax upon tobacco in its various forms and upon distilled and fermented liquors. By whomsoever paid in the first instance, these taxes enter into the cost of producing or marketing these articles and in the sequel are paid by those who consume them. Whatever differences exist between individuals and classes in the consumption of tobacco and liquors, tariff taxes are imposed chiefly upon those articles which enter into general consumption, sugar alone contributing more than one-fifth of the entire amount, and by a vicious method of discrimination they bear in heavier proportion upon

the commoner qualities, used by the poor, than upon the finer qualities demanded by the wealthy.

Hence it is fair and correct to assert that the taxes collected by the United States, through the custom-house and the excise system, are paid more nearly according to population than any other taxes that are levied. They are distributed according to numbers rather than property, as if, to use an oft-cited illustration, the Government imposed a tax upon houses, classing all in the same category and assessing all at the same rate. What, then, does a surplus of $100,000,000 mean to the people of the several States; for it is only by bringing home to them their own share of this exaction that they can begin to understand and to feel the enormity of our excessive taxation. Take any one State for illustration. Take my own, one of the smaller and less wealthy States. By the census of 1880 its population was 618,000, or nearly one-eightieth part of the 50,000,000 of the entire country. Since then the State has doubtless kept pace with the general increase, so that this ratio still holds true. Upon this basis West Virginia, from the labor, and poverty, and consumption of her people, contributes to this surplus the sum of $1,236,000, after paying three times that amount for the necessary and legitimate expenses of the Government.

Why, Mr. Chairman, what does this sum, $1,236,000, mean to our people? It means more than the entire amount raised by State and local levies, and all other sources, for our schools, which by the last report was $829,182, and also the entire amount of the property tax raised for the support of the State government, which, as last reported, is less than $350,000. This surplus revenue belongs of right in the pockets of our people, and if left there would enable them to maintain our public schools upon a basis of greater efficiency, to pay every dollar of State taxes, and contribute largely to other public burdens. But forced from us by this wasteful and illegal exaction, it takes from the "mouth of labor the bread it has earned," it diminishes the educational advantages of our children, lessens the comforts and snatches something from the necessities of our homes, adds to the pangs and privations of poverty, clips the wings of enterprise, retards our industrial growth and development, increases the hours of labor, and hardens the struggle for existence and progress to every son and daughter of toil, whether they labor in the household, in the field, in the shop, in the mine, or in the factory.

RESISTANCE TO ILLEGAL TAXES.

Could any individual stand before the people of a single State, county, or township to tax them on a like scale of prodigality and escape their hot and indignant wrath? And are we to suppose that the American people will long tolerate any party which by the machinery of Federal taxation inflicts upon them so many unnecessary burdens and so many days of unrequited labor? However patiently they submit to sacrifices demanded for the safety or welfare of their country, it is not in the fiber of our race, as history well demonstrates, to bear submissively taxes that are unlawfully exacted or that exceed the frugal needs of the public service. Why, sir, resistance to illegal taxes has been in England and in America the very genius of advancing liberty. Our great charters, which are but so many monuments in the progress of liberty, are themselves the memorials and the achievements of successful struggles against illegal taxes. So long as the necessity is laid upon the people to be thrifty and economical in their homes will they indignantly resent and repress extravagance or waste in the Government, which is but their servant. This very day the farmers of my own State are excited over an executive order directing the assessment of certain chattels hitherto treated as exempt, because some question is raised as to the legality of the order, although it would produce but $15,000 from the entire State, every dollar of which is needed and will be carefully expended.

Can I suppose they will not approve a Representative who faithfully seeks to relieve them from the unjust burden of over a million dollars per annum? Will they strain at the gnat of State taxes and cheerfully swallow the camel of Federal taxes?

HOW REDUCE REVENUES AND TAXES.

It being then admitted that we can dispense with a hundred millions of dollars of present revenues, which for my own State means nearly one million and a quarter per annum, and this without retrenching expenditures, without defaulting in any obligations, without reducing a salary or dismissing an office-holder, the next question is how to compass this desirable end and to compass it as quickly as possible. Can any man suggest a better principle of reduction than that announced by President Grant in his message of December 4, 1871, "the greatest relief to the greatest number;" to that vast majority for whom consumption treads fast upon the heels of production; to the 16,000,000 wage-earners, who by the last census earn less than $300 per annum and consume it in their daily subsistence? A tax may be burdensome because of the subjects on which it is laid or of the methods of its collection.

INTERNAL REVENUE.

The subjects taxed by the internal revenue are tobacco and liquors. They are not necessities of life; their consumption is voluntary. They do not increase the necessary cost of living to the laboring masses. They are therefore admirable and legitimate subjects of taxation. Yet the methods of collecting these taxes are notoriously, though not necessarily, involved with grave political abuses. In sections of the country, particularly in the South, the system is an engine of intolerable political persecution and oppression. Every campaign produces its swarm of collectors and deputy marshals, who, under the pretext of public employment, perform iniquitous partisan work. At other times they conspire with informers to defraud the Government of fees and to extort money from the people, becoming so odious that the agent of the Department of Justice has officially reported that it is not to be wondered at that they have been shot down as enemies of the people. Believing that such abuses are outrages which disgrace the Government, and that the security of the people in their lives, liberty, and property is the prime object for which Government exists and levies its taxes, I can uphold no system which, however legitimate the subjects it taxes, gathers its revenues in such a way as to put the life, liberty, and property of the citizen in jeopardy.

I would therefore lay a vigorous hand upon our internal-revenue system, and severely free it from all capacity for such abuse, and I would remove all restrictions upon the sale or exchange of the products of agriculture in the hands of the original producer. Consistent with this freedom I would preserve all possible revenue from this source for the reason already given, and because it all goes into the Treasury, and it is well known that if the pending bill leads to a law, the dominant party in this House has determined through its caucus to follow it with a bill which will accomplish this reform and greatly reduce internal taxes.

TARIFF.

Let us now consider the tariff as to the subjects it taxes and the manner of its collection.

Import duties are largely collected through custom-houses at a few of the chief ports of entry. With some of the possible abuses of the excise system, this collection is made in a manner little oppressive to the people. The importer pays the tax to the Government. It then becomes a constituent of the price at which the article is sold, and is eventually paid by the purchaser or consumer.

There may be necessity for some reform in the machinery of our custom-houses. But the tariff taxes the subjects which form the necessities and enter into the comforts of every household; it taxes sugar 50 per cent. and common articles of food in like proportion; it taxes clothing, whether cotton, woolen, linen, or silk; it taxes glass and earthen ware, china and cutlery; it taxes tools and the machinery and implements of labor. In a word, it is hardly possible to conceive of any home so humble or any household so poor from which it does not daily exact its tribute. Here, then, the legislature can do something to relieve the tax-payer; can retrench the surplus exaction of the Government and in proportion diminish the cost of food, of clothing and shelter, of the furniture of the bed-room and the table, of transportation, of tools and machinery, and of the implements of agriculture.

DIFFICULTY OF REFORM.

But, Mr. Chairman, when we reach the tariff we encounter a chorus of appeal, entreaty, denunciation.

The people and the people's representatives are warned away as if it were a holy of holies into which none but the high priests of protection have a right to enter. Why is this, and why has the reduction of taxes in this particular domain been impossible of achievement hitherto? Because we here confront watchful and aggressive private interests which share in the profits of heavy taxes. A tax levied upon a pound of sugar or a common blanket imported from abroad goes into the public Treasury, but it also saves the home producer of the same goods from competition with the imported article at the mere cost of its production and importation. In other words, it protects him, to the extent of the tax levied, from such competition. This is a necessary and inevitable incident of all duties levied upon imported articles which compete in our markets with like articles produced at home. The full amount of this tax is not generally profit to the home producer, because he may not be able to produce the article as cheaply as the foreigner even with the cost of transportation added, but it is generally all loss to the consumer, whether he buy the home or the imported article, because without the tariff he could buy the latter with the tax off.

In either event the home consumer pays the tax, in the one case as a tax proper into the public Treasury, in the other as a compulsory bounty to the home producer. This, I say, is a necessary incident of a tariff for revenue or for revenue only. It can no more escape from it than a body can escape from its own shadow, and this is a protection which few practical statesmen have ever decried and, I may add, under our present industrial conditions few would not discriminate to secure. But there has always been a school of economists and statesmen who have regarded this "incident" with chief interest and affection and have contended that the quantity of protection to be secured in framing tariff laws was a matter of equal if not greater consideration than the amount of revenue to be produced. This view was moderately advocated by Mr. Hamilton in the infancy of our Government to build up those manufactures which were essential to our power and independence as a new-comer in the galaxy of nations. It was subsequently urged by Mr. Clay and Mr. Greeley as a temporary fostering of infant industries, to nurse them into vigorous and self-sustaining existence.

At the present day it is vehemently urged by the leaders of the Republican party, and to an extreme never before ventured as a permanent policy, for the alleged purpose of protecting American labor and indus-

tries. It is not my intention to discuss these opposing theories. That has already been done so exhaustively and ably that any restatement would be waste of time. Let me rather consider the reasons assigned by those who warn us from any attempt to deal with the tariff as a forbidden subject.

BUSINESS QUESTION.

First, we are told it is exclusively a business question, to be dealt with not by legislators but by business men, and that its present agitation is disastrous to the "business interests" of the country. To this I answer, that while the details of a tariff, the classification and arrangements of its schedules, may be business questions requiring the minute and technical knowledge of the expert, yet the general question of revenue is the vital question of free government. "The revenue of the state" says Burke "is the state" and the settlement of this question on correct political and economical principles is the dividing line between freedom and slavery. It can not be settled in the counting-room or the warehouse, but by the full, free, and intelligent action of the people. They who pay the taxes, not they who share in them, have the paramount right to determine as to their amount and as to the manner of their collection.

Again, sir, the right of the people to be relieved from excessive taxes is superior to any "business interests" in the country, and if there be such "interests" as can not stand the agitation necessary to obtain this relief they can expect neither repose nor stability until it is fully and permanently secured.

REVISION OF 1883.

But again we are told the tariff was revised by the last Congress and that its frequent agitation is unwise and without justification. I fully agree that such agitation, without imperious necessity therefor, would be inexcusable. Let us therefore carefully examine this claim.

The last Democratic tariff, framed by Robert J. Walker, Secretary of the Treasury under Polk, was designed to be, and I believe is conceded to have been, carefully and skillfully framed on a revenue basis. It continued, with some reduction of rates in 1857, until 1861. To judge of its effect, especially upon labor and industry, we may compare the decade from 1850 to 1860 with other decades in our history, and I quote first from Mr. Walker himself in his letter to the people of the United States of date November 30, 1867:

Under the tariff of 1846, as shown by the census, our wealth increased from 1850 to 1860 126.45 per cent., whereas from 1840 to 1850 the increase was only 64 per cent., from 1830 to 1840 42 per cent., and from 1820 to 1830 41 per cent. So also from 1850 to 1860 our agricultural products increased 95 per cent. and our manufactures 87 per cent., being in both cases nearly double any preceding ratio of increase. So also our exports, imports, and revenue nearly tripled in the same period of time, and our domestic trade rose nearly in the same ratio. This augmented ratio is not the result of increase of population, which from 1850 to 1860 was less than 36 per cent.

The decade from 1860 to 1870 alone shows larger industrial progress, but that is upon a basis of depreciated currency and with the unnatural stimulus of our civil war. The figures for the decade 1870 to 1880 are much smaller. From the report of the Tariff Commission I find that manufactures increased from 1860 to 1870 124 per cent.; from 1870 to 1880, 27 per cent. The increase as above shown from 1850 to 1860 was, on a gold basis, 87 per cent. It will thus be seen that the decade of the Walker tariff was marked by the most healthy and stable growth of any decade in our history, and this no less for manufactures than for other industries. With the accession of the Republican party in 1861 the revenue policy of the Government was changed and the Walker tariff gave way to the Morrill tariff, framed upon the avowed principle of protection and distinguished by very high duties on articles competing with our own manufactures. It was not supposed that higher rates would ever be asked or tolerated in peace times. The war came. The Government was obliged to explore every possible source of revenue. Heavy domestic taxes were laid on every article and business that promised income, reaching in 1865–1866 the enormous sum of $310,000,000, of which more than $128,000,000 were laid upon domestic manufactures alone.

Tariff duties were raised from time to time by the act of 1862; again 50 per cent. by one act of 1864, and to the highest possible point by the general revision of June, 1864. This increase was declared by Mr. MORRILL himself to be "a war measure," "a temporary measure fit to be introduced because of the imperious necessities of our present condition," and he warned manufacturers that these excessive rates were not to be considered as "lawful prizes of protection," but as compensation for the internal taxes laid upon their products. The war ended. Every tax upon domestic manufactures has long been repealed. Nothing of our internal taxes remains but that on bank circulation and the taxes on tobacco, which have been reduced from 40 to 8 cents per pound, and the taxes upon liquors, which in the case of distilled spirits have been reduced from $2 per gallon to 90 cents. Yet the war-tariff taxes, upheld by a vigilant and bold combination of great private interests, and by that overweening corporate and monopoly influence, which has so largely and so selfishly shaped the policy of the Government for the past twenty years, still remain to burden the people in all their pursuits and to fill the Treasury with needless taxes. Like the horse in the fable, who, hard pressed by his enemy, the stag, submitted to a rider that he might gain the victory, and in so doing lost his own freedom, the American people having from motives of patriotism and under the stern necessity of a contest for life submitted to these grievous burdens, have hitherto found themselves thwarted in every effort at release. Indeed, every effort at relief has but seated their insatiate master more firmly in the saddle. Let me quote from the vigorous language of Senator BECK in his able speech of April 3, 1884, in the Senate:

Mr. President, the truth is, that protectionists at last believe that they can control the legislation of the Government, and not only hold on to the subsidies they now receive, but many of them clamor for more. Their organizations are perfect, and ramify every part of the country. They elect or defeat Senators and Representatives in many places, as they think best for their interest; they own a powerful and intelligent portion of the public press; they can afford to spend and squander hundreds of millions rather than have their privileges curtailed or their bounties diminished. They have their operatives, many of them very intelligent men, so dependent upon them for the support of their families that they can by threats of reducing their wages, if Congress dares to reduce their subsidies, make the workmen, against their interest and often against their will, protest vigorously by petition and otherwise against all reduction of taxation. Dismissal from position follows a refusal to vote and protest as they are expected and often ordered to do. They move like well-trained veterans in every contest, knowing that the tax-paying masses have no combinations, and can have none, no hired press, and no paid advocates. The protectionists are as trained regulars in a conflict with raw militia. Union is strength, wealth is power, and a common interest is a strong bond of union. The cohesive power of public plunder animates the consolidated bands in their raids upon the public Treasury. With all their pretended zeal for the welfare of their operatives, they look upon them as the feudal barons did upon their retainers; as bearers of burdens, to be cared for because they are useful as dray-horses, born saddled and bridled, while they were born booted and spurred ready to ride them by the grace of God.

In 1872 an attempt at reduction was made by what is known as the "Dawes bill." It failed, and a horizontal reduction of 10 per cent. was made, only to be repealed in 1875. Popular discontent and clamor began to rise, and President Arthur, in his first message, December 6, 1881, urged a revision of the tariff, referring to the large surplus income from taxation in these words:

If the revenue laws remain unchanged this surplus must year by year increase on account of the reduction of the public debt and its burden of interest and because of the rapid increase of our population.

At present rates even, he said, the entire debt could be paid in ten years, but added:

In view of the heavy load of taxation our people have already borne, we may well consider whether it is not the part of wisdom to reduce the revenues, even if we delay a little the payment of the debt. It seems to me the time has arrived when the people may justly demand some relief from their present onerous burden, and that by due economy in the various branches of the public service this may readily be afforded.

COMMISSION APPOINTED.

Congress itself attempted no relief, but responded to these recommendations and to the pressure of public opinion by the act of May 5, 1882, establishing the Tariff Commission, "to take into consideration and to thoroughly investigate all the various questions relating to the agricultural, commercial, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff on a scale of justice to all." This commission, consisting of nine members, was appointed by the President, and was composed exclusively of protectionists, of men who regarded the tariff not more as a source of revenue than as "a defense of our national industries." Their report was made to Congress December 4, 1882. I quote therefrom what has been so often quoted in this debate, to show how a protectionist commission, reporting to a protectionist Congress a scheme of a protective tariff, judicious, and "on a scale of justice to all," spoke:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties, except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors, can be justified. Excessive duties, or those above such standard of equalization, are positively injurious to the interest which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprise by rash and unskilled speculators, to be followed by disaster to the adventurers and their employés, and a plethora of commodities which deranges the operations of skilled and prudent enterprise. Numerous examples of such disasters and derangements occurred during and shortly after the excessively protective period of the late war, when tariff duties were enhanced by the rates of foreign exchange and premiums upon gold.

Excessive duties generally, or exceptionably high duties in particular cases, discredit our whole national economic system and furnish plausible arguments for its complete subversion. They serve to increase uncertainty on the part of industrial enterprise, whether it shall enlarge or contract its operations, and take from commerce, as well as production, the sense of stability required for extended undertakings. It would seem that the rates of duties under the existing tariff—fixed for the most part during the war under the evident necessity at that time of stimulating to its utmost extent all domestic production—might be adapted through reduction to the present condition of peace, requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which has become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties.

Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed, is not less on the average than 20 per cent., and it is the opinion of the commissioners that the reduction will reach 25 per cent.

In furtherance of these views it submitted schedules which professed to embody and effect this substantial reduction. This report was received with general favor. It was believed by the people that they had at last achieved a diminution of their burdens, and that this troublesome question was removed from current politics; nor was there either agitation or panic in the business interests. Those who leaned upon the tariff as their "industrial defense" acquiesced in the proposed reduction of that defense on a scale of 20 to 25 per cent. as a "measure of justice to consumers," of which they could no longer complain. The New York Tribune, organ of the highest protective sentiment of the country, on December 7, three days after the submission of the report, and before any examination of the schedules could be made, urged its party to "reform the tariff by adopting the scheme of the Tariff Commission as a whole. * * * If the Republicans allow the 4th of March to find them without a simplified and reduced protective tariff, they will deserve the defeat they invite."

WORK OF THE COMMISSION.

Had the work of the commission been carried out in accordance with, or in any reasonable approximation to, its fair professions, this troublesome question had not returned to plague us at this session, and its agitation at this time would be foolish and criminal. But, unfortunately, discussion and examination soon disclosed that the revision was in promise not in effect, was in the report not in the schedules, and the whole commission, in the main composed of able and honorable men, one of them from my own immediate neighborhood, was enveloped in scandal by the discovery that two of its members, while professing to act on "a scale of justice to all," were really the attorneys of special interests and engaged in clandestine correspondence and conspiracy with those who were aiming to advance their own fortunes by fastening high rates of taxation on the people. Of another member, the president of the commission, it has been stated not by an enemy, but by one who approved the fact, Hon. Columbus Delano, late Secretary of the Interior, that he was in the pay of the manufacturers both before and after his temporary service on the commission.

The schedules were handed over to the parties interested in framing them. They were so cunningly framed as to baffle even those long accustomed to deal with tariff legislation. This charge should not be lightly made, and therefore I quote from Mr. ALLISON, now chairman of the Committee on Appropriations in the Senate, and formerly a member of the Committee on Ways and Means in this House, speaking of the cotton schedule, February 3, 1883:

> The truth is that the Tariff Commission did not examine this cotton matter at all, it may as well be said on the floor of the Senate; nor did they make this schedule which is called the Tariff Commission schedule. It was made by a cotton manufacturer from Boston, with an expert appraiser in New York, and the Tariff Commission accepted it. When the knowledge of that fact came to me I had no particular faith in the Tariff Commission report on this cotton schedule.

And later:

> I do not choose to express my opinion of this report on anything else

ACT OF MARCH 3, 1883—NO REDUCTION.

But I will not dwell on this matter. It is known to all the world and has been officially conveyed to us, that the revision which was to be a substantial reduction of taxes, certainly 20 and possibly 25 per cent., resulted in the act of March, 1883, the existing law, which makes scarcely any reduction and lightens no burdens. The same interests which had hitherto delayed and thwarted all reform were again too strong for the people, and the burdens still remain upon their bending shoulders.

The official statement of the Treasury Department accompanying the report upon this bill, and which I will append to my remarks, gives the operation of the "revision" for its first six months. It shows that the proposed reduction of rates has not been made; that whereas heretofore the average cost of importing one hundred dollars' worth of merchandise has been $42.65, under the revision it is $40.91, and that in some important schedules there has been an increase instead of a reduction.

Take the woolen schedule. The farmer is reduced from 3 to 11 per cent. on his wool, while the manufacturer, getting the advantage of this reduction, secures also an advance of 2.19 per cent. on his fabrics. For this reason I may say, in passing, I voted to restore the rates upon wool. The "cotton manufacturer from Boston, with the expert appraiser in New York," added 2.46 per cent. to his bounty for the relief of the people's pockets, and further, in tender consideration for the American laborer, the revision reduced the taxes on silks nearly 9 per cent., and increased the rates upon earthen and china ware nearly 5 per cent. Such is the revision so sacred that we are warned not to criticise or disturb it, affording no relief to the 16,000,000 ill-paid toilers, but binding more closely the burdens under whose weight they have so long bowed; indeed, increasing those burdens, for a surplus revenue is the *reductio ad absurdum* of that kind of protection which is preached to us by the gentleman from Pennsylvania, Mr. KELLEY, and from Ohio, Mr. McKinley, and their associates upon this floor. They can not deal with it, for it sets at naught their theories and statesmanship. In the face of a fact so full of present injustice and future peril they stand in helpless imbecility. They can not put forth their hands to relieve the many, because they must first satisfy the demands of the few. They can not say to the people, "How much can you bear?" or to the people's agent, the Government, "How much do you need?" For they must first ask the private interests, "How much do you demand?" And they must meet that demand, no matter how great the resulting burden to the people or how great the unneeded flow into the Treasury.

They have but one remedy for high taxes, and that is higher taxes, for it is well known that when once you have passed protective rates the greater the taxes imposed the less goes into the public Treasury and the more into the private coffer. For the patient, half frenzied by drink, they have no remedy to restore him to rational sobriety; they can only stimulate him into the quiet of stupefaction.

SECRETARY OF TREASURY ADVISES REDUCTION.

Again, Mr. Chairman, do those who use this argument forget that notwithstanding the pretended revision, the Secretary of the Treasury in his report to this Congress returns to the question of a reduction of taxes? After showing that the present rapid extinguishment of the public debt can not long continue, as we shall soon pay off all that can be called in, and can call in the rest, if at all, only by purchase at heavy rates of premium, he says:

> There is forced upon our attention the question, how shall a heaped-up surplus of public money be avoided? The discussion of this question in former reports of this Department admits of but one consistent answer from it now. The views therein expressed have not been given up. THERE OUGHT TO BE A REDUCTION OF TAXATION.

And again:

> So the question still presses, what legislation is necessary to relieve the people of unnecessary taxes? As elsewhere suggested, it should not be assumed that the surplus in the Treasury will be consumed by lavish expenditures for objects of doubtful expediency or legality, or that the scheme which has been proclaimed, of exacting money from the people for the purpose of returning it to them by filtering distribution through State governments, will find any favor with Congress or the people. * * * My last report said that taxes upon spirits and tobacco, being upon things not needful, should be retained rather than those upon the common necessaries of life; which as a proposition is not to be controverted. But it was conceded by all that a substantial reduction should be made upon nearly all imported articles subject to duties.

He declares that the intentions and calculations of reduction from the tariff revision have not been verified, and after suggesting that present relief from the surplus may be obtained by extending the bonded period for the whisky-dealers, he concludes:

It—

The Department—

> adheres, however, to its conviction, that ultimately the just and expedient method of relief from taxation, and of limiting the revenues to the needs of an economical government, must be found in a reduction of the duties on imports.

Such is the official statement of our financial minister, and yet in this Republic, where no task ought to be more agreeable to representatives of the people than to reduce taxes, and none undertaken with more heartiness and alacrity, we are urged to do nothing whatever. But there are two objections urged against this bill by those who profess to be in favor of some reform.

CRY OF FREE TRADE.

The cry of "free trade" has been raised and the attempt made to cover those who favored its consideration with whatever prejudice exists in the minds of some of the people against this name. There could be nothing less accurate, less candid, or more deceptive than this cry. Indeed, I have found it difficult to believe that many upon this floor or in the press who have so opposed the measure have taken care to inform themselves of its provisions. True, it was inevitable, as indeed it was most wholesome, that in the discussion of any revenue measure there should be some discussion of fundamental principles. Indeed, it is the mark of the statesman as distinguished from the empiric or politician to deal with the principles as well as the details of legislation, and a frequent recurrence to first principles has been enjoined by a great statesman in the bill of rights of a great state as part of that vigilance which is the price of our liberty.

But this bill does not require such discussion. It does not even foreshadow a departure from our long-established policy of gathering the bulk of our revenues from a tax upon imports. It does not attempt a forced transition from protection to free trade or even to a revenue tariff. Its declared and real object is to reduce unnecessary taxes by passing from a high war tariff to a high peace tariff. It provides in effect that as a rule 80 per cent. of existing rates shall hereafter be levied upon imported goods, and while it fully guards against the concealed enormities of the present law by prescribing a maximum rate of 60 per cent. ad valorem on wool and woolens, of 50 per cent. on metals, and of 40 per cent. on cotton goods, it carefully declares that it shall not, except in a few specified instances, operate to reduce the duty on any article below the highest rate of the Morrill tariff of 1861. Now I have shown that the Morrill tariff was framed for protection, and its author asserted that it "would place our people on a level of fair competition with the rest of the world."

The author of this bill [Mr. MORRISON], whose authority will be as little doubted as his candor, assured us in opening this debate that "the reductions proposed are so limited as never to place our people below, but to leave them far above, the level of fair competition on which the Morrill tariff placed them." Can any protectionist require more than this? It is far beyond what President Garfield desired as

the solid basis of a tariff system. Speaking in this House July 10, 1866, he said:

One of the worst features of our industrial system is the irregularity and uncertainty of the legislation in reference to the tariff. It subjects the business of manufacturing to the uncertainty of a lottery. If the prohibitionists succeed one year, the profits are enormous; if, as is quite probable, the reaction of the next year puts free-traders in power, the losses are equally great. Let either of these parties frame the tariff, and the result will be calamitous in the highest degree. What, then, is the point of stable equilibrium where we can balance these great industries with the most reasonable hope of permanence? We have seen that one extreme school of economists would place the price of all manufactured articles in the hands of foreign producers by rendering it impossible for our manufacturers to compete with them, while the other extreme school, by making it impossible for the foreigner to sell his competing wares in our markets, would leave no check upon the prices which our manufacturers might fix upon their products.

I hold, therefore, that a properly adjusted competition between home and foreign products is the best gauge by which to regulate international trade. Duties should be so high that our manufacturers can fairly compete with the foreign product, but not so high as to enable them to drive out the foreign article, enjoy a monopoly of the trade, and regulate the price as they please. To this extent I am a protectionist. If our Government pursues this line of policy steadily, we shall year by year approach more nearly to the basis of free trade, because we shall be able more nearly to compete with other nations on equal terms. I am for a protection that leads to ultimate free trade. I am for that free trade which can be achieved only through protection.

With what pretense of information can any man denounce this bill as a free-trade bill when its author assures us its reductions are so limited as to leave our people far above the level of the Morrill tariff, which tariff, by the assurance of its author, the most ultra protectionist that ever framed an American tariff, placed "our people upon a level of fair competition with the rest of the world;" and fair competition was all the late President sought as the stable equilibrium of our great industries and the necessary protection of our people against extortion and monopoly? How idle and baseless then is this clamor, gotten up to blind the people as to the real scope and purpose of the measure, to prejudice them against it as the visionary scheme of a new school of theorists and doctrinaires. Sir, it would be just as candid and quite as true to raise the cry of improper exposure against any one who, beneath the genial sun of this spring day ventured to lay off some of the heavier clothing of midwinter, as to cry free trade against this and all other efforts to free the people in these halcyon days of peace from some of the burdens with which they encumbered themselves in the stress and rigors of the great war.

This bill is but an effort to redeem our promises and to perform our duties to the people. It seeks to lighten the burdens of the "great mass of workers," who pay "the bulk of our taxes" from their "too-scanty means of comfortable living." It is estimated that it will annually reduce "something like $8,000,000 on sugar, as much on cotton and woolen goods, and $14,000,000 on other articles used in every home;" in all, a relief of $30,000,000 of tariff taxes. But this is not all the relief. The incidental taxes under the tariff are much greater than those which go into the Treasury. How much this excess can not be accurately stated. The Saint Louis platform of the Democratic party in 1876 declared that the tariff, practically the same as exists to-day, cost the people five times more than it produced to the Treasury. Mr. R. J. Walker, in 1867, estimated that the $150,000,000 then collected enhanced the price of rival protected articles at least $350,000,000. Taking this lesser estimate as accurate, and no higher authority can be cited, a reduction of our customs revenue of $30,000,000 would carry with it relief to the people to the extent of $70,000,000 more. And all of this, Mr. Chairman, can be accomplished without reducing American industry to the level of fair competition with the foreigner.

HORIZONTAL REDUCTION.
